EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

1238

End of Semester Report

1. Name: Russell, Margret Ann
2. Date of Birth: October 9, 1954
3. Area(s) of Career Interest: Juvenile Probationary Officer;
or Legal Office Secretary.
4. Previous Work Experience: Food wrapper and cashier, drive-in
restaurant.
5. Academic Background:
 - a. Class: Junior
 - b. Vocational Courses: Typing.
 - c. Cumulative Grade Average: 3.500
 - d. Linear Class Standing: Not applicable.
6. Job Training Station Data:
 - a. Station: Administrative Section, Staff Judge Advocate's
Office, Davis-Monthan Air Force Base.
 - b. Training: Office Receptionist. Receives incoming visitors
and directs them to action agent within the SJA's office.
Assists in initial processing of various legal documents for
subsequent completion of appropriate legal officer. Receives
incoming telephone calls and provides caller with required
office information. Performs other routine office tasks
such as typing and filing.
 - c. Attitude: Satisfactory. Supervisor comments on student's
informal dress, manners, and conduct in office environment.
Student has had difficulty in getting along with her teachers.
Teachers, in turn, complain of student's flippant attitude
characterized by inattention, repeated absences or "tardies",
and failure to do class work.

- d. Skills: Student has gained skills in office practices common to the legal professions. Although her attitude has been a problem, she is industrious and takes her job training seriously. Supervisor has stated his intention of advancing student to more demanding work in the SJA's legal library.
- e. Knowledge: Student has developed knowledge of legal related office work, an appreciation of the background and training required for this type of work, and a better understanding of human relations on the job and in the school environment.
7. Post Secondary Plans: Not fully determined at this time. Student has stated that she is interested in attending four year college upon graduation from high school. Her general areas of interest are oriented towards social work.
8. Comments: Student's most significant problem areas are immaturity and attitude, one growing from the other. She has made excellent progress, in most respects, on her job training station with a positive change of attitude noted in her relationship with supervisor to the extent that she will now accept guidance without terming it discrimination. Numerous conferences concerning her attitude towards teachers have produced minor changes. Discussion with student's supervisor suggests that advancement to a more demanding job may produce positive results in attitude change.

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

1242

End of Semester Report

1. Name: Urbina, Frank
2. Date of Birth: October 15, 1953
3. Area(s) of Career Interest: Auto or aircraft mechanics.
4. Previous Work Experience: Clerk and general laborer, Lucky Stores.
5. Academic Background:
 - a. Senior; graduating status to be determined.
 - b. Vocational Courses: Automotive Shop, General Metals; and Wood Shop.
 - c. Cumulative Grade Average: 4.129
 - d. Linear Class Standing: Not currently included in graduating senior class.
6. Job Training Station Data:
 - a. Station: Non-Destructive Test Facility, Military Aircraft Storage and Disposition Center, Davis-Monthan Air Force Base.
 - b. Training: Assists in physical inspection of aircraft parts using chemical, sonic, and ultra-violet light techniques to locate cracks, strain areas, or otherwise hidden faults in aircraft parts. Cleans, lubricates, and packages inspected parts for subsequent shipment in logistical system.
 - c. Attitude: Excellent. Supervisor has consistently reported that student is exceptional in terms of his willingness to learn, accuracy, and mechanical abilities. Student was readily accepted by normal work force and is held in high regard by the several journeyman inspectors for who he has worked. Conversely, student's attitude towards the school environment is almost completely negative as indicated by an

extremely poor attendance record and low academic achievement.

- d. Skills: Student has gained a significant skill level in non-destructive test techniques. Supervisor states that he is capable of satisfactory performance in most of the skills required in this job area.
 - e. Knowledge: Student has acquired sufficient knowledge to qualify him for an entry level position in the non-destructive test job area. Supervisor has provided on the job training and instruction that is intended to prepare the student to take the entry level certification test required of workers in this area.
7. Post-Secondary Plans: Student is tentatively planning to enroll in summer school session in order to earn sufficient credit for graduation. He developed a deeper interest in aircraft mechanics as a result of exposure in this job training station and subsequently applied for admittance to the Aircraft Frame and Power Plant Mechanic's Course at Cochise College, Douglas, Arizona. He has been accepted for this training, but there is some doubt at this time as to whether or not he will actually enroll. Student plans to marry in July with the possibility that this responsibility will preclude further training.
8. Comments: One of the most positive aspects of this student's participation in this Program was the fact that he did remain in the school environment during the past semester. He had planned to drop out of school at the end of the Fall Semester but remained after assignment to a job training station that caught his interest. This student's high school record indicates four years of attendance problems, poor academic achievement, along with other problem areas.

(

His main interest is in mechanics and he has been encouraged to follow this career area. His job attitude, work attendance record, and successful job performance suggest that the student will be able to do entry level employment in either a mechanical or non-destructive test work area.

End of Semester Report

1. Name: Valencia, Carmen Odellia
2. Date of Birth: January 25, 1954.
3. Area(s) of Career Interest: Probation Officer; Social worker.
4. Previous Work Experience: Dean of Students Office, Tucson High School. Performed general office work to include typing, filing, desk and telephone reception work.
5. Academic Background:
 - a. Graduating Senior.
 - b. Vocational Courses: Typing, Shorthand, Business Machines, and Clerical Practice.
 - c. Cumulative Grade Average: 2.3421
 - d. Linear Class Standing: 205/604
6. Job Training Station Data:
 - a. Stations:
 - (1) Office and technical assistant, dental office.
 - (2) Office assistant, Certified Public Accountant firm.
 - b. Training:
 - (1) Dental Office: Received training in professional office routine and technical training with dentist specializing in orthodontic practice. Office work included typing, billing, completion of appointments by telephone, and office filing. Technical training included preparation of dental castings, final processing of castings, and chair side experience in working with dental patients.
 - (2) CPA Firm: Receives training in business and office practices in large (25 employees) accounting firm. Performs account filing, reproduction work (Xerox), typing and receptionist

- c. **Attitude:** Excellent. Supervisors of both training have favorably commented on student's good job attendance, ability to follow instructions, and cooperative spirit. It should be noted that the job transfer was brought about by the fact that the dentist desired a full time employee and asked this student to remain in his office after graduation. The student's college plans conflicted with this arrangement and she was subsequently relocated in a position that would offer part time employment after enrollment in the University of Arizona.
- d. **Skills:** Student has had an opportunity to gain practical skills in office work in both position in addition to the limited dental technician's training she received in working with Dr. Schmitz.
- e. **Knowledge:** Current job provides student with knowledge of business practices, along with organization and operation of a large business office.
7. **Post Secondary Plans:** Student has received a tuition assistance award of \$800 for her first year of work at the University of Arizona. She plans to enroll in the College of Business and Public Administration and pursue studies related to interest in probationary work. The office supervisor in charge of her current training station has stated that the firm will retain the student on a part time basis in order to assist her college education plans.
8. **Comments:** Job training stations held by this student have not been in her area of career interest, but have served to provide her experience and salable skills that will allow her to support college plans. This student is very capable individual with definite plans and long range goals in mind. Her school records and job training performance suggest the capability to succeed in her area of career

End of Semester Report

1. Name: Valencia, Rachel
2. Date of Birth: June 13, 1955
3. Area(s) of Career Interest: Long range interest in teaching career. Short range interest in office skills.
4. Previous Work Experience: Neighborhood Youth Corp Program- worked as recreation assistant at Richey School.
5. Academic Background:
 - a. Class: Sophomore.
 - b. Vocational Courses: none.
 - c. Cumulative Grade Average:
 - d. Linear Class Standing: Not applicable.
6. Job Training Station Data:
 - a. Station: Teacher's Aide, Roosevelt Elementary School.
 - b. Training: Assists teacher (Mrs. Elizabeth Bentley) in working with third grade students. Assists small groups in working on art projects; provides reading assistance to individual students as directed; monitors play ground activities; and performs other classroom tasks under teacher's supervision.
 - c. Attitude: Excellent. Principal of Roosevelt School, Mr. Geesy, and Mrs. Bentley have commented on student's rapid development during the period she has been in this job training station. Student experienced initial problem in too close an identification with the children under her care. However, after guidance and counseling by her supervisor and this office, she made significant improvements. Student's level of improvement noted in the fact that both Mr. Geesy and Mrs. Bentley have requested the student's re-assignment to the same job position next year, if possible.

- d. Skills: Student has gained skills in working with young children. She demonstrates artistic abilities and has gained skills in providing assistance to small groups working on arts or crafts projects.
- e. Knowledge: Student has gained knowledge of teaching profession and the teacher's role in the classroom.
7. Post Secondary Plans: Student is undecided at this time. Her exposure to the classroom environment has modified her interest in the teaching profession. She retains an interest in working with children; however, her interest appears to be swinging from academic work to the arts and crafts area.
8. Comments: A number of changes have been noted in this student's attitudes since she entered the Program. She has become more articulate and appears to regard herself in a different light. With Mrs. Bentley's assistance, a summer job with the Arizona Historical Society Museum was established for this student. The Museum's Director, Mr. Sid Brinckerhoff, has agreed to provide a position that will allow the student to work with various summer program groups. This position will include a wide variety of work experiences that should further assist the student in more clearly identifying her interest and capabilities.

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Yribe, Albert
2. Date of Birth: February 7, 1955
3. Area(s) of Career Interest: Undetermined.
4. Previous Work Experience: Neighborhood Youth Corps Program-
worked in Tucson Public Library; four months training with
Job Corps; dish-washer and bus-boy.
5. Academic Background: None. This student has started school on
three occasions but has never remained in class for a full semester.
He has no high school credits at this time.
6. Job Training Station Data:
 - a. Station: Commissary Warehouse, Davis-Monthan Air Force Base.
 - b. Training: Worked in receipt, storage, and issue of foodstuff
items intended for use in Base Commissary and field ration
mess facilities. Assisted in inventory work, case lot counts
of materials, and completion and check of out-bound shipments.
 - c. Attitude: Poor. Student has poor job and class attendance
records. No apparent motivation towards job training. Supervisor
requested relief of student for poor job attendance.
 - d. Skills: Limited. Student demonstrated some interest in inventory
work but could not perform satisfactorily because of poor
arithmetic skills.
 - e. Knowledge: Limited. Student is generally unprepared for unskilled
and certainly semi-skilled, training position. In effect, this
individual is probably a functional illiterate and his past
record suggests small hope for any improvement.

8. Comments: This student was accepted by the Program from the Youth Service Bureau's input of drop-outs. He was enrolled in classes at the beginning of the Spring Semester, but quickly repeated his previous absence pattern. Efforts by other students (Bedoy and Urbina) to encourage Albert to get to class were as unsuccessful as those efforts made by the several agencies and individuals who have attempted to work with this individual. Albert has not attended classes at all for the past three weeks and was subsequently dropped from his job training station and this Program.

Tab Q, Other Students Assisted

1. In addition to those students enrolled as participants in the Program, this office provided assistance to other students in locating and obtaining part time jobs. Several of these students have not been identified elsewhere within this report and are noted here for information purposes.
2. Student Assists:
 - a. Morales, George: Assisted by Miss Varela in finding part time evening employment as a mechanics helper. Student worked for approximately six weeks and was subsequently discharged for cause.
 - b. Bedoya, Arturo: Student was referred as replacement for Morales (par. a. above). He worked for approximately two months and was subsequently discharged for cause.
 - c. Arias, T.: Student was placed as office secretary trainee in a Dental office, effective upon graduation.

Program Drops or Resignations

1. As noted in the body of this report, several students were dropped from the Program for cause or voluntarily resigned. These cases are summarized in this tab.
2. Voluntary Resignations:
 - a. Hegwood, James: Student was interested in drafting and was assigned a job training station with an engineering drafting section at DMAFB. Student subsequently resigned to take a position that offered more working hours (dish washer).
 - b. Smoke, Howard: Student replaced Hegwood, shown above. After making excellent progress for three months, student moved from foster home and elected to live with "hippie" group and dropped out of school. Numerous attempts were made on the part of this office and his case worker, Pima County Welfare Department, to encourage him to return to the school environment. After living with a commune for about two weeks, student had a change of mind and enlisted in the U.S. Navy. Subsequent information indicates that student has deserted this Service.
 - c. Gomez, Mark: Student was assigned work station in a shop specializing in custom manufacture of picture and mirror frames. Supervisor reported satisfactory training progress and offered part time job to support further training plans (Pima College). Student resigned from training position to accept employment as service station attendant.
3. Discharges for Cause:
 - a. German, David: Student assigned job training in a welding shop. Attitude problems and poor job attendance resulted in discharge for cause.

- b. Acedo, Tommy: Student assigned job training position as Electrician's Helper, Pima County Physical Plant Department. Attitude problems and poor job attendance resulted in discharge for cause.
- c. Morales and Bedoya: See TAB "Q".

Model Cities program

Lessons teach students to work

By ADOLFO QUEZADA
Citizen Staff Writer

Described as a potential dropout at the start of the school year, Rachel Valencia now has a genuine interest in education, according to one of her teachers.

What happened?

"It's simple," explained Robert Myers, director of the Model Cities Exemplary Vocational and Educational Program. "Education has become relevant to her. She knows why she is learning certain things in school."

Myer's program, funded by the Department of Health Education and Welfare under the umbrella of Tucson's Model Cities program but administered by Tucson School District 1, brings the world of work into the educational experience of students in the Model Cities area.

"There are other programs in the school that provide working experiences for students while they're in school," said Myers, "but the difference is that we work with the potential dropout students, the ones with bad attendance habits and poor scholastic records."

Rachel, 16, is one of nine children and at the beginning of the year she thought of quitting school to help at home, maybe getting a job.

Instead, the EVE program advised her to remain in school and placed her as a teacher's aide 16 hours a week at \$1.00 an hour. This summer she was placed with the Arizona Historical Society.

"She will do a little bit of everything," said her AHS supervisor. He said she will learn cataloging, art and secretarial duties.

Her salary for the seven-

week summer program will be paid by the Neighborhood Youth Corps, which cooperates with the EVE program,

but an AHS official said that "hopefully, we will be able to keep Rachel after the seven weeks on our own payroll."

— Citizen Photo

Historical work

Rachel Valencia, 16, polishes an ornamental gorget collar which once belonged to Emilio Kosterlitsky, head of the Rurales, the then dreaded police of Mexican dictator Porfirio Diaz. Miss Valencia works at the Arizona Historical Society through a Model Cities summer program.

Besides placing 24 students in business offices, medicine, banking, transportation, Davis Monthan Air Force Base, and many other fields of work, EVE provided a weekly class on work orientation. Myers said the class included human relations, getting along with fellow-employees and the boss, interviewing for a job, preparing resumes, writing a letter of application and group relations.

"Some of the students had never heard of a resume before," said Myers. He said, "I was very surprised to see how limited their knowledge was about how to make a living besides in auto mechanics and office work."

Students participating in the program work from 8 a.m. until noon and attend classes in the afternoon. They carry a full load and are usually out by 4:30 p.m.

Myers admitted that the scholastic records of participating students did not take a drastic turn for the better. He said, "Our goal was to keep them in school and you know what? It worked."

Beyond keeping them in school, however, the program provided them with career information and even some personal counseling.

Alice Varela, assistant to Myers, visited homes and held noon rap sessions daily in her tiny office with the girls and some of the boys in the program.

"We talked about everything," said Miss Varela. "The girls want to talk about some of the personal problems that they have at home or just exchange personal experiences they encounter on the job," she said.

"We don't pretend to be a

counseling staff for the school," said Myers, "but Tucson High has only seven counselors with 400 students assigned to each of them and it is physically impossible for them to see all of those students in one school year. I think we help fill a need," he said.

Myers said that the employers usually paid the salary of the participating students but that some salaries were paid by the Neighborhood Youth Corps.

Myers personally went door to door to recruit the participating employers. "I wore out two pairs of shoes getting them," he said, "but it was worth it. Next year we'll try to place 50 students."

He said, "We want to open their eyes and let them know that there are many different jobs from which they can choose."

"If we can teach these students to walk into an employer's office and tell him what it is they want to do, instead of 'I'll do anything,' we will have accomplished our goal."

ABSTRACT

TITLE: Guided Occupational Orientation - Training and
Job Placement Program

PROJECT DIRECTOR: SIDNEY L. JOHNSON

APPLICANT SYRACUSE CITY SCHOOL DISTRICT
ORGANIZATION: SYRACUSE, NEW YORK 13202

DURATION OF
PROJECT: February 1, 1970 - June 30, 1972

TOTAL FEDERAL
FUNDS REQUESTED: _____

The project is designed to obtain authority, and if the authority is granted, to proceed with modification of a school system of a medium sized city. The modification hopefully will result in recognition of occupational information and skill attainment as inseparable components of learning stages and exercises from pre-school and kindergarten upward. Orientation will commence at the start of primary education and continue through the fourth grade. Beginning with the fifth grade guided occupational orientation and skill training will commence and the "learning by doing" process will be intensified and continue through the eighth grade or age sixteen. At this point it is expected that counseling, simulation of industries and crafts in the schools, general work experience on the job with continuing basic education part-time, cooperative education in a chosen career field, post-secondary, technical, and preparation for higher education will emerge as the continuum of the system. This comprehensive project will embrace the total philosophy and all facets of vocational-technical education as a necessity for the individual, his community, and his country.

D. BODY

1. PROBLEM:

- a. Many youth, particularly those from the low socio-economic and academically disadvantaged groups, aspire unrealistically in terms of their own potential to job careers and job goals.
 - b. Educators are not adequately prepared to present occupational information to students in a systematic procedure.
 - c. Many youth, particularly those from the low socio-economic, disadvantaged and academically deprived groups, are not adequately prepared to adjust and find success in our complex social and economic society.
 - d. There is a lack of understanding among many people: educators, parents, students, employers - of the dignity, worth, the satisfactions derived, the opportunities available and the contributions that can be made from all levels of occupations.
 - e. There is lack of a plan to involve cooperation between public education and manpower agencies to the end that both share responsibility for job preparation of all students.
1. Our school district recognizes the above cited problems and proposes to take preventive and corrective action in dealing with them as outlined in this proposal.

2. DESCRIPTION

1. Provided with authority from the Board of Education through the Superintendent, the professional staff (administrators, supervisors, counsellors, and teachers) will reorganize the scheduling and instructional approach, and shift the emphasis from general basic education to integration of occupational education and general academic education (English, Social Studies, Science and Mathematics). The staff will produce revised outlines of courses of study that allow the individual continuing study opportunities or intensive occupational training for entry level placement.

Elementary - 5th and 6th Grade

This proposal is designed to begin in Grade 5. However, there is presently included in grades K through 4 an occupational orientation program.

On the kindergarten level, students engage in role playing, simulations and discussions about various workers. They learn about "helpers" in the neighborhood, people who work in the school, jobs their parents hold. Much of the equipment used in the kindergarten is geared for this program - trucks, wheelbarrows, traffic lights, toy stoves, toy stores, etc. Vocabulary developed in the reading readiness program also relates to a great extent to the world of vocations.

In the upper primary grades, an extensive Social Studies unit is used throughout the district revolving around Community Helpers; S.S. books, films, filmstrips, tapes, trade and library books are used relating to this unit. Community resource people are utilized in the classrooms - firemen, policemen, druggist etc.

A portion of the 4th grade S.S. curriculum includes a study of Syracuse from earliest days to the present. A general overall view of the historical, industrial and scenic phases of the Community for a brief exposure to such places as the newspaper office, a supermarket warehouse, the police department, Niagara Mohawk etc.

2. This proposal is designed to intensify the vocational-industrial skill development aspects on the 5th and 6th grade levels.

A writing team, comprised of 5th and 6th grade teachers will meet for a two-week period in in-depth intensive curriculum development sessions. The material developed will be used as a vehicle for career study, presented in an individualized fashion, catering to differing student learning roles, styles, interests and reading abilities.

3. The team will also identify areas in the present Social Studies, Mathematics and Science curricula where a model or manipulative device will enhance the lesson. The description of these specific models will serve as the curriculum for the Industrial Skill Development Phase of the program.

The materials will be packaged so that students may learn about a series of occupations and careers. Similar concepts were used by schools of San Diego County, California and reported in the ERIC system (ED 015-513). Also, the Portsmouth, Rhode Island, school system has been using this approach to individualized learning since 1965. Positive results have been reported in both the above instances. The individualized approach becomes an integral part of the 5th and 6th grade proposal.

After the occupational curriculum materials have been developed by the teacher writing committee, two mobile vans will visit schools to disseminate and create interest in these materials. The first van will be used to house booths designed to give students a glimpse into various job categories in existence. Each job category will have general display (pictorial and narrative), perhaps an exhibit of some equipment used, a listening center, film and filmstrip projector, and resource people from industry.

This van will be used as a kick-off to the Vocational Information part of the program. Students will come into the van, armed with a Learning Activity Package. (LAP*) The Teacher Assistant will give students a general orientation as to why they are in the program, stimulate interest in the program, and instruct students as to how they are to utilize their time in the van. The LAPs will contain question sheets. Students browse around the van getting a general overview and answering general questions, then choose 3 or 4 occupations to pursue in greater depth. When the choice is made, the student then goes to the appropriate booths with his LAP. The LAP will contain a series of tasks for students to perform. They may be instructed to interview the representative at a booth with a series of questions, to view a filmstrip and find and write answers to questions, to examine display materials in search for answers to questions, to consult with the teacher and/or teacher assistant in search for information, etc., use the listening center which may explain some of the material in exhibit.

Back in the classroom, the student continues working on his LAP - summarizing information gleaned from the Van, identify additional information he needs, consult trade books to find further answers, engage in role playing and other group activities, plan and go on field trips for additional

knowledge. This part of the program will develop Language Arts skills (such as interviewing techniques, note taking using reference books, writing summaries), reading skills (trade books on various reading levels catering to individual interest will be used), and some basic concepts of economics.

*A learning activity package is a unit of work written for students to pursue individually. The content is written on three different reading levels. Reading level, time and style are varied to suit individuals, utilizing a multi-media approach.

For example, a non-reader may be exposed to a particular content by listening to a tape. A student of average reading ability may read the material as written. A better student may be given the material in greater depth and at a higher level of sophistication. Films, filmstrips, records, tapes, library books and all types of materials which will be utilized in LAPs.

The other van, the industrial skill lab, will be equipped to service a class of 30 students.

The teacher writing team will have identified and described in the Social Studies, Science and Math curriculum, models that students can make which can be taken directly back to the classroom to use.

For example, students will be instructed to make such manipulative devices for math as fractional parts kits, geometric figures, time lines. Students can then take these models to the math lesson and demonstrate their use. They could also go to other rooms to help demonstrate their use.

A similar approach would be used for science. Various equipment such as beam balances, levers, weather instruments, animal cages could be made in the Industrial Skill Lab and likewise be demonstrated and used in science classes.

Dioramas, maps and other models could likewise be made to enhance the Social Studies class.

Our aim is to give students an opportunity to handle tools, learn to use them correctly, and also to make an actual contribution to a lesson. All too often, poor readers have been penalized in all subjects because most lessons are heavily oriented in utilization of the reading skill. Many behavior problems and evidences of lack of motivation stem from the fact that students go through a series of classes without any success experiences. Bringing a model to a class that the teacher can use and the student can demonstrate to his peers hopefully will add to a child's feeling of self-worth.

In conjunction with the above, teacher education programs will be made available to target area school teachers for the integration of career planning materials into the curriculum.

JUNIOR HIGH

A complete integration of occupational education material is planned for the Junior High level. This consists of total involvement of all teachers to the guided oriented program.

The occupational areas to be introduced to the student will be:

1. Agriculture 2. Distribution 3. Health
4. Home Economics (wage earning) 5. Office
6. Trade and industrial 7. Technical

The seven broad curriculum content occupational areas will involve information for those interested in service level occupations to those interested in professional occupations.

As a basis for the above thinking, project ABLE (ED-030-720), established in New Quincy, Mass., provided occupational curriculum for grades 7, 8, and 9. Another USOE project which involves itself with career planning for the Junior High level student was a career simulation for adolescent pupils reported by the San Diego County Department of Education (ED 016-268).

A new concept employed in this study will be to establish an in-service education program for guidance counselors, teachers, administrators and representatives from industry.

The aim of this in-service program will be to acquaint guidance counselors with the needs, goals and opportunities that industry has to offer to the non-college bound youth. Teachers will become involved with the actual integration of occupational orientation into the present curriculum. The representatives from industry will have a long hard look at their own job descriptions and prerequisites.

In particular each teacher will use his subject area to provide related occupational education geared to the level and experience of students. Guidance counselors will become more vocationalized in knowledge and competency to work with a student or group of students.

This comprehensive in-service training for all Junior High School personnel in the area of occupational education and the integration of occupational education in all curriculum is a unique and major step in making general education relevant.

SENIOR HIGH

A similar in-service training program, as established for the junior high, will be given to the senior high school guidance counselors, teachers, administrators and representatives from industry.

The program is designed to prevent secondary school age youth from leaving school before they are employable, and to provide an attractive occupational preparation program for youth who are out of school and unemployed or underemployed. The school district is convinced, by results of limited existing similar programs, that work experience with related counseling is an effective way of serving some students. We want to develop and implement a work experience program of occupational education for the disadvantaged student so that the emphasis will be on behavioral modification, job success and improved skill competency.

Syracuse is concerned about the number of our youth who leave school at age 16 or before completing a secondary school program. In reviewing our research department's report on dropouts last year, 1968-69, we note that 549 were reported as dropouts for Senior High Schools and 100 from Junior High Schools. The largest number left from the tenth grade. We feel certain that these youths were educationally and vocationally handicapped and left because they found it difficult to function successfully in our regular program.

The need for identifying such students and providing educational experiences to improve their self-concept, scholastic interest and occupational competence is most vital. The problem demands top priority and action in finding ways of reaching these students and providing them with individual counsel and help.

The work experience concept in education has been proven to offer a challenging and effective means of providing stimulus to remain in school and continue education. The Syracuse University Research Corporation, in its recent report to the Statler Foundation entitled "Broadening the Experiential Base of Education, June, 1969", recommended Work Study as a part of general education for all students. The New York State Education Department, Bureau of Occupational Education Research, has conducted a successful GUIDED OCCUPATIONAL TRAINING work experience program, VEA Project #68-6-256, January, 1969, in Oceanside Senior High School, Long Island.

Work experience programs have been in operation in Syracuse for 10 years and we now have five effective programs: office occupations, distributive education, industrial diversified occupations, school to employment program and special education placements. However, they are not designed or sufficient to serve the students reaching age 16 in the critical 9th and 10th grade levels, where the leaving-school practice is concentrated.

Students who participate in the general work experience program will be given this opportunity and encouraged to register in our other work study programs during their 11th or 12th grades. This early introduction to work experience will eventually require an expansion of our other work study programs.

WORK EXPERIENCE PROGRAM FOR SECONDARY STUDENTS

The program will serve all students 16 years of age and older who are identified as potential dropouts as well as those out of school youth who can be encouraged to return. Four Occupational Resource teachers (O.R.) (one from each school) will be appointed for our Senior High Schools and each will be responsible for working with the Junior High Schools assigned to him. The O.R. teacher will serve as a personal-vocational counselor and supervise work experience through regular visitations to job stations. His functions are essentially as follows:

1. Interviews potential dropouts as referred by school and dropouts invited in for interview, and explores with each student how the general work experience program may best serve him.
2. Consults with school administrators and teaching staff about curriculum and program modifications that would benefit youth with special needs.
3. Communicates with the parents of youth who have been identified as needing a work-related program. Parents must be informed of the nature and purpose of the program, and encouraged to support their child's involvement in the program.
4. Make use of Community resource help such as:
 - a. New York State Employment Service - we are expecting this agency to assign two vocational counselors (one for each two schools).
 - b. Community Agency Resources (Chamber of Commerce, Manufacturers Association of Syracuse, etc.).
 - c. Volunteers selected from business and industry.
 - d. Others to be determined.
5. Help student decide on committed plan of action geared to his career development.
6. Find employers in cooperation with the New York State Employment Service who will provide part-time work experience and supervise the on-the-job work..
7. Act as a liaison between the student and his teachers in order to insure that instruction is related to work experience.

8. Evaluate and keep records on progress of each student beginning with the first interview.
9. Provide related classroom instruction to make work experience more meaningful to student.*

*Curriculum for Related Instruction
 Why education is important.
 Career planning.

Occupational orientation

Attitudinal and behavioral development

Appraisal of interests and understanding abilities.

Employer-employee relationships and responsibilities.

Personal and job related problems.

Health and safety.

Opportunities for advancement in the world of work.

Students will receive one unit for Regents credit for 400 hours of work experience and one-half unit for 200 hours. Students who are able to take the full related instruction program will receive an additional unit of Regents credit.

The O.R. teacher can be the most important person in the lives of the students who participate in this program. He should be a person who can relate well to the disadvantaged student and have occupational and counseling background to effectively help influence and direct students.

A unique feature we hope to include in one senior high school - Central - where we have the largest number of disadvantaged students, is an academic core center with a related teacher to work with students in the work experience program. The core teacher will complement the work of the regular teacher in the areas of communication, computation and citizenship. This teacher will use individualized instruction and programmed learning as well as other recognized methods to help students improve basic skills in line with individual's ability and occupational needs. This will give support and assistance to classroom teachers in adjusting to individual differences. This core teacher will need to spend time in preparing and developing methods to be used for instructional work. Students in this special instructional program will comprise a control group for comparison with other students in the same school and the other three high schools.

It should also be emphasized that scheduling in occupational-academic areas will be flexible and individualized to allow a student to spend as little or as much time in the class or laboratory as his individual needs require. This is an innovation in our proposal.

Those students, after intensive counseling, who wish to leave the secondary school will be provided with intensified proficiency training in a selected occupation so as to qualify for employment at the entry level. They will be offered participation in work-experience and continuing education programs (upgrade, etc.).

COMMUNITY COLLEGE

Articulation between the school district and the community college will not only involve the work-study graduate who has determined an advance career goal, but the other participants in the program as well.

The junior-senior high school programs are based on the following from the ERIC System:

ED 010 295

ED 027 435

ED 026 527

ED 011 044

ED 025 641

ED 024 752

ED 010 620

ED 010 282

3. OBJECTIVES:

A distinction will be established between overall, broad objectives and objectives which are more specific, sharply defined, clearly stated and capable of being measured.

BROAD, OVERALL OBJECTIVES

- a. To present to youths in an understandable way, the world of work and career planning.
- b. To encourage youth to realistically aspire to job careers and job goals commensurate with their potential.
- c. To establish in-service education programs for educators to present occupational information to students in a systematic procedure.
- d. To adequately prepare low socio-economic disadvantaged and academically deprived youth for success in our complex social and economic society.
- e. To provide greater understanding and information to educators, parents, students, employers of the dignity, worth, the satisfactions derived, the opportunities available and the contributions that can be made from all levels of occupations.
- f. To develop a plan of cooperation between public education and manpower agencies to the end that both share responsibility for job preparation of all students.
- g. To encourage and guide students to continue their secondary education - general and occupational.
- h. To identify through school records and attract through elicitation in-school and out-of-school youth who need occupational education and successful on-the-job training.
- i. To find meaningful job placements where a student will have an environment in which he can succeed and develop self-respect and dignity through cooperative efforts of the school district, New York State Employment Service, and the community at-large.
- j. To provide occupational orientation and continuing information for career planning and advancement.

SPECIFIC OBJECTIVES

Grades 5 & 6

3. Objectives - Career Information Phase

- a. Given an array of career choices (via mobile exhibit and presentations) students will select vocations to study in depth.
- b. Upon selection of vocations to study, students will participate in interviews for information regarding job opportunities, training needed, remuneration, opportunities for advancement and desirable personal characteristics.
- c. Given opportunities to conduct interviews, students will take notes and organize data derived from interviews, as well as learning about the occupation itself.
- d. Given identity of students interested in similar vocations, students will join groups in quest for and sharing of information, allowing for group participation, as well as occupational career information.
- e. Given printed and non-printed resource material, students will gather additional information, allowing for individual learning and self-motivation.
- f. Given general outline for career information quest, student or students in groups will organize scrapbook of data collected, to be used as a reference source for himself and other students.
- g. Given opportunity to collect background information, students will be able to discuss merits of one career as compared with another in group situations (based on information rather than emotion or off-the-cuff opinion) to provide better knowledge re careers.
- h. Given variety of materials, student will develop habit of using several resources before making a judgment.
- i. Given task of making some career options, student will consult resource people to get additional information and to help him make some tentative decisions.
- j. Given exhibits to view and opportunities to take field trips, students will ask questions other than those suggested in the LAP.
- k. Given opportunities to take field trips, student will help in planning the trip, i.e. deciding what information he needs, which people or department he might concentrate on etc.
- l. Given opportunities for field trip or interview, student will prepare a report to share information received.

- m. Given a variety of source material, student will document information received (i.e. - include bibliography, quote with foot notes, etc.).
- n. Given set of basic questions relating to various careers, students can answer questions regarding three career choices.

3. Objectives - Industrial Skill Phase

- a. Given a pattern to follow, student can cut out pattern for a model.
- b. Given set of directions, student can make a completed model.
- c. Given samples of typical lesson plans in math, social studies, or science, student can help decide on what models could be built that would make the lesson more meaningful.
- d. Having completed a model, student can demonstrate its use during the appropriate lesson (for his class or other classes).
- e. Having completed model, student can help another student who might be having a problem performing a similar task.

JUNIOR HIGH SCHOOL

3. Objectives

- a. Provided with the total Junior High School occupational orientation, the student will show a desire and be able to make a tentative selection of career education that he will pursue in Senior High School.
- b. Given the opportunity to learn about and discuss occupational information in all classes, student will become inquisitive and develop the habit of asking questions and seeking more assistance in making career decisions.
- c. Provided with introductory occupational experiences, the student will approach the related occupational simulation in the classroom with increased attention and proficiency.
- d. Provided with individual and group counseling, the student will better understand himself and how he can prepare for the world of work in line with his interests and abilities.
- e. Given related occupational education in each subject area (English, Social Studies, Science and Mathematics), the student will show improvement especially in communication, computation and citizenship.

- f. Provided with integrated occupational learning (fusion of occupational instruction with general academics), student will become involved in doing reports, projects and other activities that are meaningful for career planning.
- g. Provided with school occupational orientation - parents will encourage and support their children's involvement in the program.

SENIOR HIGH SCHOOL

- a. Provided with the overall program of counseling, work experience and related class instruction, student will:
 - 1. be interested in remaining in school;
 - 2. give evidence of a constructive attitude toward school, teachers, friends, parents and others;
 - 3. develop acceptable behavior response in school and on the job;
 - 4. develop a better self image and more self confidence;
 - 5. experience success in school and on the job;
 - 6. develop positive attitudes toward personal and citizenship responsibilities.
- b. Provided with related classroom instruction in line with his occupational interests and individual needs, student will improve his knowledge of basic academic skills necessary for employment in any area.
- c. Given work experience learning, student will:
 - 1. find gratification and satisfaction in this occupational setting;
 - 2. receive employer's approval for work performed under his supervision.
- d. Provided with intensive counseling, student will be able to handle adjustment problems to supervision in school and at work.
- e. Provided with a list of job vacancies by the Employment Service counselor the pupil will follow prescribed application procedures or telephone for an interview, and receiving same, proceed to get release from school and appear before the employer to apply for one or more of the advertised vacancies. The pupil will report the outcome of his search to the Employment Service counselor.

5. Procedures

a. General Design:

1. The approach is highly individualized in terms of pupil's career interests as well as his ability to find and assimilate information.
2. The design provides for pupil involvement - pupils in a "doing" role rather than a "listening" role.
3. The program provides some concrete experiences where pupils who might perhaps have a reading problem, finds success in making a model, prestige in knowing that the model contributed to an actual lesson (the teacher needs and uses what he makes).
4. The program provides concrete experiences for pupils to gain some manual dexterity.
5. The program, without preaching, imbues child with appreciation for dignity of work and gives him a hopeful future within his academic and financial grasp.
6. The program involves business and industry as co-partners in providing real life experiences in understanding community occupation needs and career choices.
7. The program provides for use of advisory committee to help establish direction for determining occupational needs and program changes.
8. In-service education will be established as a cooperative partnership with business and industry to provide real functional opportunities to up-date understandings and knowledge by participating in activities in community businesses and industry by using business and industry staff as resource teachers in the schools.
(See also 2 Under Body - Description for specific details of program).

b. Schools or Locations

Ten elementary public and five non-public schools meeting the criteria for Title One and ESEA services will be included in the program. All secondary pupils in the school district and disadvantaged students from parochial schools will participate.

c. Participants

Approximately 2200 fifth and sixth grade students will be participating, many under-achievers, from lower socio-economic areas. The total elementary school population is about 21,000.

Students involved in this program the first round will be about 10% of the elementary school population. Students from 58 public school classes and 15 non-profit private school classes will participate. The students from the non-profit private schools will be drawn from the same geographic and socio-economic areas as those from public schools.

The school district's existing policy is to assign secondary school pupils to junior and senior high schools so as to maintain a balance in race and affluence. These policies have been in effect since 1966 and continuation is assured.

d. Methods and Materials - Elementary

Heavy emphasis throughout the program will be placed on a multi-media approach. Because of the reading difficulties of many of the students, the program must not rely too heavily on reading as the tool for instruction. The LAPs will contain directions for students to refer to a film, filmstrip, diagram, record and filmstrip, or trade book. In many cases available material will have to be re-written on an easier reading level. Representatives from business and industry will be interviewed by students who will organize the answers on a form prepared in advance by the teacher and students. Experience charts will be used to summarize the data a student collects in his quest for career information. Students themselves will prepare direction sheets for teachers and other students to refer to in using the models built in the Industrial Skills Lab.

For further details regarding LAPs and vans, see #2 (Description). (For reference to Research see B- Background Data).

Examples of Trade Books to be considered for use:

Voice of Tools and Machines

How People Earn and Use Money

How People Live in the Big City

The Jobs You Get

The Person You Are

The Newspaper You Read

Estimated Total \$7,000.

Examples of filmstrips:

The Job Interview

The Nurse's Aide

The School Cafeteria Worker

ABC's of Getting a Job

The Gas Station Attendant

Estimated Total \$2,000.

Examples of films:

Just a Secretary

Just a Teller

Looking for A Job

Big City Workers

Estimated Total 2,000.

Other Types of Materials

Transparencies such as "Everyday Economics"

SRA Lab - "Widening Occupational Roles Kit"

Guidance Materials - "A Book About Me"

"What Could I Be?" Estimated Total 2,000.

A-V Equipment

Tape recorders and head sets

Filmstrip previewers

Record Player

Listening Centers

Picmobile & movie projector

Estimated total 2,000.

Total for Career Information Booth in Van

\$15,000.

General Mechanics Tool Sets (2 @ \$500.)

1,000.

(See lists)

Instructional Supplies (15 schools @ \$100.)

1,500.

(Lumber, nails, metal, glue, solder, miscellaneous hardware)

Shop Tools

3,500.

Total for Industrial Skill Lab

\$6,000.

General Mechanics Tool Sets

First Aid Kit	Sloyd Knife
Portable Vacu-Vise	"Handyman" Nail Hammer - 13 oz.
Stanley Handiman Vise	Nail Hammer - 10 oz.
Wood Workers Vise	Ball peen hammer - 6 oz.
"C" Clamps	Ball peen hammer - 8 oz.
#32 Spring Clamps	Ball peen hammer - 12 oz.
Disston Back Saw	Rawhide Mallet
Dovetail Saw	Carpenters Mallet
Coping Saw	Cabinet files for wood
Tubular Hack Saw	Wood Files - flat
Miter Box	Wood Files - half round
Block Plane	File Cleaner
Spoke Shave	Pencil Compass
Hand Drill	5" Diagonal cutting pliers
Drill Points for Hand Drill	Straight nose pliers
Rose Type #137 Countersink	Long nose pliers
XCellite Screwdriver 4"	Parallel Jaw pliers
Bit Brace	Adjustable wrench - max. opening 3/4"
Auger Bits	Auto wrench - 9"
Screw Driver Bit	Jewelers Straight shears
Coping Saw Blades (many)	Vise-grip sheet metal tool
Hack Saw Blades	Pocket snips - 7"
Staple Gun Tacker - 5/16" staple	Protective goggles
Staples, 5/16"	Soldering Iron
General combination Miter Square	Soldering gun-welder
Bench Rule - 2'	Soldering paste
Folding Rule	Sal-Ammoniac Bricks
Ripping Chisel	Bench Anvil
Riveting Hammer	Hand Saws
Nail sets - 3/32" & 1/8"	Fire Extinguisher - CO ₂

d. Methods and Materials - Secondary

Materials and methods for the Junior High School integrated occupational education program will be modified from the experience of other projects listed under BACKGROUND DATA - B.

In the Senior High Schools, students will be referred to the occupational resource teacher after the school (public or private) has carefully identified each as a potential dropout - a student who will not remain in school. A dropout student will be referred immediately unless the school administrator wishes to make an exception for special reasons. Specific procedure for student referred will be developed in conferences with administrators and guidance counselors.

In the early implementation of the program, students will be accepted on the basis of greatest need. Enrollment figures as of September 1969 showed 5951 students in our four Senior High Schools and 6689 students

In our nine Junior High Schools. There are also eight Parochial High Schools with an enrollment of 3934 which will be served by the program.

It is expected each O.R. teacher will serve during the school year approximately 100-150 students with the assistance of the New York State Employment Service counselors. Factors such as placement opportunities and number in full time related programs will have an effect on total students served. Emphasis will be placed on serving each pupil well in line with his individual needs and capabilities.

e. Evaluation - Elementary

1. In designing and implementing the program (both the Career Information phase and the Industrial Skill Lab phase), provision will be made for a check list of each child. The teacher will use this check list to determine whether specific objectives are being met. (See D-3-Objectives). Objectives tapping both the affective and cognitive domain have been included in the planning.
2. For the Career Information program, the LAPs will include, as a standard feature, a pre- and post test which each child must take.
3. In addition, sixth graders' progress in assimilating career information will be assessed as the SRA Lab "Widening Occupational Roles Kit" (or similar instrument) is used. Each student is provided with a Student Record book for this.
4. For the Industrial Skill Lab, each child's performance will be assessed by a simple performance test in the Skill Lab -- i.e. ability to measure, make a pattern, use a saw, hammer, etc., paint----
5. Summaries from each participating school will be forwarded to the Coordinator at the end of the school year to assist him in making an over-all evaluation, determining any modifications or new directions the program should take before continuance and/or expansion.

e. Evaluation - Secondary

Criteria to be used in evaluating the program:

1. Survey interest and reactions of Junior High School pupils on their readiness for career planning.
2. Comparison of number of students enrolled in program who complete the school year with numbers of past two years.
3. Comparison of attitudinal and behavioral changes at the end of the year with the time of entry by narrative reports from building administrators.
 - a. Standardized tests results will be reported where applicable.
4. Employers' summary reports on adjustment to their success on the job will be summarized by the Supervisor, Work Experience.

6. Coordination and Dissemination:

The Department of Curriculum and Instruction, the Department of Pupil Services and the Department of Occupational and Continuing Education have been charged by the superintendent with the responsibility for a unified approach to full integration of occupational education into the school system's standing programs. This approach, if successful, will be the essence of the school district's 5 year plan for a vocational education as directed in the New York State plan and will be presented for inclusion in the regional vocational plan required by the New York State plan. Once the local plan is integrated into the regional plan it will serve as a vehicle for economical implementation in small school districts in the region who do not participate in exemplary program experimentation.

7. Personnel:

Name: Sidney L. Johnson Birth Date: 12/5/21
Title of Present Position: Assistant Superintendent of Schools
for Occupational & Continuing Education
Social Security No. 260-05-9256
Title of Address: Mr.

Proposed time commitment if this project is funded:

	<u>Percent of Time</u>
Teaching Duties	
Continuing Administrative Duties	<u>75</u>
Consultant Services	<u> </u>
Time devoted to other projects:	
Time to be committed to this project	<u>20</u>
Other Time Commitments - Industry & Community	<u>5</u>
TOTAL	100%

Brief statement of background, experience, and qualifications:

21 years personnel administration and training - U.S.A.F.
7 years experience in education: 2 years teaching business education, 2 years administration of Manpower Development and Training Programs, 2 years school business administrator and 1 year occupational education.

B.S. Business Administration.
M. of Business Education.

N.Y.S. Certificate: School District Administrator.
Other Certificates: Teacher, Secondary Principal, & School Business Official
87 graduate credit hours: Business and Educational Administration.

7. Personnel: cont'd.

Name: Dr. Mary C. Durkee

Title: Assistant Director

Social Security Number: 114-20-0677

Experience and Qualifications: Ph.D in Education.

Over 20 years experience in elementary education as a classroom teacher and building administrator and supervisor of curriculum and instruction for elementary/intermediate grades.

Name: Vincent F. Brennan

Title: Assistant Director

Social Security No. 132-14-5191

Experience and Qualifications:

Masters in Education

Over 20 years experience in education as a classroom teacher, building administrator, school district superintendent, supervisor of Manpower Development & Training Programs and supervisor of special needs and work experience of the local occupational education programs.

8. Facilities:

In addition to the vans being requested for the 5th and 6th grade programs, the 9 junior high schools and 4 senior high schools are adequately equipped with home economics, industrial, business education and technical labs. Business and industry demonstration stations are assured by the continuing endorsement the school district has from the Chamber of Commerce and the Manufacturers Association of Syracuse.

9. Special Funding Provisions:

Federal funds for this grant will be administered as a separate account by the school district finance officer and all disbursements will bear the project's identification number. If the project is successful, it is intended that its successful implementation will be the new educational system for the City School District.

COSMETOLOGY

I. NATURE OF WORK Learning Activity

1. Get the cassette tape on "Careers in the Beauty Industry".

Read the following story as you listen to the tape.

Have you ever been in a beauty salon or looked through the window of a beauty salon? Or, have you noticed women and girls walking by and have you thought that their hair looked real pretty? Do you know how many different kinds of jobs are needed to keep a beauty salon going so that those ladies can have nice-looking hair? Do you think you might like to work in the beauty industry? If you have, let's open the door and go in to see what makes a beauty salon tick.

COSMETOLOGY

I. NATURE OF WORK Learning Activity

SECTION 1

When we first enter the beauty salon, probably the first person we will meet is the RECEPTIONIST (rec-sept-shun-ist). She will have a desk with a telephone so that she can make appointments for customers and be sure they are taken good care of by the right hairdresser and on time!

The RECEPTIONIST also collects the money from the customers and usually takes care of selling COSMETICS which can be seen on shelves in the salon. The RECEPTIONIST usually keeps track of the hours the employees work, the amount of money they have earned and, sometimes, even makes up the payroll. The RECEPTIONIST may, in fact, be the salon owner or manager or she may be an employee. It can be an important and well-paid job.

TURN OFF THE TAPE RECORDER WHILE YOU ANSWER THE FOLLOWING QUESTIONS:

Duties of a receptionist:

1. A receptionist makes _____ for customers.
2. She makes sure they are _____ of by the right hairdresser...and on time!
3. The receptionist also _____ the _____ from the customers and usually takes care of selling _____.

COSMETOLOGY

I. NATURE OF WORK Learning Activity

4. The receptionist usually keeps track of the _____ the employees work, the amount of _____ they have earned, and sometimes even make up the _____.
5. The receptionist may, in fact, be the _____ or manager, or she may be an _____.

Pictionary ---- about the Beauty Business!

Shampooer - washes hair.

Hairstylist - cuts and styles hair.

(3)

Permanent Waver - puts curl in hair
to stay in permanently.

Colorist - colors (dyes) hair.

Straightener - "presses" or takes
curl out of hair.

(3a)

COSMETOLOGY

I. NATURE OF WORK Learning Activity

NOW: turn the tape back on and listen to it as you read more about our visit to the beauty salon.

SECTION 2

As we get farther back into the salon, we will see men and women working on customers' hair. In large shops these men and women may be specialists - they ordinarily do only the job that you see them doing. SHAMPOOERS, they wash and clean the hair for different reasons; apply rinses either for dandruff or for a different color; and generally assist the HAIRSTYLIST who cuts and arranges the hair to make a lady look her best. We also see the COLORIST. She has on rubber gloves and a plastic apron and she is applying a thick, dark cream on the hair to make it the color that the STYLIST wants. At another chair a PERMANENT WAYER is rolling up hair on short, different-colored plastic curlers and then applying a liquid to the curls. The liquid doesn't smell too good, but it makes the hair pretty.

In still another chair another hairdresser wearing rubber gloves and a plastic apron is putting heavy, white cream on the hair. She is the STRAIGHTENING specialist. When hair is too curly or kinky for a certain style, curl must be taken out of the hair. Sometimes the STRAIGHTENER will use a hot, brass comb to take out the curl. This is called PRESSING.

Turn off the tape recorder.

COSMETOLOGY

I. NATURE OF WORK
Learning Activity

Answer these questions from Section III

List two duties of a Shampooer

1. _____
2. _____

List one duty of a Hairstylist

1. _____

Complete the following sentences:

1. A Colorist wears _____ gloves and a _____ Apron. She applies thick, dark cream to the hair to change its _____.

List two steps a Permanent Waver goes through:

1. _____

2. _____

Complete the following sentences:

1. A Straightener puts heavy, white _____ on the hair.
2. Hair is straightened when it is too _____ or _____ for a certain style.
3. When a hot, brass comb is used to take out the curl, it is called _____.

COSMETOLOGY

I. NATURE OF WORK Learning Activity

Pictionary ---- about more beauty salon workers!

Manicurist - cleans, shapes, and
polishes fingernails

Dispensary Clerk - hands out
supplies

Chief Stylist - either the owner
or manager

NOW: turn the tape back on and listen to it as you read about
these workers.

Section III

As we look over toward the dryers (dryers are hot-air hoods which fit over the customer's head to dry the hair - they look like space helmets), we see another person working on a customer's fingernails. She is called a MANICURIST and she clips and files fingernails, softens and grooms the customer's hands.

Back in the shop we discover a small room. It is well-lighted and ventilated. There is a sink and counter and lots of shelves, cabinets and containers all filled with bottles, cartons, linen and all sorts of things needed to work on customers and to keep the tools and containers clean. The person working in here is called a DISPENSARY CLERK.

COSMETOLOGY

I. NATURE OF WORK Learning Activity

We also have seen a man in a zipper jacket walking about the shop talking to different SPECIALISTS, looking at customer's hair and writing things on small cards. He is the OWNER or CHIEF STYLIST. What we have been looking at is a large shop with twenty or thirty people working in it. In a small shop (three or four people) the same type of things will be going on except there will be no specialists. The people working in a small shop perform all of these operations and are called ALL-AROUND OPERATORS.

Answer these questions from Section III

1. Dryers are _____ hoods which fit over the customer's head to _____ the hair.
2. A manicurist _____ and files fingernails, _____ and _____ the customer's hands.
3. A _____ handles and gives out bottles, linen and all other supplies used in the beauty salon.

(6)

COSMETOLOGY

I. NATURE OF WORK Learning Activity

Get the Job Guide G-2, Manicurist.

Read the section on Job Duties. List six steps the manicurist goes through to "do" fingernails.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

This job guide also states three things a manicurist MAY do.

They are:

1. _____
2. _____
3. _____

How To Collect Information About The Hairdressing Profession

1. Get the name and address of any company that makes materials used in beauty shops. Use the list provided here or visit a beauty shop and tell the owner or manager that you want to be a hairdresser and ask if he can provide you with even more information.
2. How do you get to talk to a shop owner? Simple! First, find out the owner's name. The easiest way is to call on the telephone and ask. Just say, "May I have the name of the owner of your beauty shop?" (be sure that you have paper and pencil ready to write it down). Then say, "Thank you."
During the first part of the week, stop into the shop and say, "Hello, my name is _____ and I would like to see Mr. _____." When the owner comes, just look him straight in the eye and tell him that you want to be a hairdresser and you would like advice on getting started. When you and he are through talking, thank him for his help. If it happens that he doesn't want to help, don't be discouraged. You can figure that you have met one of the very few unpleasant people in the beauty business. Call someone else (all jobs have some unpleasant people).

COSMETOLOGY

I. NATURE OF WORK Enrichment

With a partner from your class, practice setting hair from the chart in the brown folder. Ask your teacher if you may plan a demonstration for your class.

COSMETOLOGY

II. REQUIREMENTS Learning Activity

New York State Rules

To Become A Beauty Operator You Must Meet The Following Requirements.

1. You must be 17 years of age or older.
2. You must successfully have completed an approved course of study such as is offered at Syracuse Central Technical High school or as is offered in a private trade school.
3. You must be of good moral character.
4. You must be in good health.
5. You must have at least finished an elementary school education.

Get the Career Brief B-38, Cosmetologist. Open to the sections, "Personal Qualifications" and "Training Requirements". As you read it, listen to the side of the tape labeled "Personal Qualifications" and "Training Requirements".

When you have finished, go back and fill in the blanks of the following:

An aspirant should have an _____ and well-groomed _____, a pleasing _____, and a _____ manner.

She needs general _____ and strong _____ and _____. The work requires dexterity of _____ and _____.

Every state requires the Beauty Operator to be _____. Most states require applicants to pass a _____.

To take this examination, applicants must be at least _____ to _____ years old and complete an approved _____ course.

COSMETOLOGY

II. REQUIREMENTS Learning Activity

The most desirable method of formal training includes completion of _____ plus _____ to _____ months of formal training. A majority of beauty schools require applicants to have _____ diplomas.

Some states will accept training in a public _____ leading to a vocational high school diploma as eligibility for taking the _____ for a license.

The license is issued by New York State.

COSMETOLOGY

II. REQUIREMENTS Learning Activity

All states require that Beauty Operators be licensed. To get a license, you must (1) first attend a beauty school or complete the course in Cosmetology at Central Tech High School. (2) You must be 17 years old or older. (3) You must have finished elementary school. (4) You must pass an examination.

Now fill in the four things necessary to obtain this license.

State Of New York	
<u>LICENSE FOR BEAUTY OPERATOR</u>	
(1)	_____

(2)	_____

(3)	_____

(4)	_____

COSMETOLOGY

II. REQUIREMENTS Enrichment

The yellow pages in the telephone book list the beauty schools in Syracuse. List the names of the schools here:

Ask your teacher to make arrangements with someone from the Cosmetology department of Central Tech to visit your class.

Beauty Operators...

Where AND HOW THEY WORK...

As you read the following paragraph, underline the words that tell why the work is hard; circle the words that tell why the work is pleasant.

Beauty operators work in clean comfortable shops. Salons are well lighted and pleasant. The work is not dangerous, but it is hard.

Beauty operators work long hours, often in the evening. They must work standing up, but the job is fascinating and interesting.

The hair dresser may be very rushed on weekends. He or she must please all kinds of people.

Now, list the underlined words in column I; list the circled words in column II.

Reasons Why -

I

II

Beauty work is hard:

Beauty work is pleasant:

Junior High Evaluation - Student

2A: Choose what you think is the best possible answer for each of the following multiple choice questions. Indicate your choice on your answer sheet by filling in the box under the letter you think is correct - a, b, c, or d.

- (1.) To find a list of job openings in the Syracuse area, I would go to:
 - (a) friends
 - (b) a military recruiting office
 - (c) teachers
 - (d) the New York State Employment Service
- (2.) If I wanted to be a carpenter, the best place to go for information would be:
 - (a) newspaper want ads
 - (b) labor unions
 - (c) private employment agencies
 - (d) the public library
- (3.) To arrange my school schedule so that I might get into a vocational program I would go to:
 - (a) my teachers
 - (b) my parents
 - (c) my guidance counselor
 - (d) the Chamber of Commerce
- (4.) If I were interested in jobs available in a grocery store chain, I would get the best information from:
 - (a) my guidance counselor
 - (b) a visit to a grocery store manager
 - (c) the Public Library
 - (d) Labor Union Organizations
- (5.) If I wanted additional training in the computer field, my best source of information on training programs would be:
 - (a) colleges and training schools
 - (b) government agencies
 - (c) advertisements
 - (d) the Chamber of Commerce
- (6.) If I wanted to know the number of policemen that would be needed in Syracuse in the next ten years, my best source of information would be:
 - (a) the Public Library
 - (b) my teacher
 - (c) the Chamber of Commerce
 - (d) the New York State Employment Service
- (7.) To really know what a machine operator does on the job, it is best to:
 - (a) ask my friends
 - (b) go to the New York State Employment Service
 - (c) visit an industry
 - (d) read a book dealing with machine operators

- (8.) If I wanted to work for the government, my best source of information would be:
- (a) a training school
 - (b) the Civil Service Commission
 - (c) the Chamber of Commerce
 - (d) advertisements
- (9.) To find out the average earnings of a typist in Syracuse, the best source of information would be:
- (a) a friend who works as a typist
 - (b) the Chamber of Commerce
 - (c) advertisements
 - (d) a private employment agency
- (10.) If I wanted to learn how to write a personal resume' I would:
- (a) go to a labor union
 - (b) ask my English teacher
 - (c) ask my parents
 - (d) go to a professional society
- (11.) If I were working as a secretary and wanted to find a better job I would:
- (a) go to a private employment agency
 - (b) talk to friends
 - (c) talk to a labor union representative
 - (d) ask a former business teacher
- (12.) If I wanted to enter the field of airline mechanics, my best source of information would be to:
- (a) speak to an Air Force recruiter
 - (b) ask a friend who is an auto mechanic
 - (c) write to the Civil Service Commission
 - (d) write to the Chamber of Commerce

Junior High Evaluation - Student

- 3: Read the following questions and fill in the box on your answer sheet under the letter which best expresses the way you feel - a, b, c, d, or e.

Example: I think Richard Nixon is the president of the United States:

- (a) strongly agree
- (b) agree
- (c) not sure
- (d) disagree
- (e) strongly disagree

The correct answer would be: (a) strongly agree

- (30.) It is just as important to plan for your future job as it is to plan what subjects you will need to graduate from high school.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (31.) It is not necessary to think about a career until you finish high school or college.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (32.) What I learn in science classes has little to do with the kind of job I might choose someday.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (33.) The type of jobs available in the Syracuse area has little to do with the kind of work you will do someday.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (34.) How much schooling a person has means little as to what jobs he can hope to get.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree

- (35.) The school counselor will have very little to do with your future career choice.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (36.) Knowing something about many different kinds of jobs is important before making a definite career choice.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (37.) Finding out about how my school subjects might help me in different jobs is useful in planning for a career.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (38.) Planning for a job involves only learning about what you like to do.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (39.) In planning for a job, the only thing to consider is your ability to do a particular job.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (40.) What I learn in English has little to do with the kind of job I might choose someday.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (41.) In planning for a job, it is important to think about whether a job involves working indoors or outdoors.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (42.) A student can plan out his career by himself just as well as if he gets help and advice from others.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree

- (43.) What I learn in Math has little to do with the kind of job I might choose someday.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (44.) Many people change their minds about their careers after they have started working. Therefore it is un-important to plan for your career.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (45.) The more time I put into studying about possible careers, the more likely it will be for me to find a job that is best suited to me.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (46.) A student should wait until he or she is a senior in high school and see what jobs are available before making plans for a career.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (47.) It is important to start thinking and planning for a job while still in junior high school.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree
- (48.) What I learn in social studies has little to do with the kind of job I might choose someday.
- (a) strongly agree
 - (b) agree
 - (c) not sure
 - (d) disagree
 - (e) strongly disagree

TELEPHONE CAREERS

Rationale -

Do you like to talk with someone?

Do you like to listen?

Can you learn how others think and feel?

The best way for us to talk is face-to-face. This is "Communication."

Can you think of another way to talk to someone?

As you study this LAP you will find another interesting way to communicate.

Listen to the record "Telephone Repairman" for some ideas.

Pre-Evaluation -

Can you name five ways of communicating with others?

Try to name five workers who help you to communicate with others.

Can you name an instrument that helps you to communicate.

Behavioral Objectives -

Here are some things you will be able to do when you finish working on this LAP.

- I. - A. Given a choice of occupations you should be able to circle those that come under telephone workers.
B. Given pictures of telephone employees you should be able to label their occupations.
- II. - A. Given a list of occupations and a list of salaries, you should be able to match the salaries with the occupations by drawing a bar graph.
B. Given a list of employees and a chart containing the different levels of schooling, you should be able to put each worker under the correct heading.
C. Given a choice of characteristics, you should be able to recognize those that apply to telephone employees.
- III. - A. Given several words describing working conditions, you should be able to explain how each fits the telephone industry.
B. You should be able to tell under what conditions telephone workers must work overtime.
- IV. - A. Using a telephone book you should be able to locate definite information in the yellow pages.
B. Given a list of names, you should be able to place them in the order in which they appear in the telephone book.
- V. - A. You should be able to complete a Job Information Form.
B. Given the words, "fringe benefits," you should be able to list the ones given by a telephone company.
C. Given a list of workers, you should be able to circle those who earn the most money per week.
- VI. - A. You should be able to explain what future there is in working for a telephone company.

TELEPHONE CAREERS

I. Nature of Work

- A. Here is a list of telephone workers. Look in your dictionary for the meanings of any words you don't know. Write sentences using your own words. Explain what each word means.

telephone craftsman _____

telephone operator _____

clerical worker _____

administrative personnel _____

sales personnel _____

scientific and technical personnel _____

maintenance and building service personnel _____

- B. Read the following want-ads. Under each one write the career name of the worker wanted.

Wanted: girl with pleasant speaking voice, enjoys working with people.

Man over 18 with mechanical skill - ability to climb

Wanted - girl with business training - able to take shorthand.

Man with mechanical skill willing to travel - gets along well with people

II. Requirements

- A. Go to the Semi-Skilled Career Kit and find these cards:

"Telephone Installer"

"Telephone Cable Splicers"

"Telephone Operator"

11. Requirements - continued

Fill in the chart below with information from these cards.

[illegible]

B. Read the directions and complete the exercise called WHAT WOULD YOU DO?

If you were being trained for a job and found yourself in any of the situations below, what would you do? Put a check mark (x) beside the answer you think is BEST. And in the empty spaces, write an answer of your own.

1. You find it impossible to get along with the person who is training you.

- a. Complain about him to his superior.
- b. Try to get along with him as best you can.
- c. Leave the job and try to find another one.

Figure 1d is a line graph showing the change in the number of individuals per 1000 in the 15-64 age group from 1990 to 2010 for various countries. The y-axis represents the number of individuals per 1000, ranging from 0 to 100. The x-axis represents the year, from 1990 to 2010. The graph shows a general downward trend for most countries, with some exceptions like China and India showing a slight increase.

2. You find it difficult to understand some of the classroom instruction you are receiving.

- a. Tell the instructor that you're having difficulty understanding.
- b. Ask another trainee to help you understand the information.
- c. Drop out of the training program.

d. _____

II. Requirements - continued

B. 3. The training is going well, but you don't think you're being paid enough money.

- ☐ a. Ask the person who hired you if there's any possibility of getting a raise.
- ☐ b. Quit the training program and try to find another job.
- ☐ c. Tell the person who's training you that you can't live on the money you are earning.
- ☐ d. _____

4. You have a legitimate gripe about the way a training program is being conducted.

- ☐ a. Take your gripe to the president of the company you are working for.
- ☐ b. Take your gripe to the head of the training program.
- ☐ c. Explain your gripe to the other people who are being trained with you and find out if they agree with you.
- ☐ d. _____

5. You're being annoyed and harassed by someone else who's being trained with you.

- ☐ a. Stay away from him as much as possible.
- ☐ b. Try to become friendly with him.
- ☐ c. Report him to the person who is training you.
- ☐ d. _____

6. You discover that you don't like the job you're being trained for, and would like to be trained for another kind of job with the same company.

- ☐ a. Go immediately to the person who hired you and present him with your problem.
- ☐ b. Ask the person who's training you for advice about the problem.
- ☐ c. Speak to another trainee about your problem and ask him for his advice.
- ☐ d. _____

III. Conditions and Location of Work

A. From the conditions named circle those that best describe telephone linemen and installers. Use your dictionary to look up any words you don't understand.

indoors	steady	climbing
outdoors	seasonal	tiring
noisy	dangerous	heavy lifting
quiet	standing	odd hours

B. Underline the right answer.

1. I am a boy who likes the outdoors. I like to climb trees. I am interested in electricity. Which career might I be interested in?

salesman

truck driver

lineman

telephone lineman

life guard

2. After a storm I am called out to work many hours in the bad weather. I must wear a hard hat, rubber gloves, and special shoes. Who am I?

brick layer

cable splicer

football player

miner

riveter

3. I have a pleasant voice and good hearing. I enjoy talking to people. I work regular hours, either day or night. Who am I?

beautician

nurse

telephone operator

teacher

secretary

C. Pretend you are a lineman called out on a stormy night. Write a short paragraph describing your experiences.

IV. Duties

A. Do you know there are yellow pages in the telephone book? After reading this story and answering the questions you will better understand the use of the yellow pages.

Read USING THE YELLOW PAGES on the next page.

USING THE YELLOW PAGES

III. *Using the yellow pages.* Pat handed her brother Tom the phone book. "What's this for?" he asked.

"Help me," said Pat. "Mother said I could have my hair done. I want to go to that place my friend Betty goes to. I want to phone and see when they can take me. But I can't find the place in the phone book. I know it's at 311 Park Avenue and that the name begins with *J*. But look—there are pages and pages of *J*'s. It will take me forever to find the phone number."

"Why don't you use the yellow pages?" asked Tom.

"Yellow pages? Oh yes, I see the yellow pages. But how will they help me?"

"The yellow pages have all the stores and places where you want work done. The names are not in ABC order at first, but what you want is in ABC order--automobiles, boats, cleaners, and so on. Then under those things are the names of the people you can call. Their names are in ABC order. Look—under 'Books,' Brown's Book Store comes before Carter's Book Store because *B* comes before *C*."

"I guess I should look under 'Beauty Shop,'" said Pat. "How do you spell it? I know it begins with *B*."

"Well, that's a help," said Tom. "But you won't always have me around to spell for you. Turn to the *B*'s and try to find a picture of someone having her hair done."

"Oh, here's one," Pat said. "And here's another one." She went on looking.

"Then you've found 'Beauty Shops.' Look under the *J*'s until you find the address you want."

"That's easy," said Pat. "Here it is. Jack's Place, 311 Park Avenue, HO 7-9155. I can see that using the yellow pages saves time."

A. Here are pictures of parts of the yellow pages in the phone book. Look at them carefully. Then answer the questions on the next page.

ANSWER THE FOLLOWING QUESTIONS -----

1. Tom wants to take Mary out to a restaurant they haven't been to. He looks in the yellow pages. What does he look under? _____
 2. Pete's family is going to move. They need a truck. What do they look under in the yellow pages? _____
 3. Pat heard about a beauty shop called K & V's. She doesn't know what street it is on. Find out for her. _____
 4. The stock boys are having a party. Tom wants to order some hot dogs for the party from a place at 21 State Street. Find the name of the place for him. _____
 5. One of Pat's young brothers was hurt, and she had to call for help. She got the right place, because she looked for the picture that would help her. Then she learned the word she should have looked under. What is that word? _____
 6. If your TV broke down, what is one place you could call? _____
 7. Mrs. Crandall wants to have the house painted. Whom could she call to do the painting? _____
 8. Why does "Restaurants" come before "Trucking" in the yellow pages? _____
 9. Look under "Beauty Shops." Why does "Chez Char" come after "Arno House"? _____
 10. Which comes first under "Trucking" - "Tom's Trucking" or "Carter's Carting"? _____
 11. Could you answer 8 without looking back at the yellow pages? _____
 12. Should you answer 8 without looking back at the yellow pages? _____
 13. Tell why you answered 10 as you did. _____
- B. Look again at the pictures of the parts from the yellow pages. Write the phone numbers that these people should call.
1. Mr. Cleary wants to have a fence put around his back yard. _____
 2. Mr. Benson wants to call Matt's Lines. _____
 3. Gloria wants to have her hair done at Chez Char. _____
 4. Pete wants to get seat covers for his new car. _____
 5. The Crandall's TV broke down. _____
 6. Tom wanted to be sure the Blue Bird Inn would have room for him when he took Mary there for dinner on Sunday. _____
 7. What number did Tom call when he wanted the hot dogs for the party? _____
 8. Mary wanted to call the beauty shop that was next door to Art's Hot Dog Stand. _____
 9. Mr. Clark wanted to call a trucking company near the As You Like It Restaurant. _____

V. Advantages

A. One of the important things in taking a job is the amount of money you will earn. After working with these salaries, you may decide you would like to become a telephone employee when you have finished school.

1. In the telephone industry the average beginning weekly earnings for a telephone operator is \$70 a week.

How much will she earn a month? _____

What will her salary be in one year? _____

2. If the beginning salary of a telephone installer is \$85. a week, what is this per day for a 5-day week?

3. A cable splicer earns as much as \$170.50 a week. A telephone installer earns about \$136.00 a week.

What is the difference in their weekly wages? _____

How much would this be in a month? _____

4. If the salaries of telephone workers are \$154.50, \$117.50, \$136.00, \$95.00 and \$70.00, what is the average salary?

- B. 1. What do you suppose "fringe benefits" means? Look in the dictionary to find out. Write why this would be one advantage in working for the telephone company.

2. Look at reference materials about telephone employees to find another advantage.

VI. Future of Job

- A. From the chart below, discover whether these people were steady workers. Follow all the directions on the chart.

A. In Column 1 are the names of some workers and the dates they started to work. In Column 2, write the names of the workers in the order of their job seniority. Start with the worker who has the most job seniority.

Column 1		Column 2	
Name of Worker	Date Started	Name of Worker	Date Started
1. Mike Franco	12/12/55	1. _____	_____
2. Ann Samuels	2/1/61	2. _____	_____
3. Della Green	9/4/63	3. _____	_____
4. Ed Better	12/1/55	4. _____	_____
5. Russ Bray	2/26/61	5. _____	_____
6. Joe Spino	2/15/62	6. _____	_____
7. Alan Gold	9/6/56	7. _____	_____
8. Daisy Jordan	11/6/55	8. _____	_____
9. Arnie Swift	7/10/63	9. _____	_____
10. Wanda Breen	1/22/59	10. _____	_____

B. Read each statement. If the statement is true, write "True" on the line. If it is not true, write "False" on the line.

1. Joe Spino has more seniority than Arnie Swift. _____
2. Wanda Breen has less seniority than Alan Gold. _____
3. Ed Better has more seniority than Mike Franco. _____
4. Russ Bray has less seniority than Ann Samuels. _____
5. Della Green has more seniority than Arnie Swift. _____

B. From all the information you have found doing this LAP, prepare a short talk on one telephone employee. Present it to the class during English period.

C. Write a letter to the telephone company asking for the latest materials on careers in their industry.

TELEPHONE CAREERS

Post-Evaluation

- I. Match the duty listed below with the correct title.
Place the number of the title in the blank space before the duty.

- | | |
|---------------------------|---|
| 1. telephone operator | _____ has charge of telephone operators |
| 2. service representative | _____ one who puts in a telephone |
| 3. telephone installer | _____ person you dial for help |
| 4. telephone lineman | _____ person who works with cables |
| 5. cable splicer | _____ person who repairs damaged lines |
| 6. supervisor | _____ person who works in sales |

II. Which of the workers listed above earn the most money? _____

III. Which of the workers work outdoors? _____

IV. Which of the workers may be either men or women? _____

V. Which of the workers has to have the most schooling? _____

VI. Which of the workers would work overtime most often? _____

GUIDED OCCUPATIONAL ORIENTATION
Syracuse City School District

TEACHER'S MANUAL

Individualized Career Studies

The basis of the Individualized Career Studies is self-direction by the students. This is accomplished by two means:

- (1) Instructional Level: Blue - below grade level
Yellow - Average
Pink - above grade level

All three levels contain learning activities to meet the same objectives as spelled out in the pre-post tests; these learning activities are tailored to meet the needs of the learner at each of the three instructional levels. The "ability" at each of these levels was determined by the teacher-author of the study and a reading specialist. The teacher prescribes the correct level (by color) for each child in her class.

Orientation Study (Introduction to the World of Work) - although the teacher prescribes the instructional level, you will notice that many pages are white. It is advised that these white pages be done as a whole group activity - mainly because of the newness of the material and the need to share ideas. As the study progresses, the number of colored sheets of independent work increases. If this is the child's first experience in self-direction, it is THE TIME to emphasize the importance of reading directions and following them on his own. It becomes increasingly important for him to be self-reliant as he goes into the Career Studies. Emphasize that students become familiar with the glossary and use it frequently.

- (2) Choice of Interest Areas: This choice is made by the student. He should choose three areas* in which he is interested.

ICS's - Twenty-one careers are written up as studies, each one done in three ability levels. An overview of the content of each has been written by the author of each and is included in this manual. Please read each thoroughly to help guide the students in their selection of career studies. The writing team has also included a section on ideas to assist you in implementing each study in your classroom. Prerequisite skills, needed by the students (letter writing, outlining, etc.) , are noted in this section.

* The number of ICS's done by the child is left to the discretion of the teacher. If possible, three is the recommended number.

The following features are standard in each ICS:

- 1 - General Format - each study has four sections:
 - a. Nature of Work - description of jobs in this family, duties, (this section usually is the largest).
 - b. Requirements - a study of the physical and educational requirements of the main jobs in this area.
 - c. Conditions - treats working conditions, location of job, etc.
 - d. Advantages - describes earnings and, in some cases, the future of these jobs. In many studies this section utilizes math.
- 2 - Learning Activities and Enrichment - each of the above four sections contains both:
 - a. learning activities - fundamental to successful completion of the ICS. All students using the study should complete all learning activities.
 - b. enrichment - contains activities related to jobs but not essential instruction. Enrichment activities give the opportunity for the teacher to further individualized instruction by assigning those activities which will best suit each child's style of learning.
- 3 - Pre-post Test - Items are identical for pre and post tests. They are based directly upon a learning activity, which is indicated in the teachers manual. Each test item is one in which student makes a choice from a given set of answers and then writes that choice in the blank. There is only one correct answer for each blank. In each study the content "spread" of the test items is:
 - a. Nature of Work - 4 questions
 - b. Requirements - 2 questions
 - c. Conditions - 2 questions
 - d. Advantages - 2 questions

Use the answer key for marking. Only the teacher should mark pre and post tests. Each correct answer counts 1 point. Ten points is a perfect score. Enter the pre and post test scores in the space provided on the progress sheet. Pre and post tests are packaged separate from the Career Study and should be kept by the teacher except when being administered. Please refer to "Suggestions for Administering Pre and Post Tests", located with the tests.

4. Table of Contents page: The paragraph on this page is actually a rationale for the students. They should read this carefully and use it to help them determine their choice of areas to study.
5. Bibliography: Before starting and during the use of the career study, the student should become completely familiar with the use of the bibliography. Because he will be independently getting his own resource materials, he must be able to determine what they are.* The bibliographies list the following materials - all of which are in the Career Study Kit (in classroom),

- a. Books - mainly hard cover books, listed in standard form.

Material in Brown Folders

- b. SRA Briefs - large folders found in the brown duo-tang folders. These contain stories related to each career, and each one has an accompanying cassette tape. This tape is to be listened to as the child reads the story. The back page contains pertinent facts used in learning activities.
- c. Career Briefs
Career Summaries
Job Guides
- d. Green D.O.T. Cards - Dictionary of Occupational Titles published by Sextant and Company. Kept in brown folders according to careers.
- e. D.O.T. Cartoons - leaflets published
- f. U.S. Government Occupational Outlook Bulletins
- g. Reprints

A V Material

- i. Cassette Tapes
- j. Filmstrips

All of these resource materials should be explained to the class before they begin their independent work. Allow them time to look them over and ask questions.

It is essential that a careful inventory be made of all materials when received and again before they are returned. Notify the Career Center of any missing materials immediately.

*Stress to the children that these books are necessary for them to proceed with the activities assigned to them in the Career Studies.

6. Progress Sheets - one per child per career study, are the permanent record to be returned to the Career Center. They serve the two-fold purpose of
 - a- a guide to the ICS activities - the prescription sheet, and
 - b- the only record keeping teacher is asked to do, to be returned to the Career Center for evaluation. These constitute essential data needed for the evaluation requested by the Federal Government.

Use of the progress sheets - before student does any part of a career study, he should complete the pre-test. Please refer to "Suggestions for Administering Pre and Post Tests," located with the tests. Results of this pre-test should be recorded in the space provided on the Progress Sheet. The Pre and Post tests themselves should be marked by the teacher and kept in her possession at all times. Activities are listed according to the four sections of each ICS; within each section is a description of each activity and the page on which it is located. Teachers can use this to assign work to be done on a certain day or for a series of days. There is another column, marked "done", in which to indicate if work is satisfactory and/or a grade. Students use these sheets to locate and keep track of work assigned. Teachers also can use this as a guide for AV required, or out of room activities such as field trips or interviews.

"Assign" and "Done" Columns

The activities assigned must be so indicated by the teacher in the column marked "Assign." The Career Center will depend on you to indicate (by a checkmark or a date) in these columns any activities engaged in by students. Each of these will be recorded by the Career Center for the program evaluation. Please be sure to indicate, by marking in these columns, which activities were done by each child.

7. Glossary - mainly job-related words unique to each career. Students should be encouraged to study this carefully before beginning the career study and to refer to it constantly during the learning activities. Teacher may want to design additional activities using the glossary.
8. Interview Sheet - attached to the back of each career study. The main purpose of the study is to gain information, and the interview technique is a valuable method. All students should make use of this method, practice it in the classroom and be prepared to use it on field trips or with resource people. Please refer to the interview lesson in the Orientation Study Appendix.

Other Items:

Career Ladders
Charts, graphs
Field Trips

Other items, not necessarily in each study.

Career Ladders: These are graph like devices used to illustrate the job-family concept. Each study, whether it be about construction workers or school personnel, presents the family of workers involved, from unskilled up through the professional level. The career ladder relates these jobs in terms of education and income.

Field Trips: You will be advised by additional bulletins as to the standard field trip procedure. Again - the main purpose of the program is to get information about jobs, not products. The field trips should be planned and carried out to meet this objective. Children should be prepared by (a) knowing what information they are to seek, (b) know what method they are to use in acquiring this information, (c) having practiced these methods before the trip, and (d) knowing how they are to use this information when the trip is over. Further detail on these points:

- a- information children are to seek - falls into the same four objectives that are the framework of the Career Studies, namely: nature of work and duties of the jobs observed, educational and physical requirements for these jobs, conditions and location of these jobs, advantages and future of these jobs. The standard interview sheet contains questions relating to these objectives. Students should be encouraged to expand upon these standard questions.
- b- methods - interview (by whom? how many students at a time?); observation (checklists of facts needed should be prepared).
- c- practice- before a field trip in which interviews are to be done, small groups should be organized with specific areas to be covered assigned to each group. Each group should have a spokesman (asks questions), a recorder (writes answers), timekeeper (responsible for moving the group on).
- d- use of information - to share with the class, interview groups should be scheduled to report their findings orally, upon return from the trip. All those doing that particular career study should be aware that this is their opportunity to obtain any information they need.

Charts and Graphs

Presenting Data - A graph is a visual representation of data that often facilitates understanding the data. The most frequently used graphs are the pictograph, the bar graph, the circle graph, and the line graph.

A bar graph usually can be read with a greater degree of precision than can a pictograph. The students should be provided with opportunities to draw both vertical and horizontal bar graphs. The terms horizontal axis and vertical axis also prepare the students for later work in graphing.

A. Presenting Data in a Bar Graph

Terms

1. Bar Graph
2. Vertical Bar Graph
3. Horizontal Axis
4. Vertical Axis

Usually, the vertical scale of a graph begins at zero and extends upwards in intervals appropriate to the data being presented. This fact will be familiar to students from their work in earlier grade levels. (Sample lessons #1-9)

- B. #1. Data can often be presented by a graph called a bar graph. The graph at the right is a vertical bar graph showing the areas of the Mountain States. Why do you think it is called a "vertical" bar graph?

- #2. The states are listed on a horizontal line, which is called the horizontal axis of the graph. The vertical line at the left of the graph is called the vertical axis. The numerals along the vertical axis are in the form of a scale, called the vertical scale. How many thousands of square miles are represented by each of the spaces between lines on the vertical scale? (10)
- By comparing the height of the bar and the vertical scale, make an estimate of the area of each of the Mountain States

Charts and Graphs (cont'd)

3. The areas, to the nearest 1,000 square miles, are shown in the table at the right. Draw a vertical bar graph in which each space on scale represents 5,000 square miles.
4. Do the bar graph you drew and the one shown above present the same information? (yes)
5. Which presentation, the table or the bar graph enables you to compare the areas of any two states quickly and easily? (bar graph)

State	Area in Sq. Miles
Montana	147,000
Nevada	111,000
Colorado	104,000
Wyoming	99,000
Utah	85,000
Idaho	84,000

C. In exercise 4, you may wish to ask students which graph is more accurate: the one they drew for 3 or the one presented on the preceding page. (The students' graphs should present each area to the nearest 5,000 sq. mi.; the text graph presents each area to the nearest 10,000 sq. mi.)

6. The bars for the graph on the preceding page were drawn vertically. The bars of a bar graph can also be drawn horizontally. The scale will then be on the horizontal axis. Such a graph is called a Horizontal Bar Graph.

7. The table at the right shows, for eleven kinds of food, the number of calories contained in one cup. What is the greatest number of calories that must be represented on the scale of a bar graph made from these data? (165) How many spaces will be required to represent that number of calories, if you let each space represent 5 calories? (16½) 10 calories? (33)

Food	Calories
Milk	165
Spaghetti	155
Lima beans	150
Orange juice	110
Buttermilk	90
Beets	70
Popcorn	55
Spinach	45
Carrots	45
Turnips	40
Cabbage	25

Charts and Graphs (cont'd)

The choice of a horizontal or a vertical bar graph for presenting data is arbitrary. However, certain types of data lend themselves better to one type of graph than to the other. For example, the vertical bar graph is more appropriate for presenting altitudes and the horizontal bar graph is more appropriate for presenting distances.

8. Select a value for each space, and make a vertical bar graph of the data.
9. Astronomers measure the distance from the earth to the various stars in units of light-years. One light-year is equivalent to the distance light travels in one year, or about 5,880,000,000,000 miles. Listed below are 16 stars and their distances from the earth in light years. Make a horizontal bar graph of these data.

DISTANCE OF STARS FROM THE EARTH			
Stars	Light Years	Stars	Light Years
Sirius	9	Betelgeuse	300
Canopus	90	Aldebaran	55
Alpha Centauri	4	Spica	190
Vega	27	Pollux	30
Arcturus	32	Antares	170
Capella	42	Fomalhaut	27
Procyon	11	Regulus	70
Altair	18	Castor	45

Classroom Management: There is no set formula for this. As with other phases of implementing this program, decisions are left to the individual teacher's judgement. How you set up and run the career studies will depend on you, your particular class, the amount of experience that both you and your students have had in self-directed study. The teacher during this program should assume the role of a director of activities. This will be easy to accomplish when:

- a- teacher and students are thoroughly familiar with objectives, content and procedure for the career studies,
- b- teacher prescribes correct instructional level for independent student progress and further refines the prescription by careful choice of enrichment activities.
- c- student choice of career studies is based on familiarity with their content,
- d- students are ready to assume responsibility for their own progress. This can be determined only by the teacher. Students should be impressed with the fact that other than the pre-post tests and purely subjective answers, they themselves will be responsible for checking their answers with the answer key, correcting their errors, and moving ahead upon satisfactory completion of each activity. It will be their responsibility to read instructions, locate their resource materials, complete their tasks, score them and then proceed all at their own rate;
- e- teacher should periodically (perhaps twice a week) review all Progress Sheets to see what AV materials are required for what students. Scheduling of recorders and previewers could well be very complicated. It is wise to have a list of other activities ready to take up the slack time a child will have waiting for the use of AV equipment. Such activities could be from the Enrichment section, or general classroom routines such as spelling assignments, peer tutoring and designing of new activities by the students themselves. The important thing is that these "busy work" suggestions be ready ahead of time.
- f- students should be assigned responsibility for daily inventories of all resource material. There should be a "chairman" appointed for each of the following:

- a. books
- b. brown folder
- c. tapes
- d. recorders, headsets and previewers
- e. filmstrips
- f. answer keys

These materials should be inventoried by each chairman each day. Loss of any materials should be reported immediately to the Career Center.

Red Duo-tang folders: provided for each student. These are to be used for his career studies and progress sheet. At no time should the progress sheets be allowed to be stored loose in the desk as they are the permanent record for evaluation data and must be returned to the Career Center.

CAREER CENTER VISIT MEMO

Where: Career Center, Room 11, George Washington School, 1970 Meadowbrook Drive.

When: On two consecutive days of the block of days to your school; 9:30 - 11:30 A.M.

How: Transportation has been arranged for you and your class. The District bus will be at your school no later than 9:30 A.M. on each day assigned. You will be returned to your school by 11:30 A.M.

Why: The visit to the Center should provide each student with a realistic and personal approach to his in-depth study of the world of work. Thirty-five industrial and business concerns have cooperated in furnishing exhibits that are representative of job areas in our community. They are clever, unusual, and thought provoking. They represent a large investment by these companies in time, effort and supplies. The trip will provide the springboard for a worthwhile study of the world of work.

Impress upon your class that this is a privilege extended by school and the businessmen of the community. Concerns such as Community-Hospital, the Telephone Co., WSYR-TV, etc., have cooperated with us to furnish the Center; we in the school system must cooperate by showing our best manners.

PRE-PLANNING FOR ENTIRE PROGRAM

1. Obtain old magazines for pupils to use in collecting pictures of people at work. Other faculty members and friends can help you.
2. Prepare a resource file folder for each Career Study and begin collecting pictures, posters, etc. for display use.
3. Request supplementary films and filmstrips from film library if desired.
4. Prepare bulletin board showing workers.
5. Post program schedule.

SECTION A

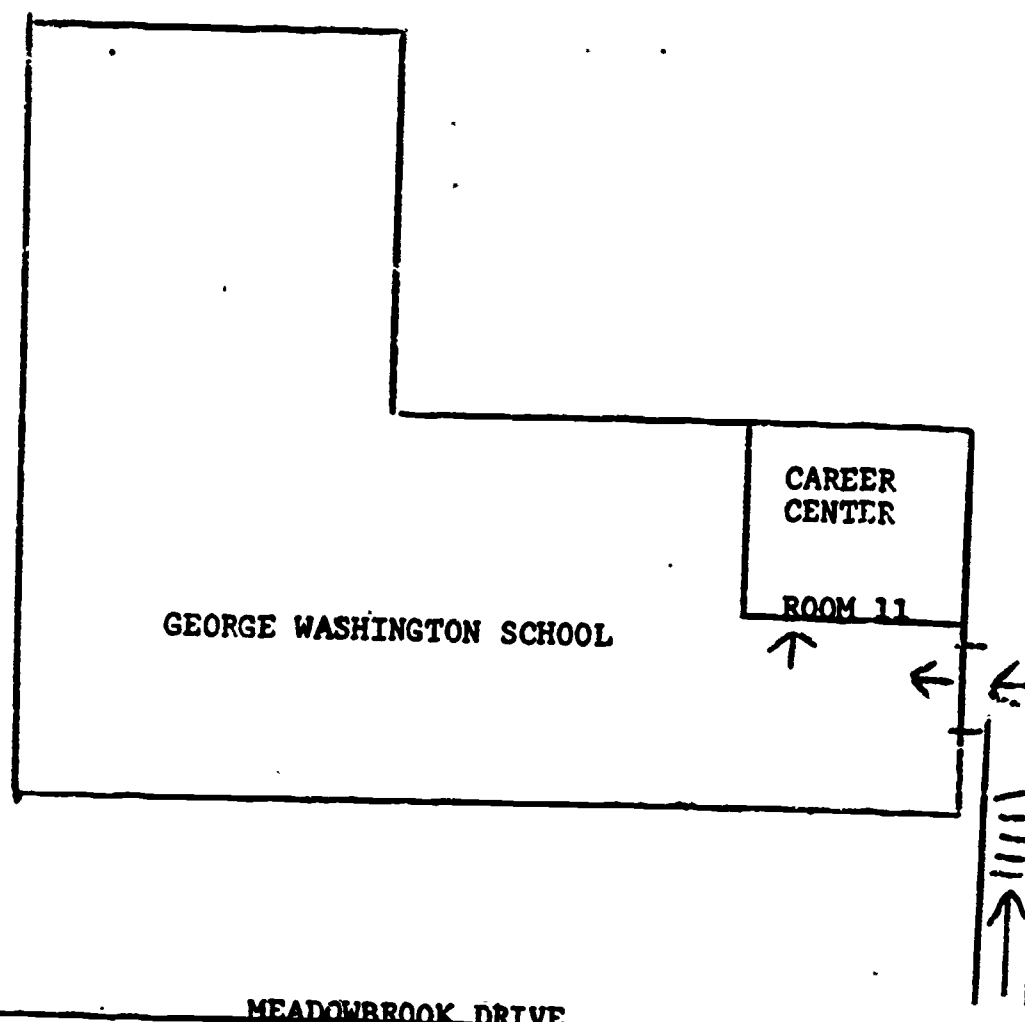

Page 11

BEFORE CAREER CENTER VISIT

1. Organize pupils into teams of two, to work together in the study carrels while at the Center. Assign a number to each team.
2. Have the Orientation Study finished.
3. Have each child bring a pencil.

UPON ARRIVING AT CAREER CENTER

Speaking of manners....when you arrive at George Washington, classes will be in session. You will come in the end door, nearest Nottingham School, and proceed directly into Room 11. Coats, boots, etc. will be removed in the room. By doing this we shall minimize any chance of disturbing other classes. Please see that your class enters in single file and in silence

1. Encourage pupils to read books about occupations for leisure reading or for oral and written reports.
2. Pupils can assume the roles of workers through dramatic play. They can write short plays based on their interpretations of TV Programs, outside reading, or interviews with employed acquaintances.
3. With your guidance, pupils can also create the roles of various workers through spontaneous role playing. For example: a hospital pharmacy, a retail store, or a school library.
4. Use experiments and displays which may expand concepts presented in the Career Studies. For example: different kinds of thermometers might be demonstrated in connection with the Hospital Careers Study, or a toy car display with the Auto Workers Study.
5. Children may make scrapbooks on occupations...include vocabulary, pictures, clippings and original stories or reports of interviews with workers.
6. Pupils may be encouraged to interview acquaintances in various lines of work and report on these to the class.
7. Invite parents and other relatives of pupils to visit your class and describe their work.
8. Plan a field trip to a business or industry of interest to your class.
9. Let children help develop a vocabulary list to supplement words provided in the glossaries.
10. Use vocabulary lists for spelling bees.
11. Ask pupils to write stories or poems which reflect their concepts and interpretations of facts about workers.
12. Let pupils draw pictures to illustrate various jobs. Use for displays.
13. Organize pupils into teams to collect or draw pictures of people at work and use these in preparing weekly bulletin boards.
14. Ask children to help develop a chart of the major industries in Syracuse, showing how they contribute to community well-being.
15. List some of the many occupations on which Syracuse depends for successful business and industry.

INDIVIDUALIZED CAREER STUDIES

There are 21* Career Studies described in Section C of this manual. Please read these descriptions and discuss them with your class.

It will be necessary for you to send the Career Study order for your class to the Career Center 10 days before your Career Center visit, in order to be assured of delivery. Additional studies may be chosen after the class visits the Center. It is your decision as to:

- a. how many studies each child will undertake (we suggest at least three),
- b. the level of difficulty each will do.

Every Career Study will have accompanying Progress Sheet. These must be accounted for at the end of your scheduled program by returning them to the Career Center with all data recorded on them.

Career Study order form is in the self-addressed envelope inside the front cover of this manual.

CAREER STUDY KITS

Your classroom will have its own complete Career Study library for approximately 3 weeks. All materials necessary for the Career Studies will be a foot-locker, with lock, and can easily be stored in your classroom. See page 8 for suggestions as to appointing student chairmen of inventory duty. Inventories should be done daily on the books, cassette tapes, cassette recorders, filmstrips, previewers, folders, electrical extensions, etc. All items must be checked out before the kit is reassigned to the next classroom.

*There are 19 studies finished. The remaining two will be finished at a later date.

EVALUATION MATERIALS - RETURN TO CAREER CENTER

- I. ATTITUDINAL SURVEY - PRE PROGRAM; one per student, administer before any part of program is begun.

ORIENTATION STUDY - PRE-TEST; one per student, administer before any part of program is begun.

ORIENTATION POST-TEST; one per student, administer at completion of Orientation Study.

BRING THESE THREE SETS OF COMPLETED ITEMS WITH YOU TO THE CAREER CENTER AT TIME OF FIRST CLASS VISIT!

- II. PROGRESS SHEETS; one per child, per study.

POST PROGRAM ATTITUDINAL SURVEY; one per child

TEACHER'S ANECDOTAL SUMMARY; one per teacher

RETURN THESE COMPLETED MATERIALS WITH THE CAREER CENTER STUDY KIT UPON COMPLETION OF PROGRAM!

WORLD OF WORK ORIENTATION --- GOALS

As a result of this program student will

- 1- develop an awareness of the world of work by completion of a program of self-assessment in relations to career goals
- 2- develop an understanding of the relationship of school to work by successful completion of individualized study unit
- 3- develop an understanding of the meaning of work in our economic system, including such concepts as division of labor and interdependence and the importance of work.
- 4- build an understanding of the vocabulary of the world of work necessary for use in Career Studies.
- 5- develop an understanding of:
 - a. Social Security
 - b. Labor Laws
 - c. Unions
 - d. Professional and non-professional categories: (Degrees: Associate, Bachelors, Masters, Phd); (Entry level, unskilled, semi-skilled, apprentice, journeyman, Master)
- 6- Introduce world of work routines:
 - a. job application
 - b. want ads
 - c. job interview
 - d. pay rates (hourly, weekly, annually)
- 7- Introduce practice of individualized and/or independent instruction demonstrated by the successful use of the Orientation Study.

TEACHER'S GUIDE - ORIENTATION STUDY
An Introduction to the World of Work

This study serves a two-fold purpose:

- A. To introduce the concept of exploring occupations and work-related attitudes and conditions, and
- B. To acquaint teachers and students with this form of self-directed study.

This study provides the foundation for the entire program. It is essential that sufficient time be allowed to cover all activities thoroughly. For this reason, the Orientation Study is to be used in place of the traditional social studies and language arts programs, not in addition to it.

Most of the vocabulary and the understandings will be new to the students and so have been carefully developed within the study. It is recommended that these understandings be discussed with the class prior to doing each lesson, whenever possible with the filmstrip indicated.

INTRODUCTION: If sixth graders have reached the study of Ancient Greece, they will recognize the term philosopher. This is an excellent opportunity for discussion - to let the class interpret what the social and moral issues of today are, and how they might affect their lives; why it is essential that we learn to live together with our differences; how their future as a successful person depends upon understanding ourselves first.

LESSON I: Needed Materials: Filmstrip #1 - Who Are You; help wanted from newspaper for each child. Explain the purposes of this study (learning about jobs and learning about ourselves).

LESSON II: Needed materials: Filmstrip - What Do You Like to Do? Introduced by a personal interest inventory. This is an excellent opportunity for students to discuss how their interests differ and how these differences should lead to different life styles. Page 11- since many of these terms are new, they are described in the glossary; Page 12 - all subjective. This page should be used for class discussion. Pre and post test based on pp. 6 and 11.

LESSON III: Needed Materials: Filmstrip - What Good Is School? The idea in this important lesson is not usually appealing to children. It may be a good place for some students to role play Henry and Tom, or make up skits of their own. The yellow and pink study users should progress independently through pp. 16, 16a, and 16b, while the blues do only pg. 16, as is included in their study. Pre and post test based on pp. 15 and 16.

LESSON IV: Materials needed: Filmstrip - What Is A Job? The introductory pages should be done as a class activity. This is a good opportunity to review social studies in the framework of careers. From this point on, many job titles are mentioned in an effort to constantly expose the student to the many enormity of the world of work.

Job duties are stressed in the various exercises that follow; once again, the student is shown the many areas available to him, of all natures and at all levels.

Page 27 - This area treats elementary economics, developing only the basic concepts.

WORK - WANTS - PRODUCE - GOODS - SERVICES - SATISFY

Explain to students that work is an important part of the process by which people satisfy their wants. They should understand that (1) most of the things we want (other than air, scenery, sunlight) are not free, they have to be produced by someone. The people who do the work have to be paid and the things they use to make the products cost money, so the products are not free. (2) whether work is done at home or in a store, the results are the same: goods and services to satisfy wants. (pre-post test) Aim toward the understanding that work is the use of energy to (pre-post test 2d) produce goods and services. (Check students' comprehension of vocabulary and stress use of the glossary.)

Ask: Does the work you and others do around home help satisfy the wants of your family?

Are all the things a family wants produced at home? Do some families work in places other than home to produce goods and services for others?

Most of the goods and services we want are produced by others, working away from home. (pre-post 2c)

Goods and Services pg.27

The purpose of this is to distinguish between goods and services. After doing the exercise, discuss answers as a group. A chalkboard listing could be made of those workers who produce goods and those who provide services, compiled from students suggestions.

Enrichment - a bulletin board made up of newspaper and magazine pictures, labeled by occupations and the goods and/or services produced by each.

SECTION B

Page 14

Page 28 - Division of Labor (pre-post test IV - 2b)
The different jobs done in a home by family members is a good way to introduce this topic. The exercise on pg. 28 is done in the school setting. Other more complex settings (industry, hospital, community, etc.) could be gone into from here.
In division of labor, each worker has special interests, abilities
Ask: What are the advantages of division of labor? (makes work easier, saves time, leads to higher quality product)

Page 29 - Interdependence of workers:
Each of us depends upon many different workers to produce the goods and services in our complex society. Discussion may be built upon interdependence from the family unit up to the global affairs.

LESSON V: Materials needed: pg. 31 filmstrip - What Are Job Families?

It is important to develop understanding of this term as a "community" of jobs all related, containing levels of work from unskilled up through the professional. This is the basis for the CAREER LADDER concept used throughout the program.

Page 32 - (pre-post V -1)

Deals with the terms unskilled, semi-skilled and skilled.
The work is self-explanatory and can be expanded upon at teachers discretion.

Page 39 - The area of technicians and technical training will be new to most students. Since this is the area in which many of the students will be successful in their working career, it should be dealt with thoroughly. The courses available at Central Tech provide an excellent framework for discussion, also, the many 2 year technical schools.

Page 40 - This topic is open ended - suggested topics that may be covered are: degrees, (Associate, Bachelor's, Masters, Phd), graduate and undergraduate school, certificates and licenses.

APPENDIX - page 45 Social Security

The Social Security office (James St.) has been most cooperative with teachers who have called and requested a resource person to come to their classroom and explain the Social Security system. Following this, you may want to ask that office for the official application forms for each student to acquire his Social Security number.

Page 50 - Suggested meaning of labor union, from the American College Dictionary, Random House: An organization of workmen associated together for some common purpose. Example: better working conditions, worker benefits, etc.

SECTION B

Page 5

Page 53 - Interview type #1 - although both types of interviews are important, the first type is essential for use later on in the career studies. All hints on page 53 should be learned and practices. Tell the students they should mark these pages for reference when they do their field trips and interviews.

Page 54a is a preveiw to pg. 55 in that it deals with the type #2 interview - those in which the reader is being interviewed. This sheet is for information only.

Careers in House ConstructionTeacher's Guide

This is a very thorough Career Study identifying the many workers involved in house building. The workers are divided into the following categories:

- a. Professional - architects, surveyors, draftsmen
- b. Skilled - electricians, plumbers, roofers, etc.
- c. Semi-skilled and unskilled laborers discussed briefly.

There is an abundance of material written into the study such as filmstrips and books which provide the basis for many activities.

The entire study, though lengthy, is very precise and explicit and should present no difficulty to any type of student.

Suggestions for Teaching and Implementing

The pupils doing this study should first of all look over the abundance of material available in the kit. They should carefully examine the booklet itself and the glossary. There are many illustrations that encourage discussion on the duties and materials used in the career field.

A trip to a building site for a house would be an excellent activity. Pupils could interview the workers; perhaps a parent of one of the students who works in this field could serve as a resource person.

The glossary should be stressed as a useful tool provided to help understand and do the study.

Restaurant CareersTeacher's Guide

This study explores many jobs in the restaurant field, but most of the activities center around the duties of a waitress.

The study begins with a filmstrip introducing various occupations in this field. From here the pupil examines the five categories of people who deal in food services in general.

Using the many materials available, the pupil will learn through different activities some of the jobs and the work involved in each. Included in the first section of the study will be found an activity sheet entitled Lou's Quick Lunch. The purpose of this exercise is to provide children with learning to read menus, figuring the cost of several items, etc.

The last part of the study deals with the educational and personal requirements, the many types and kinds of restaurants, and the advantages and pay scale of the various jobs.

The study should not provide too much difficulty for any of the three levels as there is much material available. The blue level is very concrete and directs the pupil to the specific material. Both yellow and pink require more initiative in finding and listing items, the pink naturally demanding more than the yellow.

Suggestions for Teaching and Implementing

To introduce this study, the teacher could draw on the children's experience in eating in restaurants. The filmstrip "Job Opportunities in a Restaurant" gives an introduction to the various careers to be found.

Have the children look through the study before starting, so that they are aware of the content and the activities required. Be sure they particularly read over the glossary and look over the brown folder containing the material.

The enrichment activities suggest interviews with a restaurant worker. This could be handled by having one student interview a worker and sharing his findings with the class or taking groups of children to lunch, having each pay his own way. Perhaps a waitress can come to your classroom to be interviewed.

To acquaint the children with the many types of restaurants, the phone book and a newspaper are required. Perhaps the children could relate orally their experiences in different types of restaurants.

The enrichment activities include planning a meal, serving it, etc. This activity lends itself very well to the Skills Phase program whereby the pupils doing this study could actually execute the planning and carrying out of the Restaurant when this part of the program is in your school.

Store WorkersTeacher's Guide

The career study on Store Workers was written with a very definite purpose in mind - to show the many job opportunities there are in the retail field. Emphasis was put on the many positions requiring a "high school or less" education. This was done to bring to the student's attention that all jobs don't require a college education. However, with a high school diploma one can attain a certain high standard in the employment field.

By the use of filmstrips, tapes, briefs, etc., the student discovers positions such as stock clerk, interior designer, display worker, comparison shopper and many more. Some of these job titles are familiar to the pupil while others are very unusual and should arouse a degree of curiosity as he works through the Career Study.

Cooperation, enjoyment of working with others, a desire to please others are all brought out in this Career Study. It is not too difficult, so it should not require a long time to complete.

Suggestions for Teaching and Implementing

1. SRA Briefs have been taped for non-readers. These should be made available to all the students working on this study.
2. The reading of graphs should be reviewed if this activity has not been covered in Math. (Bar graphs specifically.)
3. A discussion of what a career ladder is, what is found on it, why it's a good way to show information may help the students in completing such an activity.
4. This study affords an excellent opportunity to reach out into the neighboring community for store owners, clerks, people from home who work for stores to come in and speak to the students.
5. Letter writing especially thank you letters will be used as an activity and may need reviewing.
6. A walk through a shopping center or neighborhood to become aware of the different kinds of stores should prove both interesting and informative.
7. This would lead to interesting activities such as making a model neighborhood from construction paper, drawing scale models of stores (pink) or just paintings or drawings of what was seen on this walk.

NOTE: In this one instance, a combination of the yellow and pink levels would provide a comprehensive picture of jobs in the retail field. The activities that overlap are few and most students would benefit from the use of both levels.

FirefightersTeacher's Guide

Notice the word, "Firefighters," because of women's Lib they are no longer called "Firemen." However, many of the books were printed before this movement became so active, therefore, the term "firemen" is used in titles and in book content. Nevertheless, the new term is preferred.

This study covers service careers under government control with the advantages of job security, paid vacations, hospitalization, and requiring less than college schooling.

Through the use of SRA Briefs, tapes, Career Briefs and Summaries. The many job titles listed are described as to Nature of Work, Requirements, Conditions and Advantages.

Problem solving bar graphs, career ladders, letter writing and dictionary work are activities included in this study.

Terminology found only in firefighter careers is brought to the attention of the student.

The levels of this career study are written in a concise manner easily followed if directions are carefully read.

This study would be considered average - not too difficult nor too easy.

Suggestions for Teaching and Implementing

1. Letter writing is an activity that should be reviewed before the student begins work on this study.
2. He will meet the term "Career Ladder" which may need explaining.
3. Bar graphs are included in the yellow and pink level of this study. Children may not have worked with graphs at the time this study is implemented in your school. Refer to pages 6-8 in Section A of this manual for a sample lesson on bar graphs.
4. In the pink and yellow career study the children have to make a time line. This activity may be new to them and may need some teacher's guidance.
5. The use of the glossary needs to be stressed.
6. As an enrichment one of the children may wish to invite the firefighters who inspect the school to visit and speak to the class. These men are anxious to have the opportunity to talk with the children.
7. In the pink level, page 2, the following job titles could be listed:
 1. Hooksie
 2. Smoke eater
 3. Watchman
 4. Patrollo
 5. Inspector
 6. Volunteer Firemen
 7. Smoke Jumper

FIREFIGHTERS

Teacher's Guide

Page 9a

CAREER LADDER

<u>Job Title</u>	<u>Salary</u>
Fire Chief	\$18,000
Deputy Chief	\$14,500
*Fire Marshall	\$10,530 - \$11,730
Captain	\$10,130 - \$10,930
Lieutenant	\$ 9,530 - \$10,130
Firefighter	\$ 7,830 - \$ 9,330

This chart is included for your information - in case a firefighter is not able to talk with your class.

There is a form letter requesting a class visit to a Captain Duncan of the Fire Department. You can find this letter in packet 3.

* Please have students change this job title as the Fire Marshall is on a different salary schedule.

Careers in Office WorkTeacher's Guide

The Office Workers' Career Study provides the student with a basic background of information concerning what it would be like to work in an office.

All three levels (blue, yellow, pink) are not overly difficult or lengthy. Each, however, introduces to the student what is needed to be developed now in reference to education and personal traits and attitudes if he or she wishes to enter a position in an office.

The only real difference between the three levels involves the fact that the yellow and, particularly, the pink studies require higher levels of reading and writing skills than the blue study. The yellow and pink studies also touch upon a larger number of jobs found within an office.

The teacher, as in all the career studies, should discuss with the students the fact that attendance, personal traits and attitudes, and academic progress at the present time will most likely have a direct bearing on the gaining of employment in the future.

Airport WorkersTeacher's Guide

The Airport Workers study is about the different jobs connected with the running of an airport.

A large group of employment opportunities is covered here. It is intended to be done by those students who feel that they may venture into this area of employment. Like the others it is divided into three reading levels.

The study follows the same plan as the others which you have done. The first part is concerned with the Nature of Work. It contains many learning activities which expose the student to the numerous airport jobs and the duties involved in each.

The second phase of the study is conceived with the educational requirements needed in these jobs. The concentration here is placed on school and the subjects one should study.

Phase three informs the student of some of the different working conditions he may encounter, whether he will work indoors or outdoors and some of the safety precautions needed to be taken.

The fourth and final phase informs him of the advantages of the different jobs. It gives a salary chart and enables the student to find out the different salaries for the different jobs.

The student should obtain a sufficient amount of knowledge about airports when he completes this study to know whether or not to pursue his interests in the field.

Suggestions for Implementing and Teaching

The teacher should initially introduce Airport Workers in a general way. The children should look through the study and be aware of the length of the study, the different activities which are to be done, and the kind of resource material that is available to them.

It is essential that the teacher review or teach the class how to use the glossary. Many of the activities are dependent upon knowledge of the words listed in it.

The learning activities stress skill in the following areas:

1. Reading Comprehension
2. Outlining
3. True-False
4. Matching
5. Multiple Choice
6. Completion
7. Some mathematics in Phase 4

It is hoped that the student will apply these skills which he has learned in class to the completion of this Career Study.

People in Newspaper CareersTeacher's Guide

The career study "People in Newspaper Careers" provides the student with a good understanding of the people and work involved in the putting together of a newspaper.

The Career Studies are divided into three levels with each level containing four sections.

The blue career study is relatively easy. The nature of work section, as in all levels, introduces vocabulary related to the newspaper industry. Contained in this section are job descriptions and a fairly good audio-visual presentation on just how a paper is put together.

The requirement is basically the same for all levels although higher levels of reading and writing skills are needed for the amount of training and education for a particular job is covered.

The conditions section concerns itself with what it is like to work at a particular job at a newspaper. Whether its indoors or outdoors, working alone or with others, etc. Similar materials are covered at all levels, but the depth is much greater in the yellow and pink studies.

The last section deals with advantages of working in the newspaper industry. Covered in this section are such things as salary, unions, fringe benefits and what the future holds for a particular position. Basic material covered in again similiar, but the enrichment materials in the yellow, and particularly the pink study, require a high level of reading and writing skill.

NOTE: One enrichment activity directs the student to imitate a reporter by taking notes and writing them up in story form. This may require extra guidance from the teacher.

Also, please note cartoon insert for page 7a for pink and yellow.

HOSPITAL CAREERSTeacher's Guide

Hospital Careers opposed to Health Careers stresses only those positions connected with hospitals. Students believe these to be nurses and doctors, not realizing the many employees it takes to run this tremendous enterprise.

With this in mind, activities have been included from candy stripper to doctor to show students that one can start in this field with little education then through desire and continued education can climb up the career ladder as far as they wish to go.

New filmstrips, books and pamphlets describe the duties, educational and personal requirements, working conditions and advantages of careers in a hospital community.

The study introduces the concept of the "hospital team", (workers who deal directly with the patient) as well as the behind the scenes workers who are necessary to both the patient and the team.

The study is not a difficult one but presents job titles which will be new to most students.

Suggestions for Teaching and Implementing

****IMPORTANT**** - Many of the same resource materials for this study are used in both the hospital and health careers studies. Children should be cautioned to check both brown folders for these materials and to see that each is returned to its proper place.

Have the children look through the study before starting so they are aware of the content and the activities required. It is important that they become familiar with the glossary and the materials in the brown folder.

Children should be prepared for independent use of the resource material listed in the bibliography.

The importance of "reading and following directions" cannot be stressed too much. It will be an additional help to the children if they are taught to

- 1- first survey the questions they are to find the answers to,
- 2- read to find the answers. Most of the exercises call for specific information - one title, three duties, etc.

Enrichment activities include drawing pictures, making sample booklets, making paper nurse caps, etc.

One of the activities is to interview the school nurse or health clerk. She is a valuable resource person who can contribute a great deal to the depth of the study. She should be encouraged to work with the students, especially in the section "Requirements."

To acquaint the children with the hospital facilities in the Syracuse area, the use of the yellow pages in the phone book is required.

Most children have had some exposure to hospital experience and could relate it orally. This would enrich the study for himself and the entire class.

the yellow and pink levels are given the opportunity to construct their own crossword puzzle and will need graph paper to do so.

Charts are used in the fourth section, "Advantages". The materials needed for these charts are specified in each case.

Skimming is used as a learning activity throughout the study. It is a technique that needs to be encouraged as the children search through the material for their answers.

FASHION AND CLOTHING CAREERSTeacher's Guide

The Fashion Career Study begins with an introduction to the many jobs that are to be found in the fashion world, and continues with vocabulary unique to this study.

A filmstrip "Manufacturing Clothing" and several books give an overview of how a garment is made from start to finish. In the pink and yellow study, the pupil learns a bit of the history of the development and use of clothes from ancient to modern times.

Next there is a series of activities designed to identify job title with job descriptions and each of the 3 levels examine the job of a dressmaker, model, and designer in some depth.

The rest of the study is devoted to the conditions, requirements, and advantages of various jobs. Included in the last section are table (blue) and graph reading (yellow and pink) with related math exercises.

The blue study is fairly easy and should present no problem to a slower student. The yellow study requires quite a bit of reading and finding facts, but the study is quite precise about the location of the answers. The pink study is relatively difficult and would require a student with real interest and diligence.

Suggestions for Teaching and Implementing

Children, especially girls, are interested in clothes and the teacher can introduce this study by capitalizing on that interest by bringing in teen fashion magazine, swatches of fabric, etc.

The student who does this study should be encouraged to acquaint themselves with the entire study, the glossary, and all the material available before beginning.

This study especially lends itself to working in groups, but it should be stressed that books and pamphlets required in the activities be read thoroughly, carefully noting titles and page numbers.

Since modeling is a very limited career field, good grooming is stressed in the blue and yellow study rather than job description. Here the teacher may use the 6th grade health book or other material to present ideas on grooming.

The enrichment activities call for a field trip and interview with a department store worker in the clothing section, but if this is not possible, the teacher might invite an attractive girl to the class to share her ideas on clothes and grooming.

One of the enrichment activities call for the planning and giving of a fashion show. This might be included in the skill phase of the program, when the class does the restaurant project, under the heading "Fashions at Luncheon."

Telephone WorkersTeacher's Guide

This study is available in only the yellow and pink reading levels. (The blue level is currently under revision)

The yellow career study is average in length and includes enough vocabulary work to enable most students to learn about the various jobs in the telephone industry. There are activities in which the student is gradually led to learn what different job titles describe.

The requirement section discusses the education and training necessary for a particular job...The conditions section tells what the job will be like—working alone or with others, outdoors or indoors, etc. The advantages section deals with salary, fringe benefits, and the future of a particular job.

The pink career study is somewhat difficult and long but provides for a really in-depth study of almost every job at the telephone company. A high level of reading and writing skill is required for this study. This career study also has work within it which will be presented to the class when the student has concluded the study.

PEOPLE WHO WORK IN CONSERVATIONTeacher's Guide

This study introduces the term "Conservation" to all three levels, including the jobs of the forester, soil conservationists, and wildlife conservationists. The True Book of Conservation would help the teacher in establishing a background for this study.

Included in the first section are filmstrips about the paper industry and the many jobs offered by it. (Some of the words may be difficult but most are defined in the glossary.) Also included is a list of job titles and descriptions which have to be filled in.

The last part deals with salary and other advantages requiring the children to complete graphs.

Many enrichment activities are suggested that can be begun in class and completed during the Skills Program.

The study may tend to be difficult because of the vocabulary in the filmstrips. Serious, interested students should find this study fun. If the student is more interested in animals, he should be referred to the animal study.

Suggestions for Teaching and Implementing

The teacher should stress the use of the glossary before children begin. Many terms that are difficult in filmstrips must be defined.

The following items must be understood before the students begin the study:

1. What is a planter box?
2. What is a green house?
3. What are relief maps?
4. What is a collage?

These crafts are part of the enrichment activities.

Children should know that all information about requirements is in the brown folder. They will have to read and listen to tapes from the S.R.A. briefs, dependent on their need for information.

Bar graphs are used to compare salaries, therefore, the making and interpreting of a bar graph should be taught.

Postal CareersTeacher's Guide

This study is about careers connected with the post office. The greatest emphasis is placed on careers requiring less than or a high school education to stress that one can attain a job future without having a college education. Because of this, most activities center around mail handlers, window clerks, distribution clerks, mail carriers, and parcel post delivery men. The service to society is also included in this study.

A filmstrip entitled "The Post Office and Its Workers" introduces the three levels of this career study to arouse interest in the many postal positions available.

Books play a very important part in the activities of this study. Hopefully, children will read these books when time permits.

Math questions, writing a complete sentence, alphabetical order, filling in blanks, working with a career ladder are some of the activities included in this career study.

Each level includes a glossary of words used in this study. The postal study is not too difficult for all levels. Directions are easily understood.

A visit from the mail carrier who delivers the school mail is an excellent method of stimulating interest in this study. He will give the teacher the number to call to arrange this visit.

If a field trip to the Post Office is arranged, have each child take with him a letter and envelope addressed to himself. Then he can watch each process a letter goes through before it is delivered to his home.

Suggestions for Teaching and Implementing

Because use of books is one of the main activities in this study emphasis on following directions, carefully reading titles and page numbers should be brought to the pupil's attention.

In some cases the child is directed to list a specific number of answers. If the number is not given then he is required to list all the answers. i.e. list 4 duties or list the duties.

Whenever SRA Briefs are used in an activity a tape of the SRA Brief has been made to be used by the non-readers. Children working on all three levels may use and enjoy these tapes.

Each level has a glossary included pertaining to words used in the particular Career Study. A discussion of the purpose of a glossary will help the child see its value and avoid the teacher's necessity to explain the meaning of a word.

As more enrichment children could illustrate a trip to the post office, a mail carrier in uniform with bag, cap, etc., a booklet or whatever proves most interesting to them.

People Who Work With AnimalsTeacher's Guide

This study is one of the easier studies to complete. There is only one filmstrip for this study which deals with animal care. Introduced in this study are the veterinarian, pet store worker, zoo keeper, zoo director, dairy farmer, poultry farmer, and fur farmer.

Many of the resources, especially the pamphlet, "How to Live With a Neurotic Dog" are amusing and enjoyable. If the children are careful to follow the directions, they should have no difficulty with this study.

Suggestions for Teaching and Implementing

Looking for details is one skill that is used frequently in this study. Children are required to read a book or pamphlet and then to list their answers to a question.

Most of the enrichment activities can be completed in class. If the children choose to make a bird feeder, it can be completed during the Skills Program. A visit to a pet store is an out of class activity that children can do on their own. Other activities include making an animal cage from a shoe-box, making a scrapbook of animals (this could be given to a primary class afterwards), and writing a story. The pink level is given a crossword puzzle to do.

All SRA material has been taped for the children to listen to as they read the stories. All material except for filmstrips and books are in the brown folder.

Auto WorkersTeacher's Guide

This career study begins with the examination of the various jobs in the automotive industry. Throughout the study in all levels, the occupations of Gas Station Attendant, Auto Mechanic, Car Washer, Auto Body Repairman, and Automotive Brakeman are studied in more depth. The filmstrip Working With Cars is used as an introduction to the study.

The study also examines the nature of work by using such filmstrips as Changing a Flat Tire and using such books as Automobiles-How They Work.

The rest of the study includes the conditions, requirements, and advantages of the jobs in this study.

The Blue Career Study is quite easy and short with the directions being fairly explicit about where material may be found.

The Yellow Career Study introduces the student to the concepts of vocational or technical schools and on-the-job training. This study also includes some vocabulary and alphabetizing not found in the blue study.

The Pink Career Study has even more language development such as unscrambling words and reading facts from a newspaper and putting them in outline form.

For all three levels this study should be relatively simple and be accomplished without too much difficulty.

Suggestions for Teaching and Implementing

The natural interest most boys express in cars and mechanical skills can be capitalized on through use of car ads in magazines, collections of toy cars, or drawings that the children can make.

As in all the career studies, the entire study should be looked over thoroughly, including the material available. Emphasis should be placed on familiarizing the pupil with the glossary, and the careful reading of the assigned material.

A visit to a garage or vocational school mechanics department would be most helpful in the development of this study. The Career Center will try to arrange this type of field trips.

The inspection sticker is mentioned in this study, so the teacher might be prepared to answer any questions concerning car inspection or let the children examine a car inspection sticker.

Since many of these studies require children to find facts from resource materials independently, the teacher should spend time developing techniques for this type of learning.

Careers in TransportationTeacher's Guide

This is a study of some of the jobs available in the world of transportation. Because this is such a vast field to cover, only a few jobs are stressed in depth.

The first section of this study begins with a brief explanation and history of transportation. It is hoped that the pupil will understand that man has always been concerned with the moving of people and things from one place to another.

In the next section, jobs in the field of transportation are broken down into four major areas. These areas are:

1. Drivers, i.e. busdriver, taxi driver, ship's captain
2. Loaders, i.e. fork lift operator, winch operator
3. Planners, i.e. supervisor, dispatcher, salesman, traffic manager
4. Helper of People, i.e. stewardess, chef, ticket salesman

Under requirements, the pupil is asked to study one two, or three jobs, according to his level. The jobs of busdriver, power truck driver, and shipping and receiving clerk are those he can choose from.

In the remaining parts, explanations for the jobs of routeman, taxi driver, and long-distance truck drivers are given. Charts and a graph show the salary scale of jobs in the world of transportation.

This is a good study for those interested in being a busdriver or truck driver. The blue level is a little difficult, but those choosing it will be able to answer the questions if they follow the directions closely. These directions guide them, almost word for word, to the correct answers. The wide range of activities and resources should make it interesting for the yellow and pink levels.

Suggestions for Teaching and Implementing

There are several ways a teacher can introduce this study to those interested. The filmstrip "Transportation and Transportation Workers" could be used. The pupils interested could take a walk around the neighborhood, especially if it is near a major street, and make a list of the modes of transportation they see on their walk. A transportation scrapbook could be made from an old magazine or a story could be written about "How French Perfume Came to Our House" or "How Danish Bacon Got to Our Table".

Before a pupil begins this study he should look over the booklet carefully. He should take time to read the glossary and become familiar with the new words he will meet. He should also look through the booklet to see the various jobs studied in depth.

The interview tapes of a taxi driver and a shipping and receiving clerk should be listened to carefully. There are answers to be given after each tape according to level.

Pupils should be encouraged to interview a bus driver or a truck driver. Perhaps arrangements could be made for the school bus driver to come in a talk to the class. A round trip on a city bus would provide a good opportunity for them to see the duties of a bus driver. A trip to a local trucking terminal would also be good to see the way trucks are loaded.

Pupils are encouraged to use newspapers to find out about available jobs in the field of transportation.

Careers in Heavy ConstructionTeacher's Guide

This study acquaints the pupil to the many people who work together to build bridges, dams, and large buildings. The job opportunities in this field of heavy construction are numerous.

In the nature of work, the pupil is introduced to the three different groups of workers found in this field. Under professionals he studies briefly the surveyor, architect, civil engineer, and draftsman. Carpenters, structural iron-workers, bricklayers and machine operators are met under the section involving skilled and semi-skilled workers. Unskilled workers make up the last group. These are the construction laborers.

In the next part, the pupil looks for the qualifications of various jobs in the field. Special stress is given to the training and the type of personality each worker must have.

The last two sections cover the conditions and advantages of a job in this field. Graphs, charts and a pupils knowledge and research are used.

This study presents a good overview of the many jobs available in the field of heavy construction for each level readers. Naturally, the blue level is shorter and requires less than the yellow or pink levels.

Suggestions for Teaching and Implementing

This study could be introduced in many different ways. Boys and girls, on their way to school often pass many building sites. A discussion about the number of men and the kinds of machinery they see on these sites, could introduce the unit. The book Come to Work with Us in House Construction contains poems about the many available jobs in the construction field. A game of "Who Am I" using these poems would be an enjoyable way to introduce the unit. The filmstrip Heavy Equipment Operators could also be used.

The glossary contains many words they will meet in the study. Be sure to have the pupils look it over carefully. Have them also look over the booklet to see the many activities and materials they will use.

In this booklet, there are many activities. The SRA Briefs are used as sources for requirements, conditions and advantages. There are also two tapes with filmstrips to use.

The pupils are introduced to the symbols an architect uses. They are then asked to make their own blueprints of specific places. The higher group is also asked to use Encyclopedias for information.

Health CareersTeacher's Guide

****IMPORTANT**** Many of the same resource materials are used in both the Hospital and Health Careers studies. Children should be cautioned to check both brown folders for these materials and to see that each is returned to its proper place.

Health Careers is such a tremendous field it was necessary to limit this study to those positions considered most common as nurse, pharmacist, aides, public health nurse, etc.

Through filmstrips, books, pamphlets and cards the duties, educational and personal requirements, working conditions and advantages of careers in the Health field are explored.

This is not a difficult study for each level but it is a very thorough one and is longer than some of the other career studies. However, it covers such important services through use of many tapes and interesting activities. The length of the study should not be a deterrent to choosing it.

Suggestions for Teaching and Implementing

1. All SRA Briefs are taped for the non-readers. These may be used by all the students.
2. Use of the bibliography is most important as often the children are referred to the bibliography for titles of books, pamphlets, etc. to be used in an activity. A lesson on this may be needed.
3. Emphasize the importance of reading directions so the student gives the exact information asked for as, one filmstrip, four duties, etc. Often books are to be completely read. These will be easy reading.
4. Outlining is an activity in this study. The format of an outline may have to be reviewed before children doing the pink or yellow level can complete the study.
5. Writing letters may have to be reviewed before this study is begun.
6. Math problems involving adding, subtracting and multiplying are included in this study.
7. A career ladder appears in the pink level. The term career ladder may need defining.
8. Outlining is mentioned as an activity in the pink study. This word may also need defining.

PolicemenTeacher's Guide

This is a good study for those pupils who are interested in becoming policemen. In it, the pupil becomes familiar with the various kinds of policemen. They also see the different tools needed by policemen and have an opportunity to meet the language familiar to this field. The requirements and conditions of a career in this field are easily understood. The advantages are shown on a career ladder.

The blue level of this study is very easy to follow. The book "About Policemen" is written in such a way that the information needed can easily be obtained. The yellow and pink are equally as interesting and contain activities that will challenge the reader of each level.

Suggestions for Teaching and Implementing

This study can easily be introduced through a discussion about Policemen. In the yellow and blue studies there is a letter to an editor that could be read to the class. There are two filmstrips that could be shown on the training and duties of a policeman. Articles found in the daily newspaper on crimes and other events could also be used.

A trip to the Public Safety Building would be an excellent activity to include. Arrangements can be made through Captain Donahue's office at the Public Safety Bldg. If you would prefer, a policeman to visit your classroom, please use the letter in packet 3. Pupils could interview the school crossing guards..

In both the yellow and pink studies there are activities on the history of policemen and information about policemen around the world. Pictures and bulletin boards can be made from this information.

Essential to the introduction of this study, is a careful examination of the study itself and the glossary. There are many illustrations that encourage discussion on the duties and materials used in this career field.

The pupils should read the prescribed book thoroughly. Besides these, the book "West Side Cop" is recommended for the pink level.

This study involves the protection and safety of each of us in our daily lives. The idea of obedience to laws both inside the classroom and outside should be stressed.

Policeman

Page 23a

This chart is included for your information in case a police officer is not able to talk with your class.

School WorkersTeacher's Guide

The Career Study in School Workers was designed to show the many job opportunities there are in the education community, such as maintenance men, teacher aides, teachers, librarians, athletic coaches, health workers and administrators.

The study begins with a filmstrip introducing these occupations. From here the pupil investigated these fields in greater depth. A field trip to the Board of Education is included as an enrichment activity. Educational requirements for workers unskilled up through the professional levels are dealt with in the section "Conditions of Work". The number of fields the child studies is determined by the color of the study he is doing. Here the format of the study varies from the others in that the learning activities do not relate only to conditions of work, but rather encompass all facts about that career. This is necessary due to the enormous amount of material that is related to jobs in the school workers field. You will find also, the learning and enrichment activities for each field are located together for the sake of continuity.

Although the study is lengthy, the child is given a choice of activities to follow within it...as indicated on the Progress Sheets.

No learning activities are given in the section "Advantages", as these had been covered in the previous section.

Suggestions for Teaching and Implementing

The filmstrip provides a good introduction. Children are familiar with the positions described and are usually quite interested in finding more information as directed.

The use of charts to obtain information is included in all levels. Students may need extra help in understanding the job titles and terms used in these.

Resource people within your buildings should be utilized as much as possible. It is an excellent opportunity for students to conduct interviews with these people.

Refer to Section A, page 5 of the manual for instructions on planning field trips. Also, refer to packet # 3.

IMPORTANT: DO NOT undertake field trip to the Central office until you have read and carried out the preparatory steps as outlined on the special instructions in Packet 3.

SECTION C

SKILLS PROGRAM

Implementation and Teacher's Guide

Each classroom will receive the equivalent of two full days of related occupational skill studies and activities conducted in the Skill Trainer Van. The emphasis of these activities is on projects that tie in with the regular curriculum and will develop materials which will remain in the classroom.

It is strongly recommended that the classroom teacher guide the student's decision as to project selection, because many projects lend themselves beautifully to becoming future teaching aids.

In the implementation of the industrial skill phase, the Skills Teacher will provide each student with one or more Activity Packets (similar to a workbook), about one week prior to the arrival of the Skill Van. These Activity Packets were prepared by a teacher writing team and correspond to the career areas studied. They direct the students into activities which introduce them to the tools, machines and skills necessary within the career areas studied.

It is not expected that the student develop proficiency with the tools, machine or skill they are practicing; the idea is merely to give the student an opportunity to have "hands on" exposure to things that relate to their career study.

It is very important that each student return the Activity Packets to the skill teacher when they have completed the work. They will be reviewed by the skills teachers, graded (number of skills involved, number of skills utilized), and scored for future program evaluation.

When the Activity Packets arrive at your classroom (about one week prior to the arrival of the skillvan), the teacher should plan with the class the projects to be completed that can be used as teaching aids. For example, the fluorescent growing lamp you will be furnished will accomodate 4 planter boxes, (sample sketch and bill of materials attached). At the completion of the Skill phase of the program you will have all of the materials required for a good year-long Conservation study. A wind vane and anemometer built during the skill phase could provide a useful tool in teaching about weather instruments and how they work. A partial list of suggested projects is included for your convenience. All of the plans and materials are available at the Skill Van.

(2)

The Skill Trainer Van contains equipment and materials related to seven occupational areas (Communications; Distribution; Health; Home Economics; Office; Trade and Industry; Technical). The following cross-index will help the teacher apply the I.C.S. and Skill Trainer equipment. In many cases there are overlapping areas.

OCCUPATIONAL AREAS	RELATED CAREER STUDIES
Communications	Telephone Careers Police Fire Fighters Newspaper Workers Conservation Post Office Airport Workers
Distribution	Restaurant Careers Fashion and Clothing Careers Transportation Careers Store Workers Newspaper Worders
Health	Health Careers Hospital Careers Police Careers Fire Fighters
Home Economics	Restaurant Careers Fashion and Clothing Careers Hospital Careers
Office	All Career Studies
Technical	People Who Work with Animals School Workers Telephone Workers Auto Workers
Trade and Industry	Heavy Construction Workers House Construction Workers Telephone Workers Restaurant Careers Auto Workers Fashion and Clothing Careers Transportation Careers

Section C

3

Equipment and Materials in Skills Trainer

1. Complete one-bed hospital room with Chase Doll and physical examination equipment (stethoscope, sphygmomanometer, etc.) Either a professional or a paraprofessional representative of the medical profession instructs.
2. Complete short order restaurant (grill and oven, cooking and serving utensils, table with 10 chairs, food preparation table).
3. Business Machines -
 - 2 IBM Setric typewriters
 - 2 electric printing calculator
 - 3 cash registers
 - 1 grocery store type
 - 1 adding machine type
 - 1 restaurant type
4. Crafts materials for construction of models, teaching aids, projects using wood, metal, clay, paper mache, plaster of paris, block printing.
5. 2 sewing machines with attachments
6. Wood shop and construction materials area with work benches (2), large variety of power and hand tools, electric soldering guns(2), saw horses (8).

A Sample Project from the ICS CONSERVATION Activity Packet

Involves: math, science, social studies

The student will be given a selection of several projects requiring various skills and aptitudes needed by people who work in the area of conservation.

Perhaps he will elect to construct a planter box which will later be filled, 1/2 with good soil and 1/2 with poor soil, to illustrate the necessity of soil conservation. It is suggested that sometime prior to the arrival of the skill trainer Van, the student (or a group) plant some seeds in a milk carton or paper cup for later transplant to the planter box. (Your classroom will be furnished with a special fluorescent growing light for this project).

With the arrival of the Skill Trainer Van, the student will be provided with a set of plans and all of the tools and materials necessary to construct the planter box. His activities will be directed by the classroom and Skills teacher.

SKILLS INVOLVED:

1. Reading a simple sketch.
2. Selecting proper materials from a B/M.*
3. Measuring out a board (smallest increment generally 1/8 inch)
4. Using tools: a) saws (various saws for various jobs, both hand and electric)
b) plane and forming tool
c) hammer and nails

RELATED ACTIVITIES:

1. Cooperating with others.
2. Selection of proper soils (silviculture)
3. Selection of plants to be grown (botany and dendrology)
4. Transplanting and care of young plants (forest management)

OVERVIEW:

For the most part all of the skill activities are conducted simultaneously. The program is both intense and comprehensive. By the time the Skill Van arrives each student should have selected projects or activities in which he or she will work.

For example, if a student has studied in the occupational area of Health, his related skills activities should be confined to the Hospital and Health skill area, and his skill participation will be from the Health-Hospital Activity Packets. If a student has studied in the area of Trade and Industry he might be more flexible as to activities (see related career studies under Trade and Industrial). This area could involve - the wood shop - sewing machines - office and related business equipment.

A loose schedule of activities would be as follows:

First session: (usually 2 hours)

1. Student Orientation to Skill Van - including introduction and instruction on many tools and machines.
2. Professional and/or paraprofessional personnel conducts exercises in the Hospital and Health career area. (Students concerned with careers in Health, Hospital, Police and Fire assemble in this area.)
3. Restaurant and Food Processing students proceed according to attached schedule, "Restaurant Program".
4. Students involved with business machines and related equipment start activity packets.
5. Students involved in wood/construction materials shop begin projects according to preplanned activity packet selections.
6. Students involved in clothing and fashion design begin in sewing machine area.

Second session: (usually 2 hours)

Most students will still be working in their first career study area. In some cases they will have completed the skill offerings in this and will be ready to go on to another activity packet.

SECTION C

Page 6

Third session: (usually 2 hours)

Generally most students are rushed to complete projects during this final session. In addition, the final phase of the restaurant program (serving a lunch to their classmates) will be a disruptive influence.

The Skill Trainer Van itself is approximately 12' x 50' long and is designed to comfortably accommodate 30 students and a teacher. The Van is air conditioned and heated by a self-contained constant air flow system. There are two large entry and exit doors with emergency crash bars. Emergency lighting and 2-way intercom between the Van and the school office is provided. Provisions have been made for a coat rack and boot trough.

Note: there are NO lavatory facilities aboard the Van. Arrangements must be made before entering the Van.

Restaurant Program

Most classes will participate in the restaurant activity. Ideally, the program is structured along the lines of operating a real restaurant. Due to the complexity of the program, it must be somewhat organized prior to the arrival of the Skill Van. This could be done by the classroom teacher while guiding the students through their career studies in Restaurant Work.

Outline

Prior to Arrival of Skill Van:

Formulate some type of Restaurant workers structure: From those students studying Restaurant Careers select or have the children choose; 1 owner, 1 manager (either of which could double as a cashier), 1 or 2 cooks, a salad chef (if salad is to be served), a pastry chef (if deserts are to be served) and 2 or 3 waitresses. All of the participants will serve as busboys/girls and clean up committee.

First Session at Arrival of Skill Van:

Restaurant workers will decide on the food to be served. They will type or draw menus and make arrangements for obtaining the food. The program does not furnish food, paper plates, knives, spoons, forks, napkins, etc. Some things can be supplied by the school cafeteria. Some things have been donated by neighborhood grocers or parents. Suggestion: Pancakes are inexpensive, 30 to 40 small pancakes can be made from one 59¢ box of pancake mix. An 18" oblong sheet cake can be cut into enough small pieces to serve an average class at about 69¢ plus frosting. The skill van is equipped with a grill-oven type cooker. Only things that can be grilled or heated in an oven can be prepared. Hamburgers, hot dogs, steaks, grilled cheese sandwiches and french fries (frozen and cooked in the oven unit) have been successfully prepared.

Second Session:

Cakes are baked - salads prepared - jello is always easy and good.

Third Session:

Tables set - food prepared and served - clean up. Many students will have finished one or two activities near the end of the third session and are now good candidates for "customers" at "the Restaurant". They can receive play money from the Skills Teacher, order from the menu, pay the check, figure the tips and receive their change.

Suggested List of Projects for Which Plans or Activity Packets
Are Available

A. Airport - Transportation

1. Operate electric typewriter
2. Operate electric printing calculator
3. Operate accounting machine cash register
4. Build weather instruments (wind vane, anemometer, wind sock)
5. Build telegraph - show how telegraph is used to make ticket reservations)
6. Build model airplane
7. Build model wagon (covered or Roman)
8. Build model chariot

B. Conservation

1. Making paper mache diorama of land formations (mountains, plateau, faults, drumlins, etc.)
2. Build planter box
3. Build relief map (or diorama) to illustrate soil erosion
4. Build telegraph
5. Build birdfeeding station, birdhouse, greenhouse, animal cage
6. Build weather instruments - wind vane, anemometer

C. Fashion and Clothing

1. Design and sew on a sewing machine an original sample (doll size)
2. Cut and sew different types of clothing worn by people studied in social studies
3. Design and make a piece of haute couture jewelry
4. Design, cut and sew an apron for waitress to be used in restaurant program
6. Making and dressing hand puppets
7. Design and block print curtains for classroom door.

D. Office Workers

1. Operate office machines
 - a) IBM Selectric typewriter
 - b) Monroe printing calculators
 - c) NCR cash registers

E. Newspaper

1. During time skill program is at school, gather news, make photos, and publish a "onesheet" newspaper of skill program activities
2. Make block printing

F. House Construction - Heavy Construction

1. Build electro-magnetic crane
2. construct working model Roman aqueduct
3. Make greenhouse
4. Make puppet stage
5. Make classroom storage cabinet
6. Construct model log cabin
7. Make demonstration models to illustrate principle of lever, inclined plane, wheel and axle, block and tackle, beam balance

G. Hospital - Health

1. Attend activities with nurse and para-professional people brought in
2. Make splints to demonstrate application of bandages
3. Making models to demonstrate muscles - bones - tendons
4. Make triangular bandages
5. Make models to demonstrate respiration
6. Make dental impression mold and carve teeth

H. Store Workers

1. Operate cash registers
2. Participate in grocery store program
3. Inventory Skills Van

I. Fire Fighters - Police

1. Attend activities of para-professional (first aid) people
2. Complete auto accident report from tape recorded conflicting testimony
3. Build telegraph

GUIDED OCCUPATIONAL ORIENTATION
Syracuse City School District

Dear Principal (Teacher)

This is a reminder that the G.O.O.P. is scheduled in your school on the following dates:

Orientation Program

class 1. _____ to _____
2. _____ to _____
3. _____ to _____
4. _____ to _____
5. _____ to _____
6. _____ to _____

Career Center Visits

class 1. _____ to _____
2. _____ to _____
3. _____ to _____
4. _____ to _____
5. _____ to _____
6. _____ to _____

I.C.S. Program

class 1. _____ to _____
2. _____ to _____
3. _____ to _____
4. _____ to _____
5. _____ to _____
6. _____ to _____

Skills Trainer Program

class 1. _____ to _____
2. _____ to _____
3. _____ to _____
4. _____ to _____
5. _____ to _____
6. _____ to _____

Career Study Kits should be inventoried and ready for truck pick up on _____.

Any lost or damaged materials or equipment should be immediately reported, by phone, to the Career Center. Also, should be clearly identified and notice of same should be in an envelope attached to the inside top of Career Study Kits.

All evaluation materials in packet #2 should be returned to the Career Center by _____.

Skill Trainer Van Movement Specifications

SUBJECT: Specifications to provide necessary and suitable men and equipment to relocate Skill Trainer Van.

1. Move a 12' x 54' Skill Trainer weighing approximately 14,000 pounds, equipment required to be heavy enough to fill all legal New York State requirements, and equipped with ball hitch, rear mount, and with necessary electrical wiring for proper lights and electric brake operation.

Personnel shall be trained and proficient in unblocking and moving of units of the above described size, over various and narrow streets in the city of Syracuse, and must have knowledge of low underpasses and obstructions encountered en route. These personnel must be skilled in placing units of this type in tight locations and in blocking to the requirements of the Syracuse School District.

2. To provide an escort vehicle equipped with proper signs and safety devices and to be equipped to move a portable power plant mounted on a low-bed trailer weighing approximately 7,000 pounds, and equipped with the proper lighting and brake connections to operate same.

Personnel operating escort vehicle must be familiar with requirements for escort duty and in moving loads of the above described size.

This should pretty much cover your requirements as far as specifications of equipment and personnel are concerned. I have not included specifications for rate as this may be done either on an hourly basis or on a blanket move basis.

CITY SCHOOL DISTRICT
Syracuse, New York

EVALUATION OF WORKSHOP

We would like to assess how helpful you feel this workshop has been in preparing you to launch the new Elementary Occupation Orientation program in September.

Please respond to the questions below frankly. You do not need to sign your evaluation sheet if you do not wish to do so.

1. Please respond to the first series of questions by checking your response in the appropriate spot on the continuum. (Feel free to add any qualifying comments you wish.)

1. To what degree did the workshop give you an understanding of the intent of the program?

67½%	30%	2½%	
Excellent	Good	Fair	Poor

2. To what degree did the workshop succeed in making you familiar with all of the LAPs?

35%	45%	17½%	2½%
Excellent	Good	Fair	Poor

3. To what degree did the workshop succeed in familiarizing you with the materials to be used in the LAPs?

40%	45%	12½%	2½%
Excellent	Good	Fair	Poor

4. To what degree did the workshop succeed in helping you to know how to organize your class for implementing an individualized program?

15%	67½%	17½%	
Excellent	Good	Fair	Poor

5. How well has the workshop helped you to see how this program fits into the total curriculum picture?

47½%	32½%	20%	
Excellent	Good	Fair	Poor

6. How well did the workshop help you to plan how to keep records of individual pupil progress?

5%	47½%	42½%	5%
Excellent	Good	Fair	Poor

7. To what degree did the workshop help you to see the articulation between the skill van and the social studies, science and math curriculum (i.e. to what extent could you utilize the manipulative devices made in the skill van in your regular classroom?)

27½%	42%	12%	27½%
Excellent	Good	Fair	Poor

8. How well prepared do you feel you are to handle this program as a result of the workshop?

12%	67½%	17½%	2½%
Excellent	Good	Fair	Poor

Guided Occupational Orientation
Program

General Job Skills

To evaluate oneself

- a. Complete a personal inventory.
- b. Complete a self - evaluation.
- c. Write a composition on likes, dislikes, abilities, talents.
- d. Make a list of things you like to do.
- e. Make a list of things you don't like to do.
- f. Ask someone to write a paragraph telling you about what they think you do well / don't do well.
- g. Ask a teacher (or teachers) what they think is your most outstanding character feature.
- h. Compare what teacher (s), and/or classmates have said about you.
- i. Ask an adult (or friend) to write you a character reference.
- j. Tell what you think is your best characteristic (appearance excluded) and why.
- k. Demonstrate a talent that you have in a class talent show.
- l. Write a class news sheet describing accomplishment of each member of class.
- m. Write a class brag sheet where each member writes a brag about himself

General Job Skills - 2

To evaluate oneself in terms of a job.

2

- a. Make a list of jobs that you would like to do in the future.
- b. Make a list of duties that you do daily.
- c. Pick a job that interests you and research it: salary, flexibility, requirements, training, etc.
- d. Write a composition on what you hope to do in the future
- e. Evaluate another student in terms of attitude, work habits, skills, co-operation, etc.
- f. Ask someone to evaluate you as a worker.
- g. List the characteristics of a good worker
- h. List the characteristics of a poor worker.
- i. Compare your work habits to a list of good work habits and poor work habits.
- j. Discuss the similarities of a good worker and a good student
- k. Write an advertisement advertising your skills and abilities.
- l. Compare a good worker with a poor worker and come up with a list of do's and don'ts.
- m. Pick a job you are interested in and compare yourself and your abilities to the standards set forth by the job.

General Job Skills - 3

Evaluate oneself in terms of a job.

- n. Prepare a resume (profile) of yourself stating your abilities and accomplishments and why you think you should be given the job of your choice.
- o. Given a job description and three resumes, pick the applicant best suited for the job.

To prepare oneself for a job or career.

- a. Examine the job of your choice and make a list of things you would have to do to get the job.
- b. Make a list of school subjects you would have to study to get job.
- c. Write a paragraph about what you will have to do to be what you want.
- d. Make a list of work habits you could develop at school that would (might) help you on the job.
- e. Interview your guidance counselor. Tell him about the career of your choice and have him help you plan a course of study.
- f. Investigate out-of-school possibilities about part time or apprentice work in the job area of your choice.
- g. Interview someone who has the job you're interested in. Get them to tell you how they got the job, their duties, and whether they enjoy it?
- h. Examine the four major subject areas and list what jobs they help prepare you for.
- i. Examine the minor subject - art, home economics, business, shop, gym, music - and tell what jobs they help prepare you for.
- j. given 2-3 jobs investigate them and list skills necessary to do each job.
- k. List skills (if any) that are common to most jobs
- l. Show a film(s) on various occupations and list skills needed, training required, and duties performed.

General Job Skills - 5

List ways and places to look for a job.

a. List five places where you can look for a job.

b. Write a brief description of five places that find jobs for people.

c. Interview one of the following:

personnel manager, employment agency interviewer, member of chamber of commerce, N.Y. State employment interviewer, - about how to go about applying for a job.

d. Match a list of abbreviations used in classified ads with their meanings.

e. Fill out a job application form.

f. Given a list of (ten) abbreviations found in the

classified section of the newspaper write their meanings

g. Prepare a class classified section advertizing eg. jobs wanted - help wanted.

h. Write a business letter applying for a job (stating your qualifications).

i. Select an agency to investigate and report back to the class.

j. Write an advertisement in the style found in the classified section of the newspaper.

k. Interview someone who has a job and report on how they looked for and found a job.

General Job Skills -6

6

List ways and places to look for a job.

- l. Present a strategy on how you would go about looking for a job.
- m. Prepare a bulletin board that displays ways and places of finding jobs.
- n. Get a member of Chamber of Commerce to talk to the class and tell how to go about getting jobs.
- o. Take a field trip to the N.Y. State Employment service.
- p. Take a sample I.Q. test.
- q. Take a sample aptitude test
- r. Do some sample questions from a civil service exam.

General Job Skills - 7

Outline methods on how to prepare for and be interviewed

a. Define what an interview is.

b. Read through a prepared interview script with another classmate.

c. Listen to a taped interview and prepare a list of questions that you think you would need to know answers to during an interview.

d. Look at filmstrip dealing with job interviews.

e. Given a check list, listen to two taped interviews. Decide who gets the job.

f. Compare an interview with an audition.

g. Write a paragraph on WHAT TO WEAR TO AN INTERVIEW.

h. Using a checklist discuss what one should wear, look like and act like during an interview.

i. Given a job description, construct sample interview questions.

j. Interview a classmate on what kind of job he wants and why.

k. Survey people who have jobs and ask them what they think is the most important thing to do and not to do during an interview.

Understand work etiquette

- b. Given job description(s) and five pictures of clothing select correct dress for job.
- c. Prepare a bulletin board - showing jobs and clothing that go with them.
- d. Fill out a HOW WELL DO YOU GET ALONG WITH OTHERS form.
- e. Select three people in your class that you would like to work with and tell why
- f. List the qualities you think are important in getting along with others.
- g. Set up a model office and assign each member a duty. List the consequences of any one of these workers not doing his job.
- h. Discuss the results of "bossing", "over-doing", "under-doing".
- i. Interview an employer(s) and ask him/her what an employee would have to do to get fired.
- j. Prepare a report on how to lose a job.
- k. Given a profile of two employees, only one of which you the employer can afford to keep. Pick one and list why.
- l. Take a field trip to an office, building, plant, etc. and report on how people need to work together to get the job done.
- m. Interview an employer and question him on how he gets his employees to work together - and on problems he encounters.
- n. Have an employer speak to the class on "work etiquette".

General Job Skills -9

9

Understanding job terminology.

- a. Construct a job vocabulary tree.
- b. List words you encounter in reading about jobs that you are unfamiliar with.
- c. Given a list of "job" words - match them with their meanings.
- d. Make a list of words (job) that you think are essential in the world of work.
- e. Define a list of job terms.
- f. Keep a class file where class members write down and define job terms they have encountered.

MONEY - FINANCE

To show that you can identify and explain deductions on a paycheck gross to net.

1. Determine the difference between gross pay and net pay.
2. Using a paycheck, learn about payroll deductions income taxes, FICA, etc.
3. Using a paycheck another member of the class has made up, show that you understand the deductions.
4. Using a paycheck from another member of the class or your teacher, show that you understand how the net pay was figured.

To demonstrate the mastery of tax forms by properly filling in Federal and State Income Tax Forms.

1. Given federal and state tax (long and short forms) discuss vocabulary in forms.
2. Fill in short and long forms with hypothetical figures.
3. Study forms from previous years to show changes over the years,
4. Have a group discussion to identify weaknesses and difficulties in present forms.
5. Arrange field trips to local tax bureaus to become aware of local agencies.
6. One student can give another student a hypothetical set of figures from which he is to fill out a tax form.

MONEY-FINANCE - - 2

To show that you can estimate the cost of education for preparing for certain jobs.

1. Choose various vocations such as teaching, medical, secretarial etc. and figure out cost for preparation.
2. Write to various colleges for cost of tuition, room and board, etc.
3. Name at least four jobs for which apprenticeships are available. What is an apprenticeship? How much does an apprenticeship cost the apprentice?
4. Explore the apprenticeship programs of Central Tech High. What benefits do these programs give? Make a report on your findings.

Demonstrate by use of a budget that you can spend money properly.

1. Keep a daily budget from real or make-believe allowance with expenditures.
2. List reasons why people spend beyond their budget.
3. Assume you earn a net salary of \$600/month. Show how you would spend this money over a month.
4. With several other students, form a hypothetical family, and list what expenses the family has in a month.
5. Find out how your parents or other adult wage earners spend their earnings - Report on your findings.
6. Explain what a family could do if it finds that it runs out of money every month before the month is over.

MONEY - FINANCE - 3

Develop an understanding that credit buying is advantageous if paid within a specified time limit.

1. Learn to compute interest charges on revolving charge accounts
2. List the advantages and disadvantages of having credit accounts.
3. List the reasons why people like to use credit accounts.
4. Select an item, such as a refrigerator or television, and determine the actual cost if payments are made in 30 days; one year; 5 years.
5. Call the Better Business Bureau and research their booklets on credit buying. Based on this information, write a dittoed list of do's and don't's for your class.
6. Interview several adults to get their advice on credit buying. Make sure several are elderly people - over 65-70 years .

Demonstrate that with a make believe investment you can buy and sell stock to show you have an understanding of the stock market.

1. Make a list of terms from the newspaper stock market reports, and show that you understand them.
2. Choose stock from newspaper to buy and sell.
3. Keep a daily record to show how your stock is progressing
4. Prepare field trips or interviews with local stock firms.
5. List reasons why the market may fluctuate (bear - bull market)
6. Explain who should buy stock and why.

MONEY-FINANCE - 4

13

Show that extra fringe benefits may sometimes be better than a larger salary.

1. Explain what is meant by fringe benefits.
2. List fringe benefits that you are familiar with now.
3. Discuss and list new benefits that you think should be included as fringe benefits today.

To demonstrate that you can differentiate

between fringe benefits and non-fringe benefits.

1. Given a paycheck form, students identify fringe benefits.
2. List and discuss other fringe benefits that may not appear on check.
3. Discuss the importance of fringe benefits in job choice.
4. Check with several people to find out the value of fringe benefits they receive on their jobs.
5. Explain how one person might be getting a lower wage per hour than another, yet still earning more because of his fringe benefits.

MONEY-FINANCE - 5

To demonstrate a knowledge
between strikes and layoffs.

1. Define the terms "strikes" and "layoffs".
2. List the various reasons for "layoffs" and "strikes".
3. Discuss and list various ways to overcome or limit strikes and layoffs.
4. Prepare bulletin board with material from current strikes and layoffs.
5. Interview several workers about their opinions on strikes or layoffs? Are their opinions valid?

-
1. Itemize a list of the social needs that are met by your job.
 2. Write a list of financial needs that are met by your job.
 3. Determine if education was too little or too demanding for your present job.

To prove that your job is worth
the effort.

To show an understanding of the protection offered by employment insurance.

1. Do research on origin of unemployment insurance.
2. Itemize the advantages and disadvantages of unemployment insurance.
3. Write about ways to improve unemployment insurance.
4. Who is entitled to unemployment insurance?
5. Call the N.Y. State Employment Services for printed material on unemployment insurance for a bulletin board.
6. Some people feel that unemployment insurance is the same as Welfare. Write a comparative paragraph comparing and contrasting the two.

To show an understanding of the strengths and weaknesses of government protection.

1. Do research on various governmental protective measures (Federal banks, maximum interest charge, stock market regulations etc.).
2. Write compositions on why or why not federal government should be involved in protective and restrictive measures for public and private enterprise.
3. List the dangers of too much government control.
4. Determine from the library and N.Y.S.E.S. various types of government protection and report on your findings.

MONEY-FINANCE - 7

To understand the factors to be considered in job transfers to different areas.

1. List benefits that may be lost if worker doesn't transfer to another area with his firm (pension rights, insurance benefits, etc.)
2. Evaluate local openings in your occupation if you decide not to transfer.
3. Write about the problems that may arise for members of your family to adapt to a new location.
4. Make a list of jobs that have a high chance of transfer.
A low chance.
5. Make a list of jobs where people are self-employed and can determine their own locations.

To manifest an understanding of what is meant by the term "moonlighting"

-
1. Discuss what is meant by the term "moonlighting".
 2. List occupations that have restrictions on moonlighting (firemen, policemen, etc.)
 3. Write about people you know who are "moonlighting".
 4. List advantages and disadvantages of "moonlighting".

MONEY - FINANCE - 8

To demonstrate the importance
of paying yourself first.

1. Have a class discussion on benefits of paying yourself first
(savings account for a rainy day, saving for a college education,
etc.)
2. List the reasons why it is important to discipline yourself
to save.
3. Write compositions about people who live beyond their means.

To develop an ability to assess
your present job.

1. A class discussion of why people should not remain in their
present jobs if they are dissatisfied.
2. List measures to be taken to prepare for jobs in other fields
3. Write paragraphs about people you know who are dissatisfied
with their jobs.
4. List reasons why people continue to stay in jobs that give
them little satisfaction.

MONEY-FINANCE - - 9

18

To demonstrate by use of statistics
where your tax dollars go.

1. Do research on local tax dollar disbursement.
2. Discuss if our local tax dollar is being spent properly.
3. Examine state and federal tax disbursement.
4. Prepare bulletin board in sections denoting local, state and federal use of tax money.

To demonstrate an understanding of
local and state welfare plans.

1. Do research on New York State Welfare Acts.
2. Interview personnel at local welfare agencies.
3. Discuss what should be the role of the Federal Government concerning welfare.
4. List the strengths and weaknesses of welfare aid.
5. Estimate the cost of welfare aid for a family of six.
6. Hold a debate between a person who doesn't like welfare and one who does.
7. Interview a caseworker with the Department of Social Services to get his or her views on welfare.

MONEY-FINANCE - 10

To show that paper routes and part time jobs are important for preparation for future vocations.

1. Have class list the part time jobs that are available after school and during summer vacation.
2. Write a list of benefits to be derived from a part time job.
3. Write compositions in class to show the possible effect that part time jobs may have for future vocations.
4. Prepare bulletin board of various jobs held by present class.

To understand the need for and the benefits derived from our Social Security System.

1. Write a list of reasons why the Social Security Act was enacted.
2. Have each member of the class apply for a social security number.
3. List the advantages and disadvantages of the Social Security System.

JOB REALITIES - PART I - EMPLOYEES EXPECTATIONS

To Evaluate oneself in
terms of a given job.

- a. Make a list of your accomplishments.
- b. Make a list of your qualifications.
- c. Make a list of things you do well.
- d. Make a list of things you do for hobbies (sports, projects, interests).
- e. Ask three people you know to write a letter about your character. (teacher, counselor, adult, minister)
- f. Take an aptitude test.
- g. Given a job description(s), list your personal likes and dislikes to the duties.

- i. Given a job you cannot do or do not like to do, explain why you are a poor choice for the job.
- j. Go to the N.Y. State Employment service and let an interviewer interview you.
- k. Ask someone you have worked for to rate you as an employee.
- l. Ask your teacher to rate you as an employee.
- m. Ask your parent to rate you as an employee (if you work around the house).

Job Realities Part I
Employee Expectations - 2

To outline methods of finding
jobs to suit individual dif-
ferences and personalities.

21

- a. Describe, draw, list the kind of job(s) you would be miserable doing.
- b. Given (five) jobs. List one essential character trait (e.g. patience) you would have to have to do that job.
- c. Make a collage that shows some important character traits (e.g. listening well, patience, etc.)
- d. Given a character description(s) and a job description(s) list reasons why person will be happy or unhappy doing this job.
- e. Ask guidance counselor (teacher) to suggest some jobs he thinks you might excel in. List these.
- f. Investigate a job that someone has suggested you might like to do and tell why or why not it would be a good choice.
- g. List reasons why people fail at jobs. Compare these with another student, another group, etc..
- h. Make a collage, or bulletin board showing people doing jobs they hate, or love.
- i. List five things that you would do if you had to do a job you hated.
- j. Outline a method that shows how to go about getting a job you would be content doing.

Job Realities Part I
Employee Expectations - 3

To outline the social
needs of a job.

- a. List five reasons why people work.
- b. Write out some of the consequences of everyone in a city deciding not to work.
- c. Write a report on two periods in history when people have been looked down upon for working.
- d. Write a report on the social aspects of woman working forty or fifty years ago.
- e. Discuss in a group, or by a panel Why People Should or Should not Work.
- f. Explain in a paragraph/composition what might happen in a country where half the people could not find jobs.
- g. Agree or disagree in a paragraph with the statement "People are happy doing nothing". Explain your reasons.
- h. Survey woman between the ages of 20-70 and ask them "Should woman work?"
"Should a woman hold a high political office?"
List results.
- i. Survey people between the ages of 20-70 and ask "Why do people work?" List your results.

Job Realities Part I
Employee Expectations - 4

To understand jobs available
to a person in terms of age.

23

- a. Call the N.Y.S. Employment Agency and find out the legal age that a person can start working.
- b. See your guidance counselor and ask him how you can get "working papers".
- c. List job you can hold at ages 8, 12, 14-16, 18-20, 25-40?
- d. Given a job description(s) and three men of different ages but equal training choose one and tell your reasons for selecting him.
- e. Discuss in a group the question SHOULD AGE MATTER IN JOB SELECTION. Record your findings.
- f. Write a paragraph answering the question SHOULD PEOPLE BE FORCED TO RETIRE.
- g. Discuss the reasons young people are not allowed to work until they are fourteen.
- h. List the reasons "child labor" was made illegal.
- i. List reasons why firms might have a legal retirement age.
- j. Write a paragraph telling at what age you would like to start working, and why?
- k. Given a job and three applicants with similar qualifications, one 20, one 38, and one 60, tell which one you would pick and why.

Job Realities Part I
Employee Expectations - 5

To understand the availability
of job preference.

24

- a. Prepare a collage (bulletin board) showing jobs that have become obsolete.
- b. Pick a job that has become obsolete, describe it, tell why you might have liked/disliked doing this job.
- c. List five jobs that you think might become obsolete in the future.
- d. Write a paragraph on what would happen if machines took over.
- e. Investigate the school office and list jobs you think might be phased out.
- f. List five jobs, not in existence now, that might open up in the future.
- g. Tell what you think might be the best job for you thirty years from now.
- h. Given a job in the future list how you would best prepare yourself for the job.
- i. Investigate (using the library, guidance counselor, etc.) the need for the kind of job you would like to do.
- j. Write a "Who's Who" of the future assigning each member of your class with a job career.
- k. Predict what ten people in your class will be doing in the future.
- l. Given a career that you have been highly trained for and given the fact that you can no longer do this job, investigate what other jobs your training has prepared you to do. (you are a beautician and you develop an allergy to shampoos and dyed hair- What else can you do with your training?)
- m. Plan a field trip to a farm auction, and attempt to identify the tools - equipment and what they were used for.

Job Realities Part I
Employee Expectations - 6

25

To outline methods of

getting along with

others.

- a. Given a situation, description of characters involved, read through the script (story) - listen to tape - and write two possible endings to the story.
- b. Make a list of things that you do that might "bug" other people if you worked with them.
- c. Make a list of things you hate for other people to do when you're working.
- d. Make a collage showing the qualities of a good co-worker.
- e. Define the terms "apple-polishing" "brown-nosing" and "yes man".
- f. Write a paragraph describing some of the problems that might arise if you decide someone is "no good" before you got to know them.
- g. List four classmates you would like to work with and give a reason for choosing each one.
- h. List three ways you can go about solving a problem involving people who can't get along on the job.
- i. Write a brochure describing your (office) and why it is such a pleasant place to work.
- j. Select five people, do not name them, and tell why you could not work with them.
- k. Ask one of these people (you could not work with) to write if they could/could not work with you and why.
- l. Ask a person that is employed what his/her most difficult problem(s) is in getting along with others. List them.
- m. Ask a person that is employed "What kind of person causes the most problems on the job?" List these characteristics.
- n. Given a job to be done by four people, choose the type of people you would select to do this job. Give your reasons why.

Job Realities Part I
Employee Expectations - 7

To outline methods of
handling job frustration.

- a. Write a paragraph describing the kind of person you would hate to work for.
- b. List four qualities you would like your boss to have and why.
- c. List four things you hate for your boss to do to you when your working.
- d. Given unpleasant "on the job" situation(s) and a list of alternative behaviors, select one and explain why you picked it.
- e. Write a script that shows a "confrontation" between "labor" and "management."
- f. List five alternatives to "punching someone in the mouth"
- g. List five things you would strike for if you were going to strike.
- h. Explain the function of a "grievance committee".
- I. List five reasons you would QUIT a job.
- j. Discuss if it is better to quit a job, or be fired.
- k. Write a paragraph listing your reasons for not hiring someone who had quit 4 or 5 jobs.
- l. Define "resignation", "lay-off", "obsolescence", "leave of absence", and "sabbatical".
- m. Make a bulletin board or collage showing possible frustrations you might meet on the job.

Job Realities Part I

Employees Expectations - 8

Putting your goals in priority-promotion - leisure time to determine that working and leisure time may be utilized to the greatest advantage.

- a. Prepare charts of working and leisure time of classmates.
- b. Have class discussion of strengths and weaknesses of use of time in the class charts.
- c. Make corrections in individual charts to overcome undesirable aspects.
- d. Prepare bulletin boards of successful people and how they allotted their working and leisure time.
- e. Interview prospective employers for suggestions to help you prepare for future jobs
- f. Have successful business people speak to class concerning the ways to spend working and leisure time.

How to change jobs - move into different fields - move up. To show an ability to weigh pros and cons of changing a job or moving into a different field or accepting a promotion.

- a. Prepare self-evaluation charts to denote present progress, satisfaction with job and frustrations of present job.
- b. List the responsibilities that may be encountered in a new job or promotion.
- c. Discuss adjustment factors involved in changing jobs.
- d. Discuss and list the educational requirements of a new job or promotion.
- e. Interview successful people who have changed jobs.
- f. Invite speakers to discuss the problems and satisfactions that accompany job changes.
- g. Prepare bulletin boards of areas that may offer better opportunities for job changes.

Job Realities Part I

Employees Expectations - 10

To comprehend the difference between

prestige and status and the factors involved in mobility.

- a. Define and list the differences between prestige and status.
- b. Itemize the factors involved in mobility - advantages and disadvantages.
- c. Write compositions discussing the reasons why people like the top jobs in the organization.
- d. Discuss measures and rules to be observed that help to increase prestige and status.
- e. Write paragraphs on what you would do if you felt that you had no prestige or status in your job.

Marriage and jobs. To understand the relationship between marriage and jobs.

- a. List limitations of job choice that may be caused by marriage.
- b. Have a class discussion of financial problems in marriage that may cause a hindrance to further educational preparation for job mobility.
- c. Write compositions on whether women should work after marriage.
- d. Prepare bulletin boards about married women who have successfully combined marriage and careers.
- e. Invite successful married men and women to lead class discussions to show relationship between marriage and jobs.

Job Realities Part I
Employees Expectations - 9

Can your job be phased out?

To be adequately prepared for the possibility of a job being phased out.

- a. Prepare lists of alternative skills that may be transferred to another area of employment.
- b. Have members of the class write compositions to show how they would handle the possibilities of their jobs being phased out.
- c. Identify people that you know whose job was phased out and how they handled this problem.
- d. Make bulletin boards displaying jobs which have been phased out during the last 20 or 30 years.
- e. Itemize reasons why certain jobs are phased out.

How do strikes or layoffs affect you? To understand that strikes are union or employee motivated and layoffs are measures taken by employers.

- a. Define and list differences between strikes and layoffs.
- b. Write about measures that can be taken to avoid strikes and layoffs.
- c. Write compositions about local strikes and layoffs
- d. Prepare bulletin boards of areas that are having labor problems.
- e. Have field trips to an area which is being picketed.
- f. Invite class lectures from labor unions and industry to present their views.

EMPLOYERS' EXPECTATIONS

Show they understand that different occupations require different educational background by listing three occupations and listing the general educational for each.

1. Interview individuals who are now employed and find out what educational background they needed to get their jobs.
2. Survey college catalogs and list the required courses that are necessary for several job areas.
3. Visit your guidance counselor and work out a suitable educational ladder for several chosen fields of work.
4. Interview teachers of different subject areas and list the various job fields open to a student which require much preparation in those subjects.
5. Conduct a panel discussion about the things employers look for when hiring individuals.

Show the different occupational training programs that are offered by selected employers.

1. Talk to several individuals who are now employed and find out what type of training programs are available where they work.
2. Call a local place of employment and ask them for their career programs.
3. Make a flow chart comparing several areas of employment and show who one may progress by making use of an Employers Training Programs.
4. From several flow charts select one career training program.
5. Prepare a community-wide survey of "what can be done after high school", which includes apprenticeship programs, armed forces training, educational programs, and on-the-job training.

EMPLOYERS EXPECTATIONS - 2

To compare those influences that will and will not cause people to work well together by listing three each.

1. Select a school organization or team listing the things the group did causing them to work well (and not to work well) together.
2. List the ways business is helped by good competition. List the ways that business is hurt when competition is bad.
3. State how business is hurt when competition is lacking.
4. Prepare a list of things you would expect from the people you work with.
5. Assess how well you think you would get along with fellow workers on a job.

Pick out one place of employment and explain its seniority system.

1. Review your educational career so far by listing the additional responsibilities that you have obtained every year since you started school.
2. Visit a place of employment and interview several employers and have them explain their seniority systems.
3. Check arguments pro and con for Congress's seniority system (office space, committee chairmanship etc.)
4. Compare and contrast the advantages and the disadvantages of job seniority.
5. Explain the development of seniority systems in the U.S..

EMPLOYERS EXPECTATIONS - 4

Identify the major characteristics that employers look for when examining school transcripts of future employees.

1. List the parts of a school transcript in order of importance
2. Make up a school transcripts including items that you would use to send to employers.
3. Evaluate yourself using the personality section of a sample school transcript.
4. Evaluate several students' transcripts as if you were a prospective employer.

EMPLOYERS EXPECTATIONS - - 3

Show various programs that places of employment used in hiring minorities.

1. Call the State Division of Human Rights to find out about laws against discrimination.
2. Interview businesses about the hiring practices of minority groups.
3. Have a panel discussion to determine what a minority group is.
4. Prepare a chart or graph which shows rates of minority employment over the last 50 years.
5. Prepare a report based on the topic "the Employment of Minorities Today in U.S."

Show an understanding of job layoffs and how they affect a family and community by some of the people who count on one individuals salary.

1. Put yourself into a roleplaying situation where you have worked in a factory or other place of employment. List all the people you might have given money to because they provided you with goods or services.
2. List the people of a one-business town who might have to relocate because that business laid off 50% of its employees.
1. Compare a list of reasons why one would want to accept a job transfer with a list of reasons why one would not accept a transfer.
2. Interview people to see if they are from your city - if not ask why they moved here.
3. Study a physical map (world or U.S.) and list the areas of the map which would not be favorable to your work desires.

Show an understanding of considerations that one should make when transferring jobs.

Organization of Labor

- | | |
|--|---|
| <p>Show an understanding of lines of communications by charting the line of bosses of any organization and their responsibilities.</p> | <ol style="list-style-type: none"> 1. Chart a list of bosses in your school. Ask your teacher who is his boss and see how far you can go. 2. See your local army recruiter and ask if you can see a chain of Command from the individual soldier to the President of the United States. |
| <p>Define "labor" and "management" and point out the characteristics of each.</p> | <ol style="list-style-type: none"> 1. Follow the newspapers, T.V., magazines, etc. and gather information and demands used by Labor (strikes) and Management (employers). |
| <p>Develop a concept of Negotiations.</p> | <ol style="list-style-type: none"> 1. Set up a classroom situation with some students playing roles of management and some students playing the roles of union leaders and the labor force and negotiate a contract. |

- Students will have their own definition of Civil Service and be able to identify one type of Civil Service job with each level of government.
1. Select from your telephone book, several departments that the Federal, State, County and City Office Buildings have listed. Contact a person from each of these departments asking them what types of requirements are necessary in obtaining a selected occupation.

Organization of Labor - 2

(Civil Service continued)

3. Use a roleplay situation where a mayor and the common council lists the requirements for two types of city jobs.
4. Explain the advantages and disadvantages of Civil Service job protection.

Understand concept of self-employment and be able to list many factors that one must take into consideration before starting a business.

1. Start your own business on paper. List all the reasons why you think you could make money in your business. List the things that might not make a profit.
2. Check your local newspaper for a business that is for sale. List the reasons why you may buy or not buy the business considering such factors as location, supply and demand, etc.

1a.

Read through history and/or economic texts and tell about 3 depressions and 3 periods of prosperity in the United States. This study should include time periods, people, causes, effects, reason for prosperity (depression) and any additional vital information.

Show an understanding of Business Cycles

by listing various causes and effects of lb.

Business Cycles. Be able to state what

comprises a recession, depression and prosperity period.

1c.

Do library research on U. S. Economic History, selecting the topic with the teacher

Compare after interviewing people in Syracuse (even teachers) who lived through the depression to determine how individuals and families were affected by the depression in the 1930's.

Make up a series of questions before you interview the people.

1e.

Read books or part of books such as: Grapes of Wrath by Steinbeck, Hard Times by Terkel, Since Yesterday by Lewis on the 1930's depression.

Report on the book(s) used, telling about how the author or the people mentioned in the book viewed the depression.

1f.

Report after reading microfilms of old newspapers, magazines, and/or the real material to see how people viewed the depression while it was happening. (The public library or Syracuse University will have the needed microfilm.

1g.

Read through the microfilm (available at Syracuse University Library) of the Congressional Record of the 1930's and summarize our leaders' views of the depression.

2.

Make a written or oral comparison of life under different parts of the Business Cycle. a) Depression b) Recovery c) Prosperity d) Recession.

3.

Do written research on the history of Business cycles in other countries. (one book might be - The Stages of Economic Growth by W.W. Rostow) (available in S.U. Library and Syracuse Public Library.

4. Do a written and/or oral comparison of Business Cycles of various countries (see Rostow's book The Stages of Economic Growth)
 - 5a Paste up and (or) evaluate the latest leading economic indicators for the U.S. (see the Wall Street Journal (daily on front page) The New York Times, Barrons, Time, and (or) Newsweek)
 - 5b Draw copies of the latest indicators on poster board.
6. Write to U.S. Department of Commerce and U.S. Department of Labor for the latest economic reports.
7. Have a discussion or write a paper explaining why businesses have moved up and down in the past. (see cartoon in teacher supplement).
8. Discuss the logic of the similarity and differences between the ups and downs of the economy and human moods.
9. Explain how job opportunities would increase or decrease with changes in the Business Cycles.
10. Use Role Playing with students playing Government, Labor, and Business leaders in a discussion of the problems of controlling the economy. (further questions could be discussed).
11. Use Role Playing with students playing a family member in the home of an unemployed family. Discuss the various problems that would be created for each member of the family.

1. Discuss or report on various types of Welfare programs.

ECONOMY - 3

2. List the different people who would need welfare.

3. Do a study of the history of Welfare including Charities.

Show an understanding of Welfare by
stating who is eligible for Welfare,

4. State 5 reasons why Welfare is needed including alternatives to Welfare.

Society's need for Welfare and Welfare's
benefits.

5. Study local Welfare records to cite the relationship between Welfare needs and business cycles.

6. Use role playing with some students playing unemployed workers, and a social worker deciding whether the unemployed worker is eligible for Welfare (many roles with different problems could be created).

7. Visit various Welfare Agencies making a list of various facilities and benefits available to you and your family if eligible.

8. Figure out a Welfare family's budget and try living on the food budget for a week. (don't forget the school lunch program.)

9. Write to various Government leaders for their views on Welfare based upon your questions.

10. Conduct a survey of public views on Welfare and explain the people's views.

Show an ability to evaluate a community by creating a checklist and evaluating the area for job opportunities.

1. Explain the difference between a community and city. (optional use of Decisions in Syracuse, Doubleday or Community Power Structure by Floyd Hunter.
2. List 5 new facts about your community using the Herald Journal and the Post Standard.
3. Make a list from the Help Wanted Ad of 8 jobs available to you in the Syracuse area.
4. List names of Employment Agencies both private and Government.
5. Make a list of Services Employment Agencies and what they offer.
6. List the various parts of an employment agency contract.
7. Make a checklist of the various aspects of the Syracuse Community which should be considered before taking a job (see teacher guide for ideas).
8. Contact various Government agencies, Federal, State and/or local for the latest survey of job opportunities in Syracuse area. (Take 8 different jobs that interest you).
9. Create a survey and talk to various businessmen to discover job opportunities.
10. Put together a booklet with community and job survey from above for others to see.
11. Write to several Chambers of Commerce in several cities asking for information about their cities. How reliable is this information? Who else could you check with?

ECONOMY - 5

Show an understanding of strikes
by stating why they happen and
how they affect an employee.

1. List the various strikes currently on in the Syracuse area.
2. List the major national strikes in progress or pending. (use National Publications).
3. List reasons for a student strike.
 - 4a. Organize a student strike.
 - 4b. Role play a student strike in your own classroom.
5. Interview a striker in your area (make up a series of questions beforehand).
6. Interview students whose parents have been on strike at one time to discover problems created in the home.
7. Talk to personnel managers to find out how strikes affect employee - employer morale - (for studies see Industrial Psychology).
8. Have a negotiation session with workers, union leaders, employers, mediators. Discuss a union contract (research must be done on issues).
9. Study and negotiate a number of issues with your principal and/or teacher.
10. Research history of strikes in the U.S.
11. List the number of man-hours lost in each of the past ten years on strikes in hours and in dollars.
12. Interview a local labor leader to determine his views on strikes.
13. Arrange for an employer an (or) union leader to come to class to discuss or debate an issue of interest.
14. Have a speaker from mediation Bureau, U.S. Dept. of Labor or N.Y.S. Dept. of Labor come to class to discuss a topic of interest.
15. Interview several teachers to find out how negotiations have affected schools in the recent years.

1. Chart a comparison of the following economic systems; Capitalism, Fascism, Communism and Socialism.
2. Write a Biography of a worker in a Capitalist country and another economic system.
3. Debate the topic of coexistence of various economic systems.
4. Research the differences between communism in U.S.S.R. and in Communist China.
5. Research the economic views of any of the following:
Karl Marx or W.W. Rostow.
6. Research any of the economic schools below:
 - a. Marxism
 - b. Keynesian
 - c. Socialist
7. Be leader of a country with a different economic system and state how you would deal with the U.S.
8. Change the economic system of any country to something different from what it is currently. List the changes necessary within the system.
9. Have student from a country with a different economic system talk to the class.
10. Create an economic model of our society under another economic system.
11. Study the supplement for a comparison of Gross National Product of U.S. and U.S.S.R. Which country has provided their individual more goods and services.

ECONOMY - 6

Be able to compare capitalism
with other economic systems.

ECONOMY - 7

1. Make a list of businesses that ~~individual~~ ^{individual} would show you would decide which to start. 42

2. List the advantages and disadvantages of going in to business by oneself.
3. List the prerequisites needed to start your own business.
4. Talk to banker(s) lawyer(s), and (c) businessmen for a list of problems and prerequisites of starting a business.
5. Have a Franchisee come and talk to the class (answer prewritten questions).
6. Visit bankruptcy court and summarize what you see.
7. Write a Franchiser for the prerequisites and the agreement to start a business.
8. List the way a banker can help out one starting a new business.
9. Contact the various Governments and state the taxes a small business would pay.
10. Arrange for a small businessman to come to class and answer questions (a parent would be good).
11. Start your own business. (check with Junior Achievement Program Syracuse, New York - 437-2873).
12. Using a situation game, make up a business. Start it and show how it would grow through the business cycle.
13. Explain the differences between partnership and a corporation.
14. Make a list of the ways the Chamber of Commerce aids business.
15. Talk with a small businessman and find out how he got started.
16. Explain what "capital" is. What function does "capital" play in small businesses?
17. Interview a banker to find out how he decides to give people capital. How does "capital" relate to black peoples' economic condition?

Show where the tax dollar comes from as well as where it is spent

1. List all the Governments and Government Agencies collecting taxes in Syracuse.

2. Draw 2 pie graphs for one level of Government showing where money comes from and another where money goes.

3. List the various types of taxes collected by one level of government.

4. Analyze the taxes, listing all those that you pay now.

5. State how different taxes affect one income group disproportionately.

6. Make a list of services available to citizens of Syracuse.

Make notes to show which services are automatically performed and which must be "ordered" or requested by citizens.

7. Make a list of services available in areas outside of Syracuse eg. Dewitt, Geddes. Compare and contrast your two lists.

Show how minority groups are affected
in job hiring and firing. Show how
the programs for minorities in our
area help minorities.

1. Survey people about their views on compensation training programs.
2. Talk to the National Alliance of Businessmen about their minority hiring and training program.
3. Research old periodicals and microfilms for court ruling on minority hiring.
4. Find copies of old Congressional records and list parts of Civil Rights Bill (Syracuse University Library).
5. Make a list of the various Civil Rights groups that will help the worker in Syracuse.
6. Use role - playing to illustrate the problems a minority worker would have in an interview. (needed a minority worker and a personnel manager).
7. Question a minority worker in a training program.
8. Investigate Manpower Development Programs through the office of Continuing Education at the Board, or through Madison School. Report on your findings.

Services: People-Oriented - English

Introduction

All of the jobs in this field deal directly and mostly with people. While some service jobs involve working with things--machines, appliances, cars--these jobs perform their work almost entirely in contact with people. First and foremost, therefore, the worker in any of these jobs must know how to get along with his customers. A restaurant which treats its customers poorly will go out of business; a public health official who has not learned to be understanding with people will soon lose his job; a teacher who does not "get along" with his students will probably teach them nothing.

English has much to offer people preparing for these jobs. First, it can help the student acquire the skills necessary to perform the technical aspects of his job: the reading, the writing, the speaking, the listening necessary to communicate with others on the job. But, more important, literature and the basic "know-how" of communications--also an important part of English--can teach students the important things they need to know about people.

Syracuse City School District

Guided Occupational Orientation
Program

Syracuse, New York

Services-People Orientated
Workers In or Around Private
Homes

To outline methods of finding employment in or around private homes.

- a. Ask a librarian or teacher to tell you where to look for jobs in or around private homes.
- b. Canvas your neighborhood and list the kinds of jobs people are willing to pay to have done.
- c. List the number of advertisements found in the classified section of the newspaper that offer jobs in private homes.
- d. Pick an advertisement that appeals to you, and explain why you would be a good choice for the job.
- e. List chores that you like to do around the house, and pick one that you might be able to do for pay.
- f. Ask someone you have worked for at "home" (ie., babysitting, lawn-mowing, etc.) to write you a letter of recommendation stating your qualifications for this kind of work.
- g. Prepare a collage, or portfolio showing jobs done in or around private homes.
- h. Ask a member of your family to tell you what job you do best; then investigate if someone will hire you to do this job for him.
- i. Interview someone who works in or around a private home and list how he got his job, whether or not he likes it, and if he would recommend it as a job for young people.
- j. Call the N.Y. State Employment Service and find out how great the need is for the "home" job you're interested in.
- k. Investigate the salaries that "home" workers earn.
- l. List some of the advantages and disadvantages in being a worker "in or around homes."
- m. List some of the advantages and disadvantages in doing the "home" job of your choice.

Services-People Oriented
Workers In or Around Private
Homes

To outline skills needed
to do jobs in or around
private homes.

- a. Watch T.V. for an evening, and list the characters on T.V. that work in or around private homes.
- b. List the skills that T.V. characters that work in or around private homes have.
- c. List the character traits that T.V. "home" workers exhibit.
- d. Pick a job that one of these T.V. "home" workers does, and explain why/why not you would like to do this job.
- e. List skills necessary to do the "in or around home" jobs of your choice.
- f. Make a poster showing the skills necessary to do the "home" job of your choice.
- g. Investigate the demand for your type of "home" work.
- h. List character traits (requirements) necessary to do the "home" job of your choice.
- i. Outline methods whereby you can get the training to do the job of your choice.

Services-People Oriented

Workers In Government
Service

To outline methods for
finding employment in
government service.

- a. Ask your librarian to show you where to find out about the kinds of jobs available in government service.
- b. Write to the federal government and ask for information about civil service jobs.
- c. Plan a field trip to the County Office Building and list the kinds of jobs being done.
- d. Get a copy of the Civil Service Exam book and attempt some of the questions.
- e. Pick a civil service job that you would like to do, and investigate how to go about getting it.
- f. Interview someone who is doing the civil service job you want and find out how he got the job, his feelings about it, and if he recommends it.
- g. Investigate what job the job of your choice might lead to.
- h. List the advantages involved in working for government.
- i. Investigate the salaries earned by civil servants doing the job of your choice.
- j. Ask a government worker to speak to your class about his work and the ways to go about getting a job in government.
- k. Make a collage of pamphlets describing different kinds of government work.

Services--People Oriented

Workers In Government
Service

To outline skills needed
to do government work.

- a. Survey some government employees and list the skills they need to do their particular jobs.
- b. Collect some pamphlets that outline government jobs and list skills necessary in performing each.
- c. Interview someone who does the civil service job you are interested in, and outline the skills you would need to do this job.
- d. Outline the training necessary to do the civil service job of your choice.
- e. Outline methods whereby you can get the training to do this civil service job.
- f. Make a collage showing skills needed to do civil service job of your choice and training needed to do each skill.
- g. Investigate the advantages and disadvantages in performing this service for the federal government.
- h. Outline the starting salary, increments, and fringe benefits over 10 years that doing this service for the government will provide you with.
- i. Make a bulletin board showing the different types of government jobs and the skills necessary to do them.
- j. Ask someone in government to come to the school and speak to the students about skills involved in working some civil service jobs.

Services-People Oriented

Workers In Law Enforcement

To outline methods of finding employment in law enforcement.

- a. Call the Public Safety Building and ask for information about how to join the police force.
- b. Write to the N.Y. State Troopers Headquarters in Oneida, N.Y., and request information on how to become a state trooper.
- c. Ask your librarian about information on careers in law enforcement.
- d. Outline the different types of jobs in law enforcement for men or women or both.
- e. Ask a member of the police department to speak to the class about jobs in law enforcement and how to go about getting them.
- f. Make a collage showing types of employment found in law enforcement.
- g. Go to the Public Safety Building and list the different types of jobs being done.
- h. Write a paragraph about the kind of job in law enforcement you would like to do, and describe the job, salary, and how to go about getting the job.
- i. Outline a method showing how to get a job in law enforcement.
- j. Describe the job in law enforcement that you're interested in and show the promotions available.
- k. Interview someone in law enforcement who is doing the job you're interested in and find out how he got the job, how he likes it, and if he'd recommend it.

Service-People Oriented

Workers In Law Enforcement

To outline skills needed to do law enforcement work.

- a. Watch T.V. for several nights tuning in to programs that deal with law enforcement, and list different jobs law enforcers do.
- b. Watch a T.V. "police" show and list skills displayed by the characters.
- c. Survey people to find out WHAT DUTIES DO POLICE DO?
- d. Ask a policeman or other member of law enforcement agency to speak to your class about training and skills needed by law enforcers.
- e. Discuss what a policeman should be like with two or three other students.
- f. Play a few games of CLUE with 3 other classmates to see who is the best detective.
- g. Make a poster showing skills law enforcement officials need.
- h. Read Soul Brothers and Sister Lou and discuss the role of the police in this book.
- i. Ask your teacher to give you some stories that deal with law enforcement, and describe the role of police and skills they need.
- j. Go to the Public Safety Building, and investigate five different law enforcement jobs. List the training and skills needed to do each one.
- k. Pick a career in law enforcement that interests you and list how to get the job training and skills necessary to do this job.
- l. Pick a career in law enforcement that interests you, and show on a poster, maximum and minimum salaries, fringe benefits, advantages and disadvantages, skills, training and method of getting this job.
- m. Draw a picture showing the man (woman) and equipment they use in law enforcement. (If they wear a uniform, draw the uniform.)
- n. List some of the dangers involved in law enforcement.
- o. List some of the dangers involved in the area of law enforcement you're interested in.

Service-People Oriented

Workers In Law Enforcement
(continued)

- p. List the training and skills you will need to overcome some of the dangers involved in an area of law enforcement you are interested in
- q. Write a T.V. script showing a confrontation between the law and the public.
- r. Make a film showing a confrontation.
- s. Project an area of law enforcement into the future and describe the skills and training that will be needed to do this job.
- t. Research and discuss "A day in the life of a Cop".

To outline methods of finding
employment in fire prevention.

- a. Visit a fire house near your neighborhood and ask how to get information on jobs with the fire department.
- b. Ask librarian to show you how you can find information on jobs dealing with fire prevention.
- c. Pick a job in fire prevention, and describe the training you would need to do the job and how you can go about getting this training.
- d. Make a collage showing the various jobs in fire prevention.
- e. Outline five jobs in fire prevention, what they involve, and how to go about getting them.
- f. Ask a fire inspector to speak to your class about the need for workers in fire prevention.
- g. Outline a method of obtaining a job of your choice in fire prevention.
- h. Report on the need for workers in fire prevention.
- i. Report on salaries, fringe benefits, insurance programs, for workers in fire prevention.
- j. Interview a fireman about his job, how he got it, the training necessary, if he likes it, and if he recommends it.

Services-People Oriented

Workers In Fire Prevention.

To outline skills needed to do fire prevention work.

Visit a fire house, and list the equipment used.

Research and discuss with a member of the fire department, what training and skills you would need to become a firemen.

List skills needed in the area of fire prevention that interests you.

Make a collage of equipment and skills needed in the area of fire prevention that interests you.

Prepare a report on the dangers involved in working in fire prevention.

List the skills needed to overcome the dangers in the area of fire prevention that interests you.

Talk to a firemen, and write a paragraph on "A Day In The Life Of A Fireman"

Outline the training and education you need to go into fire prevention.

Interview a worker at the restaurant and find out how he/she got the job.

Look in the help wanted column of the classified section of the newspaper and list kind of jobs offered in restaurant work.

Select a job in restaurant work that interests you, research training needed, and how to go about getting this job.

Get a part-time job in a restaurant, describe the job, and write a paragraph explaining how you got this job.

Go to a drive-in restaurant and list the job opportunities that you see there.

Services-People Oriented

Workers in Food Service

To outline methods of finding employment in restaurants.

Services-People Oriented
Workers In Food Service

To outline skills needed
in restaurant work.

- a. Outline the duties of five types of restaurant workers.
- b. Draw a place setting for one person.
- c. Make a model restaurant and practice greeting, seating, and waiting on a customer.
- d. List the skills needed to be the restaurant worker of your choice.
- e. Prepare a sample menu.
- f. Collect menus from different restaurants and make a collage, or bulletin board using them.
- g. List the ingredients needed for five items on a sample menu.
- h. Organize an efficient kitchen.
- i. Make a poster showing restaurant personnel and the skills each one needs.
- j. List 3 or 4 great chefs and investigate one of them and how and where he got his training.
- k. Watch Julia Child or Graham Kerr (Galloping Gourmet) on T.V. and list some of the skills they have.
- l. Define "entree, appetizer, Soup de Jour, à la carte."
- m. List five appetizers and the ingredients for one of these.
- n. Make a glossary of cooking terms that are essential for a cook to know.
- o. Write out your favorite recipe including directions on how to make it.
- p. Illustrate a menu.
- q. Survey people, and find out what they look for in a restaurant and what annoys them the most in a restaurant.
- r. Plan the interior of a restaurant (ie. greek, french, soul-food, etc.)
- s. List skills needed to work in a drive-in restaurant.
- t. Explain in a paragraph what you would need to do to run a successful drive-in restaurant.

Services-People Oriented

Workers in Food Service

To outline methods of finding employment in food services for public institutions.

- a. List five public institutions that have food services.
- b. Ask librarian to help you find information on careers in public institution food service.
- c. List personnel in food service and the training they need to apply for a job in public institution food service.
- d. Pick a field in this area of food service and investigate salary, fringe benefits, advancement opportunities, and how to find a job.
- e. Pick three jobs in this area that interest you, write a job description of each and how to go about getting one of these jobs.
- f. Interview the cafeteria manager of your school and find out how she hires workers.
- g. Call a public institution and inquire how to go about applying for a job in their food service.
- h. List the kinds of jobs available in the school cafeteria.
- i. Make a collage showing personnel in food service in a public institution.
- j. List kinds of jobs available to students in the school cafeteria.

Services-People Oriented

Workers in Food Service

To outline skills needed
in food service for public
institutions.

Service-People Oriented

Workers In Food Service

To outline methods of finding employment in the baking industry.

- a. Visit a bakery, and question one of the workers on the types of jobs available in the bakery. List these.
- b. Find information in the school library and the kinds of jobs available in the baking industry.
- c. List jobs available in the baking industry, and write a short job description of each.
- d. Plan a field trip to a commercial bakery, and list the types of jobs available.
- e. Call a bakery, and ask how you can go about applying for a job.
- f. List the qualifications necessary to do the job in the baking industry that interests you.
- g. Write a paragraph explaining how you train to become a baker.
- h. List the items you would sell if you had a bakery of your own.
- i. Make a pastry and bread collage.
- j. Research the salaries, working hours, working conditions of the job in baking that interests you.
- k. Interview someone in the baking industry and record how he got his job, if he likes it, its good and bad points, and if he recommends it.

Services-People Oriented

Workers In Food Service

To outline skills needed
in the baking industry.

- a. Make a glossary of essential baking terms.
- b. List the qualities that a good baked item should have.
- c. Write out your two favorite recipes for baked goods.
- d. List the skills needed for the job in baking that interests you.
- e. Set up a class bakery shop for one day.
- f. Draw some fancy icing designs for cakes.
- g. Using styrofoam and, icing, and paints and make a wedding cake.
- h. Make a collage showing jobs and skills in the baking industry.
- i. Make a concrete pastry poem.
- j. List five skills that a baker should know.
- k. Draw the kitchen of a bakery.
- l. Make a poster showing pastries and the country they come from.

Services-People Oriented

Workers In Beauty Culture

To outline methods of finding employment in beauty culture.

- a. Visit a beauty salon and interview one of the operators about how to become a hair dresser. List your findings.
- b. Visit a school of beauty culture, and find out about job opportunities in this field. Write a report on your findings.
- c. Write to National Hairdressers' and Cosmetologists Associations, 175 Fifth Avenue, New York, N.Y. 10010 for information about careers in this area.
- d. List types of jobs available in beauty culture.
- e. Spend a day at a beauty parlor, and list the kinds of jobs you observe.
- f. Make a poster showing the different job opportunities in beauty culture.
- g. Find, and report salaries, working hours, and fringe benefits available in this field.
- h. Outline the advantages and disadvantages found in the career in beauty culture that interests you.
- i. Prepare a list of beauty schools that are found in Syracuse, and list their tuition fees and placement services.
- j. Outline the kind and quality of training a beautician needs.
- k. Interview someone who operates his/her own beauty salon, and report on how they started their own business.

Service-People Oriented

Workers in Beauty Culture

To outline skills needed
in beauty culture.

- a. List the basic things any hairdresser must know how to do.
- b. List the basic things any cosmetologist must know how to do.
- c. Outline the skills needed in the field of beauty culture that interests you, and rate them according to how difficult or easy they are to do.
- d. Do someone's hair and makeup, and write a report explaining how you went about doing this.
- e. Make a Hair-do magazine where you feature some original hair designs and fashions.
- f. Make a collage showing hair-do's and make-up past, present, and future.
- g. Draw a picture of a woman in the hair do and make-up of the year 2000 A.D.
- h. Prepare a "Beauty Tip Handbook" where you give woman advice on how to be beautiful.
- i. Teach a group of girls how to apply make-up. (ask for a volunteer)
- j. Give a lesson on HOW TO CARE FOR YOUR HAIR.
- k. Write a report on the types of hair do's and hair cuts popular today.
- l. Teach a group of your classmates about nail grooming.
- m. Interview someone who works in a beauty salon, and write about A DAY IN THE LIFE OF A BEAUTICIAN.
- n. Pass out a questionnaire that asks about basic beauty problems eg. frizzy hair, oily skin, blemishes, etc. and report on your findings.
- o. Ask your classmates, or other people you know to give you a "beauty tip" that you can share with others. Put these together on news bulletin form and pass them out to your friends.
- p. Research magazines for professional beauty tips, and put these together in a notebook. Share it with your friends.
- q. Discuss, in a group, the best feature of each of your classmates, and how it can best be accentuated.

Service- People Oriented

Workers In Beauty Culture

- q. Prepare a glossary of beauty culture vocabulary.
- r. Collect samples of beauty and hair dressing products. (Stores often give samples out to interested people.)
- s. Invite a hair dresser, or beautician to speak to your class about careers in this area.

Workers In Men's Hairdressing

To outline methods of finding employment as a barber.

- a. Visit a local barbershop, and interview a barber about how you can learn his trade.
- b. Ask your librarian to help you find information about apprenticeship programs.
- c. Write to the National Association of Barber Schools Inc., 750 Third Avenue, Huntington, W. Va. 25701 about information on how to become a barber.
- d. Watch a barber at work, and compute how many customers he handles per hour.
- e. Research and record a barber's salary, hours, working conditions, fringe benefits, and training.
- f. Compute the number of barber-shops in your neighborhood.
- g. Outline a barber's apprenticeship program.
- h. Interview a barber about his work, and ask him to tell you why he would recommend it to a young person.

Services-People Oriented

Workers in Men's Hairdressing

To outline skills needed in hairdressing.

- a. Watch a barber and list the routine he follows in dressing a customer's hair.
- b. Interview a barber about the skills he needs to know and list these.
- c. Illustrate barber's tools and skills that go with them.
- d. Illustrate men's hair fashions of today and yesterday.
- e. Outline skills a barber needs to know and rate them as hard, medium and easy to learn.
- f. Make a men's hair fashions magazine using pictures and your own illustrations.
- g. Investigate the field of making men's hair pieces, re-grafting of hair, and hair-weaving. Report and discuss these methods.
- h. List men's hair styles and grooming aids in an alphabetized illustrated directory.
- i. Inquire at the N.Y. State Employment service about training programs for barbers. List them.

Services-People Oriented

Careers in Custodial Work

To outline methods of finding employment as a custodian.

- a. Interview a school custodian on how to get a job in custodial work.
 - b. List the kinds of custodial work being done in the school.
 - c. Call the New York State Employment Service about jobs in custodial work.
 - d. Research and list salaries, working hours, working conditions, fringe benefits, and requirements for custodial work.
 - e. Ask a custodian to speak to your class about the advantages and disadvantages of custodial work.
-
- a. List the kinds of duties custodians perform.
 - b. Outline the skills a custodian needs and the things he needs to know how to do.
 - c. Work along with a custodian for an hour and write a report on his/her routine.
 - d. Investigate job opportunities for part-time custodial work.

Services-People Oriented

Members of Armed Forces

To outline methods of obtaining information about service in the armed forces.

- a. List the branches of the armed forces.
- b. Go to a recruitment center for any one of these branches and obtain information on how to join the service.
- c. Make a poster showing the different branches of the armed forces.
- d. List the advantages, disadvantages, benefits, and salaries of the armed forces.
- e. Ask a member of the armed forces to speak to your class about life in the armed forces.

To outline qualifications necessary for service in the armed forces.

- a. List the requirements for service in the branch of the armed forces that interests you.
- b. Make a poster showing the training program for the branch of the armed forces that interests you.
- c. Write a paragraph on "A day in the life of a private."
- d. Read No Time For Sergeants or another book about military life, and describe barracks routine as it appears in this book.
- e. List work that you can do in the armed forces, even if you're not fit for active duty.

- a. Arrange a field trip to Upstate Medical Center to find out about health careers.

- b. See nurses about information on health careers.

- c. Start a health careers project, and invite speakers to speak to your group about these careers.

- d. Make a bulletin board showing careers in public health service.

- e. Call CARERCO and ask them to send you information on training programs in health careers.

- f. Pick a job in health careers that interests you. Investigate training, requirements, salaries, fringe benefits, working hours, and working conditions. List these.

- g. List advantages and disadvantages in public health service.

- h. Check with O.C.C. about health service training programs there.

- i. List jobs in public health service which require college education and those which don't.

To outline skills needed in public health services.

- a. List personal qualities any worker in public health service needs.
- b. Outline skills you would need to know in the fields of public health service that interests you.
- c. Interview someone in the field of public health service that interests you, and let them tell you the skills you will need to know.
- d. Volunteer to help the school nurse, or school dental technician and record your duties and her routine.
- e. Pick a career in public health service, and illustrate training and career duties.
- f. Design a uniform for yourself that would be functional in your job in health careers.
- g. Write to Washington, D.C. about information on "para-medics" and other "para-professional health careers."

Service-People Oriented

Workers in Public Health Service

To outline methods of finding employment in public health service.

Services-People Oriented

Careers in Dental Work

To outline methods on how to become a dental worker.

- a. Call American Dental Association, and ask for information on how you can become a dentist.
- b. Write to the University for information on how to become a dentist.
- c. Ask your dentist about career opportunities in dental work and the kind of training a dentist needs.
- d. Inquire about salaries, working hours, working conditions and benefits in dentistry.
- e. Prepare a dental work display.
- f. Write a paragraph on the advantages, and disadvantages of the dental profession.
- g. List the types of dentistry being practiced today, and write a brief description of each.
- h. Outline the training needed in the branch of dentistry of your choice.
- i. Investigate and report on jobs connected with dentistry but not requiring as much work (e.g. dental hygienist, dental technician, X-ray technician).
- j. Through research and visits to dentists, discover what a dentist has to know and do besides dentistry to operate his own business.

Services-People Oriented

Careers In Dental Work

To outline skills needed in dentistry.

- a. Outline a dental care program that you would tell your patient to follow. (Ask your dentist for tips).
- b. List things any dentist must be able to do.
- c. Make a poster showing teeth and their roots.
- d. Investigate and report on several diseases that affect teeth and gums.
- e. Illustrate a dental hygiene poster.
- f. Visit a dental school and write a report on what you observe.
- g. Ask your dentist to let you spend a few hours in his office watching him work. Outline what he does, how he talks to his patients, etc.
- h. List types and kinds of equipment dentists use. (Ask your Dentist).
- i. Visit a dental clinic and list types of jobs being done there.
- j. Report on the duties and skills of a dental hygienist / X-ray technician / dental technician.
- k. Interview the school dental hygienist about what she has to do and which skills are the most important. Report on these.

Service-People Oriented

Careers in Medical Work

To outline methods on how
to become a Medical Worker.

- a. Write to Upstate Medical School, and ask for information on requirements for medical school.
- b. Outline the training someone needs to become a doctor.
- c. Research the areas of medicine being practiced today. Record the area(s) that interests you, and write a short paragraph describing this area.
- d. Visit Upstate Medical Center and ask to speak to a doctor about requirements for a career in medicine.
- e. Watch some of the "doctor" shows on T.V. and write down the kinds of medicine these doctors practice.
- f. Write a paragraph, or a report on what kind of doctor you want to be, and why you want to be a doctor.
- g. Research and record a doctor's training after medical school, salary, working hours, working conditions, and fringe benefits.
- h. Write the advantages and disadvantages of being a doctor.
- i. Research and record the kinds of jobs available in a doctor's office.
- j. Pick a job done in a doctor's office, other than the doctor, and write a short description of it.
- k. Research the requirements for a job in a doctor's office. List these.
- l. List some of the workers who work with doctors in hospitals.
- m. List the requirements needed for one of these jobs in medical work that interests you.
- n. Make a collage showing the different types of workers in medical work.
- o. Investigate the requirements necessary to be a para-medic.
- p. Visit Upstate Medical Center, go up to one of the wards and observe the different types of jobs being done. List these.
- q. List the types of workers found in the laboratory of a hospital.
- r. Investigate salary, requirements, training, working hours, and fringe benefits of a medical worker of your choice (other than a doctor).

Services-People Oriented

Careers In Medical Work

To outline some skills
needed by medical workers.

- a. Make a poster showing basic equipment a doctor uses.
- b. Ask a doctor if he can tell you what his daily routine is. Record this.
- c. Watch a T.V. "doctor" show and write a paragraph on the doctor's routine.
- d. Write a paragraph on the personal qualities a good doctor needs.
- e. Write a short script for a T.V. show that shows a doctor facing a crisis.
- f. Write an essay about a doctor's day in the year 2000.
- g. Outline the skills the medical worker of your choice needs to have.
- h. List the types of skills needed to work in a laboratory of a hospital.
- i. Make a poster showing equipment, uniform, duties, and skills of a medical worker, other than a doctor.

- a. Write to a school of nursing (ask librarian to help you) and ask for information on how to become a nurse.
- b. Interview a nurse and record her working hours and type of nursing she does
- c. List the different kinds of nursing careers available.
- d. Volunteer to work as a CANDY STRIPER and report on your duties, and hospital routine.
- e. Investigate and list nurse's salaries, working hours, working conditions, fringe benefits.
- f. List advantages and disadvantages of being a nurse.
- g. List and briefly discuss the various specialties within the nursing field. How does one prepare differently for each?

Service-People Oriented Careers In Nursing

To outline methods of
how to enter a career
in nursing.

To outline skills needed to be
a worker in the nursing field.

- a. Volunteer to work as a Candy Stripper, and report on the skills you need to know, and those you observe in nurses.
- b. List the personal qualities a nurse needs to have.
- c. Design a comfortable functional nurse's uniform.
- d. Outline the skills you will need to do the type of nursing that most interests you.
- e. List some of the skill's any nurse needs to have.
- f. Write a paragraph on "WHAT I WOULD DO IF I WERE A NURSE".
- g. From your outline in "d" above, list where you would gain each of the skills you need.

Services-People Oriented

Careers in Education

To outline methods on how to get a job working in education.

- a. Interview a teacher, and ask him/her what the requirements for teacher's are.
- b. Research and record salaries, working conditions, working hours, and fringe benefits.
- c. Ask your teacher to describe a day's routine.
- d. Write to Syracuse University's School of Education and inquire about teacher training, and careers in teaching.
- e. Write a paragraph on WHY I WANT TO BE A TEACHER.
- f. Explore and record teacher's salaries, working hours, working conditions, and fringe benefits.
- g. List some of the advantages and disadvantages of being a teacher.
- h. List careers other than public school teaching but still connected with education, and discuss briefly the role of each.
- i. List some of the requirements needed by the worker in education, (other than the public school teachers) in the job that most interests you.
- j. Investigate salary, working conditions, working hours, and fringe benefits of this worker.

Service-People Oriented
Careers In Education

To outline skills needed
to work in education.

- a. List the personal qualities you feel a good teacher should have.
- b. Ask your teacher to tell you what kinds of things a teacher must know how to do.
- c. Prepare and teach a lesson about something you're interested in to a group of students. Have your teacher rate you.
- d. Write a paragraph on "MY FAVORITE TEACHER".
- e. List ten things you would change about school if you were a teacher.
- f. Volunteer to help a poor student in a subject you do well in. Record his progress.
- g. Help a brother or sister with their homework. Record his/her progress.
- h. Ask your teacher to show you what a lesson plan is, and then write one yourself.
- i. Read The Miracle Worker and explain how Annie Sullivan taught Helen Keller to speak.
- j. Ask your Librarian to help you find information on schools of the past. Write a report on what schools used to be like.
- k. Write an essay about schools of the future.
- l. Observe your teachers in their classroom, and write an essay comparing and contrasting their routines.
- m. Write a skit showing a sad, or funny incident between a teacher and his/her class.
- n. Watch Room 222 on T.V. for a few weeks and describe some of the problems a teacher can face.
- o. Using paper, or a box, draw or build a model classroom.
- p. List some of the skills needed by teacher-aids.
- q. Write short job descriptions of some jobs connected with education, other than public school teaching.
- r. List the skills needed for a job connected with education (other than public school teaching) that interests you.

Services-People Oriented

Careers In Law

To outline methods on
how to become a worker
in law.

- a. Write to a Law School and ask for information on how to become a lawyer.
- b. Go to Legal Aid Office and ask to interview a lawyer. Record what he tells you about how he became a lawyer.
- c. Ask Librarian to help you find information on the different types of law being practiced. Write a short job description of the area(s) that interests you.
- d. Write a paragraph on the kind of law you want to practice and why.
- e. Investigate and outline a lawyer's salary, working hours, working conditions, and fringe benefits.
- f. List some of the advantages and disadvantages of being a lawyer.
- g. List some of the jobs found in law offices other than a lawyer's.
- h. Investigate the requirements for one of these jobs.
- i. Investigate salaries, working hours, working conditions, and fringe benefits for one of these jobs.

Services-People Oriented

Careers In Law

To outline skills needed to be a worker in the legal field.

- a. List the kinds of personal qualities a lawyer needs.
- b. Read The Devil and Daniel Webster and explain how Daniel outwitted the devil.
- c. Watch two or three of the lawyer "T.V." shows and list some of the skills that the T.V. lawyers have.
- d. Read a Perry Mason mystery story by Earl Stanley Gardner and write a paragraph on Perry's qualities and his skills as a lawyer.
- e. Write a script where a trial takes place and you play the "lawyer" part
- f. Read the play, WITNESS for THE PROSECUTION, and outline the qualities the defendant's lawyer has.
- g. Visit city court and record what happens between lawyer, client, and judge.
- h. List skills needed by a legal secretary.
- i. List skills needed by a worker in law, other than a lawyer.

INTRODUCTION

Funded by a special grant from the U.S. Office of Education, the Guided Occupational Orientation Program will be a part of the curriculum throughout grades 6-12. Careers Unlimited is the junior high school segment of this program.

The basic idea behind the junior high program is extremely simple: junior high students, we feel, should begin to examine alternative careers and to examine themselves and their goals in light of these careers. The Guided Occupational Orientation Program seeks to meet these goals.

All four of the required junior high school subject areas (English, mathematics, science, and social studies) participate in the program, and a separate booklet has been developed for each career field in each area. Thus there are four "Entertainment and Communications" booklets--one in each of the four subject areas. In addition, there is an introductory booklet--designed for use in English and social studies classes--simply titled, "Careers Unlimited."

Seven career fields are included in the program:

1. Clerical and Sales Careers
2. Services - Working with People
3. Services - Working with Things
4. Working on the Land
5. Manufacturing Careers
6. Structural Work
7. Entertainment and Communications

The hope of the Writing Committee is that a student will be able to pick a field of interest, e.g. structural work, and study that career field simultaneously in each of his four subject areas. Thus, he would be studying structural work in his English, social studies, mathematics, and science classes at the same time. Another possibility, discussed in the following pages, is that one teacher of the four could

be responsible for working with each individual student in all four of the areas. This possibility is especially promising for those schools organized on a "house plan" basis.

Unlike many other curriculum materials in past years, the booklets included in the Guided Occupational Orientation Program are not "curriculum guides" or "syllabi." They are, rather idea-books, books from which both students and teachers can get ideas about how a student can learn more about the careers in his field of interest. Almost entirely, the booklets consist of "objectives" and "activities"--so that the teacher and the student may cooperatively determine the objectives to be pursued, and the teacher can help the student to choose appropriate activities which will lead to the chosen objectives.

Under the terms of Secondary Bulletin No. 101--the course approval bulletin for the Guided Occupational Orientation Program--each school in the system is to devise its own means of implementing the program. The booklets and materials recommended in this guide are simply tools to be used by the school as it sees fit. The "mandates" or "requirements" stated in the bulletin are few: 1) every student in grades 7-9 is to study career orientation; 2) every student should spend approximately as much time on career study as he does in any one of his other courses; 3) the student is to study career orientation in all of the four areas to which he is assigned. (Obviously, a 7th-grader not normally taking science will not do the science part of the Guided Occupational Orientation Program unless one of his other teachers can guide his study in science.); 4) each school is to file an implementation plan with the Office of Secondary Education. One unit of credit will be granted 9th grades; normal school credits will be granted 7th or 8th grades.

The school has several resources to help plan its implementation of the program. First, Assistants and Associates in Secondary Education can help through their knowledge of curriculum

planning and programming. Second, the District's four Occupational Resource Specialists--operating from the Office of Pupil Services--have been specially trained to help. Third, one of the teachers in each school will be meeting throughout the school year as part of the secondary writing team--those people who first wrote the booklets you will be using.

In the following section of this booklet--"Implementing Guided Occupational Orientation"--two topics are dealt with. First, some suggested school-wide approaches to the program are presented. Those described here are only a few of the possibilities; it is entirely possible that each school can design its own tailor-made program, only vaguely representing one of the designs described. Second, some suggestions for working with individual students in individual classes are discussed, as a means to each teacher's personal planning for the program.

The Secondary Writing Team Guided Occupational Orientation Program

Ron Cocciolo - Social Studies Teacher
Andrew Cooper - Social Studies Teacher
Pete Gallagher - Science Teacher
Gerald Mingolelli - English Teacher
Jo Ann Morabito - Mathematics Teacher
Steve Phillips - Assistant in Secondary Education
Faye Zuckerman - English Teacher
Helen Kahn - Graphic Artist

Curriculum Aides for Guided Occupational Orientation

Introductory Planning Guide

English & Social Studies - 1 booklet

28 Planning Guides

English - 7 booklets; 1 each in:

Clerical and Sales
Services: People-Oriented
Services: Things-Oriented
Manufacturing
Structural Work
Working on the Land
Entertainment & Communications

Social Studies - 7 booklets

Science - 7 booklets

Mathematics - 7 booklets

Supplementary Packet

Forms, charts, sample materials for use
by students and teachers

Teacher's Resource Book

Bibliography, program summary, suggestions
for implementing program school-wide and
in individual classrooms.

Information and details available from:

Stephen Phillips
Syracuse City School District
409 West Genesee Street
Syracuse, New York 13202

Each teacher should have one copy of the teacher resource book.

Each teacher will have one class-set of student-teacher booklets in his discipline:

5 copies	Clerical and Sales	Pink cover - Mathematics
5 "	Services: People-Oriented	Blue cover - Science
5 "	Services: Things-Oriented	Yellow cover - Social Studies
5 "	Working on the Land	Green cover - English
5 "	Manufacturing	
5 "	Structural Work	
5 "	Entertainment	

35 booklets

Each English and each social studies teacher should have 1 class-set (35) introductory booklets (white cover)

Each teacher should have one copy of the supplementary activities packet.

Guided Occupational Orientation: The School-wide Plan

Secondary Bulletin 101 outlines important facets of the program:

- 1) All students in grades 7, 8, and 9 are to participate in the program;
- 2) A student is to study career orientation in his mathematics, English, social studies, and science class--or in each of these subjects for which he is enrolled;
- 3) Grade 9 students will receive one unit of credit for successful career study; normal "school credit" will be granted Grade 7 and Grade 8 students;
- 4) The principal of each school is to submit an implementation plan for the Guided Occupational Orientation Program in his school. This plan should include the process by which teachers from the four subject areas will coordinate their planning and teaching for the program, in addition to the school's method of arriving at a single grade in career study for each student. (Schools have the option of selecting either a pass-fail system or another system consistent with the grading system currently used in the school.

Following are several possible organizations of school staffs for implementation of this program:

"House Plan" schools

"Core Program" plan - With this type of organization, each student would be responsible to one of his four teachers for career study, though this teacher would plan with the student for work in all four areas (English, social studies, science, and mathematics.) Under this system, each teacher would work with one group of students for a four-period block of time, either one day/week throughout the year or for one unit of study comprising approximately 120 periods of class time. Within the house, students could be "exchanged" by the teachers for shorter periods of time. Thus, if one of the students permanently assigned to career study under his English teacher needed to use science equipment, his English teacher would work out an exchange agreement with the science teacher.

With this plan of implementation, the planning booklets could be used in an infinite variety of ways. A student who needed extra help in social studies could be urged to concentrate on this phase of the program; a student especially interested in mathematics could specialize in the mathematics phase of the program. More important, the planning guide could be put to very effective use, with a student and teacher cooperatively selecting objectives and the activities which will lead to their

fulfillment. A system of diagnostic teaching thus becomes possible: the teacher and student collectively assess a student's strength, weaknesses, and interests; together, they select objectives in line with these factors; and the teacher recommends activities which aim at fulfilling these needs.

"Coordinated Teaching" plan - With this type of organization, the students would move from class to class as they often do. The student would, however, negotiate one contract or course-of-study with the team of teachers for his house. Each teacher would then accept responsibility for guiding the student's study in a designated area of study. Because of the scheduling possibilities made possible by the house plan, some "exchanges" could still be made, so that a student could spend extra time for extra help with a particular one of his teachers.

Non-House Plan Schools

The task of coordinating the teaching effort in schools which do not have a "house plan" may be difficult, but it is no less important. The teaching staff in each school--whether a school with a house plan or one without--will have to come to some agreement about coordinating the Guided Occupational Orientation Program.

One possible scheme of coordination would use one of a student's teachers--perhaps the English teacher--as a "base teacher" for his career study. It would be the job of this teacher to orient the student to the world of work, also to help him choose areas and means of studying careers throughout his school day. If each of a student's four teachers are simply left to "go their own ways", the program will be confusing, and its educational benefit will be minimal.

A student might be asked, for example, to draw up the specifications for his contract--in English, social studies, science, and math--under the supervision of his English teacher. The contract would then be taken to each of the teachers for their recommendations and approval. Any changes, however, would be worked through the English teacher, so that he would remain the adult responsible for the student's total program. During the school year, other teachers would meet regularly with the student and the English teacher to help the student evaluate his work; the English teacher would, at the end of the marking period, sit with the student to make his final evaluation.

For the Individual Classroom Teacher

The Over-all Teaching Plan

Any good unit plan, lesson plan, class or individual project contains three important phases: introductory activities; developmental activities; culminating activities.

Introductory activities are those which help the student and teacher collaborate on the scope and sequence of the work to be done. These activities are also the things to build students' motivation for future work.

Developmental activities are those which enable students to work in depth in a particular area within the general content field. When groups are working together on a project, developmental activities can be done either by the entire group or by individual students.

Culminating activities--including evaluation--are those which help students to draw together their total knowledge of the work done. In classes which use "cooperative" or "DEMOCRATIC" learning, each student will contribute by reporting on his phase of the work so that other students can benefit. When the student has completed his culminating activities, he should have a clear idea what he has learned during the time spent and should have the "total picture" of the unit studied.

Several steps are in the recommended instructional scheme for Guided Occupational Orientation:

- 1) Student and teacher cooperatively review the program, and assess the student's needs in areas comprising the program.
- 2) Student and teacher cooperatively select objectives which will work at fulfilling the student's needs.
- 3) The teacher, as the instructional manager and consultant, recommends activities which will fulfill the objectives.
- 4) Student and teacher cooperatively develop a specific educational plan, based on available time, materials, resources, and evaluation methods.
- 5) Student pursues his educational plan, relying on the teacher for guidance along the way.
- 6) Student and teacher cooperatively evaluate the student's progress towards fulfillment of his objectives.

As noted in the previous pages, two or more teachers could be resources to a particular student. We recommend, however, that one teacher be specifically

assigned to develop individual students' programs and to coordinate his work with other teachers.

Diagnostic teaching

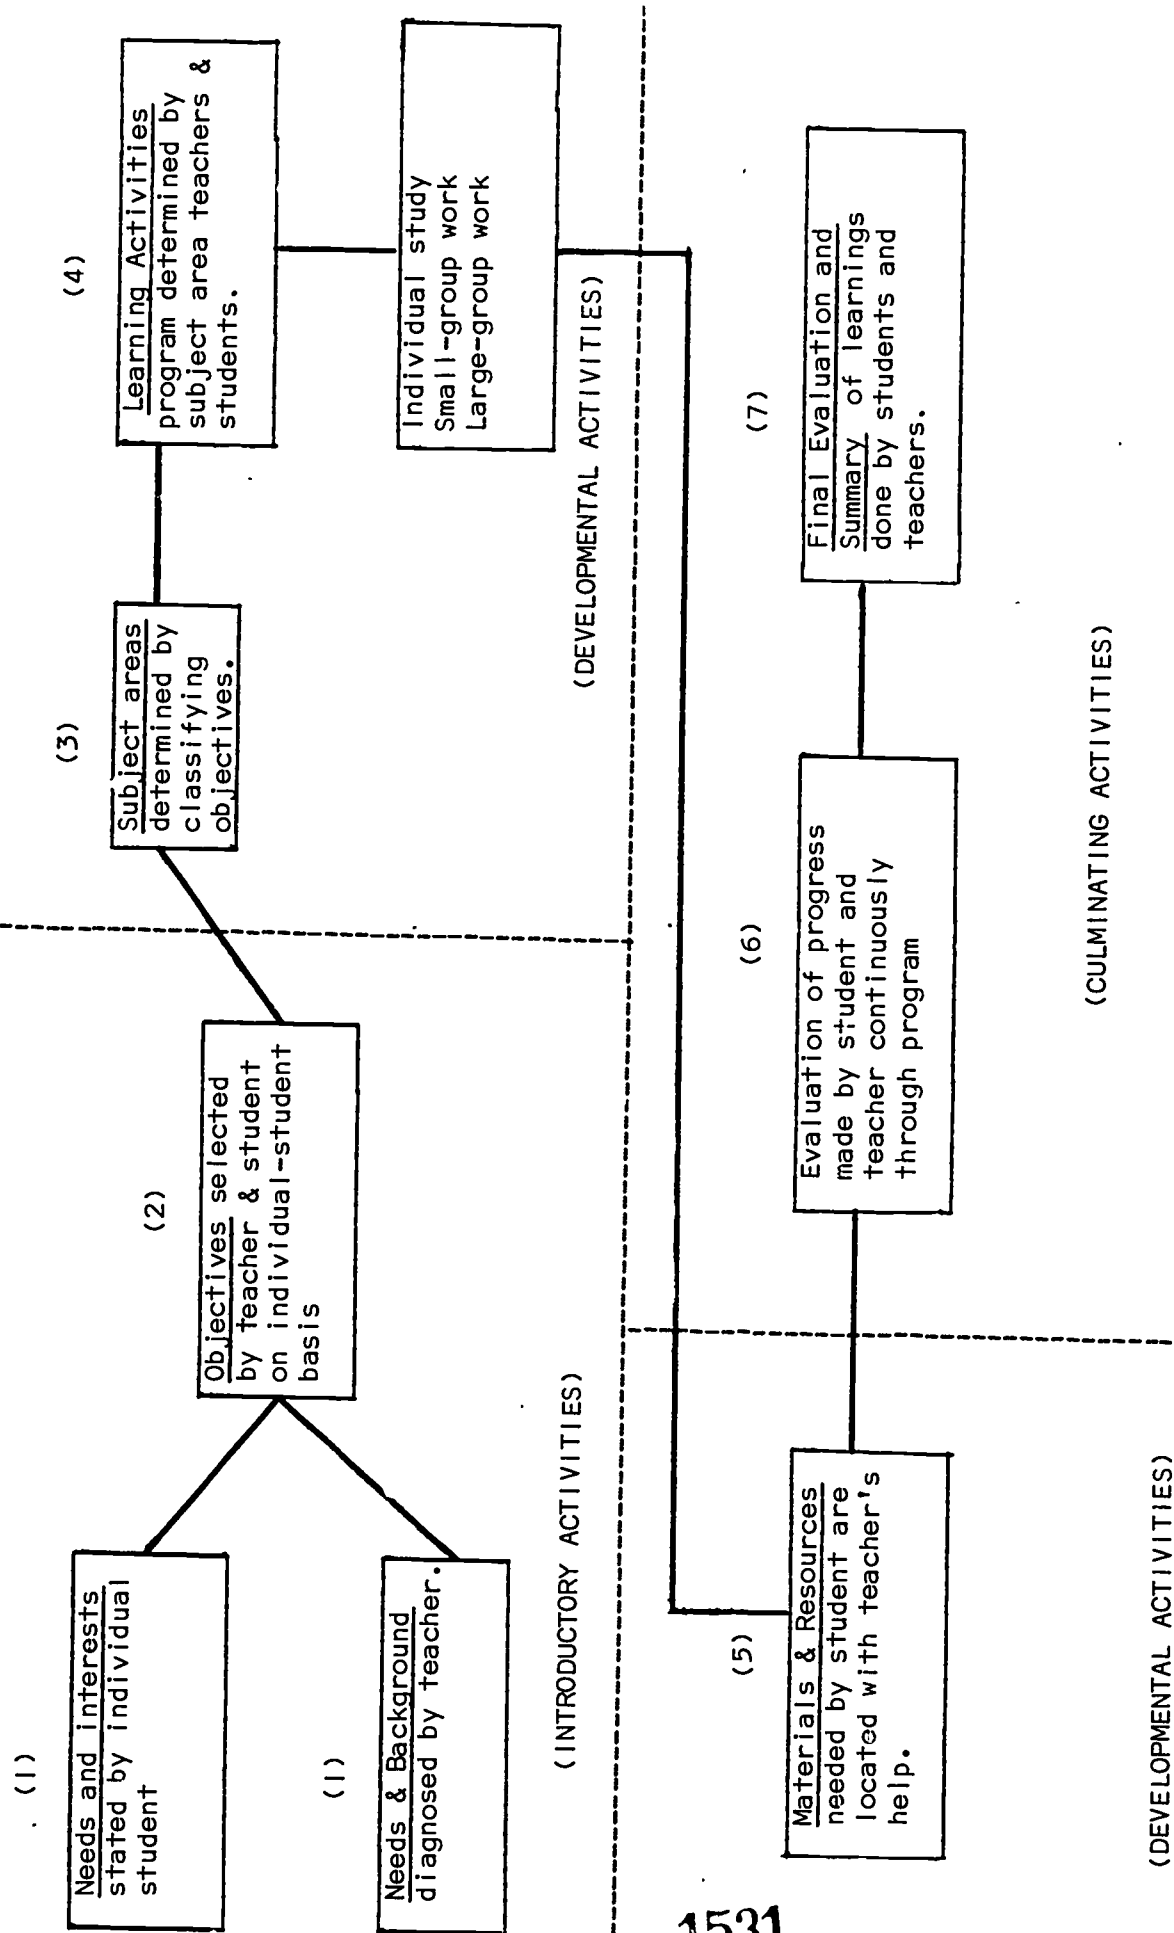

"Diagnostic teaching", as the name implies, is based on a student's and a teacher's cooperative analysis of the student's particular needs. The role of the teacher here is a guiding role--he helps the student find ways to assess his own strengths and weaknesses, interests and social needs. At the end of the diagnosing or pre-testing program, the student should have a clear picture of what objectives he needs to further his development and education.

At this point, the teacher and the student jointly pick those objectives which will advance the student. Throughout the Guided Occupational Orientation booklets, the objectives are listed on the left side of the page. It is from these objectives--plus any students and teachers may care to invent--that the student and teacher should select a few.

Next, the teacher helps the student to select activities appropriate to his needs. If a student needs extra work in composition, and is interested in auto mechanics, he would have two objectives: 1) to learn appropriate composition skills; 2) to learn about auto mechanics. From the activities on the right column of the page, the teacher would then help the student select activities which would meet these goals: to write a composition about the future role of auto mechanics, for example.

After the student completes the appropriate activity, he and the teacher should cooperatively evaluate progress towards fulfilling the objectives. How much, we might ask, has the student learned about composition-writing? How much has he learned about auto mechanics? Evaluation can even be fun, as if a student were to summarize his learning in a creative composition, "How it would feel to be a spark plug."

TEACHING-LEARNING IN THE GUIDED OCCUPATIONAL ORIENTATION PROGRAM

Polar Characteristics Distinguishing Individualizing Teaching Practices

Observed Behavior in Classrooms of Individualizing Teachers

Observed Behavior in Classrooms of Non-individualizing Teachers

Teacher Behavior

Objectives: The teacher pursues multiple objectives, each objective related to a specific pupil or small group of pupils.

Planning and Preparation: The teacher's planning and preparation are in terms of individual pupils.

Communication-Direction: The teacher communicates with individuals in the class while other individuals of the class remain engaged in different activities.

Communication-Message: The teacher uses feedback information from individual pupils as a basis for modifying the message being communicated.

Function: The teacher's function is primarily observation of evidences of learning or the lack of it and the motivation and guiding of students to to independent learning activity.

Evaluation: The teacher's evaluation of each pupil is based on the latter's individual growth and development.

Pupil Behavior

Objectives: The pupils pursue objectives which they themselves have established.

Planning and Preparation: The pupil's planning and preparation have been unique in that they are engaged in independent work, study, practice, or demonstration

The teacher pursues a single preselected objective, applying it without variation to all pupils in the class

The teacher's planning and preparation are in terms of some single class norm. (This norm may be the average of the three or four best pupils.)

The teacher communicates with all pupils in the entire class at one and the same time (i.e. "out loud"), even when addressing one pupil.

The teacher's preselected communication is unmodified by circumstance other than his own objectives, or by variations in its reception by individual pupils.

The teacher functions primarily as a purveyor of information.

The teacher evaluates the pupils en masse with a predetermined standard as the measure of success.

The pupils pursue objectives which the teacher has established.

The pupil's planning and preparation have been by teacher's direction in that all pupils are engaged in same activity.

Communication-Direction: The pupils are engaged in small group activity in which discussion is considered a function of learning.

Communications-Message: The pupils are encouraged to manifest originality, creative productivity, and purposeful divergence.

Function: The pupils are active participants in learning activities.

Evaluation: The pupil evaluates his own growth and development.

The pupil's participation in class is restricted to asking or answering questions of the teacher.

The pupils are restricted to recitation of predigested material and to conformity.

The pupils are passive recipients of knowledge.

The pupil makes no self-evaluation, but accepts the teacher's opinion.

MY CAREER PLANNER

This Career Planner deals with the different things that must be considered in looking for and planning for a job. Choose a job or career which you are now interested in and fill out this planner in relation to that job.

My Name _____
My Grade in School _____
This Career Study is on _____
Date _____

My Duties on the Job:

In this job my most common duties would be (use single words or short phrases):

I may also need to do (other related duties):

Working Conditions:

Physical surroundings (noisy or quiet, indoors or outdoors, hot or cold, air conditioned, etc.):

Working conditions (steady, loss of time because of weather, seasonal, dangerous, standing or sitting on job, odd hours, tiring, heavy or light lifting, traveling, etc.):

Personal Qualities I Would Need for this Job:

Mental abilities and aptitudes needed (how much scholastic ability, mathematical, clerical, verbal, science or mechanical aptitude, etc.).

Physical requirements needed (active or sitting job, strength, height, weight, etc.).

Interest requirements needed (in machines, ideas, people, outdoors, etc.).

Education and/or Training Required:

Usual type of education (circle one).

High School	Senior College (4 year)
Technical School	Apprenticeship
Junior College (2year)	Special School or Training

Years of education after high school. (circle one).

1	5
2	6
3	7
4	

Experience background required (example - typing experience for a clerk or secretary; driving experience for job as delivery man or bus driver, etc.).

Other ways of gaining skills and/or knowledge.

Educational or Training Opportunities:

<u>Names and Addresses of Schools</u>	<u>Course Length</u>	<u>Yearly Cost</u>

Local employers having on-the-job training programs (if required for this job).

Future Outlook:

Job outlook in the next ten years.

Earnings I could expect:

Average earnings expected.

minimum _____ to maximum _____

per hour, year, month, (circle one).

Lowest earnings reported _____.

Highest earnings reported _____.

Local earnings _____.

If an apprenticeship earnings of beginners _____.

How would I be paid for overtime (time and a half, time off, etc.) _____.

Fringe Benefits (circle).

vacation with pay	pension plan
overtime pay	payroll savings plan
holidays off with pay	life insurance
sick leave	profit sharing
hospitalization paid wholly or in part by employer	discounts
	free recreational facilities

Hours I would work:

Usual hours per day _____.

Number of days per week _____.

Number of hours per week _____.

Night work (never, always, sometimes); circle one.

What I like about this job and what I dislike: (Advantages and Disadvantages):

I Like	I Dislike

There are (more, fewer, the same number of) things I like than I dislike.

Promotions that would be possible for me:

Titles of jobs up the promotional ladder - beginning as a _____, I could possibly be promoted to a _____ then to _____, then to _____.

Possibilities for the first promotion are (circle one):
poor, fair, good.

Where I would work:

Most workers in this career are found in (Circle one or more):

cities

offices

rural areas

factories

all areas

other _____

Name some cities, states or areas where most workers are found:

How I can measure my interests:

While in school:

Subjects I will need in this career -

Of these courses I like -

Summer or part-time jobs that would help me decide if I
was interested in this career -

Hobbies related to this career -

High School subjects and activities that could serve as a good
background:

High School subjects I should take to meet the entrance re-
quirements of the necessary school or college, or to meet the
basic requirements of a job in this area:

Other subjects that could prove helpful:

High school hobbies and clubs that could be of value:

Other Related Careers that I should investigate before making my final career decision:

Careers having similar duties to the one I am studying (working with people, operating machines, etc.) Name some:

Careers in the same industry requiring similar education or training. Name some:

Careers with similar working conditions of using the same tools, etc. Name some:

Where I can get more information:

Material to send for:

<u>Title</u>	<u>Source</u>	<u>Address</u>	<u>Date</u>	<u>Price</u>

Local places to visit:

Local workers to talk to:

OCCUPATIONAL EXTENSION PROGRAM!

Did you know that there was a special night school program for Senior High School students? It is called the Occupational Extension Program and it is located at Central Technical High School.

This program is primarily designed and offered to students in an academic program, or something similar where they do not have the opportunity during day school to fit these types of subjects into their schedules. These courses are open to 11th and 12th grade students, with a preference going to seniors in the case of a heavy enrollment.

The five courses being offered are:

- Personal Typing
- Auto Mechanics
- Woodworking-Carpentry
- Food Service Occupations
- Photography I

These five courses provide $\frac{1}{2}$ unit of credit toward graduation upon successful completion of course requirements.

Although registration was already completed on October 12, 13, 14 it still may be possible to get into a class if it is not yet filled up. Information on these programs may be obtained either through your guidance office or by calling Mr. Vernon Witmer, Principal, at either of these numbers:

476-4271 ext. 301
476-1068

Fall classes start the weeks of October 18th and 25th and continue through to Christmas vacation. These same courses will be offered during the second semester. Registration will be sometime in January. Contact your counselor to find out the exact dates.

OHIO VOCATIONAL INTEREST SURVEY

During the fall, sophomores and juniors will receive the results of the interest survey which was given last year. This survey indicates your degree of interest in general occupational areas. You will receive a booklet containing your scores and a brief explanation of your results. Sometime during the year your guidance will call you in to explain your scores to you individually. Your parents will be interested in your scores. Take your booklet home and show it to them!

In closing, if any of you have questions concerning career planning, particular jobs, training programs, or school district programs, write these questions down and submit them to your guidance counselor. We will try to answer them in our monthly newsletter.

HAPPY HALLOWEEN!!!!!!!!!!!!!!!!!!!!!!

OCCUPATIONAL SURVEY 1972-1973. ERIE, HURON,
AND LORAIN COUNTIES COOPERATIVE AREA MANPOWER
PLANNING AREA 12.

OHIO STATE BUREAU OF EMPLOYMENT SERVICES,
COLUMBUS.

MF AVAILABLE IN VT-ERIC SET.

PUB DATE - 72 71P.

DESCRIPTORS - *OCCUPATIONAL SURVEYS; *LABOR
FORCE; *EMPLOYMENT TRENDS; LABOR ECONOMICS;
*MANPOWER NEEDS; ECONOMIC FACTORS; LABOR
MARKET; *MANPOWER UTILIZATION

IDENTIFIERS - LABOR FORCE PARTICIPATION; OHIO

ABSTRACT - A RESULT OF THE MANPOWER
DEVELOPMENT AND TRAINING ACT OF 1962, THIS
REGIONAL OCCUPATIONAL SURVEY, COVERING THREE
COUNTIES IN OHIO, WAS CONDUCTED TO COLLECT
DATA TO BE USED AS A SERVICE TO EMPLOYERS,
TRAINING INSTITUTIONS, VOCATIONAL COUNSELORS
AND OTHERS WHO MUST PLAN FOR WISE USE OF
MANPOWER. THE SAMPLE WAS DRAWN FROM A LIST OF
FIRMS COVERED BY OHIO UNEMPLOYMENT
COMPENSATION LAW, PLUS MAJOR NONCOVERED
EMPLOYERS. FIRMS WERE GROUPED INTO THREE
MAJOR SIZE CATEGORIES: (1) THOSE HAVING 165
OR MORE EMPLOYEES, (2) THOSE WITH 20 TO 164,
AND (3) THOSE WITH 4 TO 9 EMPLOYEES. DATA
WERE ANALYZED IN TERMS OF WORK FORCE
CHARACTERISTICS, AND MANPOWER DEMANDS BY
INDUSTRY. TABLES EXPLAINING FINDINGS ARE
INCLUDED AS WELL AS DEFINITIONS OF THE
OCCUPATIONAL GROUPS DISCUSSED. (AUTHOR/SN)

Table IV	Current Employment by Sex and Industrial Divisions
Table V	Occupations and Reported Needs in All Industries
Table VI	Employment and Reported Needs by Occupational Groups
Table VII	Employment and Reported Needs by Industrial Divisions
Table VIII	Occupations and Reported Needs by Industrial Divisions
Table IX	Industrial Divisions and Projected Requirements by Occupational Groups

The Ohio Bureau of Employment Services began collecting occupational information and employment projections because of the Manpower Development and Training Act of 1962. Subsequent legislation focused additional attention on the need to correlate human development with economic growth through careful analysis of employment potential in every community. The bureau now conducts regional occupational surveys and publishes the results as a service to employers, training institutions, vocational counselors, and others who must plan for wise use of manpower. This report covers Cooperative Area Manpower Planning Area 12, which includes Lorain, Erie, and Huron Counties.

Methodology

This study was conducted by the method outlined by the federal Bureau of Employment Security (now Manpower Administration) in its Handbook on Job Market Research Methods. The sample was drawn from the list of firms covered by the Ohio Unemployment Compensation Law, plus major noncovered employers. The firms were grouped for survey purposes into three size categories-- A, firms having 165 or more employees; B, those with 20-164 employees; and C, those with 4-19 employees.

During the first quarter of 1972, there were approximately 3,520 employers within Erie, Huron, and Lorain Counties; of these, 536 employers comprise our sample. The sample represents 66% of the total estimated non-agricultural labor force in the three-county area. Eighty-two per cent of the selected employers returned the questionnaires, and reported 78% of their total employment. The sample consisted of all the A firms in the area, 20% of the B firms (random selection of every fifth firm), and 4% of the C firms (random selection of every twenty-fifth firm).

After the reports were edited and checked for accuracy, we adjusted by industry the total employment figure reported by the surveyed firms, so that the total for each industry equalled the January, 1972 employment. To arrive at industry totals, we then applied the adjustment factors by industry to the specific occupational categories, the replacement data, and the projected employment total for one and two years. After final adjustment, the total employment in the surveyed occupations represented 92% of the total estimated employment for January, 1972 in the three-county area.

Data are limited to reports on occupations paying wages and salaries. They exclude self-employed, military, and domestic workers. The adjusted estimates do not represent all reporting firms because many small employers do not forecast personnel replacement needs. Estimates are based on established employers and do not reflect new businesses entering the area. The forecast figures are presented in actual numbers in order to define the size of training needs. They are employers' estimates rather than exact numbers of job openings. Projections are on a one- and two-year basis and do not necessarily show the number of openings in any specific month. For the purpose of this survey the following assumptions were made as a guide to responding firms: (1) the present long-term trend of economic growth of the United States will continue with no major setback for the next few years and (2) scientific and technological advances will continue, affecting our industrial production methods, manpower requirements, and consumption pattern.

Work Force Characteristics

The population of Lorain County has increased by 18.1% in the last decade, Erie by 11.6%, and Huron by 4.8%. The median age of the population is 25.1 years in Lorain County, 27.4 in Erie, and 26.5 in Huron, compared with 27.7 years for the state.

In 1960, the date of the latest available data, 14.1% of the people living in Lorain County, 11.3% living in Erie, and 18.1% living in Huron worked in other counties. Some commuted to one of the other counties in the area. About 9,000 worked in Cuyahoga County. About 1,300 persons living in Cuyahoga County worked in Lorain.

From 1950 to 1960, immigration added 18.8% to the population of Lorain County, 11.1% to Erie, and 2.3% to Huron. Census figures just released on immigration for 1960-70 reveal that Lorain County immigration had slowed to a 3% gain, and Erie to .7%. Huron County lost 6.6%.

National manufacturing employment declines caused by technological improvements have not affected Area 12. During January, 1972 more than 45% (55,100) of the 122,000 estimated nonagricultural employees were employed by manufacturing firms. (The term "nonagricultural employment" as used here includes all employed persons reported by individual firms, and excludes unemployed, unpaid family workers, persons employed in agriculture, forestry, and fishing, and self-employed domestics. Civilian labor force estimates quoted in this report include these workers.)

Wholesale and retail trades employed more than 15% (19,000), the services industry employed 14% (17,000), and government agencies employed 13% (16,000). These four industrial divisions accounted for 88% (approximately 107,360 persons) of the total estimated employment.

The largest occupational groups, by employment, are professional, technical, and managerial--18.6%; clerical--16.3%; structural work--13.8%; machine trades--12.9%; and service occupations--12.5%. These five groups accounted for 74% (82,852 persons) of the total 111,848 workers reported by surveyed employers.

Of the estimated 146,475 persons working in Area 12, 95,772 were employed in 1970 by firms paying unemployment insurance. The unemployment rate for all persons in Ohio was 4.0%; in the three-county area, it was 3.8%. Male unemployment statewide was 3.5%, in the area, 3.1%. In the three-county area, unemployed women exceeded the 4.9% state average, with an overall rate of 5.1%.

The April, 1970 Census indicates that the proportion of women employed in the Ohio civilian labor force was 36.5%; Erie, Huron, and Lorain Counties averaged 34.3%. Employers reported that women were employed in 72 of the 217 occupations detailed in this nonagricultural survey. Of the 39,348 working women, 90.6% were employed in services, wholesale and retail trades, manufacturing, and government. Seventy-six per cent of all clerical workers; and 62% of all people working in services are women.

POPULATION BY AGE GROUP—WOMEN TO TOTAL

Erie, Huron, and Lorain Counties
1970

Definitions of Occupational Groups

Professional, Technical, and Managerial - This category includes occupations concerned with the theoretical or practical aspects of such fields of human endeavor as art, science, engineering, education, medicine, law, business relations, and administrative, managerial, and technical work. Most of these occupations require substantial educational preparation (usually at the university, junior college, or technical institute level).

Clerical and Sales - This category includes occupations concerned with preparing, transcribing, transferring, systematizing, and preserving written communications and records; collecting accounts and influencing customers in favor of a commodity or service. Includes occupations closely identified with sales transactions even though they do not involve actual participation.

Services - This category includes occupations concerned with performing tasks in and around private households; serving individuals in institutions and in commercial and other establishments; and protecting the public against crime, fire, accidents, and acts of war.

Processing - This category includes occupations concerned with refining, mixing, compounding, chemically treating, heat treating or similarly working materials and products. Knowledge of a process and adherence to formulas or other specifications is required in some degree. Vats, stills, ovens, furnaces, mixing machines, crushers, grinders, and related equipment or machines are usually involved.

Machine Trades - This category includes occupations concerned with feeding, tending, operating, controlling, and setting up machines to cut, bore, mill, abrade, print, and similarly work such materials as metal, paper, wood, and stone. Throughout this category, the overall relationship of the worker to the machine is of prime importance. At the more complex levels, the important aspects of the work include understanding machine functions, reading blueprints, making math-

ematical computations and exercising judgment to attain conformance to specifications. Coordination of the eyes and hands is the most significant factor at the lower levels. Disassembly, repair, reassembly, installation, and maintenance of machines and mechanical equipment, and weaving, knitting, spinning, and similarly working textiles are included in this category.

Bench Work - This category includes occupations concerned with the use of body members, handtools, and bench machines to fit, grind, carve, mold, paint, sew, assemble, inspect, repair, and similarly work relatively small objects and materials such as jewelry, phonographs, light bulbs, musical instruments, tires, footwear, pottery, and garments. The work is usually performed at a set position in a mill, plant, or shop, at a bench, work table, or conveyor. At the more complex levels, workers frequently read blueprints, follow patterns, use a variety of hand tools, and assume responsibility for meeting standards. Workers at the less complex levels are required to follow standardized procedures.

Structural Work - This category includes occupations concerned with fabricating, erecting, installing, paving, painting, repairing, and similarly working structures or structured parts, such as bridges, buildings, roads, motor vehicles, cables, airplane engines, girders, plates and frames. The work generally occurs outside a factory or shop environment, except for factory production line occupations. Tools used are hand or portable power tools, and such materials as wood, metal, concrete, glass, and clay are involved. Workers are frequently required to have a knowledge of the materials with which they work, e.g., stresses, strains, durability, and resistance to weather.

Miscellaneous - This category includes occupations concerned with transportation services; packaging and warehousing; utilities, amusement, recreation and motion picture services; mining and logging; graphic arts; and various miscellaneous activities.

Definitions of Industrial Divisions

A brief description of each industrial division follows with examples in each to provide for a better understanding of the data published in this report.

Mining - This division includes all establishments primarily engaged in mining. Mining is here used in the broad sense to include the extraction of minerals occurring naturally: solids, such as coal and ores; liquids, such as crude petroleum; and gases, such as natural gas. The term "mining" is also used in the broad sense to include quarrying, well operation, milling (crushing, screening, washing, floatation, etc.), and other preparation needed to render the material marketable. Exploration and development of mineral properties are included.

Contract Construction - This division includes establishments primarily engaged in contract construction. The term "construction" includes new work, additions, alterations, and repairs. Three broad types of contract construction activity are covered: namely, (1) building construction by general contractors, (2) other construction by general contractors, and (3) construction by special trade contractors. Operative builders who build on their own account for resale or lease, and investment builders who build structures on their own account for rental, are classified in Real Estate.

Manufacturing - The manufacturing division includes those establishments engaged in the mechanical or chemical transformation of inorganic or organic substances into new products, and usually described as plants, factories, or mills, which characteristically use power driven machines and materials handling equipment. The final product of a manufacturing establishment may be "finished" in the sense that it is ready for utilization or consumption, or it may be "semifinished" to become a raw material for an establishment engaged in further manufacturing.

Transportation - (Also communication, electric, gas and sanitary services). This division includes enterprises engaged in passenger and freight transportation by railway, highway, water, or air, or furnishing services related to transportation; petroleum pipe line transportation; warehousing; telephone and telegraph communication services; radio and television broadcasting; and the supplying of electricity, gas, steam, water, or sanitary services. Industries assigned to this division are to a large extent regarded legally as having a semi-public character and are regulated by commissions or other public authorities as to the rates or prices they may charge and the services they may render.

Trade, Wholesale and Retail - The chief functions of establishments included in wholesale trade are selling goods to retail trading establishments or to industrial, commercial, institutional and professional users; and bringing buyer and seller together.

Retail trade establishments engage in selling merchandise for personal, household, or farm consumption, and rendering services incidental to the sale of goods. In general, these establishments are classified by kind of business according to the principal lines of commodities sold.

Finance, Insurance and Real Estate - Finance includes banks and trust companies, credit agencies other than banks, holding companies, other investment companies, brokers and dealers in securities and commodity contracts, and security and commodity exchanges. Insurance covers carriers of insurance, and insurance agents and brokers. Real Estate includes owners, lessors, lessees, buyers, sellers, agents, and developers of real estate.

Services - This division includes establishments primarily engaged in rendering a wide variety of services to individuals and business establishments. Hotels and other lodging places; establishments providing personal, business, repair,

and amusement services; medical, legal, engineering and other professional services; educational institutions; non-profit membership organizations; and other miscellaneous services are included.

Government - This division includes all federal, state, local, and international government activities, such as the legislative, judicial, and administrative functions, as well as government owned and operated business enterprises.

Demand Occupations by Industry

Manufacturing:

bookkeeper; carpenter; chemical operator; clerk, general office; commercial designer; cutter, machine; cutting machine operator; draftsman; drill press operator; electrician; electronics mechanic; engineering technician; fitter; heat treater; instrument maker; job setter; machinist; metal finisher; molder; painter; patternmaker; photographer; plumber, pipefitter; power press operator; pressman, brick; salesman; sandblaster; sheetmetal worker; shipping and receiving clerk; stock clerk; structural steel worker; tool machine set-up operator.

Construction:

bricklayer; carpenter; clerk, general office; foreman; plumber, pipefitter; laborer; truck driver.

Transportation and Utilities:

assembler; central office repairman; lineman, serviceman; material handler; power plant operator; telephone operator; truck driver.

Wholesale and Retail Trades:

auto mechanic; auto service attendant; cashier; floral designer; material handler; meat cutter; plumber, pipefitter; routeman; salesman; shipping and receiving clerk; stock clerk.

Finance, Insurance and Real Estate:

accounting clerk; manager; salesman, insurance; secretary; telephone operator; teller.

Services:

accountant; appliance repairman; auto service attendant; bartender-barmaid; caseworker; child care attendant; computer operator; dietitian; janitor-maid; key punch operator; nurse, licensed practical; nurse, registered; occupational therapist; orderly; presser, garment; programmer; recreation leader; secretary; systems analyst.

Government:

accountant; bookkeeper; clerk-typist; cook; dispatcher; groundskeeper; highway maintenance man; janitor-maid; kitchen helper; librarian; library page; meter reader; patrolman-guard; stationary engineer; teacher aide; water treatment plant operator.

Although growth is a key indicator of the future job outlook, even more jobs will be created by deaths, retirements, and other job separations. Employers expect continued growth to provide 3,696 new jobs in the next 12 months, and 7,651 in 24 months in all 217 occupations surveyed. Estimated personnel replacement needs are 4,848 in 12 months and 9,923 in 24. The total number of estimated staff openings is 8,544 the first year and 17,574 the second.

OCCUPATIONAL OUTLOOK

Occupation	Estimated Current Employment	Projected One-Year Openings	Description	Outlook
Accountant	206	8	Applies principles of accounting to install and maintain operation of general accounting system. Professional.	Strong demand for graduates of schools offering thorough training in accounting.
Accounting Clerk	343	32	Performs a variety of routine calculating, posting, and typing duties to accomplish accounting.	Demand expected to outpace labor-saving impact of office machines.
Announcer	32	1	Introduces various types of radio or TV programs, conducts interviews, reads news and identifies station call letters.	Limited growth due to automatic programming. Smaller stations hire beginners, especially in radio.
Appliance Serviceman	74	7	Installs and repairs appliances, following manufacturer's specifications.	Moderate growth expected as number of appliances increases. Employers are increasing efficiency of serviceman through more effective training.
Assembler	6,990	431	The job duties of an assembler depends on the product being manufactured and the process being used. The kind of tools depends on the job and the product on which work is done. There are degrees of skill required.	Moderate long run increase despite continuing automation of assembly processes. Employment sensitive to changes in business conditions particularly in plants producing autos and other durable goods.
Auto Body Repairman	244	15	Repairs damaged bodies and body parts of automotive vehicles, skilled metal craftsmen.	Increased number of accidents and styling of passenger vehicles will up demand. Lead time for training will increase scarcity of qualified repairmen.
Auto Mechanic	1,087	120	Repairs and overhauls automobiles including preventive maintenance. The complexity at some components has brought about specialization. The majority are all around mechanics.	Efforts by manufacturers and increase in number of vocational schools, as well as on-the-job training is not meeting needs. Growth will continue.
Auto Service Station Attendant	1,167	141	Services automobiles, buses, trucks and other automotive vehicles with fuel, lubricants and accessories.	Local growth has stimulated demand, replacement need is large. A good entry occupation for young men to gain experience in auto repair or sales work.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Baker	80	4	Mixes and bakes ingredients according to recipes to produce breads, pastries and other baked goods.	In large bakeries many jobs are classified as machine operator, general. In restaurants and institutions cooks may also bake breads and pastries. Opportunities are found generally in smaller bakeries or in restaurants and hotels.
Bartender	830	70	Mixes and serves alcoholic and non-alcoholic drinks to patrons of permitting establishments.	Growth of high class restaurants will demand better-trained and accomplished personnel. Increased number of permits will also up the demand.
Blacksmith	32	2	Forges metal bars into horseshoes and nails shoes to hooves of horses using calipers and tools. Repairs a variety of metal articles.	Many scattered over state are self-employed. About two-thirds of those employed are in industry with balance doing custom horseshoeing. Highly skilled work usually learned through apprenticeship. Modern methods reducing need.
Boilermaker	46	2	Assembles, analyzes defects in and repairs boilers, pressure vessels, tanks and vats in the field, following blueprints using hand tools and power tools.	Few firms in this area employ boilermakers. Local demand limited, although nationally outlook is good.
Bookbinder	339	10	Binds covers to books or pamphlets and performs book finishing operations. Title covers wide range of skill levels.	Limited demand expected despite mechanization in bindery occupations.
Bookkeeper	1,760	149	Keeps records of financial transactions in business establishments.	Replacement needs exceed expansion needs. Electronic data processing may account for slowing growth; however, smaller firms will continue to expand.
Bookkeeping Machine Operator	199	---	Records entries on records of financial establishments using bookkeeping machine.	Mechanical equipment is being replaced by electronic data processing except in smaller offices.
Bricklayer/Mason	176	18	Lays building materials, such as brick, structural tile, concrete, cinder, glass, and stone blocks to construct or repair walls, partitions, arches, sewers and other structures.	Shortage of housing and much activity in construction of business structures should have effect of increasing demand.
Broadcast Technician	19	---	Operates and maintains station audio and video transmission equipment in compliance with federal regulations.	Employment in the industry is expected to grow at a moderate rate. Technological improvements will limit demand.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Bus Boy	121	7	Primarily carries soiled dishes from dining room to kitchen. Depending on place may do other work to facilitate food service.	The location, size, and type of restaurant affect earnings. A good entry occupation, considerable turnover. Usually jobs are filled by younger workers.
Bus Driver	747	72	Drives bus to transport passengers over specified routes to local or distant points according to time schedule.	Expansion needs exceed replacement needs. Renewed interest in mass transportation may create more commercial traffic resulting in more drivers.
Buyer	115	6	Purchases merchandise for resale. Selects and orders, basing selection on nature of clientele. Also may be buyer for supplies and services of an organization.	Present growth slow although long-range outlook is fair. Usually a person is promoted from within.
Cabinet Maker	10	1	Constructs and repairs wooden articles such as store fixtures, office equipment cabinets and high grade furniture, using woodworking machines and hand tools.	Little change expected in this specialized type of carpentry. Work is usually done at a bench but some on site installing still done.
Cable Splicer	22	1	Splices multiple-conductor cables used in telephone and telegraph communication.	No significant gain expected. Technological changes may decrease need. Replacement needs will continue.
Candy Maker	20	3	Mixes together and cooks candy ingredients by following, modifying or formulating recipes to produce product of specified flavor, texture and color.	Demand is stabilized at present but a few openings will develop as replacements
Carpenter	711	85	Constructs, erects, installs, and repairs structures and fixing of wood, using carpenter tools and conforming to local codes.	Strong expansion needs shown which should be further stimulated by expected increases in housing starts. Many employed in other than construction.
Caseworker	193	18	Counsels and aids individuals and families requiring assistance of social service agency.	Primarily a governmental activity, although other agencies employ people to do social work. B.S. Degree usually minimum educational requirement.
Cashier	2,302	315	Receives the payments made by customers for goods and services; disburses funds.	Increase in number of establishments and change-over to self service will create jobs. Best opportunities for those with typing, bookkeeping or other clerical skills. Part-time jobs also will be available.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Cement Finisher	34	2	Finishes surfaces of freshly poured concrete to specified grade and contour.	As construction picks up demand will increase. Outlook good.
Central Office Repairman	78	5	Includes installer. Tests, analyzes defects in and repairs telephone circuits and equipment in central office of telephone company, using test meters, hand tools and power tools; follows diagrams to install.	Normal growth will require some increase in employment. Although highly automated and the skill level of employees is higher, increased use will call for more people.
Chemical Operator	692	44	Controls the various pieces of equipment which convert raw materials into chemical products; responsible for carrying out instructions of supervisor in charge.	Increasing need forecast in this area as well as nationally. Instrumentation and automatic equipment increases skill requirements.
Chemist	158	6	A term applied to persons with degrees in chemistry performing analytical and research chemical work in industrial field as opposed to those working in theoretical chemistry - classed according to product or process.	Replacements will outnumber new openings. Those with P.H.D. will find work in colleges.
Child Care Attendant	118	12	Cares for a group of children either in institution or day care center under supervision of director.	Institutional needs will grow slowly. Day care centers are expected to increase in numbers as more women go into the labor force and require qualified child care during working hours.
Claims Adjuster	12	1	Investigates claims for loss or damages filed in conjunction with insurance policy and tries to effect settlement out of court.	Need will probably increase, unlike other jobs in insurance, due to increase in number of vehicles and population growth with accompanying needs.
Claims Clerk	32	1	Examines claims received by insurance company to determine if proper procedures were followed.	Increases in insurance coverage and medicare will create some new openings plus normal replacement.
Clerk, General Office	4,724	385	A title covering clerical workers not here identified by specific name. Many are persons performing a wide variety of clerical duties utilizing knowledge of systems or procedures. May also be a specialist.	Replacement needs are higher than expansion needs; both large. Many offer good chance for advancement. Some college graduates enter to gain experience to qualify for administrative positions.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Clerk Typist	1,154	111	Performs general clerical work requiring use of typewriter in majority of duties.	Outlook good with some expansion expected. Many seeking temporary or part time work find this a good means of employment.
Collector	64	8	Locates customers to collect overdue accounts. Notifies those with delinquent accounts by phone or mail.	Usually a more experienced person is selected for this work.
Commercial Designer	76	21	A designer creates designs or patterns consistent with material to be used. This is a term also applicable to those who draw and paint illustrations commercially.	Need will increase selectively according to field of specialization. Talented persons will usually find employment or make a place for themselves.
Compositor	260	10	Sets type by hand and machine, and assembles type and cuts in galley, for printing articles, headings, and other printed matter, determining type size and style from work order.	Considerable technological change taking place. Smaller shops using hand setting or offset. Demand will increase as economy grows.
Computer Operator	90	9	Operates on-line peripheral machines, according to instructions, to transfer data from one form to another, print output, and read data into and out of digital computer.	Staff required to operate a computer installation will be reduced as new equipment is developed, increase in number in use will create some jobs.
Concession Attendant	29	4	Induces customers to purchase food or participate in games at concession stands.	Survey made during off season. Many summer people will come into area for three or four months.
Cook	1,354	87	Prepares, seasons and cooks soups, meats, vegetables, desserts and other foodstuffs for consumption in hotels, restaurants and institutions.	Excellent opportunities. Small establishments offer most opportunities for beginners. Acute shortage of skilled cooks and chefs.
Coremaker	114	14	Makes sand cores used in molds to form holes or hollows in castings.	Title includes both hand and machine coremakers. Present moderate need will increase.
Crane Operator	761	30	A term applied to workers operating cranes using sling electromagnet, grapple hook, bucket demolition ball and clamshell. Includes power shovel operators and related.	Increasing demand expected as construction picks up. Many work in mills and factories. Jobs usually filled by promotion from within.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Credit Clerk	101	11	May process new applications, send letters to customers with delinquent accounts, accept payments on accounts, keep records of loans and accounts or may specialize in any one of above.	Steady demand for persons with aptitude to get delinquent customers to keep up payments. Need will grow as business activity increases.
Cutter, Machine	149	16	Tends machine that cuts materials such as braid, cardboard, cloth, strands of wire, or tape to specified dimensions.	Less than average growth.
Cutting Machine Operator, Fabrics	47	11	Cuts multiple layers of fabric into parts for articles, using portable electric cutter, following pattern.	Employment will reflect normal growth.
Developer	158	4	Develops exposed photographic film or sensitized paper in series of chemical baths to produce negative or positive prints.	Technological advances have resulted in a declining need. Some replacements will continue to be required.
Dietitian	42	7	Plans and directs food service programs in hospitals, schools, restaurants and other private or public institutions.	Shortage occupation. Increasing opportunities for full-time and part-time work. Growth related to expansion of hospitals and nursing homes.
Dispatcher, Radio	51	10	Broadcasts orders to radio patrol units to investigate complaints and relay instructions or questions from remote units. In some areas coordinates all police, fire, ambulance and other emergency requests, usually holds federal license.	Some growth as governmental agencies augment forces to meet rising crime rates and vehicle accidents.
Dispatcher, Vehicle	180	7	Acts as coordinator for all types of vehicles transporting people and goods to insure most efficient use and safety.	Only moderate changes expected in rate of employment. Some shift toward increased number of women can be expected.
Displayman	13	1	Displays merchandise such as clothes, accessories and furniture in windows and showcases.	Applicants must demonstrate some artistic ability. Only moderate demand expected.
Doorman/Usher	133	8	Assists patrons of hotels, restaurants and theaters.	A few doormen make good money in tips from patrons, but generally low-paying work.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Draftsman	491	51	Prepares clear, complete, and accurate work plans and detail drawings from rough or detailed sketches or notes for engineering or manufacturing purposes, according to specified dimensions. Classifications are made according to type of drafting.	Favorable prospects, especially for those having post-high school training. Well-qualified high school graduates in demand for some types of jobs.
Drill Press Operator	80	8	Operates previously set-up drilling machines, such as single-or multiple-spindle drill presses on production basis.	As industrial production picks up increased need is anticipated. Automatic machines have limited demand.
Dry Cleaner	200	13	Operates machine to dry clean garments, drapes and other materials that cannot be washed in water. Removes spots by hand.	Not a vigorously growing occupation. Self-serve machines and modern fabrics will affect future need.
Duplicating Machine Operator	31	3	Reproduces handwritten or typewritten matter using duplicating machine. The number of makes and different processes complicates interpretation of employers' definition of this title.	Replacement need will be main demand in near future, although more offices will be doing their own duplicating.
Electrician	1,271	73	Follows local code for installation and repairs of wiring, electrical fixtures, apparatus and control equipment. May be required to hold license. May specialize in construction or maintenance.	Industrial and home construction stimulates demand. Completion of apprentice program usually required.
Electronics Technician	66	2	Works with engineers and scientists in the field of electronics, does complex technical work more difficult than routine operation and repair.	Growth of technical schools has caused a redefinition of this occupation, and also made available more technicians through two-year training courses. Outlook not well defined.
Electronics Assembler	190	9	Assembles electronic equipment such as computers, movie sound recorder, radar, and sonar, using electronic test equipment, hand tools and power tools following blueprints, wiring diagrams and manufacturers' standards.	Present lull expected to be only temporary. Forecast indicates strong growth and replacement needs.
Electronics Mechanic	121	21	Repairs electronic equipment such as computers, industrial controls, radar systems and missile control systems, transmitters, antennas and servomechanisms.	Good expansion growth in proportion to number employed. Much experience or technical school training required.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Employment Security Specialist	94	4	Interviews job applicants in employment agency and refers them to prospective employers for consideration, includes other closely related activities such as job development and counseling.	Replacements will create openings for those with good background either in education or experience.
Engineer	1,272	41	A term applied to persons who have completed one or more disciplines to qualify for the area of specialization chosen in an almost infinite variety of fields.	Opportunities run from excellent to bad depending on area of specialization.
Engineering Aide	13	2	Prepares manuals, parts lists and descriptions; assigns numbers. Keeps records.	Should be person with wide experience in particular industry. Moderate need and usually met by promotion from within.
Engineering Equipment Mechanic	133	8	Same as heavy equipment mechanic. Repairs and adjusts heavy construction equipment of all types.	Demand fluctuates as amount of construction varies. Work may require considerable mobility to service equipment on worksite.
Engraver	10	1	Loosely applied here to cover all persons engaged in using tools to make letters or ornamental designs on metal surfaces.	In most cases an apprenticeable occupation. Present work force expected to be able to handle work.
Estimator	45	4	Prepares cost and work completion estimates for construction and manufacturing establishments.	Usually a person with considerable knowledge of materials and processes. Often leads to middle-management jobs.
Extruder Operator	95	24	Sets up and operates machine to extrude or coat a variety of products depending on material and specification	For one with good mechanical ability and experience this occupation offers good opportunity.
File Clerk	14	3	Files correspondence, cards, invoices, receipts and other records in alphabetical or numerical order, or according to subject matter, phonetic spelling or other system.	Modern office methods of electronically storing data and microfilming of records reduces need for manual filing. As a result demand will lessen and need will be confined to replacement.
Filling Machine Operator	308	12	Tends machine that performs one or more packaging functions. Any industry.	Growth of packaging has been phenomenal. Practically all bulk items are now marketed in this way. May be liquid or dry. Employer trains.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Firefighter	559	20	Controls and extinguishes fires, protects life and property, maintains equipment as employee of city, township or industrial plant. Inspects building for fire hazard and compliance with code.	As suburbs continue to grow more equipment will need to be stationed in new firehouses. New factories will also need protective equipment.
Fish & Game Warden	30	2	Patrols assigned area to prevent game law violations, investigate reports of damage to crops and property by wildlife and compiles biological data.	Recent recognition of necessity to protect our environment has added to the responsibilities of natural resource people.
Fitter	28	18	Lays out, positions, aligns and fits together fabricated parts of structural metal products in shop according to blueprint and lay-out specifications preparatory to welding or riveting.	Locally growth is expected within limits of size of the force. Outlook good.
Floral Designer	63	20	Designs and fashions floral pieces and decorations.	One of the occupations included in the agribusiness courses of vocational education. Moderate growth expected, some artistic ability required.
Foreman	1,614	70	Supervises and coordinates activities of workers engaged in one or more occupations. Classifications are made according to process involved, craft of workers supervised, product manufactured or industry.	Most foremen rise through the ranks, thus having a good knowledge of work to be performed. Most competent move up to higher management. Some hired because of supervisory or management training. Outlook good.
Furnace Operator	206	24	Controls gas, oil, coal, electric arc, or electric induction furnace to melt or refine metal. Title includes ceramic and related processes.	Usually work up from helper. Outlook is good for those able to work in heat usually found near furnaces.
Furniture Finisher	27	2	Finishes or refinishes damaged, worn or used furniture or new high-grade furniture to specified color or finish utilizing knowledge of wood properties, finishes and furniture styling.	Some self-employed or in small shops not included here. Most work at refinishing as factory methods eliminate hand work. Demand limited.
Groundskeeper	194	10	Maintains grounds of industrial, commercial or public property such as golf courses, performing a combination of tasks such as cutting, trimming, planting, raking and pruning.	Trend toward beautification of public and industrial grounds and increase of parks will keep demand at a high level. Many self-employed do contract work.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Heat Treater	83	13	Controls heating furnaces and quenching equipment, to alter physical and chemical properties of manufactured products by hardening, tempering, annealing, anodizing, casehardening and normalizing.	As additional products are being manufactured and either protective or decorative finishes are required and tools with better cutting edges are needed this occupation will grow.
Heating & Air Conditioning Mechanic	22	1	Work on heating and cooling equipment used in homes, offices, public buildings doing both installation and maintenance.	A shortage occupation. Building increases plus replacement of old equipment will call for more experienced mechanics. Many self-employed.
Highway Maintenance Man	244	13	Maintains highways, roads, and rights of way. Must be able to do many kinds of work.	A permanent force works year-round but during summer months many extra workers are hired. Number of workers depends on amount of money budgeted.
Housekeeper	199	30	Supervises work activities of cleaning personnel to insure clean, orderly, attractive rooms in hotels, hospitals, and similar establishments.	Extensive growth of public lodging and medical care facilities will assure excellent opportunities.
House Parent	15	1	Cares for a group of children housed in an institution, under supervision of superintendent.	Some increase as population grows. Hiring will be primarily for replacement.
Industrial Truck Operator	773	46	Drives wheeled vehicle equipped with fork lift, elevating platform or hitch, to push, pull, lift, stack or tier merchandise, equipment or bulk material in warehouse, storage yard or factory.	Mechanized handling of goods promises increase in number and replacement need is high. Often is an entry occupation.
Inspector/Tester	1,211	77	Examines parts or products for flaws or defects. Checks dimensions, tests subassemblies and assembled products using micrometers, specially designed gauges and other testing instruments, where appropriate simple visual inspection.	Present consciousness of quality of items sold and need of manufacturers to maintain standard of goods sold will prompt better control of quality. Usually jobs are filled by promotion from within.
Instrument Maker	44	7	Fabricates, modifies, repairs mechanical instruments or mechanical assemblies of electrical or electronic instruments.	Continued development of new products for measuring, recording and controlling will furnish excellent opportunities, also for those specializing in repair.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Investigator	27	1	Investigates background and personal characteristics of persons applying for credit, employment, insurance or adjustments.	Conditions are generally favorable for increased need although local demand is small.
Janitor/Maid	3,525	370	Keeps hotel, office building, apartment house or institution in clean, orderly condition. Men may tend heating plant. Present trend toward hiring a contracting firm to provide required services. New titles for same work are appearing.	Opportunities expand and work becomes more complex with new electrical appliances and chemicals. Besides replacement and expansion there is a relatively high turnover.
Job Setter	131	13	Sets up a variety of machine tools for production workers, machines first-run work piece. May instruct new workers in machine operation.	Qualified men will find ample opportunities for employment as industry continues to expand.
Key Punch Operator	189	20	Operates alphabetic and numeric key punch machine similar in operation to electric typewriter to produce punch cards with data.	Outlook good with both replacement and expansion needs reported.
Kitchen Helper	1,559	144	Performs any combination of duties to maintain kitchen and work area: sweeps, washes, removes trash, maintains silverware and transfers supplies, peels and prepares vegetables.	Traditionally a job for those with little education although those intending to learn business are usually required to start here. Many find part-time work during peak times. There is usually a high turnover.
Laboratory Helper	69	2	May perform a variety of duties: sets up and operates grinding, mixing and sifting machines to test their performance to customer specifications; cleans glassware and other laboratory apparatus.	High school graduates excelling in chemistry or physics are usually considered for job openings. Limited demand.
Laboratory Tester	367	14	Performs standardized tests to determine quantity or quality of physical or chemical properties in products or raw materials using laboratory equipment.	Employers do not specify type when reporting. Probability of increased need is good. Private and public employers will increase control over quality.
Laborer	5,991	457	An occupational grouping including most jobs of low complexity except clerical and sales. Usually minimal training required, although in some cases educational background is considered.	Heavy turnover and seasonal nature of some jobs make many openings available at certain times. Laborers in union shops usually have good rates of pay.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Laundry Worker

671 35 Tends laundering machines to clean articles and performs other operations as needs. Local demand confined to replacement required in commercial laundry.

Layout Man

345 8 Lays out reference points and dimensions on sheets, plates, tubes and structural shapes for fabricating, welding and assembling into structural metal products. May vary according to material being fabricated.

Present needs confined to replacements although upturn in business could change picture quickly.

Lens Grinder

29 2 Fine grinds and polishes surfaces of lenses to specifications.

Present demand limited to replacement. Entrants usually trained by employer. An apprenticeship trade.

Librarian

111 9 Maintains library collection of books, periodicals, documents, films, recordings and other materials and assists groups and individuals to locate and obtain desired materials.

Prospects good, school librarians are expanding absorbing graduates.

Library Assistant

161 8 Compiles records, sorts out and shelves books and issues and receives library materials.

Colleges in area and public libraries are all expanding providing additional employment.

Library Page

42 9 Works as stock clerk, locates books, periodicals and pictures for loan and replaces material according to system.

Many libraries going to open stacks may reduce need.

Lineman

378 23 Erects and maintains transmission equipment for utilities, also may be employed by contractors. Many specialize in one phase of work.

Keeping pace with population growth, improvements in technology and maintaining present equipment will provide both growth and replacement demand. Calls for men in good physical condition.

Loan Counselor

127 2 Analyzes loan contracts and attempts to obtain payment of overdue installments. May be person administering loan accounts of college or university.

Replacements are only openings expected. Some cut back indicated.

Machine Operator, General

4,957 246 A term used to designate any worker who tends machines to change shape or condition of raw material where primary task is feeding or offbearing, covering a wide range of products. Job is usually designated by name of machine.

Good source of employment for unskilled or applicants as demand for operators in all manufacturing establishments will grow with the economy. Automation is replacing some jobs.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Machinist	1,162	118	Sets up and operates machine tools to close tolerances, has working knowledge of usual machines found in machine shops. Applies knowledge of mathematics, metal properties and layout machining procedures.	Contrary to national demand there is a need for craftsmen with well-rounded experience in metal fabricating industries. An apprenticeship occupation. Many now working are older men nearing retirement age.
Mail Carrier	437	19	Sorts mail for delivery and delivers mail on established routes.	Most openings for city carriers. As population increases and size of urban area grows, more carriers will be required.
Mail Clerk	270	11	Receives letters and parcels, provides service at sales window, sorts mail.	Mechanization will slow new hires except for replacement. As new methods of handling are perfected the demand will become more clear.
Maintenance Man, Building	530	28	Repairs and maintains physical structures of commercial and industrial establishments using hand and power tools.	Considerable expansion expected by present employers which will be augmented by newly constructed buildings. Self-employed not included.
Maintenance Mechanic	1,199	55	Repairs and maintains in accordance with diagrams, sketches, operation manuals and manufacturers specifications, machinery and mechanical equipment, using hand tools, power tools and precision-measuring instruments.	Rapid growth in need will improve outlook in future as industries continue to grow and equipment becomes more complex.
Manager/Official	5,094	253	This category includes all managers and officials who are responsible for policy making and administration of business and governmental establishment.	Growth outlook is good with other opportunities for aspirants coming from large number of older people reaching retirement age. Increasingly beginning managers are required to be college grads although some still work up from ranks.
Material Handler	1,138	64	Loads, unloads and conveys materials within or near plant, yard or worksite, performing a combination of warehousing duties.	General trend is down in demand but local needs remain high. Mechanical equipment and modern methods replacing need for men but increase in number of firms has offset advancements.
Meat Cutter	616	59	Cuts and trims meat to size for displaying or as ordered by customer, using hand tools and power equipment or prepares meat for processing.	Good opportunities. Supermarkets and prepackaging plants are now best source of employment. Some are employed in processing plants.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Medical Laboratory Assistant	113	7	Performs routine tests in medical laboratory for use in treatment and diagnosis of disease. May specialize in some particular area.	Many now employed received on-the-job training. Trend is toward hiring two-year technical school graduates. Replacement need higher than expansion.
Medical Technologist	58	4	Performs chemical, microscopic and bacteriologic tests to provide data for use in treatment and diagnosis of disease. Usually designated according to field of specialization.	Must be registered with degree from accredited school. Outlook good as technology becomes more complex.
Messenger	13	1	Delivers messages, documents, packages, and other items to offices or departments within establishments or to other business concerns.	An entry occupation with little prospect of growth.
Metal Finisher	621	31	Finishes surfaces of metals by grinding, filing, buffing, and sanding, using hand or power equipment and knowledge of metal finishing techniques.	New developments in metallurgy have slowed growth. Replacement needs will continue.
Meter Reader	59	4	Reads and records electric, water or steam consumption meters at regular intervals.	No significant growth expected as methods are developed to decrease workload.
Meter Repairman	20	---	Installs, adjusts and repairs volumetric gas, oil, or water meters and time meters.	No significant growth expected as methods are developed to reduce workload.
Mill Operator	313	17	A term applied to a number of different machine operators who reduce materials so that they are ready to process in manufacturing plants.	Many manufacturing processes require some sort of a millman with no growth projected.
Millman, Grain	63	3	Tends machines that grind, cut, crimp, shell, or roll grain, hay, corn cobs and screenings for stock and poultry feed.	Usually found in feed and grain elevators with other duties complementary to customer needs. Replacement demand only.
Millman, Rubber	29	4	Tends mills to knead mix and blend rubber for further processing.	Statewide demand good with numerous plants where rubber is processed. Local need limited although a few openings develop.
Millwright	509	23	Installs machinery and equipment according to layout plans, blueprints in an industrial establishment, using hoist hand tools and power tools	Slow increases, related to new plants, additions of new machinery, changes in plant layouts and maintenance of increasing amounts of heavy equipment.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Mixer/Grinder	59	2	Depending on product produced, blends, mixes, solid or liquid ingredients to make products such as paints, lacquers, putty, inks and pigments following formula.	Relatively unskilled workers find this a means of employment. Relatively slow growth expected, openings confined to replacement needs.
Model Maker	98	1	Constructs models to scale according to specifications using woodworking and metalworking machines and hand tools.	A specialized type of work not widely distributed. Slowness in aircraft industry is mainly responsible for lack of demand.
Mold Press Operator, Plastics	66	4	Sets up and operates mold press that automatically casts plastic from molten materials.	Moderate demand forecast by employers. Some slowness in evidence at present.
Molder	355	33	Forms sand molds for production of metal castings using hand tools, power tools, patterns and flasks applying knowledge of variables. Some operate machine that molds nonferrous part.	Local demand will provide work for an increasing number of molders.
Nurse Aide/Orderly	930	55	Assists in care of hospital or nursing home patients, under direction of nursing and medical staff.	Plentiful opportunities. Growth projections in health service fields indicate that rapid increase in numbers will continue in hospitals, nursing homes and geriatric facilities.
Nurse, Licensed Practical	1,032	156	Cares for patients and inmates in private homes, hospitals, sanitariums, industrial plants and similar institutions. Licensed by State Board.	Shortage of R.N.'s and building of new facilities will create strong demand, probably greater than output.
Nurse, Registered	1,056	197	Renders general nursing care to patients ranging from general duty and public health nursing to highly specialized clinical specialists.	Shortage occupation. Demand expected to continue to exceed supply during foreseeable future. Keen competition between hospitals, nursing homes and industrial plants will continue.
Occupational Therapist	9	5	Plans, organizes and participates in medically oriented occupational program in hospitals or similar institution to rehabilitate patients who are physically or mentally ill.	Increased need forecast which may result in a shortage.
Office Machine Operator	88	2	Consists of a wide range of different machines designed to speed up office work not otherwise specifically mentioned in this report.	Electronic equipment is slowing demand although smaller offices will continue to use.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Oiler	27	1	Oils and greases moving parts of mechanical equipment, according to specified procedures and oral instructions.	In many cases an entry occupation lead- to mechanic helper. Primary need for replacements.
Operating Engineer	838	28	Operates various type of power driven heavy equipment usually in construction such as compressors, tractors, scrapers, earth movers to excavate and grade earth.	Present slow growth will increase influenced by rate of highway construction, new building subdivisions and industrial construction.
Packer/Wrapper	574	20	Packages materials and products by hand, wraps protective materials around products.	Opportunities in both manufacturing and wholesale and retail trade will be moderate but replacements will be needed.
Painter	130	31	Applies coats of paint, varnish, stains, enamel or lacquer to interior or exterior surfaces, trimmer or fixtures, doing caulking or puttying and minor repairs.	As construction of houses, apartments, offices and manufacturing facilities increase, demand will increase.
Paper Machine Operator	148	4	Controls the "wet end" of machine where paper of a specified thickness, width and physical strength is formed, supervises the rest of crew to maintain smooth flow of material.	Minimal amount of growth expected; replacements will exceed expansion needs.
Pasteurizer	11	1	Tends equipment that pasteurizes and processes milk and other liquids.	Limited demand, modern equipment may reduce need.
Patrolman/Guard	818	41	Patrols assigned beat on foot, vehicle or horseback to control traffic, prevent crime or disturbance of the peace and arrest violators, including supportive personnel. May work for private firm to patrol assigned area.	One of the best sources of employment for qualified individuals. Many new inducements being offered, specialists becoming more essential.
Patternmaker	76	10	Lays out, machines, fits and assembles castings and parts to make a metal foundry pattern. Other pattern makers are designated according to product, such as wood or plastic.	A highly skilled worker. Present need slowed but some expectation of increased future need.
Personnel Clerk	81	3	Compiles and keeps personnel records.	Little change expected.
Personnel Interviewer	359	9	Employment interviewer in either agency or company determines suitability of applicants for consideration.	Opportunities primarily for replacement needs. Upgrading is usual source.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Pharmacist	159	8	Compounds and dispenses medications following prescriptions issued by physician or other authorized medical practitioner. Some are research specialists	Professional, many self employed and not included here. Growth of hospitals, pharmacies and public health facilities will create new openings.
Pharmacy Helper	26	4	Mixes pharmaceutical preparations, under direction of pharmacist, issues medicines, labels and stores supplies, and cleans equipment and work areas in hospital pharmacy.	Moderate growth as new hospital facilities are completed. Replacements will also be required.
Photographer	32	3	Photographs persons, merchandise, exteriors, interiors, machinery and fashions. Many free lance photographers not included in this survey.	Competition keen in portrait and commercial fields. Some demand will continue for industrial photographers.
Physical Therapist	38	3	Treats patients with disabilities, disorders and injuries to relieve pain, develop or restore function and maintain maximum performance using physical means, such as exercise, massage, heat, water, light and electricity as prescribed by physician	Locally the need is limited but generally excellent prospects. Demand expected to exceed supply as rehabilitation services expand.
Physician	101	---	One with degree of medicine.	Number of physicians employed expected to decrease locally.
Plasterer	73	2	Applies coats of plaster to interior walls, ceilings, and partitions of buildings according to architects drawings, or oral instructions.	New hires will be confined to replacement needs, number employed expected to decrease.
Plater	134	5	Sets up and controls plating equipment to coat metal objects electrically with chromium, copper, cadmium, or other metal to provide protective or decorative surfaces or to build up worn surfaces according to specifications.	Within limits of size of industry good growth is expected. Some are apprenticeship jobs, others learn on-the-job.
Plumber/Pipefitter	658	91	Assembles, installs and repairs pipes, fittings and fixtures of heating, water, drainage systems according to specifications and codes. Also employed in industrial plants in a variety of different job titles.	Rapid growth as construction increases. Maintenance, repair and modernization of existing plumbing and heating systems will create additional jobs.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Power Plant Operator	157	12	Operates boilers, turbines, generators, and auxiliary equipment at generating plant to produce electricity.	Local growth will be moderate but new plants in or close to this state will provide many new openings.
Power Press Operator	949	81	One who operates one or more power driven presses that cut, bend, punch, trim, forge or rivet materials to shape, fabricate, or assemble them.	Made up of jobs of varying complexity. Outlook good with openings for new entrants expected.
Presser, Garment	224	27	Operates a pressing machine to smooth surfaces, flatten seams, or shape articles such as garments, drapes, etc. in manufacturing establishments.	Moderate demand plus turnover will provide openings for those interested. Operators in small shops not included here.
Pressman, Brick	83	27	Operates machine to press clay into products such as brick and tile.	Moderate increase as volume of printing and use of color expands requiring larger and more complex presses.
Pressman, Printing	442	32	A term applied to workers who make ready and operate printing presses to produce printed matter.	Moderate increase as volume of printing and use of color expands requiring larger and more complex presses. Technological improvements will limit growth.
Pressman, Rubber	230	9	Tends heated presses that mold and cure rubber goods and parts.	Present limited demand expected to improve moderately. New entrants learn on the job.
Production Clerk	218	10	Compiles data from customers orders, production estimates and perpetual inventory to prepare production schedule.	Electronic data processing is taking a toll on this occupation. Larger firms are going almost entirely to this type of control of production and inventory.
Programmer	78	14	Selects symbols for coding system peculiar to make or model of digital computer and applies them to successive steps of completed program for conversion to machine processing instructions.	Firms using computers to process business records and control manufacturing processes will have largest increase. Science and engineering programs will increase.
Projectionist	48	2	Sets up and operates motion picture projection and sound producing equipment to produce coordinated effect on screen.	Little or no activity expected although some new theaters are planned.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Proof Machine Operator	79	7	Sorts, records and proves records of bank transactions such as checks, deposit slips and withdrawal slips, using proof machine.	Employers forecast a small expansion however as processes are perfected automation will take over.
Proof Reader	12	---	Reads typescript or proof of type set up to detect and mark for correction any grammatical, typographical or compositional errors.	Openings usually filled by upgrading from within.
Radiologic Technologist	98	8	Applies roentgen rays and radioactive substances to patients for diagnostic and therapeutic purposes. May include industrial applications.	Some expansion as more uses are developed and new facilities are constructed.
Receptionist	37	5	Receives clients or customers coming into an establishment, ascertains their wants and directs them accordingly.	Although not much need is shown, usually applicants with clerical training are hired and are promoted after learning the firms procedures.
Recreation Leader	178	31	Conducts recreation activities with assigned groups in public department or voluntary agency.	Some expansion is expected as cities grow it is necessary to have more supervised recreational activity.
Reporter/Writer	95	3	Collects and analyzes facts about newsworthy events and writes stories conforming to prescribed editorial techniques and format; literary writers and editors are included if salaried.	A good field for those with talent and training. A number of free lance writers not included.
Roofer	200	8	Covers roof with roofing materials, other than sheetmetal, such as composition shingles or sheets, wood shingles or asphalt and gravel to make them waterproof.	Technological innovations may limit growth somewhat. New hires will be limited to replacements.
Routeman	739	30	Covers established route to deliver, sell and display products or render service.	Employment which declined during the 1950's will increase as suburban areas create demand for home deliveries.
Salesman, General	1,779	164	Sells merchandise to business or industrial establishments or to individuals at sales office, store, showrooms, or customer's home or place of business.	New products, wider distribution and greater customer demand will all contribute to the overall need for salesmen. Expansion will be significant. Demand strong for those trained to handle technical products.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Salesman, Insurance	215	45	Sells insurance to new and present clients recommending amount and type of coverage, based on analysis of prospects' circumstances. Licensed.	A wide range of entry qualifications depending on type of insurance sold. A good field for those with temperament and ability to work with people. Highly competitive.
Salesperson	3,915	279	Displays, describes and sells merchandise, utilizing general knowledge of the products sold; sells items from sales floor.	Many opportunities for full and part time. Employment will increase more slowly than volume of sales. Most demand for workers skilled in salesmanship.
Sandblaster	61	15	Directs blast of abrasive laden compressed air or water from nozzle against metal or hard composition objects to remove adhering scale, sand, paint, grease, tar, rust and dirt to impart even finish.	Continued expansion in the metalworking industry will afford increased job opportunities for sandblasters.
Seamstress/Tailor	81	7	Makes, alters, repairs garments such as suits, coats, dresses, or skirts according to pattern or customers specification using sewing machine or by hand sewing.	Usually those hired must have training and experience. Long term outlook is for growth as business continues to improve and expand. Many work at home or in small shops and are self employed, therefore not counted.
Secretary	1,658	171	Schedules appointments, gives information to callers, takes dictation and otherwise relieves officials of clerical work and minor administrative and business detail. Usually has advanced training.	Nature of work calls for more education or experience than stenographer but wages and working conditions are better. Almost unlimited opportunities for those who are able to qualify.
Sewing Machine Operator	228	28	Operates various sewing machines to join, gather, hem, reinforce, or decorate product, such as garments, upholstery, awnings, or textile bags, makes button holes or attaches fasteners to fabrics.	Local demand for both expansion and replacement good. There is usually a fairly high turnover rate which increases need. Entrants usually need training in order to qualify.
Sheetmetal Worker	761	38	Fabricates, assembles, installs and repairs sheetmetal products and equipment according to job orders and blueprints.	Number of jobs will expand in manufacturing although as construction picks up there will also be openings created.
Shipping/Receiving Clerk	497	64	Receives, stores, issues and ships materials and products and keeps inventories and stock records.	Outlook good with chance for promotion for those who acquire knowledge of products and methods.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Sign Painter	45	2	Writes, paints, or prints signs or show-cards. May cut out letters and signs for display purposes.	Many are self-employed and not covered in this report. Some feeling for form and design required. Demand limited to replacements.
Small Engine Repairman	21	1	Repairs fractional horsepower gasoline engines and related equipment.	Wide use of small engines on all type of labor saving equipment has created a big demand for good mechanics. Many self-employed in small shops not reported.
Spray Painter	361	12	Applies paint using spray equipment in either production work, repainting or maintaining surfaces with protective material.	Present low demand will reverse as economy begins to return to higher level.
Stationary Engineer	167	10	Operates and maintains stationary engines and mechanical equipment, to provide utilities such as light, heat or power for buildings and industrial processes.	Some increase in employment expected although replacement will provide most openings. Automatic equipment may cut needs in new installations.
Statistical Clerk	81	6	Compiles and tabulates statistics for use in statistical studies.	Increase in use of computers will limit growth although a fairly large number will still be required.
Statistician	11	1	Plans surveys and collects, organizes, summarizes and analyzes numerical data, applying statistical theory and methods.	Needs in this area diminishing, otherwise opportunities look good in industry, government and in education.
Stenographer	452	31	Takes dictation in shorthand and transcribes dictated material using typewriter. May perform a variety of other clerical duties as required.	Splendid opportunities for those with stenographic training.
Stock Clerk	1,240	170	A title under which numerous occupations are classified because of similar basic duties. Receives, stores and issues equipment, material, supplies, merchandise or tools and compiles stock records in stockroom.	Playing an essential role in almost every type of industry stock clerks will continue in demand and as industry grows so too will the need for stock clerks. Many are promoted to higher positions.
Structural Steel Worker	185	19	Works as a member of a crew to raise, place and unite girders, columns and other structural steel members to form completed structures or structural framework.	Demand in this area primarily in manufacturing. Usually construction shows largest need and increase in building will provide more openings.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Surveyor	16	---	Surveys earth's surface and oversees engineering survey party engaged in determining exact location and measurements of points for construction, mapping, land valuating, mining or other purposes.	Best prospects for persons having post-secondary school training in surveying. Demand will be stimulated by expanding construction of all kinds. Many are self-employed.
Systems Analyst	128	13	Analyzes problems to refine their formulation and convert to programmable form for application to electronic data processing system.	A shortage occupation requiring much education and experience.
Tabulating Machine Operator	20	1	Operates machine that processes data from tabulating cards to printed records.	Switch by many establishments to digital computer has not completely eliminated need for machine processing of data.
Teacher	7,591	410	Due to professional training required all teaching is placed in one category for reporting here, includes elementary, secondary, college and special.	Demand remains high especially for replacement needs. Supply in this area is larger than demand, except for some specialists.
Teacher Aide	414	36	Performs nonprofessional tasks to assist elementary school teacher.	A relatively new occupation gaining wider acceptance. Usually training required.
Telephone Operator	467	51	Operates telephone switchboard to establish or assist customers in establishing local or long distance telephone connections. Includes operators in business establishments who may perform clerical duties.	Growth in phones will create new openings, also replacements will be needed. PBX installations will provide many of the openings as new and larger office buildings go up.
Television Repairman	21	2	Repairs and adjusts radios and television receivers, using hand tools and electronic testing instruments. Many self employed and those in small shops not included.	Majority are self-employed and not reported. Larger firms with repairmen on payroll will continue with present number.
Teller	931	103	Receives and pays out money. Records all transactions of money and negotiable instruments involved in various bank transactions.	Rapid growth as banks expand services to urban population. Increasing portion may be part time for peak hours.
Timekeeper	87	3	Keeps daily record of arrival and departure time of employees, may prepare payroll, computing earnings and withholdings.	A decrease in total employment as technological advances replace hand computing and record keeping. Some replacement need shown.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Title Examiner	35	7	Searches public records and examines titles to determine legal conditions of property title.	Local expansion is forecast - a close parallel with demand for lawyers.
Tool & Die Maker	821	77	Analyzes variety of specifications, lays out metal stock, sets up and operates machine tools and fits and assembles parts to make and repair dies, cutting tools, jigs, fixtures, gages machinists hand tools.	Shortage occupation. Demand has been unmet for several years and needs are expected to continue to mount based upon projections of growth in manufacturing sector.
Tool Designer	94	4	Designs broaches, milling machine cutters, drills and other simple or multiple edged cutting tools and related jigs dies and fixtures for production or experimental use in metalworking machines.	Limited new openings promised and some replacements.
Tool Grinder	143	9	Tends abrasive wheel that sharpens and smooths cutting edge of tools.	Modern tools and methods are eliminating need for this type of work, although expansion is projected locally.
Tool Machine Set Up Operator	559	93	Sets up and operates variety of machine tools, such as radial drill press, lathe, milling machine, shaper and grinder usually on a custom basis applying knowledge of metal properties, machining and shop mathematics.	Considerable growth will take place as this occupation requires all around experience and work is not usually on a production basis.
Traffic Rate Clerk	56	3	Determines rates and charges applicable to freight shipments, computes and records shipment invoices, includes passenger travel rates and records.	Employment stabilized at present; replacements will account for openings.
Transportation Agent	38	3	Expedites movement of freight, mail, baggage and passengers planning itinerary and schedules.	No increase expected and replacements will be minimal.
Tree Trimmer	18	2	Trims trees to clear right-of-way for communications lines and electric power lines to minimize storm and short circuit hazards.	Use of hydraulic hoists and other equipment has facilitated individual efficiency. Often seasonal.
Truck Driver	3,357	228	A term applied to workers who drive trucks to transport materials, merchandise or equipment. Workers are classified according to type of truck, such as over-the-road.	Locally heavy demand in this area. Replacement needs also high.

OCCUPATIONAL OUTLOOK IN BRIEF (Continued)

Upholsterer	79	2	One who uses knowledge of fabrics and upholstery methods to cover such items as furniture, automobile interiors aircraft interiors and similar fabricated articles. May repair broken or worn articles.	Not a rapidly growing occupation but with normal replacements will offer openings. Many furniture upholsterers have own small shops and are not included.
Vending Machine Repairman	23	1	Installs and repairs vending machines, using hand tools and power tools.	Present staff adequate to handle current requirements.
Waitress/Waiter	1,922	174	Takes customers' orders, serves food and beverages, makes out customers checks and sometimes takes payments as well.	Growth in number of eating places plus rapid turnover in this occupation and replacement needs open up many opportunities. Competition for more desirable situation will be keen.
Watch Repairman	11	1	Diagnoses watch movement defects and repairs watch movements to comply with mechanical and timing specifications.	Often done in home or small shop; as a result only those working for wages are reported. Little demand.
Water Treatment Plant Operator	223	17	Controls treatment plant equipment to purify and clarify water for human consumption and industrial use. Includes treatment of waste water for purification.	Growth has been rapid in this occupation with public pressure building toward intensification of public and private treatment of waste water. Population growth will increase need for pure water.
Weigher	32	1	Weights filled containers or loaded vehicles of materials, computes weight of contents or cargo for the purpose of keeping clerical records.	Labor market stable, some replacement activity anticipated.
Welder	1,432	137	Welds metal parts together according to layouts, blueprints or work orders using either gas welding or brazing and any combination of arc welding processes.	Excellent opportunities for trained or experienced welders. Promotions and replacement needs will up demand.

ABSTRACT - IN AN EFFORT TO PREDICT AND PLAN
EFFECTIVELY FOR THE STATE'S FUTURE ECONOMY,
AN INVESTIGATION OF MISSISSIPPI'S LABOR FORCE
IN THE 1960'S WAS CORRELATED WITH THE 1970
EXISTING TRENDS AND ANALYZED IN RELATION TO
COMPOSITION, CHARACTERISTICS, AND
OCCUPATIONAL STRUCTURE. FINDINGS OBTAINED
INDICATED A CHANGE IN THE GENERAL STRUCTURE
OF THE LABOR FORCE. FLUCTUATIONS OCCURRED
WITH REGARD TO SIZE, PARTICIPATION, SEX, AND
RACIAL COMPOSITIONS, AS WELL AS OCCUPATIONAL
PATTERNS. THE EXISTENCE OF AN UNDER
UTILIZATION OF MANPOWER WAS EVIDENCED.

RECOMMENDATIONS AND SUPPLEMENTARY TABLES ARE
INCLUDED IN THE REPORT. (SA)

INTRODUCTION*

Changes in population characteristics, in income levels, and in the economic structure of any state are both the cause and effect of changes in the state's labor force. In the decade from 1960 to 1970 many significant changes occurred in the characteristics and composition of Mississippi's labor force. Some of these changes are merely the continuation of trends that have been in progress for several decades. Others were unique to the 1960's and may represent the beginning of new trends.

The purpose of this study is to present a broad picture of Mississippi's labor force as it existed in 1970 and to discuss and analyze the major changes which occurred in that labor force in the decade of the 1960's. Emphasis is placed on its composition, characteristics, and occupational structure. The purpose of such a profile is two-fold. First, it is important to know the current status of Mississippi's labor force in order to analyze the situation which now exists with regard to the State's economy. Problems exist, many of which, if pinpointed, can be solved in a relatively short time. Also, the type and volume of State services required, such as welfare, child care services, vocational training, and many others, are influenced by the characteristics of the existing labor force. Secondly, knowledge of the composition and characteristics of the labor force helps to reveal the most likely possibilities for future industrial growth in terms of the type and number of jobs as well as aspects of the labor force which will require significant attention by State and local governments. That is to say,

*The authors wish to thank the Bureau of Business and Economic Research and the Center for Manpower Studies (U. S. Department of Labor Grant 31-45-70-03) for their support. We also wish to thank Mr. Ernest N. Waller for editorial assistance, and Dr. Brian S. Rungeling for constructive criticism.

the study is undertaken because of a concern for present and future growth potential in the State. Mississippi is one of the poorest states in the country, and it is important that human capital in the State be developed and utilized to the maximum extent possible. Optimum utilization of the State's labor resources requires a knowledge of where unused potential lies, and how it can be brought into the productive sector of the State's economy.

The analysis such as that developed in this paper is a prerequisite to policy formulation and implementation by state and local governments. Those involved in the development and planning of Mississippi's future as well as interested citizens should find the report both informative and useful.**

LABOR FORCE COMPOSITION AND CHARACTERISTICS

Many of the significant changes in the composition and characteristics of Mississippi's labor force are in general similar to changes occurring throughout the United States. There are, however, some notable exceptions, particularly with respect to the labor force participation of various groups. This section outlines the composition and characteristics of Mississippi's labor force and discusses some of the more important changes which occurred over the last decade.

Labor force is defined here as including all members of the State's population 16 years of age or older who are not institutionalized, who are currently employed or are currently unemployed. To be classified as unemployed, an indi-

**Figures in this study not specifically footnoted have been derived from U. S. Department of Commerce, Bureau of the Census, 1970 Census of Population, General Social and Economic Characteristics, Mississippi, PC(1)-C26 (Washington: U. S. Government Printing Office, 1972), and U. S. Department of Commerce, Bureau of the Census, U. S. Census of Population, 1960 General Social and Economic Characteristics, Mississippi, PC(1)-26C (Washington: U. S. Government Printing Office, 1961).

vidual must be currently available for work and have been actively seeking employment within the last four weeks.¹ When military personnel are removed from the above defined group, the remainder are classified as the civilian labor force.

In 1970, there were 779,495 people in Mississippi's labor force, an increase of 6.4 percent over 1960. During the same period the State's population increased by 38,771, or 1.8 percent.² Not only were more people in the labor force in 1970 but, as the figures indicate, the percentage of the total population in the labor force had increased. As can be seen from the figures in Table 1, this increase was not evenly distributed among the male and female members of the population. The male labor force actually declined by slightly over 2 percent while the female labor force increased by over 23 percent. Mississippi, like the United States as a whole, is experiencing both a relatively large increase in its female labor force and an increase in the portion of the total labor force that is female. In terms of percentage increase, this growth in the female labor force was approximately evenly distributed among the urban, rural nonfarm, and rural farm labor forces.

Another characteristic of the labor force which is extremely important is age distribution. Two important changes have occurred in the overall age distribution of Mississippi's labor force since 1960. First, there has been a lowering

¹This definition is used by the United States Bureau of Labor Statistics and the Bureau of the Census. It became the official definition in 1967. Prior to that time the labor force had included all those 14 and 15 year olds who were employed or unemployed. Whenever possible, adjustments have been made to reunite the 1960 figures with the 1970 definition. In some cases data limitations made this impossible. However, comparisons are still significant since 14 and 15 year olds accounted for less than one percent of Mississippi's labor force in 1970.

²U. S. Department of Commerce, Bureau of the Census, 1970 Census of Population, Number of Inhabitants, Mississippi, PC(1)-A26 (Washington: U. S. Government Printing Office, 1971), p. 7.

of the average age of labor force members, caused primarily by large increases in the 20-24 and 25-34 year old age groups and a decrease in the 35-44 year old age group. Secondly, there has been some compression of the labor force caused by declines in the number of workers under 20 and over 64. Changes for various age groups, absolute and percentage, are shown in Table II.

Table I
CHANGE IN MISSISSIPPI'S TOTAL LABOR FORCE
BY SEX, 1960 TO 1970

Sex	Year		Change in Total, 1960-1970	
	1960	1970	Absolute	Percentage
Male	490,655	480,498	-10,157	- 2.07
Female	242,212	298,997	+56,785	+23.44
Total	732,867	779,495	+46,628	+ 6.36

Source: U. S. Department of Commerce, Bureau of the Census, 1970 Census of Population, General Social and Economic Characteristics, Mississippi, PC(1)-C26 (Washington: U. S. Government Printing Office, 1972), p. 146.

The most significant increase in the labor force occurred in the 20-24 year old age category. A probable causal factor was the post World War II baby boom. Substantial increase is also found in the 25-34 year old group. Although a more detailed age breakdown of the labor force is not currently available, it is probable that most of the increase in the 25-34 age bracket was concentrated in the lower portion of this category and was also the result of the upturn in the birth rate during the mid 1940's.

As Table II indicates the most significant decline in the total labor force occurred in the 16-17 year old age category. There was an increase in the 18-19

Total	490,655	242,212	732,867	480,498	298,997	+46,628	+ 6.4

Source: U. S. Department of Commerce, Bureau of the Census, 1970 Census of Population, General Social and Economic Characteristics, Mississippi, PC(1)-C26 (Washington: U. S. Government Printing Office, 1972), p. 146. Percentage computations are by the authors.

*The definition of the labor force varied between 1960 and 1970. Beginning in 1967, the Bureau of the Census defined the labor force as including all members of the State's population 16 years of age or older who are not institutionalized, who are currently employed or are currently unemployed. Before 1967, the labor force had included, also, all those 14 and 15 year olds who were employed or unemployed. For a fuller explanation see footnote 1.

year old group, with most of the increase being accounted for by females. The result of these two changes was a net decrease in the total labor force under 20 years of age. The decline in the number of younger labor force members in part reflects the trend toward more education, which usually means later entry into the labor force. It may also result in part from the increased difficulty which young workers with little education and little or no job skills are having in securing employment. In addition, this may reflect a normalization of birth rates as well as increased knowledge and use of birth control techniques.

There was a decrease of 6.6 percent in the labor force over 65 years of age. The continuing pressure for earlier retirement is without doubt a factor here. The increase in the number of females in the labor force who were over 65 was not expected and from data available at the present time cannot be adequately explained. It is hoped that data will become available in the future which will give some insight into this change in the labor force.

In 1970 there were 226,945 nonwhite members of the State's labor force and 552,550 white members. (See Table III.) This is a substantial change in the racial composition of Mississippi's labor force. In 1960 nonwhites accounted for 36.4 percent of the labor force but by 1970 this had fallen to 29.1 percent. This change consists of a decline of 39,528 (14.8 percent) in the nonwhite labor force, and an increase of 86,156 (18.5 percent) in the white labor force. Part of this change is the result of a 10.8 percent increase in the white population between 1960 and 1970, together with a 10.5 percent decline in the nonwhite population during the same period.³ It also reflects substantial changes in labor

98	375
99	175
100	375
Total	13,254

Tables 1, 2, 3, and 4 are summarized in Table 5 which reports that the industries polled had an estimated 37,737 employees. The responding industries had an estimated 23,896 employees, non-responding industries had an estimated 13,254 employees, and industries polled but reported no longer in business had an estimated 587 employees.

It should be noted that the responding industries represented 63.4% of the total estimated number of employees of the polled industries.

Table 5
SUMMARY OF POLLED INDUSTRIES

Questionnaire Status	Number	Reported No. Employees	Estimated No. Employees	% of Estimated Total
Returned	58	26,522	23,896	63.4%
Returned by P.O.	3		587	1.5%
No Response	39		13,254	35.1%
Totals	100	26,522	37,737	100.0%

Table 6 indicates the locations of the industries polled and the percentage return obtained from the different locations.

Study of Table 6 does not give information upon which a conclusion can be made; however, a review of responding and non-responding industries (Appendix A) reveals that only one industry out of seven polled located outside Shelby County, Tennessee; Crittenden County, Arkansas; and DeSoto County, Mississippi, responded to the poll. This 14.3% response from industries outside Shelby (county in which Memphis is located) and adjacent counties indicates a possible lack of interest by them in the Memphis labor force. This indication of a lack of interest in the Memphis labor force by industries located within an eighty mile radius of Memphis should be investigated using a larger sample size. Further study of Appendix A revealed an indicated high interest in the Memphis labor force by West Memphis, Arkansas, industries as all five industries polled responded.

Table 6
LOCATIONS OF INDUSTRIES POLLED

Location	No. Polled	No. Responses	% Response
Memphis, Tenn.*	78	46	59.0%
Tennessee	10	3	30.0%
Arkansas	6	5	83.5%
Mississippi	6	3	50.0%
Totals	100	57	57.0%

* 3 industries no longer in business

Classification of Technical Employees

Table 7 reflects the responses to Question 5 which requested the responding industries to indicate the classification of their technical employees. In order to reduce the problem caused by the variance in definition of the term "technician", a widely accepted definition of the term "technician" was given.

From Table 7 it can be seen that the reporting industries have a ratio of 1.5 technicians to each engineer. This ratio is higher than the national average of two technicians for every five engineers, but lower than the national need, according to the American Society for Engineering Education, of two or three technicians for each engineer.

Comments made by the respondents are listed in the following tables. The responses to the particular questions have been added in parenthesis to clarify the comment.

Table 7

CLASSIFICATION OF TECHNICAL EMPLOYEES

Number of responses <u>54</u>			
Engineers	Technicians	Total	Ratio - Technician to Engineer
445	660	1105	1.5

Comments By Respondents With Regard to Question 4:

1. Draftsmen (Engineers 0 Technicians 2)
2. (4) Draftsmen (2) inspectors (Engineers 1 Technicians 6)
3. Of the above engineers seven are sales engineers. (Engineers 11 Technicians 5)
4. All engineering projects sent to home office. (Engineers 0 Technicians 0)
5. Does not apply. (Engineers Technicians)
6. As one small plant within the corp we get our technical manpower for the corp on a temporary loan basis. (Engineers 0 Technicians 0)
7. Most of these are inspectors, production equipment maintainers and mechanical supos. (Engineers 4 Technicians 56)
8. 42 have degrees in math and are considered engineers on basis of experience. (Engineers 0 Technicians 8)
9. Technicians are in Laboratory or Quality Assurance Field.
(Engineers 1 Technicians 18)
10. Information confidential--therefore, will not fill out questionnaire. (Engineers Technicians)

11. Technicians are mechanics. (Engineers 1 Technicians 3)
12. "Technicians" include fourteen (14) lab technicians in Quality Control and two (2) Engineering Aides. (Engineers 2 Technicians 16)
13. We do our own design and actually build our production machinery. (Engineers 1 Technicians 6)

Utilization of Engineers

Thirty-eight (38) industries indicated that 26.7% of 100 engineers' time was spent in technician level activities (see Table 8).

This does not mean that these companies should replace 27 engineers with technicians as the comments of the responders indicate that determining the time an engineer spends at the technician level is difficult and spending some time at the technician level by engineers is unavoidable.

The data collected from responses to Question 5 of the questionnaire and displayed in Table 8 does not reveal information upon which a definite conclusion can be made, but it does indicate that an in depth study of the utilization of technical manpower is merited.

Table 8

UTILIZATION OF ENGINEERS

Number of responses <u>38</u>	
No. Engineers Listed	Percent of Time As Technicians
100	26.7%

Comments By Respondents With Regard To Question 5:

1. N/A. (11 responders)

2. Time is usually field adjusting of equipment. (Number 3 Percent of time 15%)
3. This would be more in the area of supervising and advising technicians, working with them. (Number 10 Percent of time 15%)
4. V. P. is also engineer. (Number 1 Percent of time 50%)
5. For training purposes only. (Number 1 Percent of time 100%)
6. Most Salesmen don't speak to engineers at the engineering level.
(Number 2 Percent of time 95%)
7. None should be. Very difficult to determine. (Number Percent of time)

Present Employment of Mechanical Engineering Technicians

Question 6 and 7 were designed to discover the number of mechanical engineering technicians presently employed by the responding industries and the subdivision of the broad mechanical field wherein these technicians worked.

Tables 9 and 10 tabulate the responses to Questions 6 and 7.

Table 9 reflects that 48 respondents report 234 mechanical engineering technicians while Table 10 reflects that 36 respondents utilize 290 technicians in subdivisions of the mechanical field. This disagreement in totals could be from (1) companies utilizing non-mechanical technicians in the subdivisions, (2) a difference in interpretation by the responding companies of the definition of "mechanical engineering technician", or (3) incomplete analysis by the respondents.

Table 10 (page 18) reveals heavy utilization of mechanical technicians in drafting, design, production control, quality control, and production supervision. These five subdivisions are commonly found in two curricula of the mechanical field. Design and drafting in the mechanical design curriculum and production control, quality control,

and production supervision in the production curriculum.

A significant point that can be gained from Table 10 is the complete lack of emphasis in power production and combustion engines which are two traditionally important subdivisions of the mechanical engineering field. This lack of emphasis in power production and combustion engines does not indicate that these two areas of study can be disregarded in curricula for the Memphis and Mid-South mechanical technician student for it should be noted that this survey covered only manufacturing industries. More emphasis on these two subdivisions and on heating and air conditioning would probably exist in a survey covering building and plant construction and maintenance; therefore, a survey covering these important subdivisions of the mechanical engineering field should be made.

Plant Engineering	2	0.7%
Tool and Die	2	0.7%
Miscellaneous	2	0.7%
Totals	290	99.8%

Comments By Respondents With Regard To Question 7:

1. Our small group has duties in the above categories. (Design, Drafting, Sales, Power Production, and Combustion Engines checked)
2. Vice Pres is engineer. (No subdivisions checked)
3. Maintain Mechanical Equipment (No subdivisions checked)
4. All do some drafting in design process. (Design 9 Drafting ?)

Technical Personnel Needed Immediately

Table 11, Technical Personnel Needed Immediately, indicates the responses to Question 8 which was designed to determine the immediate employment opportunities for technical personnel. Forty-five (45) industries responded showing a need for 25 technical personnel immediately. Considering that the respondents represented 40% of the manufacturing employment in the Memphis and Mid-South area (see note), there is probably employment for 60 to 70 engineers and technicians in the Memphis and Mid-South area immediately--a very healthy employment outlook. (Note: The Memphis Area Chamber of Commerce reported 59,700 manufacturing employment positions in an undated supplement to Memphis/Mid-South Manufacturers, 1970 edition.)

Table 11 reveals that 18 of the 25 employment opportunities are for mechanical technicians. Expanding this data to cover the entire manufacturing industry, there is a probable need for approximately 45 mechanical technicians immediately.

The immediate need for "All other technicians" reflected in Table 11 is only 3. This is an exceedingly low requirement, and it is felt that the respondents train of thought had been directed by the questionnaire to considering the mechanical field and other fields were excluded by the responders giving an unreliable summary of need for other technicians.

One interesting comment by a respondent was comment number 6 which pointed out the shortage of minority engineers. This comment was the only mention of the shortage of minority technical employees in the entire response to the survey. Since several companies had queried this writer as to the availability of minority technical personnel, it is felt that securing minority technical personnel is a greater problem for Memphis and Mid-South industries than is indicated by this survey. The problem of availability of minority technical personnel should be investigated in another research effort.

Table 11

TECHNICAL PERSONNEL NEEDED IMMEDIATELY

Number of responses <u>45</u>	
Title	Need
Engineers	4
Mechanical Technicians	18
All other technicians	3
Total	25

Comments By Respondents With Regard To Question 8:

1. N/A (No need indicated)
2. None at present (No need indicated)
3. None presently (No need indicated)
4. We have one Maintenance Engineer. Work along this line is sub-

- contracted. (No need indicated)
5. No actual openings at present, but number needed might vary monthly or with business trends. (No need indicated)
 6. We feel there is an adequate supply of engineers, although there is a shortage of minority engineers. (No need indicated)
 7. Our present staff is sufficient. (No need indicated)
 8. We have staffed our plant and will promote and train from our present work force. (No need indicated)
 9. Our work load doesn't require any immediately. (No need indicated)
 10. We have had an over abundance of applications in the past year.
(No need indicated)
 11. None at present (No need indicated)
 12. None at this moment (No need indicated)
 13. We will hire additional Quality Control Technicians this year, but have no immediate openings. (No need indicated)
 14. We are furnished with Eng. assist. from our Parent Office--Chicago.
(No need indicated)
 15. No anticipated openings at this time. (No need indicated)
 16. Budget considerations (Engineers ? Mechanical Technicians 6
All other technicians ?)

Present and 5-year Projected Need For Mechanical Engineering Technicians

Table 12 is a summation of the responses to Question 9 which dealt with the present and 5-year projected need of the various classifications of mechanical engineering technicians by the responding industries.

Study of Table 12 highlights the need of the manufacturing industries of the Memphis and Mid-South area for technicians supplied by two curricula. These are the mechanical design curriculum and the

mechanical production curriculum. When the subdivisions which are parts of these two curricula are totaled this becomes apparent. Combining tool design, machine design, drafting and engineering aides results in a 37 present need (31.5% of total) and 175 5-year projected need (39% of total). Combining inspectors, quality control technicians, production control technicians, time and motion technicians, and estimators results in 39 present need (33.3% of total) and 205 5-year projected need (45.5% of total).

Table 12

PRESENT AND 5-YEAR PROJECTED NEED FOR
MECHANICAL ENGINEERING TECHNICIANS

Number of responses 36

Mechanical Technicians	Present Need	5-year Projected Need
Draftsmen	22	79
Laboratory (Test)	19	32
Estimators	7	18
Engineering Aides	1	66
Tool Designers	11	22
Machine Designers	3	8
Maintenance Technicians	13	43
Inspectors	11	38
Quality Control Technicians	11	53
Production Control Technicians	4	26
Technical Representatives	2	6
Engineering Technicians	6	30

Table 12 (continued)

Mechanical Technicians	Present Need	5-year Projected Need
Mechanical Equipment Technicians	0	3
Time and Motion Technicians	8	24
Other		
Process Engineering	1	2
Totals	117	450

Comments By Respondents With Regard To Question 9:

1. Personnel with two-year degrees in chemical technology are not generally required in our laboratory activities. (Engineering Technicians Present Need 0 5-year Projected Need 19)
2. Need additional training for 3 Production Control Technicians now. (Various types Present Need 4 5-year Projected Need 19)
3. None at present (No need indicated)
4. N. A. (No need indicated)
5. Our type industry requires mostly basic working knowledge in engineering mechanics. Highly qualified engineering personnel is required only for new products. (Less than 10% of total manpower requirements) (Various types Present Need 0 5-year Projected Need 6)
6. Some of our Quality Control technicians might be categorized as "mechanical", inasmuch as their work involves analysis of the mechanical packaging process and analysis of incoming materials. (Qual-

ity Control Technicians Present Need 0 5-year Projected Need 10)

7. None of these job categories (or our corresponding titles) fall within the Mechanical Engineering Department. (Tool Designers Present Need 9 5-year Projected Need 4)

Difficulty in Employing Mechanical Technicians

Table 13 tabulates the answers of the respondents as to whether the respondent had or did not have difficulty in employing mechanical technicians. Eighteen (18) industries of 41 reporting or 44% indicated they had difficulty.

The comments made by the respondents indicate that those having difficulty were those requiring expertise in specific areas, such as irrigation, pneumatics, heating, air conditioning, and incineration.

Conclusions should not be made from the responses to this question as too many factors affect a company's recruiting efforts. Some of these factors are salary, location, working conditions, trade union requirements, and promotion opportunity.

Table 13

DIFFICULTY IN EMPLOYING MECHANICAL TECHNICIANS

Number of responses <u>41</u>		
Yes	No	% Having Difficulty
18	23	44%

Comments By Respondents With Regard To Question 10:

1. Irrigation Equip. is not a generally known subject and sources of

- trained employees small. (Yes)
2. Few are available with knowledge in pneumatic conveying and incineration. (Yes)
 3. Number of well-trained applicants in rather short supply. (Yes)
 4. We have just not had a problem with vacancies. (No indication)
 5. Draftsmen are difficult to find. (Yes)
 6. Not at present but we can see need for training to supply future needs. (No)
 7. We will now train from our present work force but the few we need to hire outside are usually available. (No)
 8. Heating, ventilating, air conditioning, plumbing. (Yes)
 9. Very little turnover. (No)
 10. Due to qualification requirements (Yes)
 11. Engineering tech. not available (Yes)
 12. Somewhat (No indication)

Sources of Recruitment of Technician Level Employees

The responses to Question 11 which dealt with the sources used by the respondents to recruit technician level employees are tabulated in Table 14. While the tabulated results are interesting, it is difficult to make conclusions from the data.

Forty-two industries indicated sources of recruitment of technician level employees. Of these, 33 indicated the per cent employed from each source and 9 indicated the sources used without stating a percentage.

Tabulation of those reporting source percentage reveals four areas with significant percentages. These areas are: upgrade promoting employees (34%), employ personnel that have received training while employed by other companies (25.3%), employ personnel with some

college and train them on the job (15.0%), and employ formally trained technicians from technical institutes and junior colleges (7.9%).

Table 14

SOURCES OF RECRUITMENT OF TECHNICIAN LEVEL EMPLOYEES

Number of responses <u>41</u>		
Source	Number	Percentage
Employ engineers as technicians	4	1.7%
Employ formally trained technicians from technical institutes and junior colleges	10	7.9%
Employ formally trained personnel from technical high schools	5	1.2%
Employ formally trained personnel from area vocational schools	7	2.6%
Upgrade promising employees and train them on the job	29	34.0%
Send promising employees to company sponsored schools	4	0.6%
Employ personnel with some college and train them on the job	21	15.0%
Employ personnel who have been trained in the armed forces as technicians	8	4.0%
Employ personnel that have received training while employed by other companies	28	25.3%
Upgrade employees by either paying all or part of the cost of continuing their education on "non-company time"	11	14.3%
Varies	5	3.6%
Total	127	100.0%

Comments By Respondents With Regard To Question 11:

1. Many are upgraded and given additional on the job training. (Various indications)
2. Any attempt to list percentage would be misleading--we have used the methods checked as they are available. (Various indications)
3. All employees are encouraged to take job related courses with a major portion of the expense paid for by the company. (Upgrade promising employees and train them on the job 80 per cent Employ personnel with some college and train them on the job 50 per cent)
4. Our need is so low that percentages are not available. (Several sources indicated with no percentages)

Salary Range of Engineering Technicians

The salary range that can be expected by the engineering technician is reflected in Table 15 wherein the responses of 41 industries are tabulated.

The average beginning salary of the engineering technician is \$577.00 a month. The average of the high salaries reported is \$851.00 a month. The mean salary is \$740.00 a month.

Table 15

SALARY RANGE OF ENGINEERING TECHNICIANS

Number of responses 41

Responder No.	From	To	Average
1	\$833	\$1000	\$916

61	\$425	\$850	\$637
Averages	\$577	\$851	\$740

* Not used in high or average computations.

** Not used in average computations.

Comments By Respondents With Regard To Question 12:

1. Salaries are strictly confidential. (No indication)
2. Varies with responsibilities, previous training, etc. (From \$500)

To \$600)

3. N. A. (No indication)
4. N. A. (No indication)
5. Company policy forbids disclosure. (No indication)

Obstacles to Employment

Questions 13 and 14 were designed to determine obstacles to employment such as union membership and apprenticeship requirements.

There were 47 responses received regarding union membership, and these responses are tabulated in Table 16. Only seven responders indicated a union membership requirement while 41 indicated no union requirement. One company responded both yes and no.

Considering the preponderance of firms that do not require union membership for technicians and the fact that some respondents indicated in added comments that their answer of yes was not applicable in all cases, union membership does not appear to be a serious obstacle to employment as a technician in the Memphis and Mid-South area.

Table 16

UNION MEMBERSHIP REQUIREMENT FOR TECHNICIANS

Number of responses <u>47</u>	
Yes	No
7	41

Comments By Respondents With Regard To Question 13:

1. 90% of the openings would not require union membership. (No)

2. Except for inspectors (No)
3. Lab technicians can belong to union. (No)
4. Except for a few supervisors (Yes)
5. We use no union employees. (No)
6. In some classifications (Yes)
7. However we are not a closed shop and membership is not mandatory.
(Yes)
8. For some lab work only (Yes)
9. Some jobs do; others do not. (Yes and No)

Table 17 indicates those respondents that have or have not a requirement for service at the apprenticeship level before full employment at the technician level can be obtained. Seven industries reported an apprenticeship requirement that averaged 2.28 years in duration. Two industries indicated the requirement or non-requirement of apprenticeship service was union rules while eleven indicated the rules were of company origin.

From Table 17, it can be concluded that service at the apprenticeship level is not a great problem to mechanical engineering technicians seeking employment in the Memphis and Mid-South area.

Table 17

APPRENTICE LEVEL REQUIREMENT FOR MECHANICAL
ENGINEERING TECHNICIANS

Number of responses <u>47</u>				
Yes	No	Union Rules	Company Rules	Ave. Length
7	40	2	11	2.28 years

Comments By Respondents With Regard To Question 14:

1. Depends on individual (Yes - Company Rules)
2. No exact duration--depends on employee (Yes - Company Rules)
3. This increases from start to top merit rate. (Yes - Company Rules - Apprenticeship 1.5 years)
4. No apprenticeship program--N/A (No - Company Rules)
5. Desired for tool and die makers (No - Company Rules _ Apprenticeship 4 years)

Recruiting Policy at Educational Institutions

Table 18 reflects the respondents replies to Question 15 which asked the respondent to outline their policy in regard to recruitment at educational institutions.

The data displayed in Table 18 indicates that 14 companies do not recruit at educational institutions. Effort should be made by placement offices to reduce this percentage.

One significant fact gained from study of Table 18 is that accreditation by the Engineering Council for Professional Development (ECPD) is an asset as 11 industries (25.6% of the responders) indicate recruitment at ECPD accredited institutions only, and 6 industries (13.9% of the responders indicate a preference for ECPD accredited institutions. (See next page for Table 18)

Table 18

RECRUITING POLICY AT EDUCATIONAL INSTITUTIONS

Number of responses 43

Policy	Number	Per cent
Company does not recruit employees from educational institutions	14	32.6%
Company recruits at accademically accredited institutions	12	27.9%
Company recruits at ECPD accredited institutions only	11	25.6%
Company prefers to recruit at ECPD accredited institutions, but must recruit at others to fullfill need	6	13.9%
Totals	43	100.0%

Comments By Respondents With Regard To Question 15:

1. No restrictions (No indication)
2. Company does not restrict its recruiting. (Company recruits at accademically accredited institutions)
3. Our company is quite small and perhaps the foregoing information is not applicable to your survey. Several items are checked in reply to some questions, as these practices have been used at one time or another. (Company recruits at accademically accredited institutions and Company prefers to recruit at ECPD accredited institutions, but must recruit at others to fullfill need)
4. Through Employment Agencies, etc. (No indication)

5. No formal recruiting program (No indication)
6. Our company will hire any qualified individual who we think can perform satisfactorily for our company. (No indication)
7. Mostly look for applicants who have qualifications for job--regardless of how they became qualified. (No indication)
8. Technicians are normally hired on direct application basis and on referrals from employment agencies. Four year mechanical engineers are employed through formal recruiting program at selected universities. (No indication)
9. We have contacted M. S. U. when we were looking for engineering technicians however I wouldn't consider this "recruiting". (No indication)
10. We are not familiar with ECPD. (Company recruits at accademically accredited institutions only)
11. We recruit from all sources. (Company prefers to recruit at ECPD accredited institutions, but must recruit at others to fullfill need)
12. Doing no recruiting at present (No indication)
13. Uncertain (No indication)
14. Will recruit from any source that offers the qualified personnel desired. (Company recruits at accademically accredited institutions)
15. No source excluded (No indication)

SUMMARY

This investigation was undertaken to discover the occupational opportunities of associate degree mechanical engineering technicians in the Memphis and Mid-South area. It was felt that the information required to discover these opportunities could best be obtained through

a survey using a questionnaire as the data collecting instrument.

The questionnaire (Appendix B) was a fifteen question instrument with space for comments by the responder after all but the first three questions. The questionnaire was utilized as follows:

1. Questions 1 and 2 were used to identify the responder and to collect the responder's correct, up-dated address. The names and addresses of all polled companies are reflected in Appendix A.
2. Question 3 was used to establish the responders total number of employees.
3. Question 4 requested the number of engineers and technicians employed by the responder. The responses to this question are reported in the section titled Classification of Technical Employees.
4. Question 5 dealt with the time the employees, classified as engineers, spend in technician type activity. Responses to this question are reported in the section titled Utilization of Engineers.
5. Question 6 was used to establish how many of the technicians employed by the responder are classified as mechanical engineering technicians. Question 6 responses are reported in the section titled Present Employment of Mechanical Engineering Technicians.
6. Question 7 requested the responder to indicate the subdivisions of the broad mechanical engineering field wherein the technicians classified as mechanical engineering technicians worked. The responses to this question are reported in the section titled Present Employment of Mechanical Engineering Technicians.
7. Question 8 was used to establish the immediate need of the responder for engineers, mechanical engineering technicians, and all other classifications of technicians. Responses to this question are reflected in the section titled Immediate Engineering and Technician

Need.

8. Question 9 was used to establish the classification of mechanical engineering technician needed immediately by the responder and his projected 5-year need. Responses to this question are reported in the section titled Present and 5-year Projected Need For Mechanical Engineering Technicians.

9. Question 10 was used to determine whether the responder had difficulty in employing mechanical engineering technicians. Question 10 responses are reported in the section titled Difficulty in Employing Mechanical Technicians.

10. Question 11 was used to determine the recruiting sources used by the responder. Responses to this question are reflected in the section titled Sources of Recruitment of Technician Level Employees.

11. Question 12 was used to determine the salary range of the engineering technicians employed by the responder. Tabulation of responses to Question 12 are reported in the section titled Salary Range of Engineering Technicians.

12. Questions 13 and 14 were used to reveal obstacles to employment for the engineering technician such as union membership or apprenticeship requirements. Responses to Questions 13 and 14 are reported in the section titled Obstacles to Employment.

13. Question 15 was used to determine the type of educational institution used as a recruiting source by the responder. Question 15 responses are reported in the section titled Recruiting Policy at Educational Institutions.

Fifty seven industrial organizations returned the survey instrument, and the responses on these questionnaires were used to compile this report. Three of the survey questionnaires were returned by postal

employees as non-deliverable. One company returned its questionnaire too late to be included in this report.

There were four stated problems of this investigation. They were:

1. To determine the employment opportunities of the associate degree mechanical engineering technician.
2. To determine the qualifications expected of associate degree mechanical engineering technicians.
3. To determine the salary range that can be expected by the engineering technician.
4. To determine obstacles to employment confronting the mechanical technicians such as union membership and apprenticeship requirements.

Responses to Questions 8 and 9 tabulated in Tables 11 and 12 indicate that employment opportunities for mechanical engineering technicians are excellent. The immediate need of eighteen (18) mechanical engineering technicians reported by the responding industries exceeds the number of 1972 mechanical engineering technician graduates from the State Technical Institute at Memphis. Since the respondents represented forty per cent of the manufacturing employment in the Memphis and Mid-South area, it is reasonable to assume that approximately forty-five (45) employment opportunities exists for the mechanical engineering technician immediately.

The 5-year projected need of mechanical engineering technicians by the responding industries far exceeds the forecasted number of graduates from the State Technical Institute at Memphis. The 5-year projected need of the reporting industries was for 450 mechanical engineering technicians. Assuming that this figure represents forty per

cent of the total need, the 5-year projected need for mechanical engineering technicians is 1,125 or 225 per year. It is realized that the entire need will not be satisfied by filling the positions with graduates from the State Technical Institute at Memphis, but if only 7.9% are recruited from technical institutes as indicated in Table 14 there will be employment for eighteen (18) technical institute graduates a year in the manufacturing industries alone.

Considering the above points, the employment opportunities of associate degree mechanical engineering technicians in the Memphis and Mid-South area are excellent.

The qualifications or skills required of the mechanical engineering technicians are outlined in Tables 10 and 12. Table 10 reports the areas wherein mechanical engineering technicians presently employed are assigned, and Table 12 indicates the areas of present and future need wherein mechanical engineering technicians are to be employed.

Analysis of Table 10 points out that 48.6% of the mechanical engineering technicians are now employed in design and drafting and 40.7% are employed in production control, quality control, and production supervision.

The present and 5-year projected need for mechanical engineering technicians is shown in Table 12. This table reveals that the mechanical engineering technician required in the future will require skills in the same areas as those now employed. As reflected in Table 10, two general divisions of the mechanical field are emphasized in Table 12. These areas are the design area and the production area. (See comments in the section titled Present and 5-year Projected Need for Mechanical Engineering Technicians.)

A wide salary range was reported by the responding industries.

The lowest reported beginning salary was \$400.00 per month, and the highest salary reported was \$2000.00 a month. The average of the beginning or lower side of the ranges reported by the responders was \$577.00 a month. The average of the high side of the ranges reported by the responders was \$851.00 a month. It is felt that the average salaries listed above are representative of the range of salary that can be expected by the mechanical engineering technician.

The obstacles to employment as mechanical engineering technicians appear minimal. Only 17% of the reporting industries indicated union membership as a requirement for employment, and only 15% indicated service was required at the apprentice level before full employment as a technician could be obtained.

Recommendations

Considering the findings of this investigation the following recommendations are made:

1. That the State Technical Institute at Memphis continue to offer the Mechanical Engineering Technology curriculum as published in State Technical Institute at Memphis Catalog, 1972-73. This curriculum will equip students with skills enabling them to accept the draftsmen, tool design, machine design, and engineering technician employment opportunities indicated in Table 12.
2. That the State Technical Institute at Memphis increase its curriculum offerings to include a Production Option in the Mechanical Engineering Technology Department or an Industrial Engineering Technology curriculum (Appendix E) as proposed by this writer to the Engineering Division of the State Technical Institute at Memphis on June 9, 1972. This curriculum will equip students with the skills required to accept

the inspection, quality control, production control, and time and motion employment opportunities pointed out in Table 12.

INTRODUCTION

At its Third Session, Geneva 1952, the Chemical Industries Committee of the International Labour Organisation examined questions relating to vocational training in the chemical industries on the basis of a report prepared by the Office.¹ Ten years later, at its Sixth Session in 1962, a short review of the situation and of developments since 1952 in the field of vocational training for the chemical industry was prepared for the Committee as a chapter included in the general report.² For this reason the present report will primarily deal with trends and developments which have become apparent in this field since 1962.

At its Sixth Session, the Chemical Industries Committee proposed to include a question relating to vocational training in its agenda for the Seventh Session. Acting on the basis of this proposal, the Committee of Industrial Committees of the Governing Body recommended that one of the two technical questions to be included in the agenda of the Seventh Session of the Chemical Industries Committee be formulated as follows:

"Vocational training and retraining of workers, technicians and engineers in the chemical industry."

The Governing Body approved this recommendation at its 170th Session, Geneva, November 1967.³

The present report has been prepared on the basis of information received from various international and national organisations of employers and workers, the relevant public authorities and a great number of undertakings of the chemical industries in various countries. It is also based on documentation and information assembled by the Office.

The report is divided into five parts.

Part I restates briefly some of the major elements of change which may be expected to have a bearing particularly on the qualifications required of technical staff and other workers in the chemical industry;

Part II deals with the special training requirements of the chemical industries in developing and industrial countries respectively and with differences in needs - the basis for planning training and retraining action of smaller and larger undertakings in the industry;

¹ Chemical Industries Committee, Third Session, Report II: Vocational Training in the Chemical Industries, ILO, Geneva, 1952, p. 68.

² Chemical Industries Committee, Sixth Session, Report I: General Report, ILO, Geneva, 1962, p. 203 (Chapter IV: Vocational Training in the Chemical Industries - Recent Developments, pp. 61-79).

³ ILO, Official Bulletin, Vol. LI, No. 1, January 1968, pp. 17-18.

Part III relates to the programmes and content of training in what appears to be key occupations to which special attention has been given by the industry in various countries in the recent past;

Part IV deals with the influence of the changing training requirements and opportunities for training within undertakings on the organisation and administration and training and with the respective roles of the authorities, the educational systems, the employers and the workers in a co-operative effort towards the improvement of existing training patterns;

Part V finally contains a number of questions proposed to serve as a basis for discussion by the Committee.

CHAPTER I

THE ELEMENTS OF CHANGE

Factors Influencing the Patterns of Training

A great number of factors, some of them constituting continuing trends, others being comparatively new, have influenced the training pattern and modified the training requirements of the chemical industry in the recent past and are likely to continue to do so in the foreseeable future. Among these a few would seem to merit special attention: the establishment of chemical industries in developing countries in which chemical production did not exist before as one element in an over-all expansion of the chemical industry in both developing and industrial countries; the concentration of much chemical production to very large concerns parallel to a specialisation of individual plants on particular lines of production or products; the increasing emphasis on research and the shortening of the period allowed for translating the results obtained in the laboratories into full-scale manufacturing; the over-all growth of the chemical industry in relation to other industries; the increasing importance of chemical processes in other industries and economic sectors and the consequential increase in competition on the employment market for competent staff at all levels required by the chemical industry; the increased degree of mechanisation in materials' handling and packaging and the rapid advances made in the use of mechanical, electrical and electronic devices in process steering and control resulting in a steep rise in the investment into product development, installations and equipment per worker and, as a consequence, increased demands placed on each worker for knowledge, skill and a sense of responsibility.

To this list should be added the growing concern in wide circles over environmental factors and the responsibility of the chemical industry in this field - a trend which would seem to require staff at all levels of the chemical industry to learn completely new aspects of their work and of the influence of their activities on the milieu.

As explained in some detail in other reports submitted to the same session of the Committee, these and other factors have led to a continuing and accelerating structural change in employment in most branches of the chemical industry. There is an increase in the proportion of highly qualified staff at the engineer and technician levels, a similarly important increase in the employment of highly skilled workers and a relative decrease in the number of semi-skilled workers trained primarily in the production plants. In other words, despite relatively stable figures in employment in the chemical industries in many countries and in some cases even a decrease in over-all employment despite increased production, the need for training and for trained staff has increased. At the same time, the opportunities for training workers and technical personnel exclusively on the job in the production plants or in the laboratories would seem to be diminishing. This, in turn, means that the methods of training have had to be reviewed in many undertakings and the pattern of training changed to ensure broad, comprehensive understanding of the scientific and technological applications of the chemical industry and a familiarity with the conditions, methods and means of production. All these changes in the patterns and trends

converge in a need for the chemical industry as a whole to take more interest than previously in the over-all organisation and development of technical and vocational education and training within their countries and for the individual undertakings to create or expand their own facilities for initial and basic training, updating and retraining of their personnel at all levels.

Action taken by individual undertakings and associations of employers and workers show that there is an increasing awareness that the industry, in its own interest, and in the interest of their countries, needs to bring their influence to bear on the organisation and programmes of training in the universities, technical colleges, schools and training centres in which engineers, technicians, maintenance and process workers receive their initial and basic training before entering into employment. It also shows an awareness of the need for attending to the training needs of the staff employed in the industry to keep the engineers, technicians and workers up to date with development, to add new elements to the training they received in the past and to organise for retraining in the cases of comprehensive technical change and for training with a view to promotion as the general levels of knowledge and skill required are rising.

The changes in the employment pattern and the new demands placed on many engineers, technicians and workers in research, production, transport and sales, have led to the establishment of new occupational classifications at all levels of work and to a demand on the part of the chemical industry for special training arrangements to be made in the universities, technical colleges and vocational schools and in the apprenticeship systems to cater for the new needs of the industry.

Despite these changes and the resulting increase in the demand for knowledge and skill - which appears more prominent in the chemical industry than in most other branches of manufacturing - real shortages appear to exist primarily in those developing countries which are "new comers" in this industry. Even such countries as Argentina, Brazil and India do not suffer from a lack of applicants at the various levels of skill required at the level of recruitment into the industry. This may be considered as surprising also in view of the fact that the volume of training has diminished in many countries in some of the fields from which the chemical industry has traditionally recruited a substantial proportion of its skilled workers as, for instance, the artisan trades in continental Europe.

The principal problems in training and retraining would therefore, particularly in the industrial countries, appear to consist primarily in a qualitative adjustment to new or modified requirements.

CHAPTER II

ELEMENTS FOR PLANNING

The training problems which management, the industrial organisations and the authorities have to cope with differ profoundly between the industrial countries and the developing ones and within both, between the larger concerns and the smaller undertakings employing a few hundred workers or less. This is true, despite the fact that the manufacturing processes as such may be the same, irrespective of the size of the firm or the level of economic development reached in the country. This fact is borne out by the distinctions frequently made in the literature between countries with a "chemical tradition" and those which are new in the field.

Developing Countries

In those developing countries in which there has not existed any chemical industry before, the long-term problem which the authorities and the industry have to tackle is to build up a sufficiently broad know-how at all levels to move gradually from the initial dependence on foreign patterns of production, often also on foreign staff in all posts where special skill and knowledge are required to a state of relative independence in the recruitment and training of personnel. Obviously, this is often a very long-term perspective.

No country which is new in the field of chemical production, however good its facilities for training at the various levels, universities, technical schools and colleges, and vocational training institutions, is in a position to develop the whole structure of staff required for progressive chemical production in a short period of time. It would seem important, however, that this long-term perspective be kept in mind already at an early stage of development of the chemical industry in a developing country. The ultimate aims of action taken by the authorities and the industry must be to create, in the long run, a sufficiently wide range of training facilities to cater for the supply of staff with adequate initial and basic training to take over, or to take on the whole set of functions in research, product and process development, manufacturing, production control, packaging, distribution, transport and shipping which combined, make an industrial operation independent and complete.

In addition, long-term planning of technical and vocational education and training, which aims at promoting the establishment of a chemical industry in a country, must also include provisions for or influence over the training of staff needed for a whole range of auxiliary and infrastructural services without which the industry cannot function efficiently. In other words, the question relating to technical and vocational training in and for an industry such as the manufacturing of chemical products, must be seen as a part of an over-all planning of the education and training systems with a view to industrial development.

Only a country equipped with competent personnel at all levels in a wide range of industries and services can make full use of the opportunities for chemical production which its potential raw materials and power supply and other services available would permit.

This means that the training needs for expanding chemical production in developing countries go far beyond the comparatively narrow confines of the industry itself: they reach into the patterns of training in many other industries and trades, such as the machine building and electro-mechanic industries for the supply of parts, construction elements and components needed for erecting new plants, the infrastructural services for power supply, transportation, etc., the extractive industries, the forest and forest products industry and the supply of properly refined and processed raw materials. This is one of the basic problems of designing training programmes for the chemical industry: the efficient production of chemical products depends on the effectiveness of other industries and services. In most developing countries the quality, regularity and supply of such products and services is deficient, *inter alia*, for lack of competent personnel. In some of these countries no chemical industry can function at all unless parallel action is planned and implemented also in other fields of industrial production and service trades.

Even if the discussion of elements for planning is restricted to the needs for trained personnel of an individual plant, there are several problems which are peculiar to the situation in a developing country. First, the staffing pattern of a plant or a company in a developing country often is and has to be quite different from that of an undertaking located in an industrial region. One reason for this may be illustrated with reference to problems encountered in repair and maintenance. When trouble develops or a breakdown occurs in a plant in an industrial country, specialised repair and maintenance personnel can normally be called in from a machine or equipment manufacturers' plant located at a short distance from the plant concerned. Chemical factories in the centres of industrial activity, for instance in Europe, North America or Japan, can normally count on rapid delivery of spare parts and specialised maintenance personnel to come at short notice when needed. Management can literally lift the telephone receiver, place the order and have the means to solve the problem at hand in a few hours or days. In contrast, a manager facing a similar problem in a plant in a developing country - even if this plant is closely related to a large undertaking abroad - has to overcome a great number of obstacles of communication, of foreign exchange barriers, of slow transports, etc. before he can even begin to tackle the problem.

Recruitment of well educated and well trained staff for key positions in production is also often more difficult. It is often repeated that the average quality of training in the universities, technical colleges and vocational training institutions does not measure up to the high standards required in many operations in the chemical industry. Moreover, chemical undertakings in developing countries cannot expect to recruit any considerable number of national technical staff and other trained workers with experience from other industries. Also many of the best students in the existing educational and training institutions tend to seek administrative positions rather than a career in industrial production, a fact which further restricts the recruitment possibilities for the undertakings. Industry often has to make do with the less qualified or organise a comprehensive training programme of its own, covering technical staff and other workers at practically all levels.

In other respects, the staffing pattern of a chemical plant or undertaking in a developing country might, on the other hand, be less comprehensive. Few such undertakings may, for instance, undertake their own products research and development work. At least in the initial stages in the establishment of a chemical industry the undertakings will largely have to depend on research done in other countries and even rely on foreign laboratories for the scientific analysis and control of raw materials and products. The same applies to the design and construction of plants and machines and equipment used in the manufacturing process.

The general statements above about the special needs and requirements and problems encountered in the establishment of a chemical industry in countries where such an industry has not existed before may be illustrated with reference to two examples, among many, taken from India and Brazil.

In India, a first fertilizer factory was started at Sindhri, Bihar, in 1951. It was the Government's first industrial undertaking after independence. A second factory was started ten years later and immediately thereafter work started on a third project and, again, six years later, three additional factories were nearing commissioning stage or were being built. It is expected that by 1970 seven factories will be in operation and that, also two of the earlier factories will have been enlarged.

In the initial operating stages the Government had to depend on foreign consultants and expatriate staff for practically all key operations from the design of the factory through the various building stages, the installation of plant and equipment and the organisation and starting up of production. Expatriate staff participated for a long period of time also in the management of production.

Gradually, the industry has made itself independent of help from outside. The enlargement of the two factories and the building of the latest additions to the chain of fertilizer production in India has been carried out practically entirely by staff trained within the industry. This has been made possible by the establishment of detailed training procedures at practically all levels of management, supervision and production and the organisation of training in the producing plants for engineers, technicians, maintenance and process workers.

The older factories have served as central training facilities in the scheme; many posts have been "doubled" with trainees and there has been a constant flow over the past ten years of trainee staff at all levels through these factories. Extensive use has also been made of the equipment manufacturers' personnel acting as instructors during the period of construction and commissioning of new plants before the organisation took over this function as well.

Parallel to this extensive in-plant training scheme, special training facilities were established at one of the plants for such functions which could not be systematically taught on the job and notably process control and various functions relating to repair and maintenance.¹

¹ Agarwal: Chemical Fertilizer and Prekasn: process control instrumentation, Training for Progress, CIRF Publications (ILO), No. 2, 1968, p. 3-16.

Similarly, the petro-chemical industry in Brazil (Petrobras) has made an agreement with the National Vocational Training Service (SENAI) according to which the industry takes on primary responsibility, itself, for the training requirements of the industry. Specialised training centres have been established by Petrobras in various parts of the country. The company is also carrying out a comprehensive training scheme through rotation on the job at the various levels of management, supervision and production. In return, the Petrobras is exempted from paying 80 per cent of the apprentice tax which, otherwise, it would have to pay to SENAI as a contribution to the National Vocational Training Scheme. The remaining 20 per cent are considered as a contribution on the part of Petrobras to such lines of training in which the chemical industry has an interest in common with other industries in the country.

These figures may be considered as indicative of the size of the effort which a growing new chemical industry has to make to build up a competent workforce of its own and the relatively insignificant contribution on the part of the technical and vocational education and training systems on which it may count. It should be added that the rate of the apprentice levy in Brazil is 1 per cent of total personnel cost in the industry concerned and that it is known that Petrobras, in addition to the amount of the levy for which it is exempted, has found it necessary to invest quite considerable funds in the training of its personnel.

The Industrial Countries

Both the smaller and the larger undertakings in the chemical industry in the industrial countries have seen their training needs change and have had to modify their training patterns fundamentally in the past few years. The reasons for this are many and complex and can only be described in a summary form in this report.

One of the basic factors which has had a profound influence on the skill pattern required in the various fields of chemical production is the accelerated rate of products and process development and the concurrent shortening of the "lifetime" of individual products, production processes and equipment. This acceleration of the process of change creates special problems in an industry with a relatively stable employment, i.e. low intake of new recruits and a rising level of requirements with regard to skill and knowledge of those employed. Examples from practically all countries show that this has forced the industry and the undertakings to review their training programmes and to expand the facilities for training established by the individual companies or by groups of undertakings; it has also led management towards taking more interest than previously in the establishment of standards of and courses at university level, in the technical institutes and colleges and in the vocational schools.

On the whole, the trend seems to be that the industry is forced to rely to a greater extent than in the past on broad and comprehensive initial training to be given at all levels in the various educational and training institutions. One of the reasons for this would seem to be the gradual dissolution of past distinctions, for instance, between biology, chemistry, physics and other elements of the natural sciences, of which chemical production is a technological application, and of the once comparatively sharp distinctions between theoretical and applied science. At both the graduate engineer and

technician levels, specialisation at the initial stages of study has proved to constitute a dangerous limitation in the adaptability of the graduate in his future work in an industry which may only have a vague notion today of what products it will manufacture and what processes it will apply in ten years time.

At the same time, specialisation on the job is often narrower than in the past. This, again, leads to demands for increased training action at all levels within the undertaking.

These general statements apply, as will be shown in some detail in Chapter III, to the training at all levels: semi-skilled and specialised workers, skilled workers and other technical staff.

Reference should, in this connection, be made also to the increasingly intensive demands for environmental conservation, which, with their particular address to many of the traditional lines of chemical production, are likely to require further adjustment in the training of managerial and intermediate staff in the chemical industry. Research and process engineers and technicians will need to know not only how to manufacture a particular line of products, but also the influence of these products and of the waste materials let out from the factories on the biological and physical environment.

In short, the new demands on the engineer, the technician and the skilled worker in the chemical industry may be summarised in the following points:

- (1) a basic foundation of knowledge and understanding of a broadening range of facts, conditions and inter-relationships over the whole field of applied science - from biology to electronics. In his initial training, he can no more be trained as a narrowly specialised "chemist", mechanic or electrician or as an ignorant operative of machinery whose functioning he does not understand;
- (2) a high degree of adaptability developed by adequately organised technical education and training for work in an industry characterised by rapidly accelerating change in products, methods, processes and environmental demand;
- (3) ability to reach a high degree of skill and knowledge in a comparatively narrow field of specialisation, developed by adequate initial training emphasising high standards of workmanship - whatever the level of education and training - followed by intensive training for adaptation to special tasks during the first periods of employment in an undertaking;
- (4) willingness to learn new processes and skills and "technical curiosity", developed by frequent attendance at courses of further training within as well as outside the undertaking.

These are aptitudes, attitudes and intellectual characteristics which are difficult to develop and, consequently, in short supply in all countries. Hence the often pressing shortage of competent staff encountered at all levels of recruitment and training in many undertakings.

There is every reason to believe that these recruitment difficulties will continue to exist also in the future. As the proportion of skilled personnel compared to semi-skilled workers and labourers continues to increase, the chemical industry will have to devote more and more efforts to the organisation of training for its recruitment needs. This applies not only to the branches of engineering (e.g. chemical engineers, chemists, laboratory technicians), and the trades and occupations at worker level (e.g. skilled process workers), but also to the occupations and specialisations which the chemical industry has in common with other industries, such as general technical and office staff, mechanics, plumbers, electricians, welders and other craftsmen needed in most construction, maintenance and manufacturing processes. The demand for such trained personnel is on the increase in all sectors of industry. Despite the over-all increase in the numbers of youth and adults receiving training to recognised qualifications in most countries, in the past decade, supply does not satisfy demand in any but a few of these occupations.

Parallel to this over-all increase in demand, some sources of recruitment show trends of diminishing intake and supply capacity. As one example, chemical industries in Continental Europe have traditionally recruited many of their maintenance and process workers among those trained to skilled standards in artisan trades and smaller service industries. These are now generally taking on a decreasing proportion of youth as voluntary school attendance increases and more youth go into training for industrial and commercial occupations in larger undertakings.

CHAPTER III

PROGRAMMES OF TRAINING IN KEY OCCUPATIONS

The wide range of differences between various countries as regards working conditions, and systems of technical and vocational education and training makes it impossible to carry out in detail a comparison between the training programmes introduced for the various specialisations at different levels in the chemical industry. There is also a difference in the speed of adaptation of the systems of technical and vocational education to new requirements of the industry which make comparisons difficult. The differences existing at the level of technical and vocational education and training and the degree of influence of the industry also has an impact on the extent to which the industry itself is taking action with regard to training of its personnel. Other factors are which branches of chemical industry dominate in each country, the supply of skilled personnel in the employment market and the degree of competition with other industries for personnel having qualifications required in the chemical industries. With these reservations, the discussion below can only be indicative of trends which have been identified in a number of countries. The examples should not be understood as models, but rather as a sample of approaches towards solving the problems encountered in improving training for the chemical industry.

Initial Training

Semi-Skilled and Specialised Workers

As a rule the training of semi-skilled and specialised workers requiring less than one or two years of instruction is unregulated and falls outside the officially recognised systems in most countries. One of the exceptions from this general rule is the Federal Republic of Germany where there are three recognised semi-skilled trades (Anlernberufe), namely:

- (a) helper in chemical production;
- (b) junior laboratory assistant;
- (c) helper in rubber manufacturing.

In all three cases, training takes place in the undertaking accompanied by related instruction through day release, has a duration of two years and is terminated by an examination before a Chamber of Industry and Commerce. Among the functions enumerated in the syllabus for training of helpers in chemical manufacturing the following may be mentioned: repair and maintenance of simple equipment; participation in the assembly of more complex equipment and in the preparation of raw materials; simple operations of distillation, filtration and crystallisation, etc.; simple physical measurement and routine tests (specific weight, boiling point, etc.).

The job descriptions for the other two semi-skilled occupations are similarly geared towards the simpler and routine operations in laboratories and rubber manufacturing, in the latter case with emphasis

on the assembly of simple equipment and the preparation of products on the basis of detailed instruction.¹

A study of training programmes operated in various industries shows, however, that there is a tendency, at least in the larger undertakings, to provide for a shorter or longer period of systematic training for a wide range of occupations at the semi-skilled level in laboratory work, production, transport and maintenance.

In the United States, for instance, the pharmaceutical industry, systematic training on the job ranging from some days up to six months, is given by the undertakings to specialised workers on elementary machine operations.

Similarly, a short period of systematic training is organised for workers concerned with materials selection, inspecting and measuring tasks and also for certain laboratory personnel for routine operations.

At least the larger undertakings normally organise part of this training outside the job as a course of induction followed by training on the job under specialised instructors or leading hands and under the general responsibility of the plant supervisors.²

In the United Kingdom, where training regulations have not yet been issued for other than skilled occupations in the chemical industry as such, the Iron and Steel Industry Training Board has recently published guidelines for a three-step training of specialised laboratory assistants in the chemical, metallurgical and petroleum industries. The programme which has a duration of approximately eight months is specifically geared towards meeting the needs of young workers who have newly been recruited into the industry but may also be applied to the training of adult workers with some previous work experience.

In Sweden, the various branches and undertakings in the chemical industry organise special courses for semi-skilled workers normally of less than two years' duration. In the anorganic chemical industry, for instance, newly recruited workers aged 20 to 35 without previous work experience are trained according to a schedule which combines rotation on the job with related instruction for four hours per week for a total of 56 weeks. The related instruction includes such subjects as physics, chemistry and mathematics - largely refresher courses to update what was learned at school - and specific knowledge relating to materials, instruments and machines, job safety and accident prevention for the operations for the occupation to which the new worker has been recruited.

¹ Institut Européen pour la Formation Professionnelle, La formation professionnelle dans la chimie du Marché Commun, Journées Européennes d'Etudes "La formation des hommes pour la chimie de demain". Wiesbaden, 26-28 November 1966, pp. 8-9.

² National Economic Development Office, Manpower in the Chemical Industry, a comparison of British and American practices, London, Her Majesty's Stationery Office, 1967, p. 29.

In the pharmaceutical industry, also in Sweden, and in the explosives industry, one year, full-time courses are organised for laboratory and production workers. The courses for junior laboratory assistants include 24 hours of practical work and training in laboratory methods and 14 hours of theoretical related instruction per week.

The courses for production workers combine 34 hours of on-the-job training with 8 hours of related instruction per week. Theory and practice should be closely related to each other. During the first half year the workers are rotated to three different work positions while during the second half of the course the trainee receives specialised training on one particular job. One of the purposes of this training is to promote the mobility of workers within the plant and within the industry generally.

Skilled Workers

In the training of skilled workers whether for laboratory tasks or for repair and maintenance or production, the major trends discerned in the programmes of training officially recognised in the various countries or applied by the various undertakings are towards a higher educational level of entry and a more comprehensive training with systematic basic training off the job and increased time for related instruction during the period of training in the laboratory or production unit.

The evolution of the classification of trades and occupations for training differs between countries. The most apparent development in the period of the past decade is, first of all, the recognition, in several countries, of two new skilled occupations as being of particular importance to the chemical industry, namely chemical process operator - in some countries referred to as chemical machine operator with a somewhat narrower choice of options - and a special trade of repair and maintenance mechanic for automated equipment.

At the laboratory level several countries, for instance Switzerland, have also established apprenticeable trades as chemical and physical laboratory assistants respectively with training periods ranging between three and four years.

A second trend discernable in most countries is to provide for broad basic training for youth in vocational training institutions or in vocational secondary schools or factory schools for a broader range of skilled occupations within the chemical industry.

These trends may be illustrated by the new craft as chemical process operator adopted as a recognised apprenticeable occupation by the United States Federal Committee on Apprenticeship. Training under this classification includes 324 hours of classroom studies in mathematics, physics (first year), chemistry and instrumentation (second year) and specific trade related instruction in the third year. A number of options for specialisation on the job is offered, but an apprentice must take three out of the following: materials handling, thermal cracking, steam generation, converter operation, power generation and distribution, reactor operation, water cooling and distribution, compressor operation, fractionation-distillation

and water treating. Each chemical process operator will consequently have a broad practical experience acquired on the job and thus be able to move between different tasks.¹

In Sweden an employers' committee on "training for the occupations in the chemical industry" recently proposed that a special "process-technical" stream be introduced in the lower secondary school which would be a common trunk basic training for the various branches of the chemical industry, the pharmaceutical industry, the petrochemical industry and the chemico-technical industry. After the first year of basic training, some would go into industry for further training on the job as machine operatives. They would be entitled to return to a second year after practice on several different jobs as operatives in the chemical industry or could go straight from the first to the second year of the process technical stream with chemico-technical bias. After this second year, some students would go into industry for training on the job as process technicians or skilled chemical process operators; others would go on to a third year technician course to acquire junior technician level qualifications. There would be possibilities open for those who went into industry after the first or the second year to go back to a technical school or take correspondence courses to qualify for a technician level certificate.²

In Poland, the training of skilled workers is normally given in vocational schools. The recruitment age is 15 years and 8 years of primary school. The duration of training for the chemical industry is three years. The last year is spent in an undertaking for on-the-job training and adaptation.

In France, the training for chemical machine operators and mechanics for automated equipment respectively takes three years and is given in secondary technical schools.

In Italy, a number of classes have recently been established in various secondary vocational schools for junior laboratory assistants and for maintenance mechanics for the chemical industry. In both cases, the training has a duration of three years and the trainees are recruited at the age of 14.

In most countries where the vocational training system is essentially based on apprenticeship, the number of options offered is normally fairly large. As an example, in the Federal Republic of Germany, one of the larger chemical undertakings (Hoechst) offers training within the undertaking for 18 skilled trades and occupations in production and 3 office occupations with a duration of training of 3 to 3 1/2 years. In the laboratory trades the level of entry is

¹ Union Carbide Corporation, Chemicals and Plastics, Apprenticeship Standards for Chemical Process Operators, Texas City, Texas, July 1968.

² Svenska Arbetsgivareföreningens Allmänna Grupp, Utbildning för Kemiska Industrins Yrken, Stockholm, 1968.

normally middle-school examination (junior secondary school), while the recruitment level for the production trades is normally the end of primary education (14 to 15 years). The trainee normally spends the first six months in a special training establishment within the undertaking and receives the remainder of his training primarily on the job with related instruction (day release) for at least eight hours per week. In the office occupations the minimum level is junior secondary school and for the career streams, completed secondary school. All training is terminated by an officially recognised examination controlled by the chamber of industry and commerce concerned.¹

Other larger undertakings, such as Bayer and BASF offer similar comprehensive programmes for training of apprentices within their works. An indication of the importance attached to training by these undertakings is that the BASF alone has a centre for vocational training with altogether 1,500 places, in which the apprentices undergo part of their training.

In the Federal Republic of Germany a total of seven skilled trades (with a training period of three to three-and-a-half years) are recognised specifically for the chemical industry. These include laboratory assistants, in biology and chemistry and in the manufacturing of paints, soap maker, materials tester and chemical process worker. The last mentioned is fairly recently included in the list of trades as is the trade of repair and maintenance mechanic (automated machinery) which is listed under the metal trades but has been adopted by the chemical industry to a large extent.

The two trades which have the largest number of apprentices registered are those of skilled process worker and skilled laboratory worker (chemistry). The syllabus of training for both these trades provides for three-and-a-half years of training in a wide range of basic functions in the respective fields of work and related instruction, on a day-release basis, in chemistry, physics, mathematics and other trade-related subjects.

The laboratory assistants (chemistry) should, for instance, carry out a series of standard tests and experiments, learn to maintain the various types of apparatus and equipment used in a laboratory and carry out the necessary mathematical calculations. The level of recruitment is normally completed junior secondary school (middle school examination). The syllabus allows for specialisation for chemical industry in general, petro-chemicals, iron and steel industry, etc. As a rule, half of the training is given in the undertaking and half in a vocational training institution.

In the Netherlands, the training of skilled chemical process operators is built on a syllabus of three years of training within an undertaking. It should be noted, however, that in the Netherlands a majority of trainees who go into apprenticeship have gone through a lower vocational school between the ages of 12 and 15, and that, consequently, the effective period of training is longer than

¹ Farbwerke Hoechst A.G., Chemie hat Zukunft, Frankfurt-am-Main, 1963.

that indicated in the apprenticeship syllabus. Apprentice training includes related instruction on a day-release basis for eight hours a week, of which four hours are devoted to general further education and four hours to trade-related instruction. The apprenticeship is terminated by an examination (as is the case, for instance, in the Federal Republic of Germany) controlled, in the Netherlands, by a specialised foundation for the control of apprenticeship.

The general trend towards the establishment of a basic training period in a vocational training centre followed by training on the job may be illustrated also with reference to developments which are taking place in Switzerland. At CIBA, for instance, a new factory school was established in 1965 to provide training for skilled process workers, and for mechanics with various specialisations.

In Japan, an increasing number of undertakings have, in the past ten years, introduced programmes of training for skilled workers into their organisation. At the outset, the training programmes were normally fairly short and covered only a few occupations. They have in recent years increased both in numbers of classifications and in the period required for complete training.¹

In the United Kingdom, the Chemical and Allied Industries Joint Industrial Council has recently adopted a scheme of training for qualified chemical operators and trained chemical operators as a national voluntary scheme for the training of young people and adults. Two certification levels - ordinary certificate and advanced certificate (lower technician level) - are provided for in the scheme which is based on a five-year apprenticeship with day release for at least two years of related instruction during six-and-a-half hours per week.

Technicians and Engineers

The changes which have taken place in the period covered by this report in the systems of training at technician and graduate engineer level would seem to relate, in the first instance, to the duration of training and to the numbers trained at the various levels. The systems as such seem to have undergone little change.

At the technician level, the long-standing trend to distinguish between junior technicians or technical assistants and senior technicians seems to be reinforced. Schemes for training junior technicians within the general system of education or of technical education have been introduced either as a period of basic training to be followed by training within the industry, or as a period of complete training to technician level qualifications in an educational institution.

Another notable trend seems to be towards opening of transfer possibilities from one stream of training to another so that junior technicians after a period of practical experience on the job may go

¹ Japan Ammonium Sulphate Industry Association, Impact of Technological Change on Labour and Chemical Industry - Experience in the Recent Decade, Tokyo, 1966, pp. 66-70.

back to school or acquire qualifications at a higher level of technical education through correspondence courses or night classes. Also, in several countries, opportunities are open for higher technicians to qualify at the graduate engineer level.

At the higher technician level, three different systems are applied in the various countries - in some countries qualification as higher technician may be acquired in several different ways.

In the United Kingdom, for instance, a technician level certificate may be acquired through studies at a technical college, on a part-time basis, while the trainee serves as an apprentice in industry. Qualifications at a corresponding level may also be acquired at full-time technical colleges and through sandwich courses where part of the time is spent on full-time training in a college and part of the time on work in industry.

In the Federal Republic of Germany, training at technician level takes place in public and private technical colleges and is terminated by an examination controlled by the State. The requirements for entry are:

- (a) completed apprenticeship as a laboratory assistant (chemical); or
- (b) secondary education supplemented by a period of practice of at least two years; or
- (c) completed junior secondary education and practical experience for at least two years in industry plus a special preparatory course for entry into a technical school.

The period of training is two years full-time or three to three-and-a-half years part-time (evening classes).

In France - as in the United States - training for higher technicians is placed at the post-secondary level and is given in specialised technical institutes. In both countries the normal level of recruitment is completed secondary school. Candidates with specially meritorious service in industry and particularly such with laboratory experience are often admitted as well. Parallel to this post-secondary training, training of technicians for various chemical specialisations also takes place in secondary school level technical colleges and through special courses by correspondence or in night classes.

It may be said that - at the technician level - there is a tendency to multiply the number of levels and the types of offerings in most countries. The range of training facilities and courses offered in this field is from two-year junior secondary school level for assistants and other lower technicians up to post-secondary or post-apprenticeship training of two to four years' duration. Some streams are highly specialised; others are more broadly covering chemical subjects, physics, bio-chemistry, chemical production methods, plastics, material testing, and mechanical/electrical engineering applied to the requirements of the chemical industry.

The great variety of offerings existing in this field would appear to be the effect of a number of factors - the great variety of needs of the industry itself; pressures within the school system for the establishment of technically biased courses at all levels; the desire to open roads for promotion and transfer lines from one level of education to another.

That the needs of industry have played a great role in this development is shown by the action taken, for instance, by the Japanese industry which in the past few years has established a number of industrial schools of specialisation. These schools often recruit at junior secondary level, provide three years of higher secondary level training in various specialisations of the chemical industry and often also a second level - of two years' duration - of a post-secondary character. These specialised industrial schools may be recognised by authorities as providing an education equivalent to that of the general schools.¹

The training of graduate engineers for most branches of industry is given in special institutions for higher education or in the science and technology faculties of the universities. Also at this level the tendency is towards a prolongation of the studies which now vary between countries from three to six years. In this period is normally included a period of practical experience in industry which may be of six months' to one years' duration. The prolongation of the period of study may take the form either of an extension of the period required for the first degree or by larger numbers of students continuing their studies to a second or a higher degree before entering into employment.

Despite the efforts to provide an easier transfer through part-time studies for instance, from technician to graduate engineer level, the general trend, even in countries where part-time studies to graduate engineer level have been the rule in the past is towards qualification through full-time studies at university level specialised technical institution.

With regard to the contents of training at graduate engineer level, the trend in most countries is clearly towards broader basic training and a less marked specialisation in specific branches such as chemistry, at least during the first years of study. The options and also the compulsory courses during the first years of study at the technical university or institute tend to be broader and to include courses in mechanical, electrical and electronics engineering as well as training in the specialisations within chemistry.

In some countries, as for instance, in France, distinctions are being introduced between research streams and production streams in the third year of study at the institutes of technology.² The

¹ HOSOYA, Toshio, L'istruzione media superior e l'istruzione tecnico-professionale, I problemi della pedagogia, Roma, Vol. 12, Special issue January-February 1966, pp. 56-77.

² Givaudon, la preparation des hommes aux métiers de la chimie, Jaune et rouge, Paris, Special issue 1966, p. 153.

variety of standards and methods of training even within particular countries is, however, such that it is difficult if at all possible, to determine clear-cut trends in the training of graduate staff beyond those indicated above.

Retraining, Updating and Training for Promotion

It is today generally recognised in the chemical industry, like in other fast-moving industries, that training is a continuing process throughout the working life of an individual. The old notion that all training needed could be acquired in the ages of youth is disappearing. As already shown in the previous part of this chapter, many courses of training to semi-skilled, skilled and higher levels which were previously reserved for young persons at the age levels of 14 to 20 are now made available also for adults entering the industry for the first time. Qualification at any level can in practice today in an increasing number of countries be achieved irrespective of the age of the person. The breakthrough of this general attitude towards training is most clearly identifiable at the semi-skilled and skilled worker levels but is found also at the levels of technician and even graduate engineers.

The reasons for this change in attitude are many and have, at least in part, been enumerated in the first two chapters of this report. Special attention may, in this connection, be drawn to the rapid changes taking place within the industry, both as regards products and production methods, the need for technical staff and workers at all levels to add new knowledge to what they previously knew, to change jobs more frequently than in the past and - as the rate of recruitment is comparatively low in most countries, particularly industrial ones - the need to provide for appropriate retraining and upgrading of existing staff within the industry.

It may be convenient, for the purposes of the discussion by the Committee, to make a distinction between three types of action relating to the training of workers who have already entered the industry, namely retraining, updating and training with a view to promotion.

Retraining is, in this connection, understood as an action by which a person is given new initial training for a job which is essentially different from any job he has had before. Updating relates to action which aims at adding knowledge and skill required by the individual worker, technician or engineer as the product range or the production processes are changed. Training with a view to promotion, finally, is used to characterise the various courses and training actions undertaken to give workers, technicians and engineering staff supplementary education to qualify for a post at a higher level in the hierarchy of occupations.

In the field of retraining a distinction should be made between action taken by the public authorities, for instance, within the framework of active manpower policies and prevention of unemployment, and training undertaken at the initiative of the industry itself, and mostly of the individual undertakings.

In the public systems of retraining there are few examples of arrangements made for training with a view to entry into the chemical industry. The few exceptions mostly relate either to action within the framework of decentralisation policies for industry where special efforts of a temporary character might be made for supplying trained

personnel for new industry in areas of unemployment and action taken under various programmes to facilitate the entry of underprivileged groups or persons who have been out of the employment market for some time (e.g. women) to find suitable employment.

Retraining courses organised by public authorities and being of interest to the chemical industry are run in several countries, notably in the United States and in the Scandinavian countries to facilitate the employment in the chemical industry, for instance, in laboratory work of handicapped personnel and of women returning into employment after their children have grown up. The training offered in such courses is normally an accelerated form of initial training covering, on the whole, the same subjects and skills as given in basic training courses for youth preparing for entry into the chemical industry. As many of the participants have previous work experience, the courses preparing for entry into the chemical industry may be shorter and the instruction more task-oriented than is normal in youth training.

While in the past such accelerated training often had a character of narrowly designed training for highly specialised semi-skilled jobs, the general trend in retraining in many countries is now to achieve the same level of qualification as given in other types and forms of initial training. When underprivileged groups are concerned, an additional purpose is often to broaden and develop the educational qualifications of the individual to make him fully accepted for work in the industry.

Another trend particularly evident in the revised Manpower Development and Training Act (MDTA) in the United States and the current application of the Industrial Training Act in the United Kingdom is to seek a direct participation and involvement of industry in the retraining of workers who have become redundant as a result of technical or economic change, or, for other reasons, wish to have training for entry into another type of work. The MDTA provides for a wide range of co-operative programmes for training within industry in which the chemical industry, together with others, takes an active part.

Under the MDTA federal and state support may be received for such retraining programmes within industry. In the United Kingdom training organised by industry qualifies for refunds under the levy/grant system which constitutes a fundamental part of the provisions of the Act.

Similar arrangements for public support to industry-based training has long been a central feature in the systems of technical and vocational education and training in the centrally planned economies of Eastern Europe where, particularly after the educational reforms of the late 1950s, industry's role in the implementation of the various programmes of technical and vocational education and training has been reinforced.

There can be no doubt, however, that the largest share in the retraining of workers is taken on by the chemical industry itself. These activities are seldom described in the literature or recorded in statistical data given over retraining activities and are, for these reasons, easily forgotten. Study of the courses run by any of the larger or middle-sized undertakings in the chemical industry shows clearly that retraining of workers who have to be shifted from

other jobs, constitutes a very large part of the total training effort of the undertakings. Action in this field ranges from complete initial and further retraining of staff at all levels for completely new factories to shorter ad hoc courses and on-the-job instruction of workers transferred from one job position to another, where the initial training requirements are the same for both the jobs, but an additional period of familiarisation and instruction is needed.

Also updating includes such a wide range of activities by individuals employed in the chemical industry, by undertakings and by employers' and workers' organisations and educational institutions that it is not possible to suggest a systematic classification of such action. They range from "ad hoc" instruction on the job at all levels to long-term courses for workers, technicians and other technical staff and for management in particular techniques which are introduced in the industry. The trends are clear however. There has been a tremendous increase in such action on the part of all those referred to in the recent past. As one single example, the Du Pont Organisation in the United States and Canada has developed an extensive programme of updating based on a comprehensive library of programmed manuals and courses. This library covers a large variety of subjects and since its start in 1959, around 100 courses have been written up and successfully used. In the short period of seven years, altogether 15,000 employees of the companies had taken an average of three courses each within the framework of this programme.¹

A second trend in this field would seem to be towards more comprehensive and more technically biased courses than those current in the 1950s. The chemical industry in the USSR, for instance, organises a whole range of courses on production techniques having a duration of three to six months of part-time tuition at the levels of technician and engineers. Emphasis is on updating technical staff in mathematics, cybernetics, applied to the chemical industry, the use of electronics and new problems at the borderline between physics and chemistry, radiation in chemistry and other similar technical subjects. Such courses are offered in addition to, or as a complement to, the traditional further training courses for technical staff in such matters as the organisation of work, cost control and costing in production and other management techniques.² Similar lists of recent course offerings could be taken from practically any of the countries where the chemical industry is well developed.

The rapidly increasing demand within the chemical industry for technically competent lead workers, foremen and staff in technical supervisory positions in research, production, laboratory work, maintenance and production has been the reason why many undertakings, employers' organisations and educational institutions have organised a broad range of training courses at all levels to permit upgrading of their workers.

¹ Simons, Industrial Training, Textile Journal, Montreal, 9 December 1966, pp. 60-63.

² Trade Union's International of Chemical, Oil and Allied Workers: International Seminar on Vocational Training and Further Training, Berlin, 23-25 November 1967, ICPS Information Bulletin, January/February 1968.

The new trends in this field, as in updating, are towards longer courses than previously with a more comprehensive technical content. Upgrading is also provided at more levels of work than in the past. A special problem in this connection has been that rapid educational development, through compulsory or voluntary prolongation of schooling, has placed the adults in an educationally inferior position compared to the younger and better educated recruits into the industry.

Some schools and adult training systems have taken action to help the chemical industry to solve these problems. In France, for instance, the government-sponsored adult training system, AFPA, offers courses at a "second level" (the first level being mainly initial training for those seeking new employment) for workers in industry to acquire recognised qualifications as specialists in production or laboratory work at skilled worker or lower technician level. The extension services and evening class programmes of many technical and vocational education and training institutions and universities also offer complementary courses for workers and other technical staff to permit them to attain higher level qualifications.

Many undertakings and industrial organisations have found, however, that they cannot, as was often the case in the past, rely primarily on the initiative of the individual to take care of the needs for promotion within the undertaking. It has, for this reason, become current practice, at least in the larger undertakings, to establish comprehensive upgrading plans for selected workers, technicians and engineers who have shown career potentials and to make appropriate arrangements for their systematic further training.

This is particularly evident at three levels: the upgrading of semi-skilled production workers to become skilled process operators; the training of skilled workers to become instructors and foremen; and the training of intermediate staff to attain higher positions.

Much training for promotion takes place within the plants in an informal manner by rotation to different jobs which have an experience value for promotion purposes. Semi-skilled workers with experience only in production are attached to maintenance teams to broaden their understanding of the functioning of plant and equipment or trained on a "second" job to increase both their mobility and their promotion prospects. Skilled workers are used as instructors or trained as testers or materials controllers as one step towards assuming supervisory control over a unit or shift. Engineers and technicians are rotated to various posts in production, pilot production experimentation and maintenance to serve as assistants to the managers to acquire broader knowledge of the various functions within chemical production in preparing for promotion.

Such rotation between jobs has always taken place in chemical production, where, in the past, there were often traditional career ladders built on seniority and broadness of experience with steps from junior helper through helper jobs, process attendant, machine conductor to assistant shift foreman, foreman and superintendent of a production unit.

In the 1950s the traditional career ladders began to become insufficient as a basis for promotion in many parts of the chemical industry. At first, action in most undertakings seems to have been directed towards providing for additional training of workers to

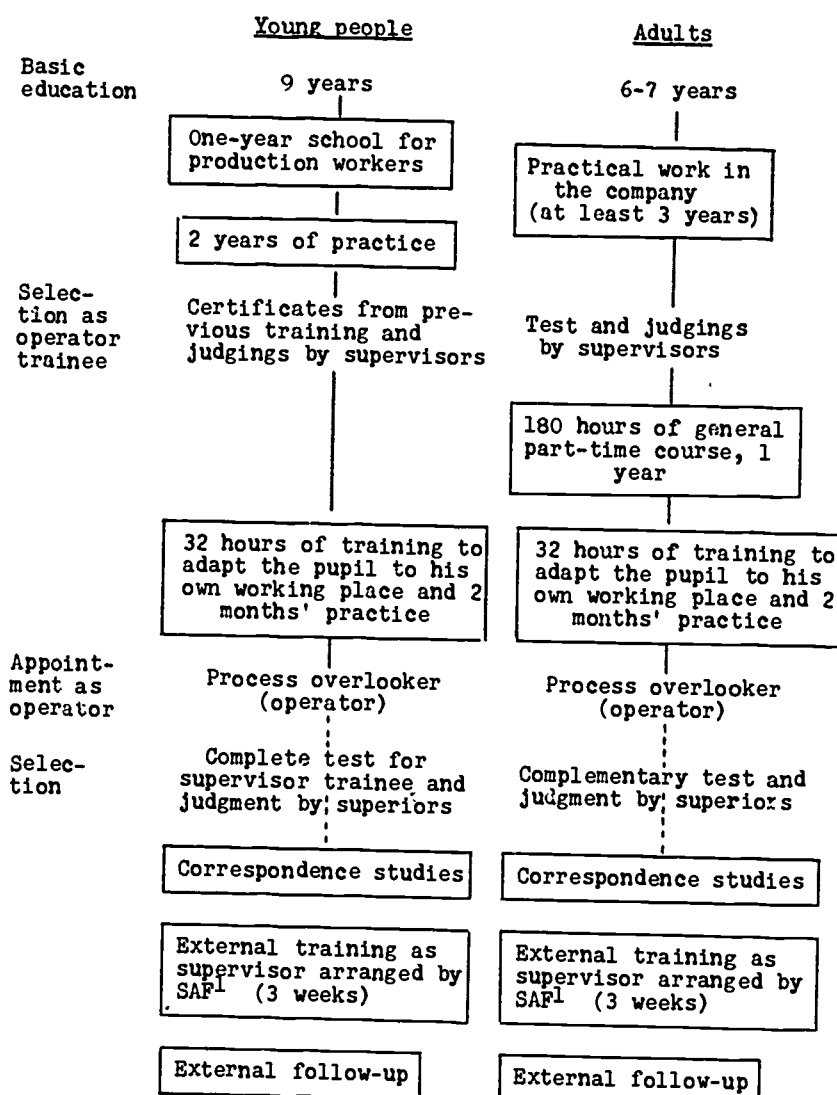

become foremen. Such training was first, in many cases, focused on the supervisory and managerial functions which were identified as the principal differences between a worker's and a foreman's tasks. Special training programmes were organised by the undertakings in the industry, by employers' organisations and, in some countries, by the public authorities to provide initial and further training for potential and existing foremen in functions of leadership, organisation of work, rate setting techniques and other functions of supervision. At the outset many of these courses were arranged on an inter-industry basis. The TWI Job Instruction, Job Relations and Job Methods, later also Job Safety programmes, for instance, were run on the basis of standard manuals used with slight adaptations in both the chemical and other industries. The chemical industries in the Scandinavian countries took an active part in the establishment of the special foreman training institutes existing in Denmark, Finland, Norway and Sweden, which provide general foremanship courses for potential and existing supervisors in all industries.

Similarly, the employers of the chemical industry in the Federal Republic of Germany began, in 1955, a series of courses and conferences primarily concerned with the place of the chemical industry in the economy, the roles of employers' and workers' organisations, labour legislation as applicable to the industry, the functions of a supervisor in chemical production and the principal techniques of supervision. As a measure of the degree of acceptance of this type of training, it may be mentioned that some 3,300 supervisors and managers from 165 undertakings had taken part in the 100-odd courses and seminars organised by the Association of Employers in the Chemical Industry between 1955 and 1965.¹

In line with the general trend in all training for the chemical industry the tendency in the recent past in most countries has been to place increasing emphasis in the training of supervisors on the technical aspects of their work. The Swedish employers, for instance, have recommended long-term planning of training for promotion in the chemical industry along the lines shown in the table. The distinction made between youth and adults has its explanation in the change in the educational system which has taken place in the past two decades and which essentially, provides for a prolongation of primary education.²

¹ Arbeitsring der Arbeitsgeberverbände der Deutschen Chemischen Industrie: Fortbildung und Information, Wiesbaden, 1965, 35 p.

² The General Group of the Swedish Employers' Confederation: Vocational Training in Swedish Chemical Industry, preparatory document, Stockholm 1967, p. 14.

¹ SAF = The Swedish Employers' Confederation.

Similarly, in Italy, long-term courses of training for potential supervisors have been organised for the chemical industry. For admission into the courses, candidates for such training should give evidence of good knowledge of the work processes, job safety measures and regulations, equipment and materials and of the organisation of work within their undertaking. They are also tested for their general knowledge and aptitudes with regard to oral and written communication, manners and organisational ability. The courses are works based and cover a total of some 500 hours of practical instruction by rotation to various departments and some 500 hours of additional trade-related instruction and further general education.¹

The increasing emphasis in the United Kingdom and in the USSR and other countries in Eastern Europe on further training of workers in industry are other examples of the concern on the part of the chemical industry for raising the general level of technical competence of the supervisors and other intermediate technical staff.²

Within the larger undertakings extensive arrangements are normally made for a systematic follow-up of recruits with career prospects. The training programmes designed for these often differ between the various units but the general trend is the same as that described above: rotation to different types of work, familiarisation with company policies and practices, intensive additional technical, practical and theoretical training for potential foremen and managers in all fields of work including research, materials and products testing and control, production and marketing.³

Methods of Training

It is in the very nature of chemical production that training of workers, supervisors and other production personnel will largely have to take place on the job. The trend towards broader basic training of a multidisciplinary character and the "closed in" nature of much modern chemical production has been the reason why an increasing part of initial training has to be given in special centres and

¹ Focaccetti, Esperienze nella formazione professionale degli adetti all'industria chimica, Formazione e Lavoro, Roma, No. 10, November/December 1964, p. 51.

² See for instance: Chemical and Allied Industries Joint Industrial Council, A Career in Chemicals, London, 1965 and National Economic Development Office, Manpower in the Chemical Industry op. cit.

The statements on trends in the countries of Eastern Europe are based on an analysis of the training regulations issued by the various technical authorities responsible for the supply of manpower to the chemical industry and for an arrangement for training for promotion in these.

³ See for instance: Du Pont de Nemours and Company, Inc., Employee Relations Department, Personnel Development Division, Personnel Development within the Du Pont Company, Wilmington, Del. (undated) 31 p.

schools in which the chemical processes can be explained in laboratory conditions. Repair and maintenance workers are, to a diminishing extent, trained exclusively on the job as the equipment is too expensive and the production processes too sensitive for allowing trainees to work directly on productive plants.

Where such basic and initial training is not provided within the national educational system (as, for instance, in France and Sweden), the trend is that the undertakings themselves, alone or in co-operation with other firms establish their own factory-based training centres for basic and further training of operatives, and for the various trades in repair, maintenance and construction of new plants such as plumbers, welders, mechanics, electronics specialists, etc. In Czechoslovakia, Hungary and the USSR, for instance, training centres are normally attached to each major plant in the chemical industry and the factories also have arrangements for close technical and pedagogical co-operation with the local and regional, general and technical schools and universities for sandwich training of trainees to provide opportunities for practical production experience for students and to cater for the further training needs of the technical personnel of the industry.

Parallel to the increasing cost of installations, equipment and machines per worker employed, means are devised in many schools and training centres to provide initial training for various functions in production and maintenance by the use of simulators, process-type models and other equipment specifically designed for training purposes. This is a general trend, which finds its application both within the general technical schools and universities and in the factory-based training centres. Methodologically sheer laboratory experiments are no more enough as a training device as the process in mass producing plants becomes increasingly sophisticated. At the same time the possibilities for training directly on the job are decreasing and an adequate alternative must consequently be found.

CHAPTER IV

THE ADMINISTRATION OF TRAINING AND RETRAINING

Two general trends may be suggested as typical features in the organisation and administration of technical and vocational education and training, including retraining in the recent past. One is towards a more extensive support on the part of public authorities to technical education and vocational training in all its forms, parallel to a certain increase in public control of the standards of training in industry. Another is towards an increased concern on the part of both employers and workers with the development of methods, facilities and standards of training.

The chemical industry is only one of many branches of industry which are the subjects of an over-all trend towards a revision of the various apprenticeship acts and other regulations applying to training in and for industry - new or revised acts and regulations of the systems of technical education and vocational training have been introduced or proposed in practically all countries in which there is a chemical industry.¹

In practically all countries direct co-operation with industry is now being sought by the authorities responsible for the systems of education and training in the administration of training and retraining at national, regional, as well as local levels. As illustrated by the provisions of the Industrial Training Acts in the United Kingdom, more and more countries are establishing bodies which, at the national level, bring educationists together with representatives of industry - both employers and workers. In some countries, where industry is small, these bodies often deal with the whole complex of technical and vocational education and training or there are separate bodies dealing with technical education and vocational training respectively. As industry grows and practically everywhere in the industrial countries the trend is to organise the national policy-making organs at two levels: one central organisation for over-all co-ordination and

¹New apprenticeship legislation has, for instance, been adopted in India, the Netherlands and Switzerland over the past few years. Basic structural reforms in the systems of technical and vocational education and training have been introduced, for instance, in Czechoslovakia, France, Hungary, Poland, Sweden, the UAR, the United Kingdom and the USSR during the same period. Similar reforms are being prepared and discussed, for instance, in Austria, and the Federal Republic of Germany. In the technical co-operation activities of the ILO, there is a general trend towards an increased demand for assistance in the reorganisation of the over-all training systems, the establishment of national vocational training organisations and the improvement and expansion of training within the various branches of industry. Important changes in the systems of retraining and further training have been introduced, for instance, in France, Sweden and the United States, all involving extended support to and co-operation with industry in the organisation and administration of various retraining schemes.

separate bodies, sometimes enjoying a quite considerable degree of independence, for each particular branch of industry and of other fields of economic activity.

At both international and national levels employers' and workers' organisations are taking an increased interest in improving and developing the systems of training and retraining in the chemical industry. In the past few years several major conferences have been organised by international organisations of employers and of workers to study and discuss methods and standards of training in the chemical industry.¹

There is an increasingly close co-operation between the national organisations of employers and workers in the administration of training within the industry. In Sweden, for instance, a national bipartite board has been established on the basis of an agreement between the employers and workers of the chemical and allied industries. The board is primarily concerned with the relations between the training needs of the industry and action taken by the authorities and with the development of voluntary training action within the industry itself. It further deals with the training of officers and instructors in industry and of training stewards appointed by the unions in each factory.

Within the undertakings the training function is given an increasingly important role within the management structure. As previously stated, most larger undertakings have established special training departments with over-all administrative and co-ordinatory functions - direct responsibility for the administration and implementation of training schemes is normally delegated to factory or plant levels. The central training departments are also often taking care of relations with educational institutions and the national training authorities and are setting company-wide standards for, for instance, management and supervisory development programmes.

Many of these programmes are applied on an international basis and companies which operate in more than one country mostly provide for training abroad at all levels when this is found desirable, for instance, in connection with the building of new production facilities or the introduction of major technical changes. Some of these companies have special schools or training centres in which specialised personnel from one or several countries receive such training which cannot be economically arranged at the factory level.

Reference has already been made to the over-all trend towards the establishment of factory schools and special plant training facilities in most larger production units of the industry.

In this general development, the smaller undertakings often find it difficult to make adequate arrangements for the training

¹ For instance: the chemical industry employers in the Common Market countries held a major conference on this subject at Wiesbaden in 1966. A similar conference was organised by the Trade Unions International of Chemical, Oil and Allied Workers, Berlin in 1967.

and retraining of their staff. In some countries, the special needs of the smaller companies are taken care of by inter-enterprise schools - special provisions for the establishment of such schools and training centres are included in, for instance, the regulations for the administration of training in France and in the United Kingdom. In other countries employers organisations and federations of the chemical industry have taken the initiative to establish their own training facilities as a service to their members or have made special arrangements with, for instance, technical colleges to provide such courses as are needed for personnel development in the smaller plants. It may be suggested, however, that, on the whole and particularly in the developing countries, the smaller and even middle-sized undertakings do not have sufficient training services at their disposal, unless they can make use of the facilities of larger undertakings with which they may have technical agreements.

CHAPTER V

SUGGESTED POINTS FOR DISCUSSION

As shown in the preceding four chapters, there are a number of problems relating to the training and retraining of workers, technicians and engineers in the chemical industry. This session of the Committee should provide an opportunity for representations of the industry from a number of countries to express their views and exchange experience to develop improved practices in this field. In doing so, the Committee may wish to bear in mind the special requirements of foreign workers and the brain drain problem of developing countries not specifically covered in the text of the report. The points below are proposed as a possible basis of discussion. The Committee is, of course, free to make such changes in the list of questions as it may consider desirable.

1. General trends of importance to the development of training and retraining in the chemical industry for:

- (a) process workers;
- (b) repair and maintenance personnel;
- (c) laboratory workers;
 - (i) in research
 - (ii) in production;
- (d) technicians and engineers.

2. Needs for change in the training of process and maintenance workers in chemical production (including needs for new skilled and highly skilled occupational classifications):

- (a) basic training;
- (b) further initial training;

3. Needs for change in the initial technical education and vocational training of technicians and engineers at various levels for research, production control and process supervision:

- (a) in developing countries;
- (b) in industrial countries.

4. Needs for development of improved forms of retraining (including updating and training for promotion):

- (a) production workers;
- (b) maintenance staff;
- (c) supervisors in production;

(d) research and production laboratory personnel for routine operations;

(e) technicians and engineers in:

(i) research and product development;

(ii) production and process control;

(iii) process development (design of new production and methods and equipment).

5. Trends and requirements with regard to:

(a) national organisation of technical and vocational education and training, including participation of employers and workers in the central standard setting and supervisory bodies;

(b) co-operation between employers and workers in the organisation and administration of training:

(i) at industry level;

(ii) at company and plant level.

6. Facilities and action, including ILO technical co-operation, required by developing countries to build up the necessary structure of skilled personnel needed by the chemical industry.

K-10 CAREER EDUCATION PROGRAMS.

WARREN CITY SCHOOLS, CHIO.

OHIO STATE DEPT. OF EDUCATION, COLUMBUS.

MF AVAILABLE IN VT-ERIC SET.

PUB DATE - AD 18P.

DESCRIPTORS - ELEMENTARY GRADES; SECONDARY GRADES; *CAREER EDUCATION; VOCATIONAL DEVELOPMENT; *CITY WIDE PROGRAMS; URBAN AREAS; BEHAVIORAL OBJECTIVES; *CONCEPTUAL SCHEMES; GOAL ORIENTATION; *PROGRAM DESIGN; *FUSED CURRICULUM; INSERVICE EDUCATION; COMMUNITY INVOLVEMENT; OCCUPATIONAL GUIDANCE; FAMILY INVOLVEMENT
IDENTIFIERS - CAREER MOTIVATION; CAREER ORIENTATION; CAREER EXPLORATION

ABSTRACT - THE OBJECTIVES OF THIS CAREER DEVELOPMENT PROGRAM FOR A FUSED CURRICULUM FOR KINDERGARTEN THROUGH GRADE 10 IN THE WARREN CITY SCHOOLS FOCUS ON THE VALUE OF WORK AND THE IMPORTANCE OF THE INDIVIDUAL TO HIMSELF, TO HIS COMMUNITY AND TO SOCIETY AT LARGE. CAREER MOTIVATION, CAREER ORIENTATION, AND CAREER EXPLORATION CONSTITUTE THE PROGRAM EMPHASES IN KINDERGARTEN TO GRADE 6, GRADES 7 AND 8, AND GRADES 9 AND 10, RESPECTIVELY. AN OVERVIEW OF THE PROGRAM INCLUDES: (1) THE AMOUNT OF PROGRAM FUNDS REQUESTED, (2) A LIST OF PROGRAM PERSONNEL AND FACILITIES NEEDED, (3) A CONCEPTUAL FRAMEWORK FOR THE PROGRAM, (4) AN OUTLINE OF CONTEMPORARY ISSUES RELEVANT TO VOCATIONAL DEVELOPMENT, (5) THE PROGRAM'S TIME ALLOTMENTS, (6) A LIST OF INSERVICE ACTIVITIES, (7) AN EXPLANATION OF THE PROGRAM DESIGN FOR EACH GRADE LEVEL, AND (8) SYNOPSES FOR EACH OF THE THREE PROGRAM SECTIONS. NARRATIVE

The Warren City's Career Development program spans the K-10 continuum. In the Warren City Schools, there are two comprehensive high schools, one special education high school, three junior high schools and eighteen elementary schools. There is a total of 4,254 senior high students, 2,265 junior high school students and 7,669 elementary students totaling 14,188 in the school system. The career education program is presently in one high school, 1,200, 9-10th grade students; one junior high school, 804, 6-7-8th grade students; and six elementary schools, 2,710, K-6 students. The grand total of participation is 4,714 (33.2%) in K-10.

Late in 1969 the Warren School system submitted a proposal stating that: in urban centers, there are a considerable number of elementary school age disadvantaged youngsters who, because lack of information and motivation concerning the world of work, are unable to set realistic educational and occupational goals. It was presumed that the problem stemmed mainly from the fact that the parents of many of these students also lack this necessary understanding and are therefore not able to offer the needed guidance.

After the first grant and experimentation, the advisory committee still felt the original premise held true. However in their investigation they felt that elementary youth, from other than disadvantaged areas, seem to have similar problems. They felt that the implementation of a career development program which enables them to see the wide world community and the participant in society. The project is designed to not only show the pre-requisite for a job but to show that all work is honorable and that every person should have pride no matter what his role. The intent of the program is to answer three inquiries of youth--"Where am I going?"--"How do I fit in?"--"Will I make it?"

Thus, the aim of the school is to provide a K-10 curriculum, in career development, to overcome the problem by providing motivational, orientational, and explorational experiences for the youth in the school community.

The objectives of the program therefore can be stated as follows:

1. The student will improve his knowledge of himself and learn that he is important. (K-6 emphasis) (7-8 and 9-10 re-enforce)
2. The student will improve his knowledge of his environment and know ways that he can contribute to home, school and community. (K-6 emphasis)
3. The student will have experiential opportunities to synthesize his self and his environment. (K-10)
4. As a result of participating in this program, their parents, and teachers will acquire a new attitude toward all education including vocational education. (K-10)
5. More interaction activities will be planned with the home, school and community to establish a closer relationship. (K-10)
6. That all the youth in career motivation programs will continue into career orientation and career exploration programs offering a full K-10 continuum.

ELEMENTARY CAREER MOTIVATION

The initial program of the K-6 Career Motivation involved four elementary schools. The second year, 1971-72, involved two additional schools.

1.	Elm Road.....	K - 62.....	1st-6th -337
2.	First Street School.....	K - 64.....	1st-6th -461
3.	Jefferson School.....	K - 61.....	1st-5th -442
4.	Horace Mann School.....	K - 67.....	1st-6th -537
5.	Washington School.....	K - 32.....	1st-6th -242
6.	Willard School.....	K - 43.....	1st-6th -362
Total.....		K - 329.....	1st-6th -2381
Total.....		K-6 - 2710	
Total Reimbursement.....		\$44,500.00	

JUNIOR HIGH CAREER ORIENTATION

The initial program of Career Orientation 1971-72 involved one school. To complete the set, another Junior High school program must be initiated.

West Junior High.....	6th-7th-8th - 804
Total Enrollment.....	804
Total Reimbursement.....	\$21,000.00

HIGH SCHOOL CAREER EXPLORATION

The initial program from Western Reserve School was initiated at the start of the 1971-72 school year.

Western Reserve High School.....	1,200
Total Enrollment.....	1,200
Reimbursement requested.....	\$36,000.00
Total Reimbursement Requested.....	\$101,500.00

PERSONNEL REQUIRED TO OPERATE K-10
CAREER DEVELOPMENT SET

The following personnel was required to carry out the duties necessary for K-10 career program:

K-10 - Career Development Coordinator (42 weeks full time).....1
K-6 - Career Motivation Specialists (part time 210 hrs.)6
7-8 - Career Orientation Specialist (full time 40 weeks -1/2 time
at each school.....1
9-10 - Career Exploration Specialist (full time 40 weeks).....1
K-6 - Instructional Aides (25 hours per week - 34 weeks).....2
K-10 - Secretary (full time 42 weeks).....1

The following facilities have been used by the personnel provided by the Warren City Board of Education.

A central Career Development office, which also includes a central media center for Career Development. There is desk space provided for Coordinator, Secretary and two Instructional Aides.

One Career Exploration office and Media Center, located at Western Reserve High School.

One Career Orientation office and Media Center located at the West Junior High School.

The Elementary Career Specialists use their designated rooms for articulation of their programs. Their rooms have provisions for an elementary Career Media Center, where feasible.

All Career Specialists are provided with phones.

K-10 LEVEL CONCEPTS

PUPIL IN RELATION TO HIS FAMILY

PRIMARY: Kindergarten: The child develops an awareness as performed in his home and the responsibilities of the family within the home, stressing interdependence and time and work schedules as it related to work. This awareness will develop showing that there are many jobs from which families can earn a living.

First:

Second:

PUPIL IN RELATION TO HIS FAMILY AND THE PEOPLE WHO SERVE HIS IMMEDIATE NEEDS.

INTERMEDIATE: Third: The child develops a self concept and learns that all worthwhile work has dignity. What they do in school will influence what they will do occupationally in later life. They will see the community at work as it relates to the production of goods and services which comes to their homes.

Fourth:

PUPIL IN RELATION TO PEOPLE AS A HUMAN RESOURCE

UPPER ELEMENTARY: Fifth: The child learns that all in industry who do a conscientious job contribute to the final product or service of the wider inter-dependent world community. They further identify with the people who are working for a living and see that a career choice is a right that citizens enjoy in the American system.

Sixth:

THE STUDENT ORIENTATION AND RELATIONS TO OCCUPATIONAL PATTERNS AND VALUES.

JUNIOR HIGH: Seventh: The student develops a concept of a work group and sees the role the worker plays in this group. He sees the dynamics of complex organizations and human relationships. He sees himself in relation to industry and to his community.

Eighth:

THE STUDENT EXPLORES IN RELATION TO HIS INTEREST AND ABILITIES, AIMING TO MATCH THEM WITH HIS FUTURE PLACE IN SOCIETY.

SENIOR HIGH: Ninth: The student through his knowledge of his self, his responsibilities, and his environment knows that all work is necessary to keep the world microcosm in balance. He uses the decision making process and aims to project his self in a work group, understanding that his skills in a work-role will serve to cope with the many situations in everyday life.

CODING

K Thru 6
I - Introduce
D - Develop
E - Emphasize

* Note - K-6 in the Warren City's Schools are self contained. All subject areas should flow together. The program will devote 270 hours or more in the fused curriculum as stated in approximate percentages above. Each class shall have at minimum of 1½ trips per year and 3 speakers.

1802

Career Orientation 7-8

SCOPE: CONTEMPORARY ISSUES APPROACH

The personnel of the Warren City Schools knows that the family of agencies must function as a unit in serving the common issues of improving community living. The school, through the contemporary issues approach, will attempt, along with the community, to identify the community occupational outlook as well as the wider world outlook. The scope of the program is flexible enough so that any teacher, in any curriculum area, with the help of the career specialist, can facilitate the realization of the program purpose. The program Scope makes full use of all community resources for learning experiences. As time and problems change, the school shall provide distinctive types of materials and aids which shall relate to the issues of the times. The contemporary issues approach must constantly provide teacher education to meet the purposes consistent with the times.

Only a pattern of organization is set forth in the Scope. The detail of planning within the curriculum must come from the teacher, and be designed by him, to serve the interests of his students.

I. Critical Social and Personal Issues and the School

A. Orientation to school and the school's function

1. Occupations in the school
2. Responsibility of the school
3. Transition from junior high to high school
4. Transition from senior high to adult responsibilities
5. Learning how to learn

B. Orientation and Process studies of the modern community

1. The home and community
2. How institutions help individuals, what they are, and what they do.

C. Survey of occupations

II. Contemporary community issues - occupations and the related curriculum

A. How can we improve on and who is responsible for:

1. Control of infection
2. Health -- personal grooming
3. Home and friends
4. Recreation
5. Traffic control
6. Crime and prevention
7. Advertising and effects
8. Fads and fallacies
9. City government
10. Consumer problems
11. Propaganda
12. Stimulants and narcotics
13. Environmental problems

14. Interracial problems
15. Mental and emotional health
16. Investments
17. Self analysis
18. Economic and social well-being
19. Ethics in business, government, personal affairs
20. War and change
21. Public health
22. Child labor and labor laws
23. Labor organizations
24. Public education
25. Ideological conflicts
 - a. Declaration of Independence
 - b. Bill of Rights
 - c. Religions
26. Political
 - a. Campaigns
 - b. Public figures
 - c. Social leaders
 - d. Political parties
27. Industrial
28. Transportation
29. Eulogies of self-made man
30. Equal opportunity for race, sex (occupational rights)
31. Machinery and man
32. Labor and capital
33. Human relations
34. Risks and responsibilities of management
35. Profits
36. Employers' needs
37. Employee's willingness to contribute to future
38. Changing conditions and their effects on employers and employees
39. Evolution and industrialization understanding
40. Personal responsibility in workers toward world improvement
41. Attitude of willingness to grow in understanding and knowledge

B. How do these apply and who is responsible for:

1. Drives - Boy Scouts, Red Cross, United Appeal
2. School - games, tickets, editorials, advertising
3. Church - teaching, preaching, social
4. Leading Citizens - mayor, police, businessmen, "town boss", social leaders

GENERAL UNIT RELATED TO CONTEMPORARY ISSUES

I. Aims

- A. To identify as many as possible occupations which are concerned with a particular contemporary issue.
- B. To collect informations about occupations which will be useful when a decision has to be made concerning future vocational plans.
- C. To become involved in relating occupations to regular classroom subjects.

- D. To observe individuals at their work.
- E. To develop the attitude that all honest work has dignity and importance.

II. Content Information

- A. Selection of a career is probably one of the most important decisions a person makes in a lifetime. Yet the amount of research that that person does is often negligible. Lesser decisions are often better researched, such as buying a car.
- B. The occupation of an individual often determines his life style.
- C. Studies show that many people are unhappy in their chosen vocation, and would change it if given a chance to do it over.
- D. "...vocational choice is a process rather than a single event; that it takes place over a period of years; that it usually begins with knowledge of one's abilities, attitudes, interests, and achievements; and that there is a crystallization of this concept into a self-concept."
- E. Future occupational needs vary and change; therefore, educational programs should reflect those needs now and in the future.

III. Activities

- A. Decide on a contemporary issue through investigation and interests, needs of students felt by the teacher, or a combination of both.
- B. Use cassettes and/or filmstrips on introduction to careers.
- C. Determine the occupations involved in that issue by class discussion, library assignment, individual research in Career Orientation Media Center, collect newspaper articles which mention occupations in that contemporary issue, ask parents or members of the CO Advisory Committee.
- D. Determine which occupations should be investigated by the class as a whole, individually, or by committee.
- E. Determine methods to use in researching the occupations; speakers and their names, if known; reading assignments; field trips where a number of occupations concerned with that issue can be observed; interviews with workers on cassette tapes; simulated experiences; make bulletin boards; use audio-visual aids in CO Media Center, school Material Center, city A.-V. Center.

PARENT AND COMMUNITY INVOLVEMENT

Members of various factions in the community, such as business, industry, education, cultural, and parents of students serve as advisors to give aim and direction in career orientation. They recommend activities designed to expand the students' knowledge of career possibilities in the community and outside of it. They participate in, and help plan, opportunities for students to be exposed to a wide range of occupations.

AREAS WHICH WILL CONCENTRATE ON THE CLUSTERS OF OCCUPATIONS ARE:

- [a] Agri-Business and Natural Resources - Science, Mathematics, Home Economics
- [b] Business and Office Education - Mathematics, English, Science
- [c] Communication and Media - English, Social Studies, Science, Music, Art
- [d] Consumer and Homemaking-related occupations - Home Economics, Mathematics, Industrial Arts, Social Studies

- [e] Construction - Industrial Arts, Home Economics, Art, Mathematics, Science
- [f] Environment - Science, Social Studies, Art
- [g] Fine Arts and Humanities - Art, Music, English, Home Economics, Industrial Arts, Social Studies
- [h] Health - Science, Physical Education, Home Economics, Mathematics
- [i] Hospitality and Recreation - Home Economics, Physical Education, Art, Music, Industrial Arts
- [j] Manufacturing - Mathematics, Industrial Arts, Science, Home Economics
- [k] Marine Science occupations - Science, Mathematics, Social Studies
- [l] Marketing and Distribution occupations - Mathematics, Social Studies, Home Economics, Industrial Arts
- [m] Personal Services - Social Studies, Industrial Arts, Home Economics, English, Science
- [n] Public Service - Social Studies, Science, English, Mathematics
- [o] Transportation - Social Studies, Science, Mathematics, Industrial Arts

TIME SCHEDULE

For the most part, all Career Orientation activities are an integrated part of the classroom experiences, except for a general unit in the study of occupations in Social Studies and administering the Ovis. The teachers use a combination of vicarious, simulated, and "hands-on" activities, using community members, parents, field trips, audio-visual aids, videotapes, written materials, and materials produced by the students.

<u>ACTIVITY</u>	<u>HOURS</u>
10 per student per year.....Speakers	20
5 per student per year, 3 1/2 hrs. Field trips	35
Preparation for trip or speaker, 3 hrs.	90
Home economics and Industrial Arts -50% of time Career-Orientation based including "hands-on" experiences	70
One hour in counselor-led career orientation and work adjustment class	38
4 weeks in general unit on study of occupations in Social Studies classes	20
Outside research on 15 USOE clusters in individual interests (1/2 hr. per week)	38
Testing	5
Integrated classroom contemporary issues occupations approx. 9 min. per major subject area per day	224
	<u>540</u>

CAREER EXPLORATION

Career days must be every day in the modern comprehensive high school. Youth must experiment in ways in which they will some day spend their work lives and serve humanity so that their all important career decisions can be made with deeper perception.

The Western Reserve High School attempts to bring to the ninth and tenth grade students, a program of career exploration through the following nine designs. Allocating the following amount of manhours to each Design.

Design I	Manhours,	13,050	-- Career Exploring Vocational Education
Design II	Manhours,	240	-- Career Exploring Units and Organizations
Design III	Manhours,	11,760	-- Achieving Your Career
Design IV	Manhours,	1,440	-- Career Media Center
Design V	Manhours,	5,400	-- Techniques and Success and Career Exploration
Design VI	Manhours,	2,700	-- Career Tours and Speakers (a course
Design VII	Manhours	49,846	-- Integrated Approach
Design VIII	Manhours,	1,200	-- Career Exploration Specialist
Design IX	Manhours,	14,400	-- Explorations (3 per Student)
All Designs		100,036	

61,964 integrated class instruction in the various subject fields. This would be less than one hour of career instruction for each ten hours of class in each subject area. It involves approximately five minutes per class per day.

100,035 hours Prepared Exploration Experience
<u>61,964 hours Integrated Career Education</u>
162,000 Total Manhours of Career Education

1,200 students x 135 hours per year = 162,000 Manhours

IN-SERVICE ACTIVITIES

A World of Work tour was scheduled for all teachers in September of 1971, prior to the start of the 1971-72 school year. All teachers at Western Reserve were requested to attend.

Arrangements for the tour were made with five selected companies in the Warren area with the help of the Industrial Information Institute.

An orientation meeting was called for all teachers. The purpose of this meeting was to explain the Career Exploration Program to the teachers, acquaint the teachers with occupations and give them suggestions as to how they could correlate career material into their curriculum. A follow-up meeting was held prior to the opening of school with the entire staff.

Department Heads meetings were held for all department heads to work in depth at integrating career information into the present curriculum guide.

An in-service workshops was held for all teachers at Western Reserve in order to give the department heads time to work with their departments for ideas for integration into their curriculum.

CAREER EXPLOATION
EXPLANATION OF DESIGNS

DESIGN I

Which is aimed mainly at the student who has interest in the vocational classes shall involve approximately 20% of the enrollment. This course, carrying credit, shall lead the vocational student to better understand what lies ahead in his desire for vocational training, in the high school, leading toward a life career.

DESIGN II

Will mainly be organizations related to career clusters where by all students in their ninth and tenth grades shall be eligible to belong.

DESIGN III

Is aimed at all ninth and tenth grade students. A required course in social studies, of which one-fifth of the time will be devoted entirely to achieving one's career. This course will carry credit.

DESIGN IV

Career Media Center, is designed for the use of all students 9-12. The students shall also have a person they can depend on who will be skilled in disseminating career information to them at the center which will be located in the library.

DESIGN V

Techniques and Success and Career Exploration will be a course which will aid ninth and tenth graders who are interested in developing their own potential through self motivation. The course shall be available to all for course credit.

DESIGN VI

Tours and Speakers shall cut across all areas, at all times, during the year. There shall be a major emphasis for a three day period. This shall be a highly structured and regimented approach. This is designed mainly because many of the youngsters have not previous career motivation and career orientation experiences. All ninth and tenth graders shall have the exploration opportunity.

DESIGN VII

Is merely an example of how all courses in the high school can involve career exploration. These integrated courses will eventually be developed for all class through the department chairman.

DESIGN VIII

The Career Exploration Specialist shall be the person who will aide all teachers and students in the implementation of the total program. He shall be responsible to the Career Development Coordinator to facilitate a continuum K-10.

DESIGN IX

Career Exploration opportunities (3) for each student to search the area related to his career interest. This experience will be performed in actual on-the-job situations in business and industry.

(It is believed that if all designs are implemented, all the ninth and tenth grade students will have optimum opportunities for career exploration.)

OBJECTIVES

1. To give the students an opportunity to acquire the necessary information needed to set realistic occupational goals.
2. To give the students an introduction to the technical knowledge and manipulative skills needed to be successful in occupation of his choice.
3. The students will be given a chance to learn the occupational procedures and requirements of the occupations they are interested in by actually performing these occupations in actual on the job situations under close supervision.

PROCEDURES AND IMPLEMENTATION OF PROGRAM

1. All of the ninth grade students were given an interest survey test. The students were grouped by interest areas indicated by the testing. All testing was done in the A.Y.C. unit, Design III.
2. An assembly for all ninth grade students was held to explain the career exploration program to them. The assembly was approximately one hour in length.
3. All ninth grade students spent four weeks in the "Achieving Your Career Unit". This unit was a part of the social studies curriculum. Each student spent one hour per day, five days a week for four weeks in this activity. The results of this unit are used as a basis for setting up exploration experiences for the students.
4. One hundred twenty boys were enrolled in the pre-vocational program in the tenth grade. Each boy spent one hour per day, five days a week, for eighteen weeks in small group instruction in the various vocational areas. Each student obtains fifteen hours of hands-on experience in each of the five vocational areas. After spending fifteen hours in each area, he then selected the one area he liked best and returned to it for fifteen additional hours of instruction.
5. A three week unit for those interested in vocational business was offered to one hundred fifty boys and girls. This gave them a chance to explore the various vocational business courses available to them. They spent one hour per day, five days per week for three weeks in this course.

PROCEDURES AND IMPLEMENTATION OF PROGRAM, Continued

6. There were at least five students per period, eight periods a day using the media room.
7. Thirty groups of five students or less spent half or full day sessions in industry viewing people performing occupations which the student had expressed an interest in.
8. Speakers were brought into the school to speak to various classes about occupations and careers. Each speaker was able to speak to eight classes of twenty five by employing our video tape equipment.
9. Thirty students were enrolled in the class titled "Techniques and Success and Career Exploration." The class met one hour per day, five days per week for eighteen weeks.
10. Twenty field trips were scheduled for large groups of students to visit industry. These trips took approximately three hours and each group had between ten and thirty students.
11. One hundred ninth grade boys were in the Industrial Arts program. They spent one and one half hours per day, five days per week for thirty weeks rotating through the different areas. Approximately one half of the time spent in these courses were devoted to career education with the emphasis on "hands-on" experience.
12. Thirty boys were enrolled in Industrial Arts Courses in the tenth grade. One half of this time was spent on Career Education.
13. One hundred sixty ninth grade girls were enrolled in Home Economics. The girls rotated through three basic areas spending a total of one and one half hours per day, four days per week for thirty six weeks. Approximately one half of this time was spent on career education.
14. Speakers from various industries were scheduled to speak to various groups of students. The groups averaged 25-30 students and the sessions lasted approximately one hour.
15. Field trips were taken to various places of business in the community, where students viewed the various jobs being performed.

INVOLVEMENT

STUDENT INVOLVEMENT

1. Participated in career development activities within and outside the school.
2. Participated in individual and group projects.
3. Participated in meaningful field trips to local industry and business firms.
4. Participated in designing and developing career exhibits.
5. Participated in kids-in-industry days sponsored by local civic organizations.
6. Listened to and discussed the views of outside resource speakers.
7. Participated in planned role-playing activities.

TEACHER INVOLVEMENT

1. Participated in the in-service training program conducted by the career development program staff.
2. Worked cooperatively with career specialist for each grade level in development and complete plans for an integrated approach using the world of work as its core.
3. Worked cooperatively with the career specialist in the implementation and integration of career materials into classroom activities.
4. Worked cooperatively with the career specialist in developing and maintaining an occupational resource library for individual investigation by students.
5. Participated in and directed field trips to local industry and business firms.

PARENT INVOLVEMENT

1. Participated in conferences with teachers and career specialist.
2. Participated in field trips, arranged by the career specialist, for them, and for their children.
3. Participated as resource speakers for classrooms.
4. Cooperated with career specialist who made occasional visitations or phone calls related to career development.
5. Assisted the career specialist in contacting disenchanted and/or inactive parents.
6. Served on Advisory Committees.

Synopsis
CAREER MOTIVATION PROGRAM 1-6

ELM, FIRST STREET, HORACE MANN, JEFFERSON, WASHINGTON, WILLARD ELEMENTARY SCHOOLS

(1) The Career Motivation program opened the year with a plant visitation workshop for teachers interested in attending. Special emphasis was placed on the work opportunities in the industries. (2) An increase in field trips and speakers have been used this year. (3) The teachers are using better follow up and preparation for the field trip and speakers. (4) All the new teachers and student teachers, (fifty) were given a workshop on the understanding of the world of work and a tour of the vocational wing of the high schools. (5) Principal's meetings have been held to improve implementation within their buildings. (6) Industry is continuing their acceptance of the program. (7) Local publicity is good and the community is becoming aware of the program. (8) Some industries take pride including the career program as a news feature in their own house organ. (9) O.E.A. has written about the program in the Ohio Schools; Changing Times carried an article about the program. (10) Industries' and speakers' response states that the kids are well prepared - they feel that the students are aware and interested. (11) Warren's schools administrative staff has been complemented by the Center for Occupational Education, On-Site-Team, on their total awareness, and involvement, and sincere belief, in the program, i.e., Superintendent, Directors, Supervisors, Principals, and members. (12) E.M.R. students become more aware of themselves and their peers and their potential thru the use of career materials. (13) School activity groups, i.e., patrol, lunchroom, librarian, audio visual workers, getting more relationships of their work as it relates to similar occupations in the community. (14) All students participating in hands on activities in their schools' extra curricular groups are awarded a career motivation certificate. (15) K.S.U. Project, industrial technology, is expanding. a student teacher from elementary education and industrial arts classes will help correlate industrial technology with social studies - science and math, (on site). (16) Thirty student teachers from Youngstown University have been assigned to world of work for three 1/2 days per week. They have helped construct programmed materials for youngsters. (17) Working with Cleveland Plain Dealer for newspaper in the classroom and as it relates to the world of work, 250 students are involved in this trial project. (18) Six film-strip productions by the Industrial Information Institute have been completed. (19) Working with the area Health Association who have designed a program of health careers involvement in the schools. (20) Children are developing their own film-strip productions relating to career development. (21) Inexpensive cameras for classrooms are available for student observation of careers singled out in the community. (22) An attempt to offer rewards to teachers who are willing to write up their projects as they relate to World of Work, Career Motivation. Nine teachers are involved in a week's institute "Instructional development" a systems approach to implementation..

Synopsis
CAREER ORIENTATION 7-8
WEST JUNIOR HIGH SCHOOL

(1) Experiences in Career Orientation begin with a contemporary issue and the occupations that are concerned with it. After an issue is decided, those occupations which have any bearing on it are researched by use of resource speakers, audio-visual materials, library assignments, field trips, etc., i.e. a 6,7, and 8th grade class conducted the United Appeal campaign for their grade a contemporary issue and organized according to the occupations actually needed to plan and carry on a charity drive. (2) USQE Clusters of occupations are assigned to specific subject matter areas. (3) Within the contemporary issue, cluster groups are also assigned. This stimulates other subject matter areas being included resulting in investigation of a greater number of occupations. (4) The success of a program depends upon the principal being behind it. Since it does require some classroom teacher initiative, they have to know that deletion or compressing the amount of time formerly spent on a unit in their subject area to provide time for career orientation is acceptable. (5) Some older teachers have to be convinced that it is not always necessary or wise to "cover the book," although some teachers find it hard to break away from the textbook. The contemporary issue approach has made this more possible. Students have helped to preview and select materials. (6) Teachers have determined that resource speakers and field trips are not the principal parts of the CO program, but a part of the whole program. (7) A Science teacher and Math teacher developed a unit cooperatively in which they shared classroom teaching, helped each other's classes while one is on a field trip, etc. (8) Students in an English class prepared the commentary, ideas, etc. for a filmstrip as part of an advertising campaign for a series of events, among them the Career Development program itself. (9) A general unit on studying about occupations was given in 7th and 8th grade Social Studies classes this year. Materials were general in nature to avoid repetition in other classes and guarantee inclusion of some materials. The EPC Career Games were used in the 8th grade as a concluding part of the unit. (10) The CO office and its materials will be moved into, and become a part of, the Media Center attached to the library. Having all materials in one place will result in greater use of consolidating equipment, etc. (11) The CO Career Specialist was a member of a junior high school curriculum revision and textbook adoption committees. Materials for review were evaluated for opportunities to include CO experiences. The books selected were suited to career orientation activities. (12) The principal and assistant principal took over classes for teachers who were on field trips. While every teacher had a preparation period, it presented opportunities for better cooperation if they were not used to "cover" other teachers' classes. (13) Extensive use was made of the videotape to get more "mileage" from a resource speaker. (14) It is difficult to schedule meetings for teachers in a particular department since they did not have the same free periods. If scheduled, they had to be after school. (15) The number of teachers participating in a voluntary pre-school in-service workshop in CO increased this year over last year. (16) Use of A-V materials put a strain on the amount of equipment available for school-wide use, requiring more to be purchased, if possible. Therefore, more is being bought with the contemporary approach. (17) Cooperation of parents who have volunteered to participate is excellent, ranging from speaking to groups of students to arranging and attending field trips to their places of work. (18) Science teachers and Language Arts teachers will be writing curriculum guides during summer and are including career orientation activities as an integral part of the curriculum.

CAREER EXPLORATION
WESTERN RESERVE

(1) A full day introductory in-service workshop was held at the start of the school year. (2) The program was discussed with the staff at the staff meeting. (3) Department head meeting have been held to facilitate integration of Career Education into all subject areas. (4) An assembly for all 9th and 10th grade students was held in order to explain the Career Exploration program to them, and how it will affect them. (5) Two groups of sixty students each completed the pre-vocational course. (6) All ninth grade students spent four weeks in the "Achieving Your Career" unit. (7) An occupational interest survey was given to all 9th grade students. (8) A Career Media Center was built adjacent to the library. Materials relating to careers in the form of books, filmstrips, cassettes, etc. for student and teacher use are located there. (9) An assembly was held for all interested 9th and 10th grade students to explain a course being offered titled "Techniques and Success and Career Exploration." Many students indicated high interest in the course. The course is a self study motivational course which emphasizes goal setting. (10) Approximately 24% of the 9th graders had a direct exploratory experience in industry with persons performing jobs related to the student's interests with some opportunity for "hands-on" experiences in these explorations. (11) The students at Western Reserve have had very little, if any previous experiences in Career Education. Therefore, arrangements were made for speakers and general field trips. (12) A complete testing program for all the students is being worked out with the department of Pupil Personal Services to administer the OVIS in the 8th grade, CATB in the ninth grade and the CVIS in the 10th grade. (13) It was necessary to employ substitute teachers, occasionally to cover classes for teachers accompanying students on field trips. As most teachers have never seen the world of work outside the classroom the experience enables them to relate jobs viewed on the trips with their subject areas. (14) A guide was developed with pointers for the students involved in explorations, aiding the student on knowing what to look for during an exploration. (15) A mid year report was given to all teachers. (16) As a result of the students researching careers of interest to themselves while members of the "Achieving Your Career" unit, exploration were located and assigned students in accordance with their research interests.

ABSTRACT - THE PURPOSE OF THIS DOCUMENT IS TO
PROVIDE EXAMPLES OF STATEMENTS RELATED TO THE
12 FUNCTIONS OF THE CALIFORNIA VOCATIONAL
EDUCATION SYSTEM, WHICH HAVE BEEN DEVELOPED
BY LOCAL VOCATIONAL PRACTITIONERS. INTENDED
TO SERVE AS GUIDELINES FOR LOCAL
ADMINISTRATORS RESPONSIBLE FOR DISTRICT
PLANNING, THESE 12 MODEL PROGRAM STATEMENTS
WERE DEVELOPED BY 155 VOCATIONAL EDUCATORS IN
17 WORK GROUPS, REPRESENTING 22 COUNTIES IN
CALIFORNIA. WRITTEN FOR HYPOTHETICAL SCHOOL
DISTRICTS IN LOCAL AREAS, EACH STATEMENT
CONTAINS: (1) A DEFINITION, (2) AN ANALYSIS
OF A NEED, (3) GOALS, (4) SPECIFIC STEPS FOR
ACHIEVING OBJECTIVES, AND (5) AN OUTLINE OF
ALTERNATIVE METHODS FOR ACHIEVING THE
OBJECTIVES. THE MODEL STATEMENTS DEAL WITH:
(1) POPULATION NEEDS, (2) THE JOB MARKET IN
RURAL NORTHERN AND URBAN SOUTHERN CALIFORNIA,
(3) JOB PERFORMANCE REQUIREMENTS, (4) PROGRAM
PLANNING, (5) VOCATIONAL EDUCATION PROMOTION,
(6) STUDENT RECRUITMENT, (7) CURRICULUM
RESOURCES AND ANCILLARY SERVICES, (8)
GUIDANCE AND COUNSELING IN RURAL SOUTHERN AND
URBAN NORTHERN CALIFORNIA, (9) JOB PLACEMENT,
(10) VOCATIONAL INSTRUCTION IN RURAL NORTHERN
AND URBAN SOUTHERN CALIFORNIA, (11) PROGRAM
REVIEW, AND (12) EVALUATION. DESCRIPTIONS OF
THE 12 FUNCTIONS AND PROGRAM PARTICIPANT
CHARACTERISTICS ARE APPENDED. (AG)

CALIFORNIA STATE DEPARTMENT OF EDUCATION

June 1972

PREFACE

The Vocational Education Amendments of 1968 and their accompanying regulations place increased emphasis upon planning and evaluation. This emphasis has influenced the development of "The California State Plan for Vocational Education" in general and "Instructions for Preparing a District Plan for Vocational Education" in particular. The latter document, advocating the development of a plan which evolves from 12 identified functions, is continuing to be revised annually to the point of taking on the characteristics and implications of program statements for each function with inherent parts alluding to need, goals, objectives, and alternatives.

The purpose of this document is to provide examples of statements related to the 12 functions which have been developed by local vocational practitioners. These statements are intended to serve as guides to local administrators who have responsibility for development of the district's local vocational plan. In no way are these statements intended to mandate objectives or stipulate activities or format.

ROLAND M. BOLDT
Chief, Program Services Unit
Vocational Education Section
California State Department of Education

San Mateo County Office of Education's Vocational Education Division has been pleased to cooperate with the Vocational Education Section, California State Department of Education, in making this EPDA, Part F, project possible. It is hoped that through these efforts those many individuals dedicated to the furtherance of vocational education in the schools of California will be assisted.

ROBERT L. CREY
Administrator
Vocational Education Division
San Mateo County Office of Education

INTRODUCTION

In California vocational educators have identified 12 components essential in public school vocational education programs. These have been defined as the 12 functions of the California vocational education system.* In this state, the 12 function system concept provides a format for describing vocational education systems in district plans and is also useful in evaluating local programs and for other reporting.

To validate the system concept and to define its elements in more detail, in October 1970, selected county vocational education coordinators were asked to help develop model program statements applicable to one of the 12 functions. Under their leadership, 17 work groups of practicing vocational educators representing 22 counties of California were organized. During the school year of 1970-71, with assistance from State Department of Education vocational education consultants, each group formulated definitions, need statements, goals, objectives, and alternatives for one of the 12 functions. Since 17 groups were formed, some functions were covered by more than one group.**

An original intent of the project was to contribute toward improved district vocational education planning and to simplify the writing of district plans. Another intent was to disseminate the California vocational education system concept and increase local educational agency awareness of its use as a tool for planning, analysis, and evaluation. A third intent was to introduce local educational personnel to the concept and use of reporting formats for Program Planning Budget Systems and to provide them with experience in writing program statements. Funds granted under the Education Professions Development Act supported the latter phase of the project.

By the fall of 1972, most of the original 17 work groups had submitted a written product. Unfortunately, many of the original reports were too general to serve as examples of actual district planning. They also varied in their interpretation of the basic 12 function concept and project assignment. In order to produce a document which would be useful to local educational agencies throughout the state as a district plan model, the work groups were asked to cooperate with a technical editor in revising their original products.

Their new charge was to assume a hypothetical school district in their geographical area, and write some specific needs measurable objectives, and alternatives to go with their functional definition and goals. In most instances, any similarity between the model program statement and an actual district is purely coincidental. In some cases the work group was encouraged to furnish a model reflecting a district just beginning to provide the product

* The 12 functions are listed and defined, as shown in the "Instructions for Preparing a District Plan for Vocational Education," in Appendix A.

** Names and assignments of work group coordinators are listed in Appendix B. Some characteristics of the work group members and the districts they represented are summarized there also.

or service the function should produce. While a few work groups furnished the statement which a district actually intended to use in its district plan, this was the exception, rather than the rule.

The model program statements which comprise the body of this report are examples of what might exist within the local geographical and social context in which each was developed. In spite of this local focus, however, it is thought that the statements contain many details common to vocational education systems in schools throughout the state. They form a resource of examples based on hypothetical and real functional components, implementation strategies, and evaluative criteria for the 12 functions at the local level.

The program statements appear here in the same order as they would in a district plan. Each statement contains the following:

- Definition Describes the function in the total system context.
- Need Tells why the services and/or products of the function are necessary to the system in terms of the local area.
- Goal(s) States the general purposes and aims of the function.
- Objectives Lists specific steps to be accomplished (and the times for their achievement) in the course of working toward the goals.
- Alternatives or Strategies Outlines the various methods considered for achieving the function objectives.

In formulating their statements for this resource document, the 155 participants from the 17 work groups gained skills which will, hopefully, encourage them to assist others in analyzing and describing their vocational education systems. Acknowledgment is due each work group leader and participant for his contribution.

In addition, recognition goes to San Mateo County Office of Education personnel who assisted in administering the project: Dr. Russell Kent, Superintendent of Schools; Robert Obrey, Administrator, Vocational Education Division; and Bruno Fabbro, Assistant Superintendent, Business Services Division; and to State Department of Education Vocational Education Section staff who served as consultants: Robert Barnes, Coordinator, Research Coordinating Unit; Roland Boldt, Chief, Program Services Unit; and Kenneth Densley and Ernest Neasham, Research and Evaluation Consultants. Roland Boldt and Ernest Neasham also served as technical editors.

Function 1 POPULATION NEEDS

DEFINITION

Establishing population needs calls for an analysis which results in providing a definition of the district service area and a determination of the potential clientele within the area. The results of the analysis should describe the characteristics of the target groups discovered in the service area.

NEED

The composition of this school district population has altered in the past decade. The local farming industry, once managed and operated largely by persons of oriental and anglo extraction, now depends on imported labor involving other ethnic groups. This change has altered the ethnic composition of schools in the area. The educational implications of this population change have not been completely assessed. In vocational education we have become aware of some of the bilingual difficulties of students who are presently in school, but we are not aware of the number of young people and adults who are not in school who could profit from vocational training. In addition, not enough is known about the vocational and social aspirations of the new ethnic elements or the constraints which might keep them from participating in local education.

GOAL

To provide district vocational educators with an economically feasible system for obtaining and maintaining population data which will provide the information necessary for planning vocational education programs which are valid both in terms of local manpower needs and the needs of the local population.

OBJECTIVES

1. Identify the major definable groups needing vocational education services in the local district service area. These groups will be defined according to age, sex, ethnic characteristics, educational status, and geographic location. A preliminary report of group definitions will be needed for district planning by November 1, 1972.
2. From local, county, state, and federal data banks and published reports, obtain as much information as possible about specific characteristics of the identified groups. This file of information, organized according to the specifications of district planning personnel, will be available for use by March 1973.
3. Identify additional information not available from the indicated sources which is needed for planning district vocational education programs so that future information requests can be made to agencies which might supply the data. This report will be made three months after presentation of the data file indicated in objective 2 above.

ALTERNATIVES

The district considered accomplishing these objectives by reassigning priorities among its own staff. Also considered and explored were possibilities of contracting for such services from the county or a private consulting firm. Utilizing district staff was rejected because of the need for adding personnel; this is not feasible under current budgetary constraints. The cost of an outside consultant was prohibitive. The county was able to provide the most satisfactory services for the least cost because it is providing such services to several other districts, and our district has become a part of the cooperative arrangement.

Function 2 JOB MARKET in Rural Northern California

DEFINITION

The job market function gathers information about existing and projected labor market needs for an individual school district and translates this information into usable form so that it can meet the information needs of the system.

NEED

The district presently relies on very general labor market information that gives little local specific information which would help in facilities planning, counseling, and curriculum revision.

GOAL

To obtain specific job market information which will permit the district to improve its planning for vocational education and which will make reliable information available to students planning their careers.

OBJECTIVES

1. Secure the services of the tri-county vocational education coordinator to furnish the district planning committee and the district counseling committee with all available local job market information. The coordinator will report to the planning committee on October 15, 1971, and to the counseling committee on January 15, 1972. The district will furnish the necessary additional financial support for the coordinator's services according to the district agreement with the county superintendent's office.
2. The superintendent will enlarge the present vocational education advisory committee so that it can become a better supplemental source of local job market information. Before the first meeting in September 1971, he will have selected additional representatives from retail merchandising, food service, and governmental services.

ALTERNATIVES

Two alternatives were considered to supply more precise labor market information: (1) to try to get HRD to change its reporting system so that it would deliver precise local labor market information in a form usable by the district, and (2) to hire an outside consulting firm to assemble and analyze existing information. We were unable to secure the services from HRD because they lacked the funding to furnish these services at this time. The cost for a private consultant was prohibitive and this alternative was rejected in favor of the county service.

Function 2 JOB MARKET in Urban Southern California

DEFINITION

The job market function is a system of identifying, collecting, validating, storing, analyzing, and disseminating data regarding current, changing, and projected manpower needs within a specified geographical area, utilizing all available resources.

NEED

(Hypothetical case: District X has no vocational programs and a newly assigned coordinator who has been instructed by the board and superintendent to initiate and implement occupational education programs in the district.) Prior to the initiation and implementation of occupational programs, the available and emerging job market must be analyzed to insure placement opportunities for a reasonable number of graduates.

GOAL

To obtain a job market analysis by contacting an appropriate agency or agencies that will provide comprehensive, systematic, and continuous information of available and emerging job opportunities, thereby enabling improved planning and instruction.

OBJECTIVES

1. By November of the current school year the district will contact the county office to obtain the appropriate job market information for the proposed programs.
2. By December of the current school year the district will validate the job market information obtained by contacting one or more of the following:
 - a. A professional labor market analyst
 - b. Evaluation committees, teachers, county advisory committee members, or Personnel Management Association members
 - c. Graduates, through a follow-up report
 - d. Others
3. By February of the current school year the district will analyze the job market information for identification of new programs, expansion of existing ones and termination of those which do not meet the criteria of the job market information or population needs analysis.
4. By March of the current school year the district will incorporate the above objectives into the remaining ten functions for implementation.

ALTERNATIVES

(Not included by authors.)

Function 3 JOB PERFORMANCE REQUIREMENTS

DEFINITION

Those activities necessary to specify the skills, knowledges, and competencies required to prepare the individual student for gainful employment, enrollment in advanced training programs, or upgrading of skills; and to assist him in making occupational choices.

NEED

There are in operation courses and programs of vocational instruction which were developed at a time when business and industry needs for specific skills, knowledges, and competencies were different than they are today. There is a need to systematically review and update these vocational courses and programs in light of new and changing job performance requirements. In planning new programs of vocational instruction, there is need to validate curricula developed by others, or new curricula resulting from the identification of emerging occupations through job market analyses.

GOALS

To provide current information for systematically validating and revising existing courses and programs of vocational instruction, and for developing curricula for planned new vocational instruction.

OBJECTIVES

1. To develop a performance based curriculum in telephone directory assistance which is based upon the results of job performance analyses with Pacific Telephone Company.

Evaluation: Has the curriculum been developed as described?

2. To develop written functional job descriptions for exploratory work experience with performance based related instruction in allied health occupations for at least two of the district's eight high schools.

Evaluation: Have such descriptions been developed for two high schools?

3. To modify and implement a revised plastics technology curriculum, as recommended by the advisory committee, to provide increased emphasis on fabrication skills.

Evaluation: Has the curriculum been modified as recommended?

4. To develop performance based learning activity packages permitting open entry/open exit of students in three allied health occupations.

Evaluation: Have such learning activity packages been developed?

5. To develop performance based curricula in housekeeping, food service, and groundskeeping tailored to the learning disabilities of EMR students and supportive of student off-campus work experience training.

Evaluation: Have these curricula for EMR students been developed?

ALTERNATIVES

1. Collect, review, and adapt existing curriculum materials with the advice of the advisory committee and/or individual members.
2. Contract with teachers or industry consultants to assist in developing new course performance requirements.
3. Contract with industry to develop course performance requirements and to operate courses.
4. Sample recently placed course graduates for recommendations for curriculum revisions based on their experience in meeting job performance requirements.
5. Sample employers of recently placed graduates as in 4.
6. Review annually with advisory committees the job performance requirements for each course.

Function 4 PROGRAM PLANNING

DEFINITION

The purpose of the program planning function is to help maintain a balance of vocational education programs and services. This function integrates information on population needs, employment opportunities, and job skill requirements with district resources and capabilities. This data is then used to determine the feasibility of implementation, maintenance and/or termination of programs.

NEED

The present district method of vocational education course introduction is informal in nature. The district director of vocational education recommends the approval of programs and courses that are recommended to him by faculty members and others, based on his experience and knowledge of community needs. No vocational program has been dropped from any of the district high schools in the past ten years in spite of the fact that enrollment in some of them has been declining steadily.

The scarcity of district financial resources limits the number of vocational programs that can be maintained, but there is evidence that local employer demand and growing public dissatisfaction with the high rate of local youth unemployment can only be satisfied by a relevant program of vocational education which can serve increasing numbers of students.

GOAL

To recommend to the district a relevant vocational education program by identifying areas of vocational training which should be added, discontinued, or redirected.

OBJECTIVES

The assistant superintendent for curriculum and the director of vocational education, together with one designated representative of each vocational subject matter area, will recommend the establishment of a process for utilizing information about population needs, job market, and job performance requirements in planning new vocational education programs and modifying existing programs. Such planning will begin on September 15, 1971. Recommended and alternative process plans will be presented for the superintendent's review on November 15, 1971. Implementation of those parts of the selected process that are feasible under the present budget will commence on January 1, 1972.

ALTERNATIVE

Consideration was given to having the planning process designed by an outside educational consultant. This was not recommended because it was thought that local staff members, with their firsthand knowledge of the district, could do the planning more effectively. In addition, it was thought that administrative staff participation would result in the early effective implementation of the planning process.

Function 5 VOCATIONAL EDUCATION PROMOTION

DEFINITION

Vocational education promotion is a plan of activities to inform the various publics of the strengths and merits of vocational education. The plan of activities shall take into consideration the psychological climate and stimulus necessary to produce the desired response from these publics.

NEED

Vocational education is established as a primary function of the educational process through legislative enactment of laws introduced to meet the needs of all segments of our society. In meeting this function, a promotional plan for vocational education must be established, as education in general has not been responsive in building a favorable image for occupational training.

To establish such a promotional plan, avenues of communication must be open among students, parents, legislative bodies, professional and vocational associations, employers, and individuals within each respective community.

GOALS

1. To solicit the cooperation of the community, industries, and government agencies.
2. To inform the community about available occupational training.
3. To establish communication with professional and vocational associations for the further advancement of vocational education.

OBJECTIVES

1. The school district will invite representatives of the community, industries, government agencies and students to join an advisory committee whose responsibility is to develop and plan promotional programs for the district. This advisory committee will be selected by October 1, 1972, and will report its accomplishments and recommendations to the board of trustees by June 1, 1973.
2. The school district's vocational education administrators and head counselors will involve all of the district's counseling staff, vocational staff, and professional and vocational associations in a workshop to plan a vocational education promotional campaign to be carried out by the district counselors. Planning will be completed by December 1, 1972, and the campaign will be implemented by April 1, 1973.
3. The school district will inform the various publics about the benefits and availability of occupational training programs in the district through professionally prepared brochures; news releases to radio, television, and newspaper media; and prepared speakers backed up with professionally prepared audiovisual presentations on the occupational training programs. The vocational administration will report the endeavors and achievements in promotion of vocational education to the board of trustees by July 1, 1973.

ALTERNATIVES

1. Remain status quo and rely on promotional activities of the state vocational education office.
2. At the county level, contract with a private public relations firm to develop a promotional program for vocational education.
3. Employ a person at the county level to perform public relations services and develop a promotional program for vocational education.
4. Request each vocational coordinator to enlist the aid of counselors and vocational staff to develop a promotional plan for vocational education. Professional consultant services will be provided by school districts to assist in developing the program.

Alternative four was selected as being the most feasible method of realizing the stated objectives. This "grass roots" approach will provide the best communication links with the community.

Alternatives one, two, and three were rejected on the basis that they did not serve the needs of the community. Two and three were also rejected because of cost and the time required to orient the agency or persons to vocational education.

The selected alternative is within the budgetary limits of the individual school districts. The program will require the involvement of vocational instructors. Public relations consultants will be obtained to assist in developing activities and materials. In some cases, the services can be integrated into the instructional program of the district.

Function 6 STUDENT RECRUITMENT

DEFINITION

The basic concept of student recruitment is encouraging students to enroll in vocational education programs. Recruitment is aimed at those students or potential students who are of secondary school age and older, who are in school or out of school, and who are in need of entry level skills, retraining, or upgrading of skills necessary to advance upward on the job. Student recruitment is also aimed at initiating individual (one-to-one) contact with those students who have an identified need for vocational education, such as the disadvantaged and handicapped, for the purpose of encouraging them to enroll in vocational education programs.

NEED

To attract to the vocational education instruction program the students who are capable of profiting from the instruction. To reach those individuals in the general student population who are not now being served by vocational education.

GOALS

Every student, grades 7 through 12, will be continuously exposed to an effective information and recruitment program that will include educational opportunities available at each-grade-level. In addition, employment opportunities based on completion of any one of the various vocational programs will be made available to interested students in advance of enrollment.

OBJECTIVE

To expose 50 percent of the student body each year to opportunities in vocational education by scheduling career days, field days, and community resource speakers. A five percent increase in vocational program enrollment each year is anticipated.

ALTERNATIVES

If finances will not permit field days and field trips, we expect to increase the emphasis on career days with community resource people to provide exposure to the vocational occupations for the students.

If the school program will not permit the organized career days and community resource speakers, we expect to have an expanded information program made available to students, counselors, teachers, and administrators. This program will include flyers, posters, and brochures published, posted, and distributed on a weekly basis.

OBJECTIVE

To operate a program of inservice education as a regularly scheduled event at least once each quarter. The purpose is to expand the understanding, thereby increasing the level of sophistication of counselors, teachers, and administrators concerning vocational education programs. The success of this program

will be evidenced by the increased enrollment of students not now being served by vocational education.

ALTERNATIVE

If teachers, counselors, and administrators find it impossible to work the vocational information inservice training program into their schedules, we expect to ask the principal to give ten minutes at each monthly faculty meeting to promote vocational education programs. The presentation will be based on materials specifically prepared for counselors, teachers, and administrators.

OBJECTIVE

At least once each quarter to expose all students, grades 7-12, to a career information program consisting of publications, multimedia presentations, and teacher-prepared lectures on occupation and education opportunities that are directly related to existing school programs.

Function 7 CURRICULUM RESOURCES AND ANCILLARY SERVICES

DEFINITION

The purpose of this function is to identify and assess the resources necessary to implement new and improved vocational education programs. Resources include personnel and the total instructional environment.

NEED

District personnel may be unaware of many of the instructional materials and aids which are available in the district schools that might be used in the vocational education program. Also, district personnel may not know of all the potential resources in the community that could be borrowed or acquired by the district at little or no cost.

The district has audiovisual equipment, but the supply of materials (films, filmstrips, etc.) is limited to a few obsolete filmstrips on shop safety. 16mm films can be ordered from the county film library, but the selection in various vocational areas is limited, and teachers sometimes cannot obtain the most current instructional films. In the past, inservice training for vocational education instructors has been limited to occasional workshops sponsored by county or state consultants.

GOAL

To identify those resources that will implement new and existing vocational programs.

OBJECTIVES

1. The district vocational coordinator, in cooperation with the vocational education teachers in each high school, will compile a complete inventory of equipment, instructional materials, publications, and resource persons in the district that could be used in the district vocational program. In addition, a similar survey of resources will be made in the community served by the district. This inventory, with the district coordinator's report of the project, will be deposited in the superintendent's office before April 1, 1972.
2. The district will be represented on the county superintendent's film selection committee by an appointed representative. The representative will compile a list of current vocational education requests which will be presented to the county committee by October 1, 1972.
3. The district vocational coordinator, in cooperation with the vocational education teachers, will preview available filmstrips and recommend the purchase of current materials by October 1, 1972.
4. The district will make released time available for all teachers whose assignments include vocational instruction to enable them to participate in the county workshops on P.P.B.S. to be held in the spring of 1972.

ALTERNATIVES

Film Resources. The fact that the district could acquire its own film library was considered. This was rejected, however, because district financial resources indicate that many more instructional resources could be acquired by cooperating with the county.

Inservice Training. The possibility of the district conducting its own P.P.B.S. workshops was considered, but the expense of hiring a consultant and the advantage of countywide conformity in accounting procedures made the county workshop the best choice.

Function 8 GUIDANCE AND COUNSELING in Rural Southern California

DEFINITION

Vocational guidance and counseling includes those activities which provide information and assistance to youth and adults considering preparation for employment and a career goal.

NEED

Status of Existing Programs. Standard elements of vocational guidance and counseling service are available to students in high school grades nine through 12 and to a limited degree to adult students enrolled in evening programs. Students may request specific vocational guidance information and related services during a pre-arranged appointment with their assigned counselor. Information and services now available to students include:

1. An opportunity to review and discuss occupational information pamphlets and books containing descriptions of job requirements, employment preparation and training facilities, pertinent facts and data on the potential labor market, opportunities for advancement, et al.
2. Testing services such as aptitude, ability, interest, dexterity and self assessment are available on a limited basis to students who evidence unusual motivational, aptitude, discipline, or other problems.
3. Group, motivational, and self assessment tests are given once each year if time, schedule, and finances permit.
4. Some career and job information books and pamphlets are available in the school library. Most are located in the reference section. There are some career "Story Books" available for circulation.
5. A Micro-film reader and copy maker is available through the VIEW system. Students may read specific information about employment opportunities in their local area as well as data on college training courses and enrollment requirements.

Guidance and Counseling Program Needs. To meet the objective of the vocational guidance and counseling function, the following new services must be made available:

1. Motivational, interest-capturing guidance materials must be developed. Suitable materials available for purchase should be procured and used. Because of the short supply of guidance materials with the pizzazz and schmaltz that appeals to the mature youth and adults of today, a means for production and dissemination of materials must be developed. Join the Navy or Be an Air Force Pilot posters may be used as examples of attention attracting materials.
2. A complete library of available vocational guidance books, pamphlets and audiovisual materials must be made available in all school, city, and county public libraries. This material should be in readily

accessible files, stacks, or racks and available for free loan under the existing library system. Library patrons should be encouraged to browse and borrow at will.

3. A mobile "bookmobile" type of vocational guidance service must be made available to adults, out-of-school youth and students in rural schools. The mobile unit shall work closely, possibly under contract, with the local schools and local library to establish a continuity of guidance information service. Visits of the mobile unit will be for motivational and special program purposes. It will serve as a link between school, public library, community, and employment service agencies. The operator of the mobile unit will work closely with local librarians and assist them in maintaining, updating, and displaying their guidance materials. During his stay he will demonstrate and promote the use of library vocational guidance materials to relieve the school counselor of this responsibility, which he is not equipped to assume.
4. A continuing financial base or source of funds to be used as needed to meet the needs identified in items 1, 2, and 3.
5. A resolution or written commitment from the school district's board of trustees to provide adequate financial and administrative support to a continuing program of vocational guidance services. The amount of financial support to be used specifically for vocational guidance may be apportioned from the total sum budgeted for all guidance services. A ratio derived from student follow-up statistics showing the percentage of former students employed in vocational pursuits to percentage of former students completing at least two years of college may be used as a guide for apportionment of support. Sources of additional support funds should be actively explored for purposes of procurement and use in expansion of the vocational guidance services.

GOAL

To assist students in preparing to make appropriate occupational or career choices themselves.

OBJECTIVE

Staff and equip a vocational guidance center in each high school by January 1973.

ALTERNATIVES

Apportion funds from VEA Entitlement and assign staff.

Develop and submit a project proposal for support of a new program.

Request assistance from community action and business groups.

OBJECTIVE

At least once during the next fiscal year, conduct general vocational guidance employment preparation seminars for high school students and adults enrolled in evening high school.

STRATEGY

Schedule, arrange, publicize, and implement the seminars.

OBJECTIVE

Provide self assessment testing of students enrolled in the eleventh grade.

STRATEGIES

Procure tests with Vocational Education Association funds; schedule group tests by arrangement with administrators, counselors, and teachers.

Advertise availability of testing service. Arrange for students to take tests on their own time in the school library, with costs of the tests paid out of general guidance budget.

OBJECTIVE

Assist in the promotion, development, and maintenance of a vocational guidance information and materials section in each public library.

STRATEGY

Hold meetings with librarians to discuss the need. Volunteer assistance in selecting and cataloging materials. Arrange for guidance center files and stacks and for publicity for the center.

Function 8 GUIDANCE AND COUNSELING in Urban Northern California

DEFINITION

Guidance and counseling is a process by which the student is given assistance in establishing a career goal through self-appraisal and assessment, testing, and the acquisition of meaningful occupational and educational information. This should lead to the establishment of a plan which will prepare him for a career through appropriate educational experiences and types of work exploration. Career planning should result in increased and more effective usage of the vocational instruction available in the district, as well as improved services for students.

NEED

Students need to make career plans that are realistic in terms of their own abilities and interests and are also realistic in terms of employment opportunities. Many students in our district are still making unrealistic and impractical decisions regarding their employment future, as illustrated by the high rate of youth unemployment and the proportion of our students who drop out of college.

GOAL

The overall goal is to expand and maintain an effective program for career planning through occupational guidance and counseling.

OBJECTIVES

1. An inservice training program in career counseling will be conducted for district high school counselors. The content of this program will meet the approval of the American Personnel and Guidance Association Committee on Career Counseling. All counselors will be encouraged to attend either the fall workshop which will be held in October or the spring workshop to be held in March.
2. The district will, by the opening of the fall semester, make whatever adjustments are necessary to establish and maintain a new pupil-counselor ratio in the high school of 300 students to one counselor. The district director of personnel services will report the pupil-counselor ratio in each school to the superintendent by October 1, 1972.
3. The director of counseling services at each district high school will initiate a committee to investigate the adequacy of the school career information services. He will report to the superintendent specific recommendations for improving such services, including acquisitions of materials and services, by December 1, 1972.

ALTERNATIVES

Few alternative courses of action are available for accomplishing either the 300 to 1 counselor-teacher ratio or the investigation of career information services. In the first instance, additional personnel will be necessary, whether obtained through shift in assignment or additions to the staff. In

ALTERNATIVES (continued)

the second, considering present budgetary restrictions, investigation and recommendation must be accomplished by the present staff. It is suggested that the committee selected to make the study include both counselors and members of the library staff whose workloads can be adjusted to accommodate the additional task.

The inservice training program will best be accomplished by career guidance consultants obtained from the Santa Clara County Superintendent's Office in connection with the implementation of project "Search." The possibility of securing the services of the local state college was considered and rejected because of a conflict in guidance philosophy.

Function 9 PLACEMENT

DEFINITION

Placement is an aspect of a broad guidance and counseling process through which student employment is facilitated. It may embody exploratory work experiences, subject-related job opportunities, as well as employment upon graduation. In its manifold aspects, it may be described through California's system of work experience education, the career development process, employment counseling, as well as through assignment to work upon satisfactory completion of a program of vocational study.

NEED

The Human Resources Development Agency, until a few years ago, supplemented staff placement services by furnishing aptitude testing, individual student counseling, and job referral to the San Francisco schools. This service was discontinued, and the entire placement responsibility was assigned to district work experience coordinators. It has been noted, however, that the placement services furnished by the work experience coordinators has been increasingly restricted by the assignment of additional duties to these persons. A recent downtrend in the availability of jobs, together with increased state and national interest in the placement responsibilities of schools, has caused the district to reassess its student placement services with the aim of increasing their effectiveness.

GOALS

The ultimate purposes to be served by the placement function shall consist of one or a combination of the following:

1. The provision for after school, cooperative, or other training that enables occupational exploration, provides for skill development, or creates other work-related learning that supplements school instruction. Such placement is temporary and intended basically to provide for student exposure to the realities of the world of work while relevant school learning takes place.
2. Employment upon satisfactory completion of a course, program, high school requirements, or other education conditional for employment.

OBJECTIVES

1. To form a study committee to assess present placement practices and recommend how present services can be restored to former levels or made to exceed them. The committee will be appointed by the director of occupational preparation. The study will be initiated by October 1, 1972. A final report will be delivered by January 1, 1973.
2. The staff assistant for work experience education will design and conduct programs of inservice training for all personnel concerned with the placement function. Planning will take place during the summer of 1972. The program will be conducted during the fall of 1972.

OBJECTIVES (continued)

3. During the 1972-73 school year, each work experience coordinator will continue to devote at least one-half of his time to placement duties in a given high school. He will have a continuing case load of at least 50 students. He will keep a daily log of his activities, provide a monthly student placement report, and submit a yearly summary of his services by June 30, 1973.

4. Through classroom sessions, small group discussion, individual counseling, the use of learning packets, and like methods, each work experience coordinator will conduct a program of learning related to a student's part-time work experiences while he is in school and to full-time placement upon graduation. Elements of this program will consist of preparation for job-seeking (self-assessment, grooming, occupational exploration), the job application process, conditions of work, and other related factors.

5. Each work experience coordinator will continue to conduct a "senior survey" in his schools. This survey will be standardized on a form developed by the entire staff. Major elements will relate to school and work plans of the graduates. The work experience coordinator will assist those who seek employment upon graduation. Senior survey reports will be submitted to the staff assistant for work experience education by June 30, 1972.

ALTERNATIVE

A possible alternate course of action was considered. Additional personnel could be added to the staff to provide more of the necessary placement services. Under present budgetary restrictions, however, this course of action is not feasible. Any solution to present placement problems must be achieved within the existing personnel structure.

Function 10 VOCATIONAL INSTRUCTION in Rural Northern California

DEFINITION

Vocational instruction is providing students with learning experiences leading to the development of skills, knowledge, and attitudes necessary for job entry.

NEED

Del Norte County is an isolated rural county in the extreme northwestern corner of California. With the limited opportunity for obtaining advanced educational training afforded by this small community, a substantial number of students enter the job market directly from high school. Because of a limited local job market, a large number of our students migrate to the metropolitan areas of California and Oregon to seek employment. In addition to the initial vocational training needs of its young people, Del Norte County schools must also meet a considerable demand for retraining and up-grading of the vocational skills of its adult population.

Students who have been recruited into the system and who have been counseled by the system must be furnished with the opportunity to gain the skills, knowledge, and attitudes required to make them employable.

GOAL

To provide instructional services necessary to meet individual and community needs for vocational training.

OBJECTIVES

1. The district will hire an experienced specialist in vocational training to guide the expansion and development of the vocational education program. The vocational education specialist will be selected by the governing board of the school district. He will be assigned duties which will include the supervision of planning district vocational education and directing the regional occupational program.

Evaluation of this objective will be accomplished by observation. If the specialist has been hired and if the regional occupational program is in operation by the end of the 1971-72 school year, this objective will be considered accomplished.

2. During the 1971-72 school year, the district will develop plans for the inclusion of a simulated office as a part of the vocational curriculum. These plans will be incorporated in a project proposal which will be submitted for obtaining a federal grant to help with financing.

The performance of this objective shall be considered complete if the plans have been formulated and approved for federal financing by June 1, 1972.

ALTERNATIVES

1. To continue the instructional program as in the past with emphasis on the major vocational areas of trades and industry, forestry, office

ALTERNATIVES (continued)

occupations, distributive occupations, and home economics, leaving vocational instruction in minor areas to be accomplished in post-high school programs by training agencies outside the county.

2. To completely revise and expand the high school program to include vocational training in all areas regardless of enrollment.

3. To continue the instructional program of the past, revising it to meet changing needs, and to establish a regional occupational plan where training programs in areas now neglected because of low enrollment may be instituted. These programs would serve the adult population of the community as well as that of the high school.

Alternative three was selected as the alternative to be followed because it was the only one the committee felt would be economically feasible and also allow for improvement of our vocational education program.

Function 10 VOCATIONAL INSTRUCTION in Urban Southern California

DEFINITION

Vocational Instruction is that integral part of the total educational program that develops the skills, knowledges, and attitudes required for occupational competency.

NEED

At present, vocational education programs other than business-related programs are provided in four of the five district high schools. Recent policy statements from the board of trustees indicate that the district should initiate additional diversified programs of vocational instruction in all of its high schools, and should move to improve the quality of vocational instruction as recommended in a recent district vocational education evaluation study which was completed with the assistance of consultants from the state and Los Angeles County.

GOAL

To provide the environment and vehicle for imparting the necessary vocational skills and technical information to students as provided for in district policy.

OBJECTIVES

1. The district will acquire additional administrative services to assist in the preparation of educational specifications and personnel acquisitions and to implement an expanded program of inservice teacher training. The selection process will be completed by December 1, 1971, so that services can commence on January 1, 1972.
2. In the school year 1971-72, the district will provide all full-time vocational education teachers with 12 hours of inservice education.
3. In the school year 1971-72, schedules will be arranged so that any vocational education teacher who lacks a preparation period will be provided with one.
4. The district will provide substitute teachers so that each full-time vocational teacher can spend at least one full day in the school year 1971-72 visiting an industry or business related to his teaching field.

ALTERNATIVES

Additional Administrative Services. The district could acquire the recommended services by contracting with outside consultants. In consideration, however, of the present inadequate vocational education administrative staff and anticipating a continuing need for these services for the next several years, it is recommended that a new associate superintendent of vocational education services be acquired at the district level and the two present part-time coordinator of vocational education positions serving four of the high schools be increased to full-time positions serving all of the high schools.

ALTERNATIVES (continued)

Inservice Training. The district could acquire staff to conduct its own inservice training program. Because of the danger, however, of such individuals being diverted to other tasks and because they might not be able to keep up on the latest information, it is recommended that inservice teacher education services be acquired on a year-by-year basis from either of the two local state colleges or the state university.

Instructor Visitations. Instead of providing for substitutes, the district might wish to employ an additional teacher for the purpose of relieving the full-time staff members. Since the present number of full-time staff members would not require all of the time of such a teacher, he could be used for part-time planning and vocational education administration. At the present time, however, it is recommended that the temporary substitutes be used. Two years from now, with an expanded staff and additional programs and students, the acquisition of an additional relief teacher would be justified.

Function 11 PROGRAM REVIEW

DEFINITION

Program review is the examination or re-examination of individual vocational education programs and the total vocational education program for the purpose of insuring quality, completeness of planning, and appropriateness in terms of meeting priorities, goals, and objectives of the total educational unit.

NEED

The vocational education system needs to be represented fairly and accurately to the decision makers who control the resources required for the system to function. This involves presenting evaluative and program justification information for administrative participation in decision making.

GOALS

To convey, in an effective manner, information about vocational education that is needed for decision making.

To insure that the vocational education system is represented at the policy-making and decision-making level in the most effective manner.

OBJECTIVES

1. By the end of the first year, the vocational director will be included as a participating member of the superintendent's cabinet.
2. The vocational director will, within the first month of the current school year, determine the kinds of management information required at the decision-making level and transmit these requirements in terms of both content and format to the program planning, system evaluation, and other appropriate functional elements.
3. The vocational director will study alternatives based on resources and priorities which would improve the district's vocational education offerings, and present these to the superintendent's cabinet by the end of the current school year.

ALTERNATIVES

1. In the absence of a vocational director, the vocational unit will delegate the responsibility of representing the vocational education system to one of its members.
2. In the absence of direct representation of a vocational education individual on the superintendent's cabinet, analyze the communication link and make optimum use of the existing structure to convey vocational education system management information.
3. Create an independent vocational program review committee to function in the review process and convey their findings in the most effective manner to those who make policy and provide resources.

Function 12 EVALUATION

DEFINITION

Evaluation is the process of determining the degree to which the vocational education system is meeting its objectives. The results of evaluation are used as part of the management information system as well as for meeting the requirements for periodic reporting set forth in the California State Plan for Vocational Education and P.L. 90-576.

Evaluation in vocational education is comprised of two primary elements: (1) end-point (terminal) evaluation; and (2) functional (ongoing) evaluation. End-point evaluation is primarily concerned with how well the system met its overall objective as determined by follow-up studies of dropouts, hire-outs, and graduates and of the number of students enrolled versus the number of students who, in fact, should be enrolled. End-point evaluation can also be thought of as evaluation at a logical stopping place, such as when reports are due to the state.

Functional (ongoing) evaluation is directed at evaluating how well each basic function is meeting its objective. Functional evaluation should be carried out on a continuous basis, with the results being used for improvement in the system. The performance of the basic evaluation function should be periodic, with the results used to measure what is being done relative to what should be done.

NEED

The local district lacks objective evidence upon which to base its vocational education decision-making. Although a district plan is prepared according to the vocational education system format, actual knowledge about the system and the students who graduate after having experienced the system's process is not obtained in an objective manner. Decisions are based on the best subjective judgment of the school principal at the time he is forced to make them.

GOAL

To obtain information for improving the decision-making process in regional and local vocational education programs.

OBJECTIVES

1. Join the county cooperative effort to make a countywide high school graduate 3-year follow-up study. The district will contribute its share of the cost and will assign the vice principal to serve on the research advisory committee. The vice principal will report to the superintendent and the board of trustees on progress of the study at the June 1972 board meeting.

2. Teachers whose assignments include vocational education will obtain a standard student characteristic card for each of their vocational students from the district office in September 1971. These cards will be maintained by the teachers according to directions furnished by the county survey committee and will be submitted to the county master file to become a permanent record on June 15, 1972.

ALTERNATIVE

The idea that the district could do its own follow-up study was considered. This was rejected, however, in favor of the county survey because of the cost and the administrative time commitment which would have been required for the local study.

Appendix A THE 12 FUNCTIONS^{*}

1. POPULATION NEEDS

This function is primarily concerned with establishing and maintaining an information file which describes the population being served. To meet the objectives of the function, the information file should contain such data elements as are required to establish the relative vocational education needs of the target population, including the population in model cities, particularly those persons who have academic, socioeconomic, or other handicaps that prevent them from succeeding in the regular vocational education program.

2. JOB MARKET

The job market information function is the counterpart to the population needs function insofar as it is essentially concerned with the demand side of the labor demand/supply curves. The function is primarily concerned with developing and maintaining a file of information on existing and new and emerging occupations which (1) fall within the occupational categories served by vocational education; and (2) have current or anticipated excess demands.

3. JOB PERFORMANCE REQUIREMENTS

This function represents the task of establishing job specifications for the vocational instruction program. These specifications include the identification of the skills and knowledges required to achieve the occupational or other objective of instruction.

The development of the specifications should probably involve the use of the task analysis technique using data supplied by individuals having skills in and substantive knowledge of the occupation or the occupational skills included in the instruction and/or requirements of licensure when appropriate. Representative vocational education advisory committees are required and will be of great importance in establishing the true requirements for entry level and progression in the vocational field.

4. PROGRAM PLANNING

This function is concerned with integrating information on population needs and job opportunities in the light of the area manpower plan (if any) and budget constraints to develop new and improved curricula so that a proper assortment of programs is offered. Clearly, this function, which includes area planning, is of paramount importance to the future success of the system.

5. VOCATIONAL EDUCATION PROMOTION

The purpose of this function is to plan and execute those activities necessary to inform the public of the strengths and merits of vocational education. The promotion of vocational education should take into consideration what population groups are most critical to the primary objectives and desired results.

^{*} As defined in "Instructions for Preparing a District Plan for Vocational Education," 1972 edition.

6. STUDENT RECRUITMENT

The student recruitment function is aimed primarily at identifying those who need vocational education and encouraging those so identified to enroll in a program of instruction. Recruitment can be directed to those already in school or those out of school. In essence, recruitment is primarily concerned with the task of initiating personal contact between individuals and the system. Recruitment differs from vocational education promotion in that the objective of promotion is to change attitudes rather than to initiate contact with potential students.

7. CURRICULUM RESOURCES AND ANCILLARY SERVICES

The purpose of this function is to obtain the resources necessary to improve existing and/or develop new vocational education programs. Such resources include materials (textbooks, worksheets, standard tests, and so forth), equipment (lathes, keypunch machines, drill presses, and so forth), physical plant, and trained instructors. In addition, the function is concerned with the development of ancillary services such as audiovisual equipment, library services, and inservice instructor training programs.

8. GUIDANCE AND COUNSELING

The guidance and counseling function consists of those activities necessary to provide individuals with sufficient information to allow them to make meaningful and informed occupational choices. The term "information" is meant to include data relating to the availability, characteristics, and recruitment of jobs for which training is, or will be, available, as well as the individuals' vocational interests and capabilities. In this sense, then, the function is also concerned with continual individual assessment.

9. PLACEMENT

The objective of this guidance function is to provide individuals with sufficient information to make a meaningful and informed occupational choice and, if that choice is employment, to assist them in finding that employment which best fits their needs and the needs of employers. As with the guidance and counseling function (item 8), however, in the last analysis the individual himself makes the final decision as to his course of action, although this decision may be constrained by available opportunities.

10. VOCATIONAL INSTRUCTION

Vocational instruction function represents the major activity of the system; that is, providing instructions to individuals for the purpose of preparing them for gainful employment or advanced vocational-technical training. Most of the resources available to the system will be utilized in performing this function.

The success of the program of instruction is highly dependent on a number of other activities which precede it, including analyzing the needs of the

population, identifying specifically where job vacancies exist or will exist, developing an effective program plan, developing curricula which are responsive to the true skills and knowledges required to enter and succeed in a vocational field, and assisting students, through exploratory and remedial instruction, to select and succeed in a vocational program.

11. PROGRAM REVIEW

This function is included to represent the requirements for review of local program plans. The existence of a decision-making activity which may be beyond the control of the local director is of concern in local level evaluation. To a large extent, however, the acceptance of a plan will be dependent on the quality and completeness of the program planning information, which provides an opportunity for a further evaluation of that activity.

12. EVALUATION

Evaluation is the process of determining the degree to which a system is meeting its objectives. The results of evaluation are used as part of the management information system as well as for meeting the requirements for periodic reporting set forth in P.L. 90-576.

Evaluation in vocational education is comprised of two primary elements: (1) end-point (terminal) evaluation; and (2) functional (ongoing) evaluation. End-point evaluation is primarily concerned with how well the system met its overall objectives as determined by follow-up studies of dropouts and graduates and the number of students enrolled versus the number of students who, in fact, should be enrolled.

Functional (ongoing) evaluation is directed at evaluating how well each basic function is meeting its objectives, which are, in essence, subobjectives of the overall system. Functional evaluation should be carried out on a continuous basis, with the results being used for improvements in the system. The performance of the basic evaluation function should be periodic, with the results used to satisfy the annual reporting requirements. One of the more straightforward methods used in functional evaluation is to ask "what questions would you ask to determine how well a function has been performed?"

SOME CHARACTERISTICS OF WORK GROUP MEMBERS AND THEIR DISTRICTS

During the project work group coordinators completed participant data summaries which described some characteristics of participating members of their groups. A compilation of these reports revealed the following about the 155 participating work group members and their school districts:

- The typical participant was male (only four percent were female) and all but four percent were white. Three out of four were thirty-five or older. Over three-fourths held positions as administrators or supervisors; the remainder were employed as teachers (14 percent) or pupil personnel specialists (10 percent).
- Three-fourths of the 155 participants held advanced degrees (masters, 70 percent; doctorates, 6 percent). Nearly half (48 percent) had 15 or more years of teaching or other employment in the field of education; 22 percent had been so employed 20 years or more. Only 13 percent had been in the field less than ten years.
- Participants' school assignments most often covered a grade level range including junior high as well as senior high; 85 percent represented school affiliations covering grades 7-12 at the least; another 11 percent held post-secondary assignments.
- Vocational education programs represented were fairly evenly distributed as to type of area served, with a somewhat larger proportion operating in rural contexts (40 percent) than in urban (33 percent) or suburban (27 percent). About one-third of the programs served poverty areas (14 percent in urban areas, 15 percent in rural). 85 percent of the participants reported that less than 20 percent of their students were from families living below the poverty line.

* Left his position before project was completed.

ASSESSMENT; OKLAHOMA

ABSTRACT - THIS SUMMARY OF THE FOLLOW-UP
EVALUATIVE ASSESSMENT OF A TRAINING PROGRAM
FOR VOCATIONAL AND TECHNICAL ADMINISTRATORS
INSTITUTED IN OKLAHOMA DURING 1970-71 WAS
CONDUCTED OVER A SPAN OF TEN WEEKS AND
EMPLOYED THREE METHODS OF DATA COLLECTION:
QUESTIONNAIRE SURVEYS, INTERVIEWS, AND AN
EVALUATION MEETING. DATA WERE OBTAINED FROM
PROJECT PERSONNEL AND PARTICIPANTS. FINDINGS
REVEALED THAT: (1) THERE IS A PRESSING NEED
FOR MORE PROGRAMS OF THIS TYPE, (2) THE
PROJECT WAS BASICALLY SUCCESSFUL IN THAT THE
OBJECTIVES OF MOST OF THE PARTICIPANTS WERE
FULFILLED, (3) MORE INPUT FROM LOCAL
ADMINISTRATORS SHOULD BE UTILIZED, (4) FUTURE
PROGRAMS SHOULD CONSIDER INTEGRATING OTHER
AREAS SUCH AS CAREER EDUCATION, (5) MORE
PLANNING SHOULD BE GIVEN TO THE ISSUANCE OF
GRADES AND EARNED CREDITS, (6) GREATER
EFFORTS TO MAKE ALL PARTICIPANTS AWARE OF THE
GOALS ARE NEEDED, AND (7) TRAINING SITE
SELECTION SHOULD BE CONSIDERED IN LIGHT OF
PARTICIPANTS' NEEDS. (SN)

FOREWARD

Effective evaluation is essential if improvements are to be made in education and training programs. While this is an easy statement to make, it is difficult to achieve. This report presents the results of a one year follow-up evaluation of a training program for vocational and technical education administrators. It is hoped that this information will serve to improve future in-service programs. The areas discussed in this report are relevant to the total program itself, but do not explain many of the specific details of the program. A more indepth analysis of the program design and implementation is presented in a final report called, A Training Program for Vocational and Technical Education Administrators, by Donald S. Phillips. Reference to the final report will provide any necessary background information on areas that may only be briefly mentioned in this report.

This evaluation could not have been accomplished without the input of several individuals. Sincere appreciation is expressed to the program instructors and participants who gave of their time to make input to the evaluation. A special thanks goes to:

Leon Applegate
Roy Byrd
Kenneth Carleton
J. R. Gililand
Larry Ann Holley

Robert Keck
Loyd Parker
Charles Parr
Bill Powers
JoAnne Ruark

who served as consultants to the project.

The one year follow-up evaluation consisted of several interrelated activities carried out during a ten week period. Sincere appreciation

and gratitude is expressed to Kenneth L. Ritter for the leadership he provided in conducting the evaluation. Mr. Ritter was responsible for the detailed planning and implementation of the various phases of the follow-up evaluation.

Donald S. Phillips
Project Director

CHAPTER I

INTRODUCTION

With the rapid expansion of vocational and technical education offerings during the past decade came a demand for qualified educational leaders to serve as administrators for vocational and technical education programs. The Oklahoma State Department of Vocational and Technical Education recognized this demand and identified administrative training as its number one priority area for the 1970-71 academic year. Utilizing Title II, Part F, funds made available under Section 552 and Section 553 of the Vocational Education Act of 1968, the State Department of Vocational and Technical Education and Oklahoma State University combined resources to develop two types of training programs for vocational and technical education administrators. Section 552 dealt with the training of vocational and technical education administrators through a doctoral degree program. Section 553 dealt with a number of areas, but in particular it sought to upgrade vocational and technical education administrators through an in-service training course or workshop.

The upgrading training program of vocational and technical education administrators done under Section 553, hereafter referred to as the EPDA 553 Program, was conducted during the summer of 1970 through the 1970-71 academic year. During that time several phases of evaluation were used to monitor the quality of the training. This provided immediate feedback about the EPDA 553 Program, but had no real views toward the

long-range effects of the training. An evaluation one year after the completion of the training for the EPDA 553 Program was conducted, and this report is the result of that evaluation.

In order to better understand the scope of this report, a brief description of the program design, a statement of the purpose and the objectives of the training programs are presented to provide the reader with a base for viewing the evaluation.

Program Design

Summer Institute

During the summer session of 1970 a four-week institute was conducted on the Oklahoma State University campus. Thirty fellowships were awarded to administrators and administrative aspirants, and they were permitted to enroll for resident graduate credit (one semester hour credit for each week). In addition, a limited number of interested persons were enrolled in the program. The summer institute was conducted on-campus to allow the program participants to be away from the current problems at their local schools.

The course material during each of the four weeks was devoted to specific topics and instructed by out-of-state or in-state consultants.

The topics discussed during the four-week summer institute were:

1. Social Implications for Occupational Education
2. Political Implications for Occupational Education
3. Local Responsibilities for Reimbursed Programs
4. Economic Implications for Occupational Education

The activities conducted by the visiting consultants and resource personnel were informative and allowed for panel and informal discussions by the participants. The participants were given periodic additional written assignments and made committee reports.

Academic Year

During the academic year 1970-71, the participants were enrolled in an in-service program for three semester hours of resident credit. Sixty fellowships were awarded to administrators or administrative aspirants. Other interested school personnel chose to participate at their own expense. The training was conducted at three off-campus locations, Duncan, Tulsa, and Oklahoma City. The program instruction consisted of two hours of classroom session each week at each of the three off-campus locations, and one monthly meeting on-campus for summarizing each topic. The weekly sessions at the three off-campus locations were conducted by university faculty and personnel from the Oklahoma State Department of Vocational and Technical Education. The on-campus monthly meetings were conducted by nationally recognized leaders in the field of vocational and technical education.

Each semester was divided into four units with weekly sessions devoted to specific sub-topics. The units discussed in each semester were:

Fall

1. Public School Administration
2. School and Community Relations
3. Student Service and Adult Education
4. Review and Analysis of Research in Occupational Education

Spring

1. Manpower Analysis
2. Curriculum Development for Vocational and Technical Education
3. Program Planning for Vocational Education
4. Current Trends and Development in Occupational Education

The material discussed in the units came from (1) course material used at Oklahoma State University with individual instructor modification and (2) other non-campus instructors who highlighted their special areas of expertise relevant to vocational and technical education.

Purpose

Several phases of evaluation of the summer institute and the academic year units were conducted while the program was in progress and near the end of the program. This provided immediate evaluation input concerning the program's instruction units and objectives. The final stage of evaluation was needed to view the results of the training program at a later date. This report is an evaluation of the training program one year later.

In short, the purposes of this report are to (1) view the objectives of the EPDA 553 Program and see to what extent they had been met, (2) analyze the EPDA 553 Program organization and management, and (3) see what changes can be made to improve future programs like the EPDA 553 Program.

An evaluation of this kind can only aim at findings that can be drawn from personal opinions of the participants as to its usefulness to them. It is for this reason that the information obtained from this

evaluation will be subjective and seen from only a time period of one year later.

Objectives

In evaluating the EPDA 553 Program a year after its completion, it becomes necessary to go back into the past and review the original objectives. While the objectives from the past may have changed or may have been altered as the program grew, they are still important for viewing the initial purpose of the program and the actual outcomes. This evaluation, thus, involves looking at the following objectives of the program.

Primary EPDA 553 Program Objectives

1. To update and improve the skills and competencies of vocational and technical education administrators in Oklahoma.
2. To provide pre-service experiences for persons aspiring to administrative responsibilities.

Unwritten Objective

1. To expose the participants in the program to a number of topic areas which would make the participants more cognizant of their weaknesses and strengths in administration.

Specific EPDA 553 Program Objectives

1. To develop a sound philosophy of the principles and practices of vocational and technical education necessary for administering quality vocational and technical education programs.

2. To interact effectively with representatives of industry, business, and labor in order to assess the needs and priority areas for vocational and technical education and translate these needs into educational programs.

3. To identify policy and decision makers in authoritative positions who can effect changes in educational programs and to interpret the role of vocational and technical education to these significant groups.

4. To understand the roles and responsibilities of the myriad of programs promulgated by the several national, state, and local agencies which impinge on the field of vocational and technical education; and, where appropriate, utilize resources from programs such as CAMPS, JOBS, OEO, WIN, and other programs as they develop to effectively meet the needs of persons who need vocational and technical education.

5. To communicate effectively with administrators of the several types of institutions, such as area vocational-technical schools, junior colleges, technical institutes, and colleges and universities, to assure an effective interface among and between such institutions.

6. To develop an awareness and understanding of PPBS and its relevance to effective program planning, implementation, evaluation, and administration.

Follow-Up Evaluation EPDA 553 Program Objectives

After the EPDA 553 Program had been completed, several future points of evaluation about the program needed to be analyzed. These points of evaluation are covered in the following questions:

1. Are participants working in positions different from the ones they were in prior to the project?
2. Has the project actually helped them in terms of their leadership responsibilities? How?
3. In light of experiences since participation in the project, what is their re-evaluation of the project?
4. Have new projects or processes been initiated as a result of the project?
5. What changes have been made in education programs of participants since the termination of the project?
6. How might a project of this type be improved?

CHAPTER II

METHODOLOGY

The follow-up evaluation of the EPDA 553 Program was conducted in three steps over a span of ten weeks: questionnaire, interviews, and evaluating meeting. Each of these three steps is explained below.

Questionnaire

A questionnaire (see Appendix A) was designed during May of 1972 with the assistance of personnel from the Oklahoma State Department of Vocational and Technical Education and the School of Occupational and Adult Education at Oklahoma State University. The questionnaire was aimed at analyzing the objectives, organization, and management of the EPDA 553 Program. Individual phone calls to the participants' employing institutions were made to update the mailing addresses of the participants for the summer, 1972. The questionnaires were mailed June 5, 1972, to the 78 participants of the EPDA 553 Program. A reminder postcard was later mailed to assure a fast response.

Interviews

Interviews with 14 instructors who taught various topics in the EPDA 553 Program and with 22 participants in the EPDA 553 Program were conducted during June and July of 1972. The interviews provided personal contact with different people who were involved in various parts

of the program and served to (1) provide information about the instructor's views toward the program and (2) provide a chance to meet with participants in the program and discuss areas that could not be put in the questionnaire or were omitted from the questionnaire. Since this evaluation was conducted over a short period of time and the participants were difficult to contact during the summer, the interviews were not set up to give a representative sample of all the people involved in the program. Instead, the results of the interviews were designed to broaden the understanding of the program participants who served as consultants in the evaluation meeting.

Evaluation Meeting

Ten of the participants in the EPDA 553 Program served as consultants at an evaluating meeting held July 12 - 14, 1972, in Stillwater, Oklahoma. The evaluation meeting analyzed the results of the questionnaires and interviews and formulated recommendations from interaction with two panels. The breakdown for the evaluating meeting was set up the following way (see Appendix B for Agenda of EPDA 553 Program Evaluation Meeting, List of Consultants, and List of Panel Members):

July 12, 1972 -- Analyzing results of questionnaire and interviews

July 13, 1972 -- Discussion of questionnaire and interview results
(Afternoon) with personnel from the School of Occupational and Adult Education and the Graduate College at Oklahoma State University.

July 13, 1972 -- Discussion of questionnaire and interview results
(Evening) with personnel from the Oklahoma State Department of Vocational and Technical Education.

July 14, 1972 -- Formulating and finalizing recommendations for the EPDA 553 Program.

CHAPTER III

RESULTS OF THE STUDY

These results came from four sources and are presented in the following manner: Results from the Participant Questionnaire; Results from Instructor Interviews; Results from Participant Interviews; and Highlights of the Panel Discussions.

Results from the Participant Questionnaire

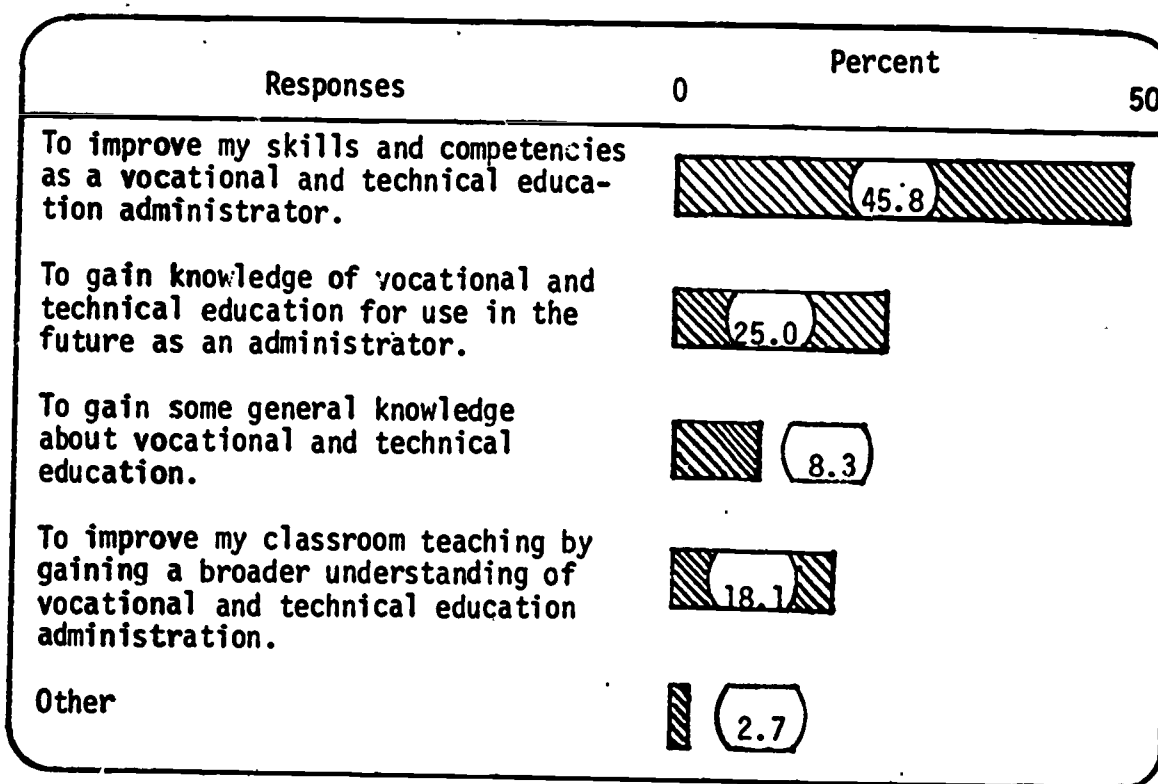

The questionnaire was sent out to the 78 participants in the program, and a 92.3 percent return was received. When reading the results of the questionnaire, three considerations should be kept in mind:

1. The participants had different vocational and technical education backgrounds (administrators, 52.6 percent; instructors, 39.7 percent; other various backgrounds, 7.7 percent).
2. The participants were enrolled in separate phases of the program (summer, fall, spring).
3. The questionnaire called for personal opinions.

Table I lists the reasons the participants enrolled in the program. There may have been several reasons why they enrolled in the program (i.e. college credit, training, friends were enrolled, etc.), but the reasons listed are those relating to the primary objectives of the program. The results of Table I show that there was a high percentage,

70.8, who enrolled in the program to gain or improve skills and competencies to use as administrators or future administrators. The 18.1 percent indicate that some instructors enrolled in the program to gain a broader understanding of vocational and technical education to improve their classroom teaching. The "Other" category in this and all other questions with the questionnaire can be found in Appendix C.

TABLE I
RESPONSES TO THE QUESTION, "WHY
DID YOU ENROLL IN THE EPDA 553 PROGRAM?"*

*(n = 72) Percents are rounded to the nearest tenth of a percent.

The responses to the question, "Did the EPDA 553 Program meet your reason for enrolling?", as shown in Table II, indicates that a very large percentage (80.3) of the participants did feel that the program fulfilled their reason for enrolling. It should be noted that the

answers "Yes" or "No" required a definite response from the participants and alleviated the possibility of indecision.

TABLE II
RESPONSES TO THE
QUESTION, "DID THE EPDA 553
PROGRAM MEET YOUR REASON FOR ENROLLING?"*

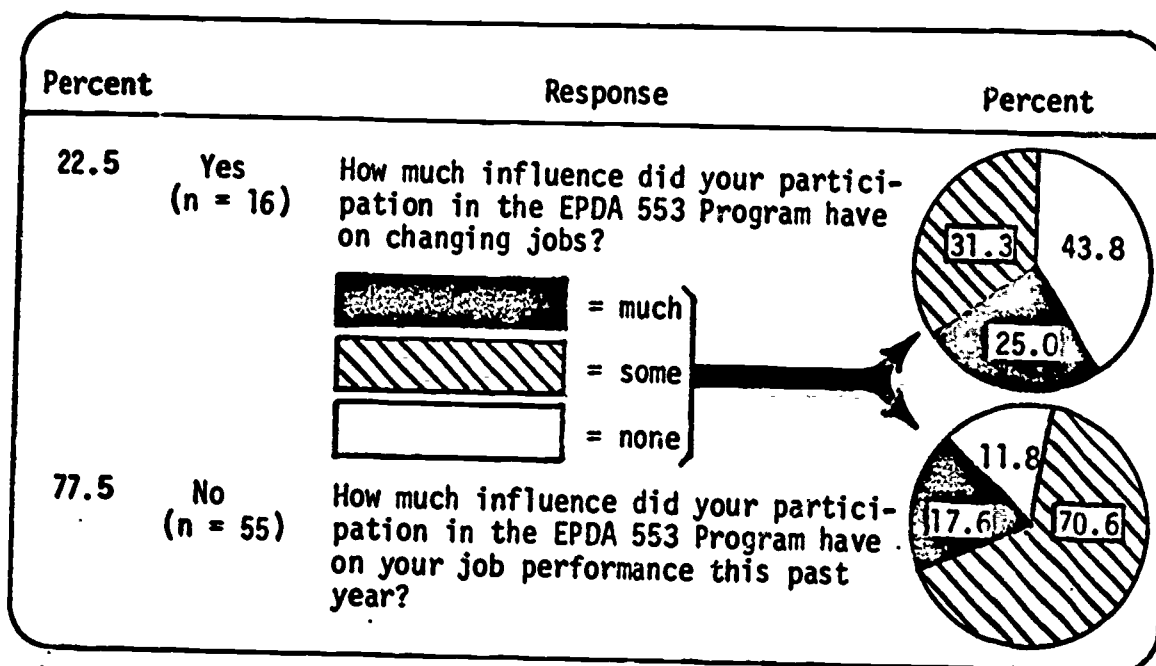

*Percents are rounded to the nearest tenth of a percent.

From Table III it can be noted that 77.5 percent of the participants had not changed positions since the completion of the program. Furthermore, 88.2 percent of the same group felt that "much" or "some" of the influence from their participating in the program had an effect on their job performance. While at the same time, the 22.5 percent of those who did change jobs indicated that the program had a lesser amount of influence (53.3) on their changing positions. From those who did change positions, it is difficult to establish whether they went up or down the occupational status spectrum.

Data relative to questions aimed at finding how, and in what ways, the knowledges gained by the participants in the program were used are presented in Tables IV and V. Table IV shows that a majority of the participants felt that the knowledge gained in the program was used indirectly. There was a substantial 34.3 percent who felt the knowledge gained in the program directly applied to their work.

TABLE III

RESPONSES TO THE QUESTION, "HOW DO YOU FEEL
THE KNOWLEDGE GAINED IN THE EPDA 553 PROGRAM HAS
BEEN USED BY YOU IN YOUR EMPLOYMENT POSITION THIS PAST YEAR?"*

*Percents are rounded to the nearest tenth of a percent.

TABLE IV

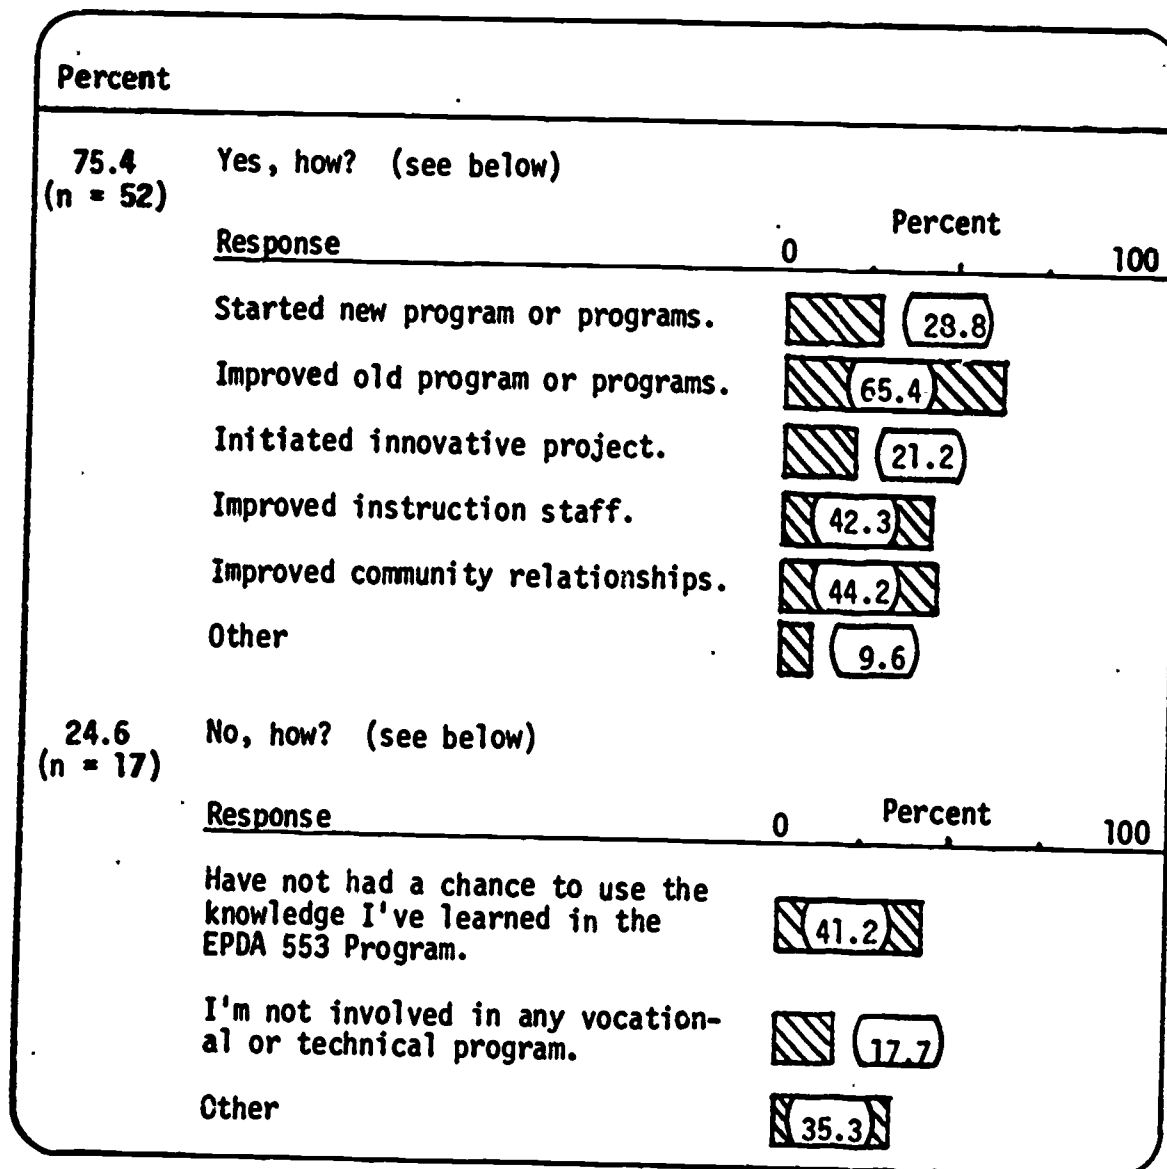

RESPONSES TO THE QUESTION, "HOW DO YOU FEEL
THE KNOWLEDGE GAINED IN THE EPDA 553 PROGRAM HAS
BEEN USED BY YOU IN YOUR EMPLOYMENT POSITION THIS PAST YEAR?"*

*(n = 70) Percents are rounded to the nearest tenth of a percent.

TABLE V

RESPONSES TO THE QUESTION, "DURING THIS PAST YEAR, HAS THE TRAINING YOU RECEIVED IN THE EPDA 553 PROGRAM HELPED THE VOCATIONAL AND TECHNICAL EDUCATION PROGRAM OR PROGRAMS IN OR THROUGH THE INSTITUTION YOU ARE EMPLOYED BY?"*

*Percents are rounded to the nearest tenth of a percent.

The question represented in Table V went one step further than the question presented in Table IV and asked the participants if the training they received in the EPDA 553 Program helped in the program or

programs in or through the institution in which they were employed. A very favorable response of 75.4 percent said "Yes", and that it was done several ways. For example:

1. Improved old program or programs
2. Improved instruction staff
3. Improved community relationships

The "No" response of 24.6 percent indicated that some participants had not yet had a chance to use the knowledge they gained in the program, or had specific reasons on the "Other" category.

Table VI presents a measurement of some of the specific objectives of the program. It should be noted that the participants had already met some of the objectives before they enrolled in the program. For example, many participants could have easily formulated their own philosophy of vocational technical education before they enrolled. The statement in Table VI was intended to solicit the participants' response as to what extent the items (objectives) in the program had been applied advantageously in their current employment. The two responses rating highest in the "Most Helpful" category showed that 56.3 percent found that there was an opportunity to meet and interact with prominent vocational and technical education leaders. Furthermore, 53.5 percent gained an understanding of the different types of vocational and technical programs offered in Oklahoma. The two responses that had the lowest ratings on the "Most Helpful" category revealed a 22.5 percent response to a philosophy of vocational and technical education and a 26.2 percent response to an ability to interact effectively with representatives from industry, business, or labor.

TABLE VI

RESPONSES TO THE QUESTION, "INDICATE
TO WHAT EXTENT THE ITEMS BELOW WERE GAINED
THROUGH PARTICIPATION IN THE EPDA 553 PROGRAM AND
HAVE HAD A HELPFUL APPLICATION IN YOUR CURRENT EMPLOYMENT."*

MH -- Most Helpful
SH -- Somewhat Helpful
NH -- Not Helpful
NO -- No Opinion

Response	Percent			
	MH	SH	NH	NO
•A philosophy of vocational and technical education.	22.5	67.6	9.9	0.0
•An understanding of the different types of vocational and technical programs offered in Oklahoma.	53.5	36.6	8.5	1.4
•An ability to interact effectively with representatives from industry, business or labor.	26.2	63.0	6.2	4.6
•An ability to assess employment needs and priorities and translate them into vocational and technical programs	31.0	54.2	9.9	4.2
•An ability to interpret the role of vocational and technical education to authoritative decision and policy makers.	29.6	50.7	14.1	5.6
•An understanding of the national, state and local roles and responsibilities for vocational and technical education.	36.6	54.9	7.0	1.4
•An opportunity to meet and interact with prominent vocational and technical leaders in Oklahoma.	56.3	38.0	2.8	1.4
•An ability to communicate effectively with vocational and technical administrators from a variety of institutions (Secondary - University).	46.5	46.5	5.6	1.4
•An understanding of vocational and technical administration procedures.	36.6	53.5	8.5	1.4
•An awareness and understanding of effective program planning, implementation, evaluation, and administration.	40.8	50.7	7.0	1.4

*(n = 71) Percents are rounded to the nearest tenth of a percent.

The statement shown in Table VII sought to determine how helpful the different units of instruction in the program were to the participants in their current positions. The results of this table were similar to the immediate evaluations of the units which were compiled at the completion of each particular unit. With the exception of the unit on

TABLE VII

RESPONSE TO THE STATEMENT,

INSTRUCTION IN THE EPDA 553 PROGRAM YOU ENROLLED
IN THAT WERE HELPFUL TO YOU IN YOUR CURRENT JOBS."*

MH -- Most Helpful
SH -- Somewhat Helpful
NH -- Not Helpful
CR -- Can't Remember

Response	MH	Percent SH	NH	CR
SUMMER				
I. Social Implication for Vocational Technical Education (n = 25)	52.0	44.0	0.0	4.0
II. Political Implications for Vocational Technical Education (n = 26)	57.7	38.5	0.0	3.8
III. Local Responsibilities for Reimbursed Programs (n = 25)	32.0	52.0	12.0	4.0
IV. Economic Implications for Vocational Technical Education (n = 27)	30.0	63.0	3.8	3.8
FALL				
I. Public School Administration (n = 61)	32.8	55.7	11.5	0.0
II. School and Community Relations (n = 61)	45.9	45.9	5.6	1.6
III. Student Service and Adult Education (n = 61)	26.2	57.4	13.1	3.3
IV. Review and Analysis of Research in Occupational Education (n = 61)	19.7	57.4	21.3	1.6
SPRING				
I. Manpower Analysis (n = 63)	30.2	57.1	9.5	3.2
II. Curriculum Development (n = 64)	39.1	48.4	10.9	1.6
III. Program Development (n = 64)	34.4	54.7	9.4	1.6
IV. Trends and Developments in Occupational Education (n = 63)	39.7	50.8	7.9	1.6

*Percents rounded to the nearest tenth of a percent.

"Public School Administration", all percentages increased in the "Most Helpful" category, since the program was first evaluated at the end of the program in 1971. The unit on "Review and Analysis of Research in Occupational Education" remained the lowest in the "Most Helpful" category, while the summer sessions on "Political Implications for Vocational Technical Education" remained the highest in the "Most Helpful" category. The unit on "Social Implications for Vocational Technical Education" produced a substantial increase to again achieve the second highest percentage in the "Most Helpful" category.

The evaluation of the different parts of the organizational structure of the program was based upon the degree of satisfaction expressed by the participants. Table VIII shows that for the most part there was a high degree of satisfaction concerning the various parts listed. Many of the "Unsatisfied" responses can be answered by viewing the responses to question number nine on the participant questionnaire.

From the open-ended question (number nine on the questionnaire) came many suggestions and criticisms for and of the program. A general summary of the responses is given below, but it is recommended that the entire responses in Appendix D be read to gain an appreciation of the purposes of this question.

1. Purpose of the program
2. Topics of the program
3. Organization of the program
4. Instructors
5. Class participation
6. Class material
7. Students

TABLE VIII

RESPONSES TO THE STATEMENT,
 "INDICATE BELOW THE EXTENT OF SATISFACTION
 YOU FELT WITH THESE PARTS OF THE EPDA 553 PROGRAM."*

VS -- Very Satisfied
 S -- Satisfied
 U -- Unsatisfied

Response	Percent		
	VS	S	U
• Selection of off-campus training sites (Oklahoma City, Tulsa, Duncan) (n = 72)	66.7	30.6	2.8
• Selection of on-campus training site (Oklahoma State University) (n = 68)	60.3	38.2	1.5
• Selection of grading system (A, B, C, or I System) (n = 71)	54.9	40.8	4.2
• Selection of course number and college department (OAED 5340) (n = 68)	47.8	39.1	13.0
• Instruction by many different instructors (n = 71)	53.5	36.6	9.9
• Length and time arrangement for class sessions (n = 71)	50.7	45.1	2.8
• Adequacy of classroom facilities (n = 70)	60.0	38.6	1.4
• Selections of course topics (n = 70)	44.2	45.7	10.0

*Percents are rounded to the nearest tenth of a percent.

The final table of the questionnaire sought to discover if the participants would enroll in a training program similar to the EPDA 553 Program if it were offered again. The responses in Table IX indicate that a very high (85.1) percentage of the participants would. The responses of "Yes" or "No" do represent extremes, however. For this reason, participants were unable to respond with a "Maybe" answer. Five participants did write in "Maybe" or other conditions before they would enroll again.

TABLE IX

RESPONSES TO THE QUESTION, "WOULD
YOU ENROLL IN A TRAINING PROGRAM SIMILAR TO
THE EPDA 553 PROGRAM IF IT WERE OFFERED AGAIN?"*

*Percents are rounded to the nearest tenth of a percent.

Results from Instructor Interviews

The results below came from 14 interviews with instructors who taught during the fall and spring sessions of the EPDA 553 Program. Due to the time of year that this evaluation was conducted (summer), the limited time allowed for the evaluation, and the purpose of the interviews, these interviews should not be considered a representative sample. These interviews do, however, represent a large portion of the 24 instructors who taught the weekly sessions during the fall and spring session of the 1970 - 1971 academic year. Each of the items below was mentioned by two or more instructors during the interviews.

Program Organization

1. Topic selection for the fall and spring sessions was done by the advisory committee to the EPDA 553 Program for training vocational and technical education administrators. Topics selected were felt to be those necessary to provide an orientation to (1) the different parts of vocational and technical education in Oklahoma, and (2) the training

needs for a vocational and technical education school administrator.

Points relevant to the topics selection were:

- a. The topics selected should have considered inputs of local vocational and technical education administrators' needs.
- b. Some local vocational and technical education administrators may not be aware of what their academic weaknesses are concerning administration.
- c. Due to the time allowed for planning of topics in the program, local input from vocational and technical administrators may not have been possible.

2. A strength of the EPDA 553 Program was that the course was taken to the administrators and teachers on local sites.

3. There was a feeling on the part of some instructors that the topics were "one-shot" sessions that were loosely coordinated. Various areas mentioned were:

- a. There was a need for better orientation of instructors, especially those outside of vocational and technical education.
- b. Some instructors did meet together to coordinate their topics on an individual and department basis.
- c. Graduate assistants driving the instructors to and from the off-campus site were helpful to some instructors in orienting them to the program and previous topics.

4. It was felt that the interaction among different departments in the colleges of OSU and the interaction between OSU and the State Department of Vocational and Technical Education had been beneficial for future relations since the program was completed.

Presentation of Topics

1. Different instructors required different amounts of preparation. The variety of preparation can be seen by the following:
 - a. Instructors who taught similar courses adapted their course material for their presentations. For some this was only a small effort, but for others it required considerable time.
 - b. Some instructors drew their presentations from material or experiences confronted in their daily work. A few instructors felt that this may have made their presentations weak because they did not prepare properly, while others found it effective and useful in their presentations.
2. Not all presentations were well received by the participants.

For example:

- a. Some topics were of a particular nature making them difficult to present and make interesting.
- b. The class participation by the participants often varied from one off-campus site to another.
- c. Some instructors found that their ability to adapt their presentation after one class helped to improve their presentation for the next class.
- d. Some instructors felt more class time was necessary to adequately present their topics.
- e. Not having a background in vocational and technical education caused some instructors to have a little difficulty in relating to students.

3. Assignments by instructors varied between fall and spring semester and seemed to be given for a variety of reasons, i.e. to make sure material was understood, for grades, and because he was supposed to.

Reimbursement for Services

1. Most of the instructors felt a professional responsibility to teach in this program. This professional responsibility varied between instructors as follows:

- a. Those instructors who had direct employment or previous connection with vocational and technical education felt an obligation to participate in such programs like the EPDA 553 Program and would have taught for free or less than the \$75/session they were paid.
- b. Those instructors who were not connected directly with vocational and technical education often felt only an obligation to teach if the university asked them to, but would not do it again for less than \$75/session.

Students in the Program

1. Some instructors who had had a weak orientation to the EPDA 553 Program were unsure of the educational or employment background of the students they were to teach.

- a. The students enrolled did have a wide range of educational experience from undergraduate work to post-doctoral work.
- b. Employment experience of participants ranged from few to many years of experience in vocational and technical education.

2. Some instructors felt it would be good exposure to have vocational and technical education teachers and administrators in the same class.

3. There was the feeling from some instructors that the students did not enroll in the program on their own initiative, but came because they were strongly encouraged to attend.

Off-Campus Sites

1. Nearly all the instructors felt the facilities used for the class sessions were adequate.

- a. The Tulsa facility was mentioned as being somewhat poorly arranged for a classroom, but it was well equipped.
- b. Some instructors were tired the next day after getting back late from the training sites.

2. All the instructors did not mind traveling to different training sites.

Results from Participant Interviews

The results below came from interviews with 22 of the participants who were in different parts of the summer, fall, and spring sessions of the EPDA 553 Program. Due to the time of year that these interviews had to be conducted (summer), the limited time allowed to do the interviews, and the purpose of the interviews, these 22 interviews cannot and are not considered a representative sample of all the participants who were enrolled in the program. They do provide informative thoughts from two or more participants which can be used to provide background information for a broader understanding of the EPDA 553 Program.

Program Topics

1. The different topics presented in the program were more of a survey or orientation of vocational and technical education. This caused some participants to see the program from two perspectives.

- a. Those people who had a background in vocational and technical education often saw some of the presentations as a rehash of material they already knew.
- b. Those people who had a limited background in vocational and technical education often felt the presentations were informative and enjoyable.

2. Since the courses were seen as a survey or orientation, many of the participants felt the topics were "one-shot" in nature. This produced the following:

- a. A desire that interesting and informative topics be given more time.
- b. Some topics were presented in a very narrow scope and, thus, not very informative.

3. Some participants felt the topic areas selected were adequate, but that the scope of the presentation made them irrelevant. This was reflected by the following:

- a. There was a lack of adequate presentations on topics that were needed for participants to perform their jobs.
- b. A need for local input to take the theoretical knowledge and put it into some practical application.

4. Some of the summer sessions were felt to be a highlight of the program. The instructors were informative and knowledgeable about their fields.

5. Some participants mentioned that there was a lack of participation on the part of business and industry.

6. Due to "one-shot" topic presentations, some participants felt there was a lack of coordination among the topics.

Program Instruction

1. Often the material presented in the different class sessions determined the quality of instruction as seen by the participants.

- a. Some material presented in class was a review of old material.
- b. Sometimes the material presented was so theoretical that comprehension was difficult. At other times, there was so much material presented it could not be assimilated fast enough.
- c. Some of the material was poor because the instructors were unprepared or disoriented to what they were supposed to talk about.

2. Because some participants were argumentative about minor items, some instructors' presentations were sidetracked or difficult to present.

- a. There were participants who felt that some instructors knew very little about the particular practical problems of vocational and technical administration.
- b. Area school personnel would dominate the discussion.

3. In many cases the instructors' own personal dynamics made the presentation interesting to the participants. Such things as the following:

- a. Using more classroom discussion instead of a lecture.
- b. The use of personal experience to present problem situations.

Assignments

1. The assignments were, for the most part, viewed from two perspectives.
 - a. The assignments appeared to some participants to be busy-work. They felt that assignments were given more for assigning grades and less for a learning experience.
 - b. Other participants felt that the assignments made them think more after they left the classroom and, thus, caused them to learn more.
 - c. Sometimes, in both cases above, the participants felt that they were expected to do too much for a three hour course when you include travel, assignments, and presentations.
2. There were participants who felt much more was gained from class discussion than from the assignments.

Influence to Enroll

1. There was a wide range of influencing reasons given for enrolling in the program. Except for the two reasons given below, the others were only briefly mentioned.
 - a. There was direct encouragement (particularly on area school administrators) from the State Department of Vocational and Technical Education for some administrators to participate.

- b. Some of the participants heard about the program from vocational and technical administrators and called the State Department of Vocational and Technical Education to find out about enrolling in the program.

Training Site

1. Distance seems to be a factor in driving to and from the training site. The participants did not seem to mind driving as long as the topics discussed were worthwhile.
2. The classroom facilities were felt to be adequate for classroom instruction.

Participant Interaction

1. There was a feeling by many participants that the interaction with a variety of people was an important part of the program.
 - a. Some administrators felt that members of their staff enrolled in the program gained a better appreciation of administration.
 - b. Area school participants and junior college participants felt the interaction has helped build better relations.
 - c. A few participants thought that the interaction of academic college educators and vocational and technical education personnel was beneficial.
 - d. For those people new to vocational and technical education, the exposure to the staff from the State Department of Vocational and Technical Education proved helpful in future relations.

2. There were two diverse feelings concerning the types of groups that should have participated in this program.

- a. Some participants felt the heterogeneous grouping of teacher, administrators, etc. added a unique mixture of "much" versus "no" experience concerning vocational and technical education administration.
- b. On the other side, some participants wanted a homogeneous group that could have an indepth concentration on specific needs of vocational and technical education.

Highlights of Panel Discussion

The two discussion panels which met with the consultants served two purposes: (1) a chance for the consultants to gain clarification of various parts of the program from the people who were involved in different phases of the program, and (2) a chance for the people on the panel to gain an understanding of some views of the consultants regarding the program. (A list of the panel members can be found in Appendix B.) Here briefly are the items mentioned during the discussion between the two panels and the consultants.

Oklahoma State University Panel

1. Role of the OSU Graduate College in the EPDA 553 Program
 - a. Usefulness of college credit received in the program
2. The results of the participant questionnaire
 - a. Favorable responses
 - b. Job changes of participants
3. Planning stages in the EPDA 553 Program

- a. Primary objectives
 - b. Unwritten objectives
 - c. Decision on orientation-type courses
 - d. Short- vs. long-range goals of the program
 - e. Advisory committee
 - f. Selection of topics
4. Interaction of people in the program
 - a. Teachers with administrators
 - b. Academic campus instructors with vocational and technical education personnel
 - c. Area school personnel with junior college personnel
5. Instruction in the program
 - a. Selection of instructors (criterion or criteria)
 - b. The background of instructors
 - c. The preparation of instructors
 - d. Theoretical vs. applied knowledge presentations
6. Various aspects of the EPDA 553 Program
 - a. Contrast of summer session to fall and spring sessions
 - b. Input from local vocational and technical education personnel on course topics.
7. Area school role in vocational and technical education leadership
 - a. Area school monthly meetings
8. Recommendations for future programs.

State Department of Vocational and Technical Education Panel

1. Input from vocational and technical education administrators
 - a. Programs meeting specific needs
 - b. Professional Personnel Development Council and its membership
2. Participants in the program
 - a. Mixture of participants
 - b. Criterion for selection in the EPDA 552 and 553 Programs
3. Various aspects of the EPDA 553 Program
 - a. Dissemination of information about the program
 - b. Evaluation of participants (grades, papers, participation, and attendance)
 - c. Selection of training sites
 - d. Ratings given the unit of instruction on research
 - e. Salary of instructors
 - f. Summer vs. fall and spring course topics
4. Interaction of people in the program
 - a. Area school personnel with junior college personnel
 - b. State staff with local administrators and teachers
5. Purpose for enrolling in the program
 - a. Future as well as present administrators
 - b. Influences to enroll from outside sources
6. The selection of instructors
 - a. Salary paid instructors
 - b. Lack of people from business and industry
7. Future programs in professional leadership in vocational and technical education.

CHAPTER IV

SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

Summary

The need for qualified vocational and technical education administrators became apparent during this past decade. The Oklahoma State Department of Vocational and Technical Education recognized this need and entered into a training agreement with Oklahoma State University to provide an upgrading training program through a summer institute and an academic year in-service course. During the summer institute in 1970, thirty fellowship participants were invited to four one-week on-campus courses which dealt with the following indepth units of instruction:

1. Social Implications for Occupational Education
2. Political Implications for Occupational Education
3. Local Responsibilities for Reimbursed Programs
4. Economic Implications for Occupational Education

During the academic year 1970-71, an in-service course with sixty fellowships was conducted at three off-campus sites (Duncan, Tulsa, and Oklahoma City). The course topics were of an orientation nature and covered the following units of instruction:

Fall

1. Public School Administration
2. School and Community Relations
3. Students Service and Adult Education

4. Review and Analysis of Research in Occupational Education

Spring

1. Manpower Analysis
2. Curriculum Development for Vocational and Technical Education
3. Program Planning for Vocational Education
4. Current Trends for Development in Occupational Education

The funds for this upgrading program came from money available under Title II, Part F, Section 553 of the Vocational Education Act of 1968. While there were other projects or programs in addition to the upgrading program for vocational and technical education administrators, this program became the most commonly known. It was often referred to as the EPDA 553 Program. For this reason, the title of "EPDA 553 Program" is used in this report to refer to the upgrading program for vocational and technical education administrators.

While the EPDA 553 Program was in progress, several phases of evaluation were used to monitor the instruction and course content. This provided immediate feedback about the program, but left the need for a long-range evaluation follow-up. An evaluation one year after the completion of the EPDA 553 Program was conducted. This report is the results of that evaluation.

The purpose of the evaluation was to (1) view the objectives of the EPDA 553 Program and see to what extent they had been met, (2) analyze the EPDA 553 Program organization and management, and (3) see what changes could be made to improve future programs like the EPDA 553 Program.

To accomplish these purposes, the evaluation was conducted in three phases. First, a questionnaire was designed and mailed to the 78

participants in the program. A return of 92.3 percent was achieved. Second, interviews with 14 of the instructors and 22 of the participants were conducted to obtain information concerning personal views of the program. With ten participants in the program serving as consultants, the information from the questionnaire and interviews was analyzed at an evaluation meeting. Two panels, one from Oklahoma State University and the other from the Oklahoma State Department of Vocational and Technical Education, were used during the evaluation meeting to provide first-hand knowledge about the program. The areas for conclusions and recommendations were developed from the work done at the evaluation meeting.

Conclusions and Recommendations

Below are the conclusions and recommendations developed from the discussion at the EPDA 553 Program Evaluation Meeting. So that the review of the conclusions can be done easily, a code system from the first letters of the source of the conclusion is used to tell from where the conclusions were drawn. The different sources from which conclusions were drawn are: PQ - Participant Questionnaire; II - Instructor Interviews; PI - Participant Interviews; CD - Consultant Discussion; and PD - Panel Discussion. The conclusions represent both the strengths and the weaknesses of the EPDA 553 Program. The recommendations are presented in a positive direction toward promoting the future professional development of vocational and technical education administrators.

Conclusions

- That a substantial percentage (70.8) of the participants in the EPDA 553 Program enrolled to gain or improve their skills and knowledges as a present or future administrator. (PQ)

- That a large percentage (80.3) of the participants in the EPDA 553 Program did meet their reason for enrolling in the program. (PQ)

- That many of the participants (81.2 percent) would enroll in a training program similar to the EPDA 553 Program if it were offered again. (PQ)

- That there is a need for a strong continued emphasis in the professional development of vocational and technical education administrators. (PD)

Recommendation I: Programs for the professional development of vocational and technical education administrators can and should be a continuous process.

- That workshops be used for in-service training that covers a short period of time.
- That courses similar to those of the EPDA 553 Program be used for in-service training that covers a long period of time.

- That some of the objectives of the EPDA 553 Program were unwritten and not conveyed to all of the participants in the program. (PI, CD, PD)

- That the EPDA 553 Program did meet a need and came at an opportune time. (CD, PD)

- That with the exception of "An ability to interact effectively with representatives from industry, business, and labor" and "A philosophy of vocational and technical education" the specific objectives of the program were met. (PQ, PI, CD, PD)

- That the informal advisory committee to this EPDA 553 Program did not consider input from local administrators on program organization. (II, PD)

- That future vocational and technical education administrator programs consider new emerging areas like "career education". (CD)

- That over three-fourths of the participants in the EPDA 553 Program felt the training they received helped the vocational and technical education programs in or through the institutions in which they were employed. (PQ)

Recommendation II: That future programs for the professional development of vocational and technical education administrators have clear and measurable (when possible) objectives which are drawn from and meet the needs of local administrators.

- That objectives be conveyed to the participants in a written form.

- That surveys geared to the local administrator level be used to determine needs.

- That the orientation-type courses used in the EPDA 553 Program fall and spring sessions provided an excellent opportunity for the participants of different vocational and technical education backgrounds (i.e., area schools and junior colleges, teachers and administrators) to interact and get to know one another. (PQ, II, PI, CD, PD)

- That the orientation-type course used in the EPDA 553 Program fall and spring sessions caused many participants on different occasions to experience a review of material they already knew. (PI, CD, PD)

- That many of the participants in the EPDA 553 Program had a desire for particular course topics to be covered in more depth and related to practical areas. (PQ, PI, CD, PD)

- That the percentage ratings on the units of instruction indicated that three-fourths of the participants enrolled in different sessions

of the EPDA 553 Program found all the units of instruction to be "Most Helpful" or "Somewhat Helpful" in their current job. (PQ, PI)

Recommendation III: That future programs for the professional development of vocational and technical education administrators clearly define the relationship between the level of the topics covered (indepth or orientation) and the backgrounds of the participants (homogeneous groups or heterogeneous groups).

- That specific indepth topics be covered in homogeneous groups.
- That orientation topics (on new material) be presented to either homogeneous groups or heterogeneous groups.

- That the college credit received for participating in the EPDA 553 Program encountered difficulty in being applied toward an advanced degree. (PQ, PI, CD, PD)

- That the application of college credit toward the administrators certificate did not become an important issue until after the program was completed and the requirements for certification had changed. (PQ, PI, CD, PD)

- That the degree of satisfaction with the selection of course number and college department (OAED 5340) had one of the lowest percentages for the category "Very Satisfied" and the highest percentage for the category "Unsatisfied". (PQ)

- That the grading system used in the EPDA 553 Program was difficult to administer due to the limited variety of criterion available to evaluate the participants. (PQ, II, PI, CD, PD)

- That the EPDA 553 Program marked a first in vocational and technical education by taking educational training to the people who needed it. (CD, PD)

- That a high degree of satisfaction was expressed about the selection of on-campus and off-campus training sites. (PQ)

- That the selection of training sites should be designed to fulfill the needs of the participants. (PQ, PI, CD, PD)

- That the EPDA 553 Program used a variety of ways to influence administrators to participate in the program (i.e., division newsletters, personal encouragement). (PQ, II, PI, CD, PD)

Recommendation IV: That the planning and organization of future programs for the professional development of vocational and technical education administrators maximize the benefits of the program to the individual needs of the participants.

- That college credit be given whenever possible.
 - That the lack of transferability in college credits due to course title or course description be minimized.
 - That the grades given fit the needs for which the participants plan to use the training he has received. (i.e., pass-fail system vs. A, B, C, or I system)
 - That the distance to the training sites be minimized within the constraints of the funds available and the number of participants served.
 - That the final decision to enroll in a training program rest with each individual.
- That the professional responsibility to instruct in the EPDA 553 Program varied from those instructors who had direct contact with vocational and technical education and those instructors who did not. (II, PD)

- That the EPDA 553 Program did not utilize the local vocational and technical education expertise that was present in the participants enrolled. (PQ, CD, PD)

- That the EPDA 553 Program showed some signs of weakness in the coordination between instructors and the preparation put into instructors' presentations. (PQ, PI, II, CD)

- That the handouts and the class assignments given in the EPDA 553 Program varied between instructors and session (summer, fall, or spring). (PQ, PI, II, CD, PD)

Recommendation V: That the selection of instructors in future programs for the professional development of vocational and technical education administrators be done on a basis which fits the objectives of the program.

- That, whenever possible, local administrator expertise be drawn into the program. (Through advisors, consultants, or instructors)
- That the instructors background fit the area of their presentation.
- That, in cases of multi-instructor programs, an orientation meeting for instructors be used to develop coordination between instructors and an understanding of the goals of the program.

APPENDIX A
PARTICIPANT QUESTIONNAIRE

1900

OKLAHOMA STATE UNIVERSITY • STILLWATER

Department of Technical Education
Classroom Building 406
372-6211, Ext. 4287

74074

June 5, 1972

During the summer session of 1970 through the academic year 1970-71 you participated in part or all of a vocational and technical education administration training program called the EPDA 553 Program. While the program was in progress, several phases of evaluation were completed. It has now been more than a year since the EPDA 553 Program completed, and a long term evaluation is needed to obtain a clearer picture of the training you received and its usefulness to you.

Your assistance in completing the enclosed questionnaire can help us to plan in-service training programs for Oklahoma's vocational and technical educators. The questionnaire will require some serious thinking and three to five minutes of your time. Since the time period for this evaluation is limited, a quick response is needed and would be greatly appreciated. The results of yours and other participants' responses to this questionnaire will be analyzed with other data at a summer meeting on July 12-14, 1972, in which 10 of the participants will be asked to serve as consultants. More information about the meeting and an application can be found on the postcard enclosed with this letter.

Thank you for your time and attention in helping us better provide professional services to you and other vocational and technical educators in Oklahoma.

Arch B. Alexander
Deputy Director, State Department
of Vocational and Technical Education

Dr. Donald S. Phillips
Director, EPDA 553 Program

Kenneth L. Ritter
Research Associate, EPDA 553 Program

FOLLOW-UP QUESTIONNAIRE
ON EPDA 553 PROGRAM

NOTE: Some of the questions below will be difficult because they require you to express an opinion. Answer all questions by selecting those items that you feel best represent your thoughts about the EPDA 553 Program. Your honest opinion is the only thing that can make this questionnaire effective.

1. Why did you enroll in the EPDA 553 Program? (Check only one item below.)

- ☐ To improve my skills and competencies as a vocational and technical education administrator.
- ☐ To gain knowledge of vocational and technical education for use in the future as an administrator.
- ☐ To gain some general knowledge about vocational and technical education.
- ☐ To improve my classroom teaching by gaining a broader understanding of vocational and technical education administration.
- ☐ Other (please specify) _____

2. Did the EPDA 553 Program meet your reason for enrolling?

- ☐ Yes (If "yes" go on to the next question.)
- ☐ No (If "no" please explain why below.)
- ☐ Topics discussed were for the most irrelevant.
- ☐ Instruction was generally poor.
- ☐ Class participation and interaction was limited.
- ☐ Other (please specify) _____

3. Is the job you are currently working at different from the one you held at the end of the EPDA 553 Program?

- | | | |
|----------------------------------|--|-------------------------------|
| <input type="checkbox"/> Yes --- | How much influence did your participation in the EPDA 553 Program have on changing jobs? | <input type="checkbox"/> much |
| | | <input type="checkbox"/> some |
| | | <input type="checkbox"/> none |
| <input type="checkbox"/> No --- | How much influence did your participation in the EPDA 553 Program have on your job performance this past year? | <input type="checkbox"/> much |
| | | <input type="checkbox"/> some |
| | | <input type="checkbox"/> none |

4. How do you feel the knowledge gained in the EPDA 553 Program has been used by you in your employment position this past year?

- ☐ It was directly applied.
- ☐ It was indirectly applied.
- ☐ It was not applied, but might be in the future.
- ☐ It was not applied and never will be.
- ☐ Other (please specify) _____

5. During this past year, has the training you received in the EPDA 553 Program helped the vocational and technical education program or programs in or through the institution you are employed by?

_____ Yes, how? (You can check more than one of the items below.)

- _____ Started new program or programs.
 _____ Improved old program or programs.
 _____ Initiated innovative project.
 _____ Improved instruction staff.
 _____ Improved community relationships.
 _____ Other (please specify) _____

_____ No, why? (You can check more than one of the items below.)

- _____ Have not had a chance to use the knowledge I've learned in the EPDA 553 Program.
 _____ I'm not involved in any vocational or technical program.
 _____ Other (please specify) _____

6. Indicate to what extent the items below were gained through participation in the EPDA 553 Program and have had a helpful application in your current employment.

(Check one of these categories on each item.)

MH -- Most Helpful
 SH -- Somewhat Helpful
 NH -- Not Helpful
 NO -- No Opinion

	MH	SH	NH	NO
A. A philosophy of vocational and technical education.	_____	_____	_____	_____
B. An understanding of the different types of vocational and technical programs offered in Oklahoma.	_____	_____	_____	_____
C. An ability to interact effectively with representatives from industry, business or labor.	_____	_____	_____	_____
D. An ability to assess employment needs and priorities and translate them into vocational and technical programs.	_____	_____	_____	_____
E. An ability to interpret the role of vocational and technical education to authoritative decision and policy makers.	_____	_____	_____	_____
F. An understanding of the national, state and local roles and responsibilities for vocational and technical education.	_____	_____	_____	_____

(Question 6 continued on next page.)

6. Continued.

	MH	SH	NH	NO
G. An opportunity to meet and interact with prominent vocational and technical leaders in Oklahoma.	—	—	—	—
H. An ability to communicate effectively with vocational and technical administrators from a variety of institutions (Secondary - University).	—	—	—	—
I. An understanding of vocational and technical administration procedures.	—	—	—	—
J. An awareness and understanding of effective program planning, implementation, evaluation, and administration.	—	—	—	—

7. Indicate below those units of instruction in the EPDA 553 Program you enrolled in that were helpful to you in your current job.

(Check one of these categories on each of the units you were enrolled.)

MH -- Most Helpful
 SH -- Somewhat Helpful
 NH -- Not Helpful
 CR -- Can't Remember

 WAYS (OUR RETURN ADDRESS IS ON THE BACK) AND WET SEALS.)

REMINDER POSTCARD

Dear EPDA 553 Participant:

You were recently sent a questionnaire that is aimed at evaluating the vocational and technical education administration course you were enrolled in sometime between the summer of 1970 to the spring of 1971. Your assistance in completing the questionnaire and returning it to us will help us better plan in-service training programs in the future. We appreciate any time you could give us in making this evaluation a success. If you have already returned your questionnaire, thank you!

Kenneth Ritter.

APPENDIX B

EPDA 553 PROGRAM EVALUATION MEETING

1907

AGENDA

EPDA 553 PROGRAM EVALUATION MEETING

Wednesday, July 12, 1972

9:00 a.m. - 11:00 a.m.

(15 minute break)

11:00 a.m. - 12:00 p.m.

12:00 p.m. - 1:00 p.m.

1:00 p.m. - 4:00 p.m.

(15 minute break)

1. Introduction fo consultants.
2. Filling out needed information on consultants.
3. Explaining the purpose and expectations of consultants.
4. Beginning analysis of questionnaire.
5. Overview of EPDA 553 Program

Break for lunch

1. Continue analysis of questionnaire.
2. Analyze results of interview.
3. Have consultants formulate questions on all aspects of EPDA 553 Program.
4. Finalize questions for consultants.

Thursday, July 13, 1972

9:00 a.m. - 1:00 p.m.

Open Time

1:00 p.m. - 4:00 p.m.

(15 minute break)

1. Panel consisting of personnel from the School of Occupational and Adult Education and the Graduate College at Oklahoma State University meeting with consultants.

- *a. Dr. Donald Phillips
- b. Dr. Lloyd Wiggins
- c. Dr. Lloyd Briggs
- d. Dr. Odell Walker

4:00 p.m. - 6:30 p.m.

Break for Dinner

6:30 p.m. - 9:30 p.m.

(15 minute break)

1. Panel consisting of personnel from the Oklahoma State Department of Vocational and Technical Education meeting with consultants.

- *a. Mr. Arch Alexander
- b. Dr. Bill Stevenson
- c. Mr. Terry Spradley
- d. Mr. Joe Kinzer
- e. Mrs. Muriel Tapman

Friday, July 14, 1972

9:00 a.m. - 12:00 p.m.

(15 minute break)

1. Finalize recommendations into written form.
2. Complete reimbursement information.

*Acting chairman for panel.

LIST OF CONSULTANTS TO THE
EPDA 553 PROGRAM EVALUATION MEETING

1. Mr. Leon Applegate, Instructor
Vocational Agriculture
Sand Springs, Oklahoma
2. Mr. Roy Byrd, Department Head
Technical Education
Cameron State College
Lawton, Oklahoma
3. Mr. Kenneth Carleton
Superintendent
Mid-America Area Vo-Tech School
Wayne, Oklahoma
4. Mr. J. R. Gililand
Superintendent
Canadian Valley Area Vo-Tech School
El Reno, Oklahoma
5. Miss Larry Ann Holley
Cosmetology Instructor
Central Oklahoma Area Vo-Tech School
Drumright, Oklahoma
6. Mr. Robert Keck, Dean
Vocational Technical Education
Eastern Oklahoma State College
Wilburton, Oklahoma
7. Mr. Loyd Parker, Instructor
Vocational Agriculture
Norman Public Schools
Norman, Oklahoma
8. Mr. Charles Parr
I.C.T. Coordinator
Duncan Area Vo-Tech School
Duncan, Oklahoma
9. Mr. Bill Powers
Superintendent
Kiamichi Area Vo-Tech School
Wilburton, Oklahoma
10. Mrs. JoAnne Ruark, Research Assistant
Research, Planning, and Evaluation Division
State Department of Vocational and Technical Education
Stillwater, Oklahoma

PANELS FOR THE EPDA 553
PROGRAM EVALUATION MEETING

Oklahoma State University Panel

Dr. Donald Phillips, Professor and Head
Technical Education
Oklahoma State University

Dr. Lloyd Wiggins, Associate Professor

Department of Health, Education, and Welfare
Washington, D.C.

APPENDIX C

"OTHER" RESPONSES TO PARTICIPANT QUESTIONNAIRE

1911

Response Question #1 "Other"

State staff request for future need for certification.
In order to qualify for a Vo-Tech administrative certificate.

Response Question #2 "Other"

State (OSU) College of Education would not accept this credit for administrative certification.

Wrong persons were doing the teaching.

The program was too general.

The courses and instruction could have been more realistic and practical.

The summer programs were excellent, but many of the programs during the school year were irrelevant.

The program is not recognized by the education department in obtaining an administrative certificate.

There was a domination of classes by the area Vo-Tech schools administrators.

There was too much of a shotgun approach.

To some extent I enjoyed all of it and learned much I'm sure.

The program could have spent more time in some subject areas.

Although it helped me, it was my understanding when enrolling the hours would count toward an administrative certificate.

Most of the items discussed were repeats of former courses.

It was about the same information I'd had earlier in other courses.

Response Question #4 "Other"

It applied in limited degrees.

The ideas brought out by the group discussions have been tried to a small extent.

No new knowledge gained from the course.

Response Question #5 "Yes, Other"

The training helped in establishing two teacher departments.

It helped me have a better understanding of the "what" and "why" of vocational education.

The training helped in our youth organization.

Program is not in operation at this time.

With the information gained I have been able to promote Vo-Tech education more ably.

No programs as yet; it will help.

The training provided a better understanding of administrative problems.

Response Question #5 "No, Other"

The information given was mostly a review of what I had already covered.

The information in many cases was too broad and not specific enough.

I'm not employed. I'm an EPDA 552 doctoral student.

No new knowledge gained from the course

Did not gain any useful information.

APPENDIX D

RESPONSES TO QUESTION NUMBER
NINE OF PARTICIPANT QUESTIONNAIRE

1914

RESPONSES TO THE STATEMENT: "LIST AT LEAST TWO WAYS
YOU FEEL IN-SERVICE TRAINING PROGRAMS, LIKE THE
EPDA 553 PROGRAM, CAN BE IMPROVED."

I. Purpose of the Program

1. We need in-service training programs every year.
2. Provide for growth through a continuation of that kind of training.
3. The course to be offered more frequently allowing more time in each area.
4. Offer them more often and to a larger group of participants.
5. That these programs be of a more frequent nature in order to stay abreast of change.
6. Have more of them.
7. By reaching the vocational educator as well as the administrator.
8. Perhaps could offer more specialized training for particular teacher groups.
9. By offering a condensed version of the subject matter to the "teacher."
10. Give more people an opportunity to apply for the full year training toward advanced degree.
11. Provide some means for credit to be counted on advanced degree.
12. By arranging with OSU College of Education for these classes to count toward the administrators certificate.
13. Set up specific courses in local areas to help those who need courses for certification.
14. I feel that a course name should be given to the course. If worth spending the time it is worth 3 hours of credit at our college.
15. Need more communication between the college of occupational education and College of Education so the course can be applied in areas where needed. Need a course description understood by both colleges at OSU.

16. Course number offered should apply directly to requirements for Administrative Certificate.
17. Let apply toward certificate.
18. To be more relevant for Vo-Tech administrators.
19. There were a few lectures that were of no real value to me -- were not prepared to fit the course.
20. Do not pressure people to enroll if they do not need credit and feel their years of experience in Vocational Education are such that most of the material covered will be only a "re-hash" of previous courses.
21. Have a specific objective in mind and zero in on meeting it.

II. Topics of the Programs

1. Concentration on one area for a greater amount of time.
2. More classtime on each individual subject.
3. I feel that in-service training programs could be improved by spending more time on the level of group solving and discussion of problems.
4. More depth in some areas (Financing - Legal).
5. Fewer topics - therefore more time to explore particular areas.
6. Each session should focus on a specific topic and not generalize.
7. Try to cover less material in lots of areas and concentrate in about three main areas with some indepth study.
8. Longer sessions with instructors like H. McDonald.
9. More time and information on financing and budgets.
10. Broaden the individual topics into courses.
11. Covering a more specific subject rather than broad subject or topics.
12. Consider the same total content, but offer some more opportunity to pursue particular interests and/or needs.
13. With a more definite approach on selection of curriculum to meet the immediate problems that face the Vo-Tech Administrator.

14. More on direct problems dealing with administration.
15. Have the students assist in the selection of the topics if at all possible.
16. Information could come from the "firing line", people working daily in administrative Vo-Tech positions.
17. School laws relating to Area Vo-Tech Schools; State Board policies relating to Area Vo-Tech Schools.
18. Additional information concerning public school law as it relates to Vo-Tech teacher education.
19. More on Public Relations
20. Knowledge of community power structures.
21. Less on Research material, more on the practical aspects; every day problems.
22. Continuing information on manpower supply and demand.
23. Awareness of need for program planning.
24. Extend opportunity of participants in curriculum offering.
25. More lessons regarding classroom instruction.
26. To point out ways of updating training equipment in the shops.
27. It was diversified in curriculum selection.
28. Proper and adequate use of Data Processing System of finance; school laws relating to financing Area Vo-Tech Schools.
29. More accurate information as to application of information.
30. Keyed more to Oklahoma.

III. Organization of Program

1. More campus training sites.
2. Five training sites instead of three.
3. Selection of training sites in southeastern Oklahoma; more reasonable and logical for one teacher to travel the distance rather than 20-30 students.
4. Using smaller groups meeting in area sites where the driving time is reduced.

5. More representatives from industry.
6. More participation with personnel from various industries.
7. Use business and industry people more since our products will be employed by them.
8. Bring more people from business and industry to sessions rather than professional educators.
9. Representatives from business, industry, and labor should be used more in the program.
10. More public relations with prospective employers.
11. Use more people from industry.
12. Include more comprehensive high school people - also junior college.
13. Allowing administrators of area schools to discuss methods of operations that are successful for them.
14. In-service and/or on-the-job training - actual participation in a training institution or agency.
15. Involvement of local, state, national power figure (politicians).
16. Vocational and Technical Education - local, state, and national training programs (Veterans - BTA, etc.).
17. The monthly (group) session was sometimes very short for the length of time involved in travel.
18. The local sessions were more informative than the once-a-month sessions at OSU; at times the long trip to OSU seemed fruitless.
19. More effective and interesting Saturday speakers.
20. I feel that the course could be put in a Saturday session and cover the material need at Stillwater or Duncan or anywhere else.
21. Saturday speakers of national stature were most helpful.
22. By breaking into group sessions of ten to twelve; have reports on all areas from these group sessions.
23. Limit the size of the class.
24. Requesting each of the Vo-Tech divisions to send out announcements in their regular mailing concerning the in-service programs of Vo-Tech OSU courses.

25. Devote more time to placement of the finished product. What do you do with the 1st, 2nd, 3rd, 4th, and 5th year follow-up?
26. Improved instruction, scheduling, and curriculum.

IV. Instructors

1. By using more administrators of area schools for instructors - the men who have actually come in contact with problems of the Vo-Tech school administration.
2. Choose instructors who have been knowledgeable concerning vocational education and its particular needs for longer than a few weeks.
3. Don't use any instructors who don't know anything about Vo-Tech education.
4. All instructors should be oriented to vocational education philosophy.
5. Use instructors that have actual present-day experience in vocational-technical administration.
6. More instruction by the people that are actively involved with the area being studied.
7. Make sure instructors are knowledgeable about Oklahoma problems.
8. Pre-in-service training for the total instruction staff.
9. A different instructor for each topic was very good. However, it would be more beneficial and interesting if topics and instructors were more closely correlated.
10. Better coordination of instruction - make sure instructors do their job, not just handouts to read.
11. The instruction range was too wide; from superior to poor.
12. The traveling instructors needed more coordination, one to another. Each seemed unfamiliar with past sessions.
13. Better choice of instructors.
14. Stress to the instructors that a more stimulating method of instruction needs to be used. A few instructors were very boring.
15. I felt that several of the instructors were ill-prepared. This area should be improved.

16. Selection of instructors that have greater and more relevant experience than what 2 or 3 had.
17. Have off-campus lecturers better prepared.
18. Urge instructors to use practical information and steer away from "same old stuff".
19. More instruction by practitioners and less by theorists.
20. Use less instructors from the department of education.
21. More instruction from outside field of education.
22. Would like to see state representatives and senators attend some sessions.
23. Knowledgeable selection of instructors were selected.
24. Identify a little more specifically the topics guest speakers are to cover.

V. Class Participation

1. More open discussion and less lecture-type of instruction.
2. More interaction among instructors and students.
3. Let the students have more round-table type discussions.
4. Involve the students more---less lecture, more "doing" projects.
5. More interaction between participants.
6. Role-playing in circumstances that a Vo-Tech administrator might become involved in.
7. Sessions in which people in various positions review problems related to their job and how they disposed of them.
8. Participant participation in planning.

VI. Class Material

1. Because most people involved have full-time jobs, limit the amount of outside written assignments.
2. Too much outside paperwork for which I did not have adequate time to work on so did not get enough value from them.

3. Do away with the busywork when you are teaching adults that have full-time jobs.
4. Do not see need in writing paper to express an opinion which may or may not agree with instructor.
5. Printed material handed out that would supplement material given during session.

VII. Students

1. Categorize enrollees so that such broad differences in needed training would not exist.
2. I suggest two groups - one for administrators and one for teachers; some on each are reluctant to voice opinions.
3. Limit the number of Area Vo-Tech school administrators.
4. Would like to see some of the actual local board members of the Vo-Tech schools attend sessions.
5. Encourage more participation by comprehensive high school administrators.
6. Expand to a wider, more varied group of people.

ABSTRACT - ONE OF FIVE STUDIES PUBLISHED
ANNUALLY IN NEBRASKA, THIS SURVEY EXAMINES
THE MANPOWER NEEDS AND JOB OPPORTUNITIES
WITHIN THE STATE. INTERVIEWS WITH A RANDOM
SAMPLE OF ADMINISTRATORS OF NEBRASKA FIRMS
SUPPLIED THE DATA. FINDINGS REVEALED THAT
78,522 PERSONS WILL BE NEEDED TO FILL NEXT
YEAR'S EMPLOYMENT SLOTS, AND 94,798 WILL BE
NEEDED THE FOLLOWING TWO YEARS. THE GREATEST
MANPOWER NEEDS WILL EXIST IN THESE
CONSECUTIVELY ORDERED AREAS: (1) DISTRIBUTIVE
OCCUPATIONS, (2) TRADE AND INDUSTRIAL
OCCUPATIONS, (3) AGRICULTURAL OCCUPATIONS,
(4) OFFICE OCCUPATIONS, (5) HOME ECONOMICS
OCCUPATIONS, AND (6) HEALTH OCCUPATIONS.

REPORT OF STATE-WIDE MODEL FOR DETERMINING OCCUPATIONAL OPPORTUNITIES IN NEBRASKA

SUMMARY

INTRODUCTION

This is the fifth in a series of annual studies, designed to identify the need for employees in the state of Nebraska. The emphasis of this study has been to determine specific manpower needs and job opportunities in the state. This objective has been fulfilled by asking employers throughout the state the number of persons they presently employ, to estimate their future manpower needs in relation to expansion, retirement, promotion and turnover for the next twelve months, and further need for the following two years. The data supplied by the employers as job titles were then classified into instructional training areas requiring similar educational preparation and occupational competencies.

PROCEDURE

The data gathering procedure for the 1972 study remained, basically, the same as in previous studies. The data gathering instrument was the same as the one used in the 1971 study to allow for uniformity in the coding procedure and better correlation with the preceding studies.

A three percent computerized random selection of firms was drawn from the Master Population Listing, and the data was gathered by personal interviews. The interviewing was done by students attending the University of Nebraska, at Lincoln. The sources which were used to compile the original master population list were: (1) IRS 941 (firms employing one or more persons); (2) IRS 942 (domestic help); (3) IRS 943 (farmers and ranchers employing hired labor); (4) the Employment Security Division of the State Department of Labor (out-of-state firms which have in-state locations, in addition to the federal, state, local and tax exempt agencies); and (5) the State Tax Commissioner (the State Business Master File for updating purposes).

For this study, an up-dating of the master population list was done by the removal of firms no longer in existence by using a compiled list of firms from the Employment Security Division of the Department of Labor (ES 202) and out-of-business firms determined from interviews for previous studies. New firms were added to the master population list by using new firm listings (ES 202) from the Employment Security Division, State Department of Labor.

The publication, *VOCATIONAL EDUCATION AND OCCUPATIONS*¹ provided the basis for coordinating job titles with instructional training areas.

¹U.S. Office of Education, *VOCATIONAL EDUCATION AND OCCUPATIONS OE-80061*. U.S. Government Printing Office, Washington, 1969.

²Nebraska Department of Labor, *NEBRASKA OUTLOOK FOR SELECTED OCCUPATIONS*, Interim Report. Division of Employment, Lincoln, May, 1972.

DELIMITATIONS

A delimitation of this study is that it was not possible to obtain a current master population listing for this report. Partial up-dating was done by using information obtained from the Department of Labor, Employment Security Division.

No allowance was made for the seasonal labor "peaks" and "lows" common in work areas. All part-time and seasonal employees were equated in terms of full-time equivalents.

The fluctuations caused by small sampling accounts for variations in certain instructional training areas from one year to another. This variation is evident when comparing all five studies.

Another delimitation common to all five studies is that the data has been obtained exclusively from employers. Employers tend to over- or underestimate, depending on labor and economic trends.

FINDINGS

The data in the 1972 study, when compared with studies of previous years, show a downward trend in overall employment. However, when the data are compiled into the five year summary, the results are compatible with those presented by the Nebraska Department of Labor, *NEBRASKA OUTLOOK FOR SELECTED OCCUPATIONS*, Interim Report, May, 1972.²

SUMMARY BY MAJOR VOCATIONAL TECHNICAL AREA

Presented in Table 1 are totals of the 1972 study by major vocational technical area. The data for each area are taken from Tables 2 through 8 inclusively.

The total number of persons shown by projected employment in all instructional training areas is 510,280, including self-employed farmers. Future needs are projected as 78,522 persons for the next twelve months and 94,798 persons for the following two years.

Trade and Industrial Occupations represents the largest projected employment with 152,466 persons presently employed or 29.9 percent of the total projected present employment. Distributive Occupations has 121,069 persons employed, representing 23.7 percent of the total and Agricultural Occupations has 92,765 persons employed representing 18.2 percent of the total projected present employment. The Office Occupations area has 70,515 persons employed, representing 13.8 percent of the total and

Other Occupations (all persons not classified by a specific occupation area) has 42,107 persons employed, representing 8.3 percent of the total. Home Economics Occupations has 3.5 percent of the total and Health Occupations represents 2.6 percent of the total, comprising the remainder of the projected present employment.

The greatest need projected for the next twelve months is in Trade and Industrial Occupations at 26,546 persons, representing 33.8 percent of the total need. Distributive Occupations will need 23,432 persons during this same period representing 29.8 percent of the total need and Agricultural Occupations will need 9,558 persons or 12.1 percent of the total. Office Occupations will need 7,271 persons, or 9.3 percent of the total, and Other Occupations will need 7,232 persons, or 9.2 percent of the total. The

need projected in Home Economics Occupations is 3,030 persons or 3.9 percent of the total and Health Occupations is 1,453 persons or 1.9 percent of the total need for the twelve month period.

During the following two years the greatest need will be in the area of Distributive Occupations, 36,086 persons, or 38.1 percent of the total need; Trade and Industrial Occupations, 28,405 persons, or 30.0 percent of the total and Agricultural Occupations, 10,952 or 11.5 percent of the total. Other Occupations will need 9,294 persons during this period or 9.8 percent of the total and Office Occupations will need 8,971 persons or 9.5 percent of the total. Home Economics Occupations and Health Occupations will require .6 percent and .5 percent, respectively, of the total projected employment need.

TABLE 1

AGRICULTURAL OCCUPATIONS

Agricultural Occupations may include one or any combination of the following functions: agricultural production, agricultural supplies, agricultural mechanization, agricultural products (processing), ornamental horticulture, forestry, agricultural resources, and related services. Emphasis in instruction is designed to provide opportunities or improve competencies in functions of agricultural occupations.

Included in the total projected employment of 92,765 persons in Agricultural Occupations (Table 2) is 53,852 self-employed farmers. The master population of firms

contains only 18,148 farmers that employ workers, making it necessary to supplement this figure with the number of farmers who do not employ additional workers. The study, *NEBRASKA AGRICULTURAL STATISTICS*³ estimates the number of self-employed farmers in the state of Nebraska. In order to estimate the need for future production agricultural workers another source was used to complete the total projected number of workers needed. The Genereaux⁴ study used a formula based upon census data and provided the figure of 951 workers needed annually. This formula made allowances for consolidation of farms, age of farmers, and age of farmers at retirement.

*Number of employers reporting employees in each cell.

aNebraska Department of Agriculture, *Nebraska Agricultural Statistics Annual Report*, loc. cit.

bGenereaux, Douglas, loc. cit.

The total projected employment in the agricultural instructional training areas is 92,765. The largest projection of presently employed is in the instructional training area of agricultural production, 21,983, excluding the 53,852 self-employed farmers. The next largest projected employment is in the area of agricultural supplies and services, 5,415, followed by agricultural products (processing, inspection, and marketing), 4,768.

Employment opportunities in agricultural production, 4,930, are projected as the greatest need during the next twelve months, followed by agricultural products (processing, inspection, and marketing), 1,374. Replacement due to

turnover and expansion will come from new employees and outside firm employees. Agricultural production projected the greatest need for new employees, followed by agricultural products (processing, inspection, and marketing).

During the following two years the greatest projected need is anticipated in the areas of agricultural production, 4,688; agricultural products, (processing, inspection and marketing), 1,616; and ornamental horticulture (production, processing, marketing and services), 1,616.

DISTRIBUTIVE OCCUPATIONS

Distributive Occupations include one or any combination of the following instructional training areas in economic activity of retail and wholesale trade, finance, insurance, real estate, services and service trades, manufacturing, transportation, utilities and communications. These instructional training areas are designed to improve competencies in Distributive Occupations.

The total projected employment of Distributive Occupations is 121,069 persons (Table 3). The largest projection of presently employed is in the instructional training area of transportation with 20,771 persons employed. Other instructional training areas projecting a large number of persons

employed are general merchandise, 17,740; apparel and accessories, 11,355; food distribution, 8,809; and petroleum, 8,001.

During the next twelve months the greatest projected need will be due to turnover and expansion, with the largest part of the supply coming from new employees. The instructional training areas projecting the greatest need are general merchandise, 5,374; transportation, 4,607; apparel and accessories, 2,505; and recreation and tourism, 2,101.

The greatest projected need in the following two years is in the instructional training areas of general merchandise, 6,910; home furnishings, 6,344; transportation, 5,577; and recreation and tourism, 4,122.

HEALTH OCCUPATIONS

For persons interested in Health Occupations there are instructional training areas with preparation for occupations that render health services directly to patients in appropriate clinical situations and those that render health services which do not involve direct services to patients but use laboratories and/or appropriate work situations.

Health Occupations projects 13,456 persons presently employed as reflected in Table 4. The largest number of projected employment in Health Occupations is in the instructional training area of nursing, 5,981, (excluding

registered nurses). The medical professional instructional training area accounts for 4,122 of the projected employment with additional employment in the area of dental professional of 606. The instructional training area of laboratory technology projected employment of 1,091 persons, while dental assisting projected employment of 970 persons.

Replacement needs for the next twelve months due to turnover and expansion will come from outside the firm. The largest projected need will be in the instructional training area of nursing (excluding registered nurses), during the next twelve months and the following two years.

HOME ECONOMICS OCCUPATIONS

For those interested in Home Economics Occupations there are instructional training areas that relate to personal, home, and family life knowledge and skills. The instructional training areas also include concepts drawn from the natural and social sciences and the humanities.

Home Economics Occupations projected 17,902 persons as being presently employed (Table 5). The instructional training area of institutional and home management and supporting services projected the largest number of persons presently employed, 10,385. The next largest projected employment is in the

instructional training areas of food management, production and services, 4,688 and clothing management, production and services, 2,223.

Replacement needs for the next twelve months due largely to expansion will come from new employees. Opportunities in the instructional training area of institutional and home management and supporting services is projected at 2,101 for the next twelve months.

Food management, production and services instructional training area projected the greatest number of opportunities during the following two years.

OFFICE OCCUPATIONS

Office Occupations instructional training areas provide opportunities for those interested in preparing for or advancing in selected office occupations. Instructional processes and learning experiences are designed to lead to employment and/or advancement in public or private enterprises or organizations related to the facilitation function of an office. Office Occupations can be the connecting link between production and distribution activities such as

recording and retrieval of data; supervision and coordination of office activities; internal and external communication; and the reporting of information.

The total projected present employment if Office Occupations is 70,515 (Table 6). The largest projection is in the instructional training area of filing, office machines and general office clerical, 24,650. The next largest projections are in the areas of accounting and computing, 13,457; stenographic, secretarial and related, 8,001; and supervisory and administrative management, 7,395.

The greatest projected opportunities for the next twelve months are in the instructional training areas of filing, office machines, and general office clerical, 2,101; accounting and computing, 1,657; and materials support (transporting, storing and recording), 1,333. Reasons for these needs are due

largely to turnover and expansion with replacement coming from new applicants.

Opportunities for the following two years are projected largely in the instructional training areas of filing, office machines, and general office clerical, and accounting and computing.

TRADE AND INDUSTRIAL OCCUPATIONS

Trade and Industrial Occupations instructional training areas prepare those interested in initial employment, for upgrading or retaining workers in a wide range of trade and industrial occupations. Such occupations are skilled or semi-skilled and are concerned with layout designing, producing, processing, assembling, testing, maintaining, servicing, or repairing any product or commodity. Some specialized fields of technology instructional training areas

are included with Trade and Industrial Occupations.

The total projected present employment for trade and Industrial Occupations is 152,466 (Table 7). The largest projected present employment is in the instructional training areas of heavy equipment (construction and maintenance), 23,276; custodial services, 19,316; carpentry (construction and maintenance), 13,659; waiter/waitress (quantity food), 11,961; and foremanship and supervision, 11,436.

Opportunities for need during the next twelve months are projected as 26,546. The instructional training areas with the greatest need projected are carpentry (construction and maintenance), 4,203; heavy equipment (construction and maintenance), 4,082; waiter/waitress (quantity food), 2,990; and custodial services, 2,505. The instructional training areas of carpentry and heavy equipment (construction and maintenance), cook/chef and waiter/waitress (quantity food) listed turnover as their greatest reason for replacement need; while custodial services, foremanship and supervision, and

graphic arts listed expansion as reason for replacement need. Most of the replacements will come from new employees.

During the following two years 28,405 opportunities are projected. The greatest need is in the instructional training areas of waiter/waitress (quantity food), 6,425; carpentry (construction and maintenance), 5,496; heavy equipment (construction and maintenance), 3,394; cook/chef (quantity food), 1,818; and painting and decorating (construction and maintenance), 1,778.

OTHER OCCUPATIONS

This section is necessary to show employment which cannot be classified into an instructional training area. The total projected employment in Other Occupations (Table 8) is 42,107. The professional group accounts for 31,520

persons; laborers; unskilled, accounts for 9,577; and municipal employees accounts for the remaining 1,010 persons.

Figure 1 -- Projected number of persons employed in Nebraska from 1968-1972, by Major Vocational Technical Area.

FIVE YEAR COMPOSITE SUMMARY

An important benefit gained from the model design resulted from combining and averaging the data for the years during which the studies have been conducted. The sampling percentage of the state-wide population of firms is admittedly smaller than is desirable. The fact remains that a three percent sampling is as large as can be managed for a given year with existing limitations of finance and personnel. Offsetting this recognized delimitation is the advantage gained by combining summaries of each year the study was conducted; this, in reality, provides the benefits of larger sampling over a longer period of time.

The 1972 study is the third year of the composite summary section which is presented as a more stable employment projection. The averaging of the individual yearly projections compensates for under- or over-sampling due to limitations of the study.

Only the totals have been reported for the three major areas of "Now Employed," "Needed Next 12 Months," and "Needed Following 2 Years." The reasons the need existed and where the replacements would be obtained were

dropped from the Composite Summary. The same practice was followed for the "N" column, an indication of the number of firms reporting data for an instructional training area.

Tables 9 through 16 present the composite data by major vocational technical area.

It should be recognized, when comparing data relative to employees needed for the next twelve months, that the data averaged together are for different calendar years. Consequently, the data do not actually project for the same twelve month period but are an average projection, gained from the years in which the survey was conducted. The same interpretation would need to be provided concerning the number of employees estimated to be needed during the following two years.

The data in Table 9 are the totals taken from Tables 10 through 16 inclusively. The data were derived by averaging totals from each instructional training area for the 1968, 1969, 1970, 1971 and 1972 studies.

BIBLIOGRAPHY	13

THE ANALYSIS PROCESS

School administrators want programs in their schools that are marked by excellence -- that are designed to foster the highest possible levels of student performance and which succeed in achieving their stated purposes and goals.

To gauge the effectiveness of a school's business education program, the business education staff should have criteria indicating optimal practices and conditions. The criteria enumerated in this program evaluation guide, therefore, seek to provide the bases upon which a program may be judged. The criteria are by no means exhaustive; they are an attempt to bring together standards in various aspects of the program believed to have a high priority.

Use of the Instrument

Maximum staff involvement is encouraged in the use of this program analysis instrument. Each item in the instrument should be classified according to its importance and relevance in the business department under review.

It is not intended that each criterion be applied to every business department. The total instrument is designed for programs of various sizes and having different goals. In evaluating your department, if a particular criterion appears unimportant or not applicable, that condition or practice should be so classified and not rated.

Wherever indicated, appropriate criteria that the business education staff believes should be considered in the program review should be added. This will provide the staff the opportunity to consider the strongest and weakest links in the total business education program.

Each item classified as important or significant should be rated individually or collectively by the business education staff. Part C, section 2, provides the opportunity for the department chairman to evaluate his own performance as well as for his evaluation by members of the staff. In part C, section 3, each teacher should rate only himself. This rating should not involve judging other members of the department staff.

In part D, each item should be given a general rating applicable to the department as a whole.

Suggestions for Remedial Steps

As this program self-evaluation is being completed, ideas or plans for improving a practice or condition should be entered in the last column of the instrument. Obviously, action cannot be taken immediately

on all items where remedial steps are indicated. The staff should probably establish a priority for the various remedial actions and establish alternative plans where immediate steps cannot be taken. Individuals or committees should then be designated to coordinate and report the progress of courses of action suggested by the program analysis.

Expected Outcomes

Undoubtedly, one of the major values to be derived from any program self-evaluation is the interchange and frank discussion generated by the various evaluative criteria. Thus the process of program self-evaluation may have as many lasting benefits as the program strengths and weaknesses identified by the staff.

A profile of the ratings is not suggested by this analysis instrument because its primary purpose is to identify needed improvements rather than portray the status quo. This should not deter the staff from preparing a profile, however, particularly if administrators or other groups are interested in a "status report" of the program as it is currently constituted.

Reactions on the use of this instrument and its contribution to program development will be welcomed by the Bureau.

Directions: The following rating procedures are suggested to record staff reactions to each of the criteria listed in the program self-analysis instrument:

Left Column	Important	Not Important
----------------	-----------	------------------

1. Check the column that applies to your business department.

Right Column	Rating	Analysis
-----------------	--------	----------

1. Rate the item
4 = Excellent Condition or Practice
3 = Some Improvement Necessary
2 = Considerable Improvement Necessary
1 = Complete Improvement or Development Necessary
2. Use analysis column to record the status of the condition or practice, and/or to propose action.

PART A
PHILOSOPHY AND GOALS

Classi- fication	NI or NA	CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp				Analyze condition or practice & propose action
		1. In order to assess its value and its contribution to the education of pupils, the business education staff has considered the following in formulating a philosophy of business education.		
		a. The philosophy of the total school system.		
		b. The attitude of parents and the business community toward business education and its role in the total secondary school educational environment.		
		c. The role of business education in furthering the ideals of our American system of free enterprise.		
		d. The possible contribution of business and office education for preparing for a better life for all high school youth regardless of economic or social status, occupational or professional goals, talents or abilities.		
		e. The attitude of the business teachers toward providing business education to students of all ability levels.		
		2. In preparing the goals (general aims and objectives) for business education, consideration has been given to:		
		a. the type(s) of students in attendance in school and in business courses with respect to age and ability levels.		
		b. the needs of students for preparation for the duties of adult citizenship in the community, State, and Nation.		
		c. the needs of students for preparation for post-secondary educational pursuits.		
		d. the needs of students for career education.		
		e. evidence from surveys of the business community with respect to:		
		- career opportunities		
		- standards necessary for initial employment and advancement on the job		
		- competencies needed by business employees		

PART B
PROGRAMING
1. Program Objectives

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA			Analyze condition or practice & propose action
		<u>Career Orientation</u>		
		1. The program is designed to orient pupils to busi- ness and office careers.		
		<u>Fundamental Skills</u>		
		2. The program is designed to build effective communi- cation skills required in business and office occupations.		
		3. The program is designed to develop skills in applied business mathematics.		
		<u>Socio-Business and Personal Use</u>		
		4. The program is designed to provide an understanding for the management of personal business activities as well as common business skills for personal use.		
		5. The program is designed to cultivate social skills and an appreciation of the importance of effective human relations.		
		<u>Occupational</u>		
		6. Vocational business education content is based on a careful analysis of the skills, knowledge, and attitudes required for successful employment and advancement in clusters of related office occupations.		

PART B
PROGRAMING
2. Curriculum Organization and Development

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA			
				Analyze condition or practice & propose action
		1. The business education program provides planned curriculum sequences which will culminate in marketable skills for business education majors.		
		2. Mini-courses are provided to facilitate flexibility and breadth of content, particularly for students who ordinarily cannot fit the regular courses into their schedule.		
		3. Independent study in business education is provided for students who cannot schedule regular courses in the business education curriculum.		
		4. Accelerated business courses, such as Introduction to College Accounting, have been organized and offered for high-achieving students who plan on a career in business.		
		5. A 1-year senior intensive business program is offered for those senior students who decide at this time in their high school careers to prepare for office employment.		
		6. Students are permitted to advance through their business studies on the basis of individual achievement, not handicapped by a rigid timetable.		
		7. The program permits the limited ability student to feel a degree of achievement and success in addition to preparing the student to meet the requirements and expectations of the outside world.		
		8. The need for curriculum change is determined by exploring possible innovations. The potential effectiveness of the innovation is substantiated by on-site visits whenever possible.		
		9. Experimentation is conducted to determine the effectiveness of possible new curriculum designs and instructional practices.		
		10. Local courses of study are developed and revised to keep curriculum content current and appropriate. State syllabuses are used as a guide.		
		11. The business education program at the secondary level is compatible with the business program at the:		

PART B
PROGRAMING
2. Curriculum Organization and Development

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA			
		<ul style="list-style-type: none"> • junior high school level • area occupational center • post-high school educational institutions in the area 		Analyze condition or practice & propose action
		12. Program development recognizes that separation of vocational and general business education causes distraction, but the two programs are enhanced when brought together.		
		13. The business education program places increased responsibility upon the student for directing his education and for making decisions.		
		14. Curriculum is developed with the understanding that education can no longer be planned within the confines of the school, but must coordinate with community resources and agencies.		
		15. The curriculum design fosters the use of such instructional strategies as team teaching, small and large group instruction, individualized instruction, and simulation.		
		16. Business education programs for disadvantaged and handicapped students are instituted when their educational needs cannot be met by the existing curriculum and enrollments are large enough for the program to be supported. (Disadvantaged means educationally disadvantaged; handicapped means physically and mentally handicapped pupils.)		
		17. Business and office education offerings are promoted for out-of-school youth and adults. <ul style="list-style-type: none"> • Vocational • Nonvocational 		
		18. The program for out-of-school youth and adults provides sequential offerings designed to develop competencies for office employment.		

PART B
PROGRAMING
3. Program Evaluation

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA			Analyze condition or practice & propose action
		1. All business department personnel are involved in a planned, continuous process of program evaluation.		
		2. The special competencies of business representatives in the community are used in an advisory capacity in the evaluation of the business program.		
		3. The purpose of the program evaluation is clearly understood and wholeheartedly supported by the administration.		
		4. Students currently enrolled in business education are periodically surveyed to assess their satis- faction with the instructional program and obtain suggestions for improvements.		
		5. Former business students are surveyed regularly to obtain their opinions relative to the value of the instruction and services provided by the business education department.		
		6. A variety of evaluative measures are used to judge program accountability.		
		PART C STAFF 1. <u>Administrators</u>		
		1. The school administration is cognizant of the im- portance of the business education program in rela- tion to other programs within the school.		
		2. Administrators support the position that time away from classes attending professional conferences and conventions, or visiting programs in other schools is time well invested for staff and program development.		
		3. In departments of two or more business teachers, one of the teachers is designated as chairman or senior teacher.		
		4. The senior business teacher or department chairman is provided released time for administrative and supervisory duties when the size of staff warrants.		
		5. The department chairman has an opportunity to in- terview applicants for his department and to make comments concerning their potentialities.		

PART C
STAFF
2. Department Chairman

Classi- fication		CRITERIA	RATING		ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA		By D.C.	By other staff	
		1. Departmental meetings are held or specific subject teachers are convened regularly for consideration and discussion of priorities for improving the instructional program.			
		2. Each year the department chairman provides leadership to the staff in the development of a major project involving such aspects as curriculum revision, instructional methods, media evaluation, public relations, etc.			
		3. The department chairman stimulates staff growth by taking steps that will result in the staff's active participation in professional organizations, such as NYSBTA, NBEA, EBTA, AVA, and AMS.			
		4. The department chairman periodically issues reviews of research that he believes might be beneficial to his staff.			
		5. The chairman promotes the ingenuity, resourcefulness, and individual talents of each of his teachers.			
		3. <u>Instructors</u>	Of your- self		
		1. Once a year another teacher is observed for at least two periods in the same, or in a different, school system.			
		2. At least one professional business education conference or workshop is attended each year.			
		3. An active part is taken in local, State, regional, and national business education associations and in conferences sponsored by colleges and universities.			
		4. Professional growth is extended through graduate study, inservice education, and reading of professional literature.			
		5. A variety of self-evaluation techniques is employed to appraise instructional effectiveness.			

PART D
INSTRUCTION
1. Activities, Methods, and Media

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI OR NA			Analyze condition or practice & propose action
		1. Business teachers experiment with new ideas and methods and carry out informal classroom research to improve their instruction.		
		2. Business teachers keep abreast of the findings of research and utilize that information to improve their own teaching.		
		3. Learnings are imparted through a variety of class-room learning activities and experiences.		
		4. Effective student-involvement techniques are used so that pupils are not passive in the learning process.		
		5. Alternative instructional strategies provide for the diverse educational needs and abilities of pupils.		
		6. Teachers develop and use supplementary reference and enrichment materials and other realia to provide instructional resources more appropriate, realistic, and up-to-date than conventional text-book material.		
		7. Appropriate resource media and materials have been acquired and developed for self-paced learning experiences.		
		8. Audiovisual media are employed to engender greater student interest during the learning process and to present concepts and understandings more efficiently.		
		2. <u>Standards and Testing</u>		
		1. Standards are clearly delineated in course syllabuses and are thoroughly understood by the entire staff.		
		2. Students are informed as to the purposes of evaluation and the expected standards in the individual business courses.		
		3. A variety of evaluative techniques (e.g., content tests, attitude checks, performance tests, and problem-solving assignments) are utilized.		
		4. Informal evaluating techniques are used, such as observation, interview, role playing, class discussion, group interaction, and business-type supervision.		

PART D
INSTRUCTION
3. Cooperative Work Experience

Classification		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI or NA			
		1. Office education majors have the opportunity to participate in a cooperative work experience program supervised by a qualified teacher-coordinator.		Analyze condition or practice & propose action
		2. Work stations are selected on the basis of their ability to provide well-rounded experiences and learning situations.		
		3. Pre-orientation sessions are scheduled for both student-employees and training sponsors.		
		4. A training plan is developed for each cooperative work experience student that will assure minimal learning experiences.		
		5. The work experience of each student in the coordinated work experience program is correlated with classroom learnings.		
		6. The work experience coordinator visits the students regularly at their employment stations in order to evaluate the range and depth of experiences and the effectiveness of the business employer-supervisor.		
		7. The coordinator for the office experience program and the local business employer-supervisor share in the responsibility of evaluating the on-the-job performance of the student.		
		PART E EQUIPMENT AND FACILITIES		
		1. The business department members are involved in planning business education facilities in plant additions, renovations, and new buildings.		
		2. The shorthand and transcription classes have immediate access to the typewriters.		
		3. Business machines are comparable to those used in offices.		
		4. Provision is made for the repair and replacement of instructional equipment on a schedule commensurate with generally accepted practice.		
		5. The layout of facilities enables:		
		• small group instruction		
		• large group instruction		
		• individualized instruction		

**PART F
GUIDANCE**

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI OR NA			
				Analyze condition or practice & propose action
		1. Guidance and counseling practices are effective in acquainting youth with:		
		• occupational careers in business		
		• the general education values of business education		
		2. The guidance staff understands all facets of the business education program and uses a proportionate amount of time in counseling students interested in business education.		
		3. The head of the business education department, a business teacher, and/or a counselor talks to all junior high students about the business education sequences and resultant business and office career opportunities.		
		4. Orientation to business and office careers is an integral part of the introductory or basic courses in the business education curriculum.		
		5. Junior high school pupils are invited to tour the department and become familiar with the various learning opportunities available in business education.		
		6. Students are given an opportunity to plan a business program sequence as part of the guidance activities incorporated in ninth and tenth grade business education courses.		
		7. The staff of the business department works with the guidance counselors to help employment-bound business students obtain employment.		
		8. A variety of tests and school records are used to assist students in planning their career goals.		
		9. The business department chairman visits classes of tenth and eleventh grade pupils not in business education to highlight the value of each business elective.		
		10. A departmental publication has been developed describing business curriculums, major sequences, electives, and other features of the business department such as cooperative work experience programs and business clubs.		

**PART C
COCURRICULAR PROGRAM**

Classi- fication		CRITERIA	RATING	ANALYSIS (If rated 3, 2, or 1)
Imp	NI OR NA			Analyze condition or practice & propose action
		1. Opportunities are provided for student-planned, all-school assembly programs, school exhibits, bulletin board displays, demonstrations, contests, and similar activities.		
		2. When such work contributes to instruction, opportunities are provided for students to gain practical experience by rendering service of a clerical and secretarial nature to faculty members and school and nonprofit community groups.		
		3. A business club, such as Future Business Leaders of America, is sponsored to foster the development of leadership talents, business acumen, and social skills.		
		4. A departmental awards or honor program is established to provide recognition for achievement by business education majors.		
PART H PROGRAM PROMOTION				
		1. Representatives of individual business firms lend their strength to the business department by serving on advisory committees and as visiting lecturers, and by carefully planned plant and office tours.		
		2. The business department publicizes the activities of the department and the accomplishments of business students through such media as displays and exhibits, the school paper, and local news media (newspapers, radio, television).		
		3. Business or community organizations are encouraged to sponsor an annual award for superior student achievement in business education.		
		4. Copies of monthly departmental reports as well as reports of professional meetings attended by department personnel are submitted to administrative personnel.

TWENTY-THIRD ANNUAL CONVENTION

PORTLAND, OREGON

DECEMBER 4 - 8, 1971

1962

VT017606

SPECIAL APPRECIATION TO JIM AND GEORGIA WALL

WHEREAS, with the extreme dedication Jim and Georgia have always shown, their work above and beyond the call of duty has contributed much to the success of this convention, and,

WHEREAS, their gracious manner and hospitality in greeting guests and delegates and giving them directions to make the convention more meaningful and enjoyable has done much to create a friendly atmosphere so apparent at this and all previous NVATA Conventions, and,

WHEREAS, Jim's health has not deterred him in his constant efforts to keep this NVATA convention functioning in the best possible manner.

THEREFORE BE IT RESOLVED, that; we, the delegates of the twenty-third Annual NVATA Convention assembled in the Portland Hilton Hotel, Portland, Oregon, this seventh day of December 1971, express our sincere thanks and deepest appreciation for their unselfish efforts.

BE IT FURTHER RESOLVED, that this resolution become the preface of the Minutes of the 23rd Annual NVATA Convention held in Portland, Oregon, December 4 thru 8, 1971.

MINUTES OF THE NVATA, INCORPORATED

Executive Committee Meetings Portland, Oregon

Wednesday, December 1, 1971
Studio Suite
Portland Hilton Hotel

CALL TO ORDER

The meeting was called to order at 9:00 A.M. by President Glen McDowell. All committee members were present except Sam Stenzel, Treasurer who had been delayed by bad weather enroute.

INVOCATION

The Invocation was given by D. P. Whitten, NVATA Vice President for Region V, Centre, Alabama.

COMMUNICATIONS AND ANNOUNCEMENTS

The following announcements were made by the Executive Secretary, James Wall.

-James Dougan, State Supervisor of Agricultural Education, Ohio who is on temporary assignment with the USOE will visit with the Committee.
-Richard Hansen, Geigy Agricultural Chemicals desires to meet with the committee on Thursday.
-Dana Bennett, Farm Film Foundation, will be unable to attend the convention, but the Foundation will be represented by James Gibson, Board Member.
-Jay Benham, National FFA Alumni Association asked to meet with the Committee.
-Dean Griffin, AVA Staff and C. M. Lawrence, AVA Vice President for Agriculture may appear before the Committee.
-Other Special Guests who will be attending the convention include--
 -DAVE KRAMER, Assistant Communications Supervisor, The New Holland Division of Sperry Rand, Corporation, New Holland, Pennsylvania.
 -ART MITCHELL, Supervisor of Youth and Young Adult Activities, The National Rural Electric Cooperative Association, Washington, D. C.
 -WALTER JACOBY, Vice President Programs, American Institute of Cooperation, Washington, D. C.
 -VERN SCHNEIDER, President, American Institute of Cooperation, Washington, D. C.
 -CHARLES BOURG, Manager, Agricultural Supplies-Marketing, United States Steel, Pittsburgh, Pennsylvania.
 -BOB LYON, Manager, Marketing Information, A. O. Smith Harvestore, Inc., Arlington Heights, Illinois.
 -PHIL SCHMIDT, Rural Youth Specialist, Farm Division, National Safety Council, Chicago, Illinois.
 -CLIFF SAYLOR, National FFA Vice President for the Pacific Region, Glendale, Arizona.
 -GRANT ESPLIN, Past President, National Association County Agricultural Agents, from the state of Utah.
 -DR. ROBERT WORTHINGTON, Associate Commissioner, Adult, Vocational and Technical Education, Washington, D. C.
 -HAROLD JOHNSON, District Manager, Pfizer Company, Inc., Spokane, Washington.
 -OSCAR HAGG, Secretary, Agricultural Cooperative Council of Oregon, Corvallis.

-WAYNE DAGGETT, President, Agricultural Cooperative Council of Oregon, Assistant Manager, North Pacific Grain Growers, Portland.
-HENRY SCHACHT, Vice President and Secretary, California Cannery and Growers, San Francisco, California.
-DON McDOWELL, Executive Director, National FFA Foundation, Madison, Wisconsin.

REPORTS - ANNUAL REPORT BROCHURE

It was moved by Francis Murphy and seconded by Millard Gundlach that all reports as printed in the Annual Report Brochure be accepted. Motion carried. (NOTE: All reports appear in the Appendix to the minutes.)

MEETING SCHEDULE

It was moved by Fred Beckman and seconded by D. P. Whitten to accept the meeting schedule proposed by President McDowell. The motion carried. Schedule accepted as follows:

9:00	--	11:30 A. M.	Meet
11:30	--	12:30 P. M.	Lunch
12:30	--	3:00 P. M.	Meet
3:00	--	3:15 P. M.	Break
3:15	--	5:00 P. M.	Meet

MOTION - NVATA BUDGET

It was moved by Fred Beckman and seconded by Odell Miller that a Committee be appointed to prepare a budget to be presented to the delegates when the question of a proposed dues increase is considered at the final general session. Motion carried. (NOTE: Budget appears on page 24 of the appendix). Committee appointed - Millard Gundlach, Bill Harrison, Sam Stenzel and James Wall.

AGENDA

After a poll of members for additional agenda items - it was moved by Fred Beckman and Seconded by Odell Miller to accept the agenda. Motion carried.

AG TEACHERS DIRECTORY

It was moved by Howard Teal and seconded by Bill Harrison that a committee be appointed to develop facts, figures, etc. in regard to the proposed purchase of the Ag Teachers Directory from Mr. and Mrs. T. L. Faulkner of Alabama that could be used in seeking advice from the delegates attending the Regional Meetings. Motion carried. President McDowell appointed the following: Fred Beckman, Howard Teal, Odell Miller, Francis Murphy, D. P. Whitten and himself as an ex-officio member.

LEADERSHIP SEMINAR

It was moved by Millard Gundlach, seconded by Howard Teal and carried that a Leadership Training Program for National and State Association Officers be developed and implemented with a session at NVATA Headquarters for National Officers and sessions at The Leadership Conferences for State Association Officers.

PROGRAM OF WORK REPORT FORM - 1971-1972

Chairmen of the various sections of The Program of Work were requested to up-date the Program of Work Report Form and turn it in to the Executive Secretary before the close of the Convention.

NEWSLETTERS TO ALL MEMBERS

Committee members re-affirmed their desire expressed at the Summer Meeting of the Committee to send two (2) Newsletters to all members during the year - one following the National Convention and one following the Summer Meeting of The Executive Committee.

RECESS AND CALL TO ORDER

The meeting was recessed at 11:35 A. M. for lunch and was called to order again at 1:00 P. M.

REVISION OF BYLAWS

The proposed revision of the Bylaws was discussed and it was agreed that all requirements for presenting the proposal to the delegate body had been met. It was suggested that when a reprint was made that an editorial correction be made in Article VI, Section 2 - b-2 by striking out the first (affiliated).

SAM STENZEL ARRIVED

Sam Stenzel whose arrival had been delayed by inclement weather in the Denver area joined the Committee at 1:05 P. M.

REGIONAL CITATION CERTIFICATES

Millard Gundlach moved that Regional Citation Certificates be signed only by the Vice President. After a second by Fred Beckman, the motion carried.

The following were appointed by President McDowell to serve on a Committee to develop a set of guidelines for presenting Regional Citations: Fred Beckman, Odell Miller and Howard Teal.

RESUMES - HONORARY LIFE MEMBERS AND CITATIONS

It was agreed that consideration would be given to candidates proposed for Honorary Life Membership and Citations only when duplicate copies of the candidates resume (one page - double spaced) was presented for Committee consideration at the Summer meeting of the Executive Committee.

OFFICER NOTEBOOKS

Bill Harrison moved and it was seconded by Odell Miller that officer notebooks and carrying cases be passed on to their successor. Motion carried.

GEIGY AWARD

The Executive Secretary, James Wall, reviewed his discussion with Richard Hansen of Geigy Agricultural Chemicals relative to changes proposed by Mr. Hansen in the scorecard. The committee was reminded that Mr. Hansen, would meet with them the following day.

TREASURER'S REPORT

The Treasurer's report was given by Sam Stenzel who moved that it be adopted. Motion carried after a second by Fred Beckman.

RECESS AND CALL TO ORDER

The committee recessed at 3:00 P. M. and the meeting was called to order again at 3:10 P. M.

DEAN GRIFFIN - AVA STAFF

Dean Griffin of the AVA Staff was introduced and spoke briefly to the committee. Activities mentioned by Mr. Griffin in which AVA has been active included:

-Assistance with the Denver Seminar
-Increased insurance benefits - tort liability.
-Eight Ag articles in AVA Journal.

HE ALSO -

-Provided each Vice President with a packet of materials relating to the Ag Division which are available from AVA.
-Asked that NVATA continue to make suggestions to AVA.

REVIEW OF CONVENTION PROGRAM AND PLANS

The following items were reviewed by the Executive Secretary, James Wall:

-Agricultural Education Division Policy Committee Meeting
-AVA Department Meetings
-Ag Ed Editing and Managing Board Meeting and Dinner
-Agenda - Three General Sessions
-Special Programs
 - (1) Agricultural Education Division Special Program
 - (2) NVATA Special Program
-Regional Meeting Plans - Agenda, attendance forms and supplies
 - (a) First Regional Meetings
 - (b) Second regional Meetings
-NVATA Reception
-Harvestore Breakfast
-State President's Dinner - Panel
-Co-Op Breakfast
-NVATA Past Officers' Dinner and Meeting
-NVATA Awards Breakfast
-Publicity Committee - Pictures and I. D. Badges
-Resolutions Committee - Meeting Schedule and I. D. Badges
-Registration procedures
-Tickets
-Convention Buttons
-Membership Report - 5 Year Plaques, 100% certificates and Life Certificates
-Professional State Association Awards
-Ideas Unlimited - Judges and Awards
-Ag Ed Standing Committees
-Certification of Voting Delegates - Delegate Cards
-Hospitality
-Vice President's Checklist
-Supplies for Regional Meetings
-State Conference Dates
-Favors and Door Prizes
-Attendance - Ag Division Meetings

ADJOURNMENT

The meeting was adjourned at 4:30 - 30 minutes early due to a conflict in room scheduling.

Thursday, December 2, 1971

CALL TO ORDER

The meeting was called to order at 9:05 A. M. by President Glen McDowell.

INVOCATION

The Invocation was given by Bill Harrison, Vice President, Region II, Leedey, Oklahoma

JAY BENHAM

Jay Benham, Administrative Secretary, National FFA Alumni Association was introduced. Mr. Benham's remarks included: -

-Purposes of the Association
-Membership slow, with 1100-1200 members at present
-Asked for suggestions
-Suggest that NVATA pass resolution in support

MOTION

It was moved by Fred Beckman seconded by Bill Harrison and carried that a letter in support of the Alumni Association be developed.

MOTION

It was moved by Bill Harrison and seconded by Fred Beckman that Luther Lalum and John Elliott be reimbursed for expenses incurred in representing NVATA at the AVA Task Force meeting on Career Education held on Thursday, December 2nd in Portland. Motion carried.

MOTION

It was moved by Bill Harrison and seconded by Millard Gundlach that committee members pay the \$3 registration fee and that no claim for reimbursement be made. Motion carried.

AVA VICE PRESIDENT FOR AGRICULTURE

Mention was made of the fact that a new AVA Vice President for Agriculture would be elected for a 3 year term at the Chicago Convention and that if the regular rotation was followed a teacher of Vocational Agriculture would be elected.

AVA DIRECT MEMBERSHIP

Evidence was presented showing that the AVA was soliciting direct membership in some states. It was suggested that a determination be made as to AVA's future plans for this activity which tends to circumvent the state Vocational Associations as well as the state Vocational Agriculture Teacher's Associations which have been serving as a "Collection Agency" for many years.

RECESS AND CALL TO ORDER

The meeting was recessed at 11:30 A. M. and was called to order again at 12:45 P. M.

AVA INSTITUTIONAL MEMBERSHIP

Institutional membership in AVA was explained by President McDowell. The Committee did not go on record in favor or in opposition to the proposal.

FFA FOUNDATION PROPOSAL

It was moved by Millard Gundlach, seconded by D. P. Whitten and carried to again make a \$1,000 contribution to the National FFA Foundation.

ENCYCLOPEDIA BRITANNICA OFFER

A letter from a representative of Encyclopedia Britannica presenting a Commercial offer to NVATA was read by the Executive Secretary. Bill Harrison moved that the offer be declined. After a second by Fred Beckman, the motion was carried.

LEADERSHIP FOR 10,000

Sam Stenzel gave a progress report on the slide series he is developing on - "Leadership for 10,000" and asked that a committee be appointed to meet with

him from 10:00 - 12:00 A. M. on Friday to assist in selecting slides and in preparing script for the series. President McDowell appointed all the Vice Presidents to serve on the committee.

JIM DOUGAN INTRODUCED

Mr. Dougan, State Supervisor, Ohio and serving for 90 days as a Special Assistant to Dr. Worthington, Associate Commissioner for Vocational Education, appeared before the Committee. Comments and/or statements by Mr. Dougan included -

....Assignment is to develop plans and establish objectives for Vocational Agriculture.

....Developing standards and developing curriculum.

....Working on Career Education Program.

....Asked NVATA to identify major concerns of Vocational Agriculture Teachers.

....There is a lack of leadership in State Supervision.

....In some instances teachers are being trained as they were 25 years ago.

....Urged NVATA to continue to nurture their relationship with the USOE.

THIRTY MINUTE CLUB RULES AND CERTIFICATES

It was recommended that the following changes be made in the rules:

....Include radio and TV in rule 5.

....Change "Exchange of Ideas" to "Ideas Unlimited" in rule 3.

Bill Harrison moved that the above recommendations be accepted and that Sam Stenzel select a committee to meet at this convention to redesign the certificate. The motion was seconded by Fred Beckman and carried.

RICHARD HANSEN - GEIGY

Mr. Hansen, a representative of Geigy Agricultural Chemicals reviewed the NVATA Professional Award Program sponsored by Geigy. A complete revision of the scorecard was proposed by Mr. Hansen and after several changes, was accepted by the committee on a motion made by Fred Beckman and seconded by Odell Miller.

RECESS AND CALL TO ORDER

The meeting was recessed at 2:45 P. M. and called to order again at 3:00 P.M.

NVATA - USOE RELATIONS

President McDowell commented on the fact that he has been involved in numerous meetings called by the USOE and is frequently recognized as a very important force in education circles.

NVATA - NASDA RELATIONS

President McDowell reported that he was exceptionally well received at the convention of the National Association of State Departments of Agriculture. Several members commented on the good relationships existing between the Vocational Agriculture Teachers' Association and Department of Agriculture in their state.

EDUCATION NEWS SERVICE

It was moved by Bill Harrison, seconded by Howard Teal and carried to subscribe for the Educational News Service for the National Office.

POSITION PAPER ON FFA

It was noted that the AATEA is now represented on The National FFA Board of Directors in an ex-officio capacity as is the NVATA.

It was recommended that The Board be requested to fund NVATA and AATEA representatives.

Howard Teal moved that President McDowell prepare a position paper on the FFA to be presented for consideration of the Executive Committee at their Summer Meeting. The motion carried after a second by Fred Beckman.

B. O. A. C. PROGRAM

It was agreed that NVATA should encourage members to support the program.

BLUE COATS FOR AMERICA

The new program approved by the FFA Board of Directors was explained by President McDowell and Past President Gundlach.

REGIONAL COORDINATORS FFA FOUNDATION SPONSORING COMMITTEE

It was agreed that a list of the Regional Coordinators should be secured and included in a Newsletter with a recommendation that state associations make a special effort to become acquainted with their representative.

TASK FORCE REPORT

It was noted that a position paper had been developed and that it would be discussed at the Ag Division business meeting.

SILVER ANNIVERSARY CONVENTION - ATLANTA, GEORGIA

A committee composed of Sam Stenzel, Chairman - Bill Harrison, Odell Miller, Francis Murphy and D. P. Whitten were appointed to start making plans with one-half day of the '72 Summer Meeting of the Executive Committee being devoted to planning. Glen McDowell and James Wall were named as ex-officio members of the committee.

SUGGESTIONS - CAREER ORIENTATION PROGRAM

The Executive Secretary, James Wall, reported that Walter Jacoby, Panel Chairman, would appreciate having suggestions for operation of the panel. The committee expressed complete confidence in Dr. Jacoby and no suggestions were made.

USE OF THE FFA EMBLEM

Certain unauthorized uses of the emblem were discussed. No official action was taken.

NEWSLETTERS

The importance of regular Regional Newsletters was discussed. The Executive Secretary James Wall asked that all newsletter copy sent to the National Office be double spaced.

POLICY - STATE ASSOCIATION VISITS

It was moved by Bill Harrison, seconded by Fred Beckman and carried to Amend Section II, #2 of the NVATA Policies by adding the following sentence: "In problem or special situations the Regional Vice President in consultation with the President and Executive Secretary shall determine action in regard to second visits".

ACTIVE MEMBERSHIP

The membership status of supervisors and teacher educators was discussed. No action was taken.

AVA BYLAWS PROPOSAL

After a thorough review by Bill Harrison of a proposal to amend the AVA Bylaws, it was moved by Odell Miller, seconded by Fred Beckman and carried that the NVATA Executive Committee recommend to NVATA members sitting as AVA Delegates, oppose the proposal as written and that they support an NVATA substitute proposal.

AG TEACHER DIRECTORY - COMMITTEE REPORT

The report was given by Howard Teal, Committee Chairman. It was moved by Odell Miller, seconded by Howard Teal and carried that the report be printed and distributed by Vice Presidents at their Regional Meetings and that the proposal be discussed and opinions secured.

BUDGET COMMITTEE REPORT

The report was given by Sam Stenzel Chairman, who moved that copies be printed and distributed at Regional Meetings. The motion carried after a second by Fred Beckman.

REGIONAL CITATION GUIDELINES COMMITTEE REPORT

The report was given by Fred Beckman, Chairman. Sam Stenzel moved that the report be accepted. The motion was seconded by Fred Beckman. Motion carried.

NOMINATIONS FOR PRESIDENT AND TREASURER

The section of the NVATA Bylaws dealing with nominations was read by the Executive Secretary who also gave the names of persons eligible according to said Bylaws.

The President, Glen McDowell appointed Millard Gundlach, D. P. Whitten and James Wall as tellers. After a secret ballot it was announced by the tellers that Howard Teal had been nominated. It was moved by D. P. Whitten, seconded by Bill Harrison and carried that a unanimous ballot be cast for Howard Teal.

After a secret ballot it was announced that Sam Stenzel had been nominated as Treasurer. Odell Miller moved that a unanimous ballot be cast for Sam Stenzel. The motion was seconded by Fred Beckman. Motion carried.

ADJOURNMENT

There being no further business, President McDowell declared the meeting adjourned at 5:30 P. M.

Respectfully submitted,
JAMES WALL
Executive Secretary
Box 4498
Lincoln, Nebraska 68504

SPECIAL EXECUTIVE COMMITTEE MEETING

Monday, December 6, 1971
Studio Suite
Portland Hilton Hotel

CALL TO ORDER

The meeting was called to order at 10:30 A. M. by President Glen McDowell.
All members were present.

PROPOSED AMENDMENT TO THE AVA CONSTITUTION

Bill Harrison reviewed what history he had been able to secure relative to development of the proposal to Amend Article XII of the AVA Constitution. According to available information, the Amendment was prepared by AVA Counsel and the AVA Board apparently was not aware of its implications.

Bill explained a substitute proposal he had prepared after which Millard Gundlach moved to accept the proposal. After a second by Odell Miller, the motion passed.

Bill Harrison moved, Francis Murphy seconded and the motion was carried to accept the following procedure:

Present substitute proposal to AVA Policy Committee.
If endorsed by Policy Committee present proposal to Bylaws Committee.
If not accepted by either or both as a substitute motion, NVATA will present the substitute proposal to the AVA House of Delegates.

REGIONAL ACTION REGARDING PURCHASE OF AG TEACHERS DIRECTORY

Region I	Very little interest.
Region II	No Interest.
Region III	No interest.
Region IV	30 - 6 against.
Region V	Little interest, develop own.
Region VI	In favor if could be secured for \$20,000.

MOTION - PURCHASE OF DIRECTORY

It was moved by Sam Stenzel and seconded by Millard Gundlach that the Directory not be purchased. Motion carried.

RESOLUTION COMMITTEE OPERATING POLICIES

Sam Stenzel moved the current chairman of the NVATA resolutions committee revise the operating policies for the committee. The motion was seconded by Millard Gundlach. Motion carried.

LETTER - DENVER SEMINAR ATTENDEE

A letter was read from a teacher member of NVATA requesting partial reimbursement for expenses incurred attending a meeting of the summation committee in Washington. It was determined that according to NVATA Policy the claim could not be paid. Millard Gundlach moved that the individual be so advised. The motion was carried after a second by Odell Miller.

OPERATIONS UP-DATE SEMINAR COMMITTEE

It was moved by Odell Miller and seconded by Bill Harrison that President Glen McDowell and Executive Secretary James Wall inquire of Paul Gray, National FFA Executive Secretary as to why teachers are not to be represented on the National FFA Seminar set for March 6-10, 1972 in Washington, D. C.

ADJOURNMENT

There being no further business, President McDowell declared the meeting adjourned at 11:50 A. M.

Respectfully submitted,
JAMES WALL, Executive Secretary
Box 4498
Lincoln, Nebraska 68504

FINAL EXECUTIVE COMMITTEE MEETING

Tuesday, December 7, 1971
Studio Suite
Portland Hilton Hotel

CALL TO ORDER

The meeting was called to order by President Howard Teal at 1:15 P. M. All committee members were present. Retiring officers Millard Gundlach and Fred Beckman also were present.

-Reviewed program for remainder of the day.

ADJOURNMENT

President McDowell declared the meeting adjourned at 10:15 A. M. as scheduled.

Respectfully submitted,
JAMES WALL
Executive Secretary, NVATA

SPECIAL PROGRAM

Saturday, December 4, 1971

**Portland Hilton Hotel
Ballroom B**

The meeting was called to order at 1:30 P. M. by Millard Gundlach, Past President of NVATA. Approximately 500 were in attendance.

The Invocation was given by James Simmons, State President and Teacher of Vocational Agriculture, Omaha, Nebraska.

Mr. Gundlach introduced guests at the speakers table as follows: -

C. M. Lawrence, AVA President for Agriculture of Florida.
Julian Carter, President of NASAE of Vermont.
Gene Love, President of AATEA of Missouri.
Glen McDowell, President of NVATA of Kentucky.
James Wall, Executive Secretary of NVATA of Nebraska.

Also introduced were: -

Andy Bassel, State President and Teacher of Vocational Agriculture, Gunnison, Colorado - Recorder.
Joe Hartley, State President and Teacher of Vocational Agriculture, Batesville, Mississippi - Host.

Mr. Gundlach introduced, Donald McDowell, Executive Director, National FFA Foundation Sponsoring Committee who in turn introduced the speaker, Dr. Robert Worthington, Associate Commissioner, Adult, Vocational and Technical Education. After an informative and challenging address, Dr. Worthington answered questions from the audience.

The meeting adjourned promptly at 2:30 P. M.

Respectfully submitted,
James Wall
Executive Secretary, NVATA

MINUTES OF THE SECOND GENERAL SESSION

Sunday, December 5, 1971

Portland Hilton Hotel
The Galleria

CALL TO ORDER

The meeting was called to order at 10:00 A. M. by President Glen McDowell. Approximately 350 were in attendance.

INVOCATION

The Invocation was given by Roy Esser, State President and teacher of vocational agriculture, Kewaskum, Wisconsin.

GREETINGS FROM AATEA

Gene Love, President of American Association of Teacher Educators and Head Teacher Educator, Columbia, Missouri extended greetings on behalf of the members of his organization.

INTRODUCTIONS

President McDowell made the following introductions: -

Linville Hardin, State President and Teacher of Vocational Agriculture
Houston, Missouri - host.

Curtis Jensen, State President and Teacher of Vocational Agriculture
Garrison, North Dakota - Recorder

PROFESSIONAL STATE ASSOCIATION AWARDS

President McDowell presented framed certificates to Presidents of Associations who qualified for the award as follows: -

Region I - Arizona, California, Montana, Oregon, Utah, Washington and Wyoming.

Region II - Colorado, Kansas and Oklahoma.

Region III - Iowa, Minnesota, Nebraska, North Dakota, South Dakota, and Wisconsin.

Region IV - Illinois, Michigan, Missouri, Kentucky and Ohio.

Region V - Georgia, North Carolina and Tennessee.

Region VI - New York, Pennsylvania, Vermont, Virginia and West Virginia.

GREETINGS FROM AVA

C. M. Lawrence, AVA President for Agriculture extended greetings on behalf of the American Vocational Association.

REPORT OF EXECUTIVE SECRETARY - (See appendix - Page 61)

The report was given by James Wall. Jim Guillinger of Illinois moved that the report be accepted. After a second by Grover Mische of Iowa, the motion was carried.

GREETINGS FROM NASAE

Julian Carter, President of the National Association of State Supervisors of Agricultural Education and State Supervisor of Vermont, extended greetings on behalf of NASAE.

PFIZER AWARDS

Pete Johnson, Pfizer District Manager, Spokane, Washington presented trophies and \$500 checks to the Advisors of the National FFA Foundation Award Winners, in Dairy, Livestock and Poultry farming. The winners were:

Roy Reno - Wyoming - Livestock Farming.

Ed Fisher - California - Dairy Farming.

Jerry Sherwin - Wisconsin - Poultry Farming.

CAREER ORIENTATION AWARDS

Plaques were awarded to the Regional Winners of the "NVATA Career Orientation Contest", by Dave Kramer, Assistant Communications Supervisor, New Holland Division of Sperry Rand. Receiving plaques were:

- Region I - Dan Birdsell, Washington
- Region II - Eugene Ruby, Colorado
- Region III - Don Leibelt, Wisconsin
- Region IV - Glen Griffith, Ohio
- Region V - Guy Angel, North Carolina
- Region VI - Oscar Harris, West Virginia

GREETINGS - NATIONAL SAFETY COUNCIL

Phil Schmidt, Rural Youth Specialist, Farm Conference, National Safety Council Chicago, Illinois, extended greetings on behalf of his organization.

GEIGY AGRICULTURAL CHEMICALS TOUR OF EUROPE

Richard Hansen, Publicist, Geigy Agricultural Chemicals, Division of Geigy Chemical Corporation, spoke on behalf of the sponsoring organization.

Donald Kabler, Corvallis, Oregon, 1971 tour winner, reported on his trip.

AGRICULTURAL EDUCATION MAGAZINE

Roy Dillon, Lincoln, Nebraska, Editor of the Agricultural Education Magazine spoke briefly about the magazine and urged teachers to write more articles.

NATIONAL FFA FARM MECHANICS CONTEST

Grover Niehe of Iowa and a teacher of vocational agriculture, represented the teachers on the National FFA Judging Contest Committee. Grover reported that a National Contest in Farm Mechanics would be held at the 1972 National FFA Convention.

NOMINATIONS AND ELECTION

President McDowell asked for nominations from the floor for the office of Treasurer.

A delegate from Ohio moved that nominations be closed. The motion was seconded by George Dunsmore of Vermont. Motion carried.

It was moved by Jim Ferries of Wisconsin, seconded by Eldon Aupperle of Illinois and carried that a unanimous ballot be cast for Sam Stenzel. President McDowell declared Mr. Stenzel elected.

President McDowell asked for nominations from the floor for the Office of President.

George Dunsmore of Vermont moved that nominations be closed. The motion carried after a second by Dick Strangeway of New York.

Dick Strangeway of New York moved that a unanimous ballot be cast for Howard Teal. The motion was seconded by Grover Mische of Iowa. Motion carried and President McDowell declared Mr. Teal elected.

ANNOUNCEMENTS

The Executive Secretary, James Wall made the following announcements: -

Favors will be handed out from 2:00-5:00 P. M. on Monday, in the Studio Suite.

Copies of the Secretary's report available at the door.

Reviewed program for the remainder of the day.

Breakfast is scheduled for 7:30 A. M. Monday.

DOOR PRIZES

Door prizes provided by the Montana, Nevada and Oregon Associations were won by - Gerald Barton of Iowa, Ralph Moffatt of Tennessee and Dan Birdsell of Washington.

ADJOURNMENT

President McDowell declared the meeting adjourned at twelve noon.

Respectfully submitted,
JAMES WALL
Executive Secretary, NVATA
Box 4498
Lincoln, Nebraska 68504

MINUTES OF THE FINAL GENERAL SESSION

Tuesday, December 7, 1972

Portland Hilton Hotel
Ballroom A

CALL TO ORDER

President McDowell called the meeting to order at 9:15 A. M.

INVOCATION

The Invocation was given by Clark Cleveland, State President and Teacher of Vocational Agriculture, Hinsdale, Montana.

INTRODUCTIONS

Denver Jones, State President and Teacher of Vocational Agriculture, Waldron, Arkansas - Host.

Willie B. Owens, State President and Teacher of Vocational Agriculture, Bamberg, South Carolina - Recorder.

RESOLUTIONS COMMITTEE INTRODUCED

Millard Gundlach, Resolutions Committee Chairman, introduced the Committee.

Region I Fred Faulks, Idaho.
Region II Andy Bassel, Colorado.
Region III David Flint, Iowa.
Region IV William Harrison, Michigan.
Region V Jimmy Morris, Alabama.
Region VI Richard Strangeway, New York.

REPORT OF THE RESOLUTIONS COMMITTEE - (See appendix - Page 68)

Jim Ferries of Wisconsin moved that the appreciation resolutions be adopted as printed. The motion was seconded by John Murray of Wisconsin. Motion carried.

Action was taken on other resolutions as follows:

SPECIAL APPRECIATION RESOLUTIONS

#1 - Dr. Robert Worthington - moved by T. C. Weaver of Georgia, seconded by Marlin Wacholz of Minnesota. Carried.

#2 - Agricultural Business and Organizations - Moved by Norman Bohmbach of Minnesota, seconded by James Pollman of South Dakota. Carried.

COMMITTEE RESOLUTIONS

#1 - Ag Division Task Force. Moved by Fred Faulks of Idaho, seconded by Verlin Hermann of Oregon. Carried.

#2 - National PFA Alumni Association. Moved by Weber of Louisiana, seconded by Roy Reno of Wyoming. Carried.

- #3 - Tort Liability Insurance. Moved by William George of Georgia, seconded by George Dunsmore of Vermont. Carried.

REGIONAL RESOLUTIONS

- #1. - NVATA Office Relocation - After considerable parliamentary maneuvering, John Mundt of Idaho moved to postpone the resolution indefinitely. The motion was seconded by Lowell Hillen of Illinois. Motion carried.
- #2. - Establishment of a Bureau of Occupational Education - Moved by Harry Karpak of New York, seconded by Leslie Olsen of Kansas. Carried.
- #3. - Veterans Farm Training - Moved by Floyd Hager of Missouri, seconded by a delegate from Alabama. Carried.
- #4. - NVATA Officers Visits to State Associations - Moved by John Murray of Minnesota, seconded by Robert Phillips of Ohio. Carried.
- #5. - Teacher Training in Agriculture Education - Moved by Keith Griffin of Michigan, seconded by Kenneth Brashaber of Indiana. Carried.
- #6. - Support of USDA - Moved by John Mundt of Idaho, seconded by Rick French, of North Carolina. Carried.
- #7. - National FFA Judging Contest - Moved by Jerry Greer of Kentucky, seconded by Cedric Gowler of Illinois. Carried.

SPECIAL APPRECIATION RESOLUTION - (See Preface)

Chairman Gundlach read a special resolution of appreciation to Jim and Georgia Wall.

Jack Humphrey of Wyoming moved that the resolution be adopted. The motion was carried after a second by David McVey of Texas.

AMENDMENTS TO NVATA BYLAWS

It was moved by Norman Bohmbach of Minnesota, seconded by Palmer Eidet of South Dakota to - amend Article III, Section 2, Part (a) to read - "Active Membership -- shall be defined as persons professionally qualified and certified by the state certifying agency, to teach Vocational Agriculture or any course related thereto requiring an understanding and knowledge of agriculture, employed as a teacher of Vocational Agriculture on at least a one-half time basis, including secondary teachers, Junior College teachers and teachers in community colleges and University systems or similar nomenclature of programs offering less than a baccalaureate degree in Vocational Agriculture and who are members of affiliated state associations of agriculture teachers."

Lew Ayers of Pennsylvania moved to amend the motion by inserting the word "elementary" before secondary. The motion was seconded by George Dunsmore of Vermont. The amendment carried and the motion as amended carried.

It was moved by Peter Edgecomb of Maine, seconded by Richard Strangeway of New York and carried to - amend Article III, Section 3, to read as follows: - (a) Voting -- "The privilege of voting shall be restricted to active members"; (b) Holding office -- "The privilege of holding office shall be restricted to teachers of Vocational Agriculture except as provided in Article IV, Section 5".

It was moved by Gayle Pettit of Kentucky, seconded by George Dunsmore of Vermont and carried to - amend Article IV, Section 5, - Opening paragraph to read as follows: -

"Officers shall be elected from the active membership. In case any officer ceases to be employed as a teacher of Vocational Agriculture, he may continue to serve in that office until the next annual meeting provided that he remains in the field of education. A President in the above situation may serve as past president for the year immediately following, provided he continues to be in the field of education. In the event that an officer ceases to teach Vocational Agriculture and also leaves the field of education, his office shall be declared vacant immediately and filled as follows:". - (Refer to Parts A & D of NVATA Bylaws)

It was moved by Vernon Luft of Montana, seconded by Marlin Wacholz of Minnesota and carried to - amend Article III, Section 4, part (a) to read -

"Active, affiliate and direct membership dues shall be \$8.00 annually starting July 1, 1972, and \$10.00 annually starting July 1, 1974."

Dave Cox of Arizona moved to amend the motion by striking out \$8.00 and inserting \$10.00 and to omit - "starting July 1, 1972 and \$10.00 annually starting July 1, 1974." Motion to amend and the motion as amended both carried. The vote on the amendment was 75 for and 23 against.

SUBSTITUTE PROPOSAL FOR ARTICLE XII OF AVA BYLAWS

Bill Harrison of Oklahoma moved, Bill Harrison of Michigan seconded and the motion was carried to endorse the following substitute proposal for Article XII of the AVA Bylaws.

* * * * *

- A. All proposed amendments must be in the hands of the Executive Director 6 months prior to the date set for the Annual Convention.
- B. Proposed amendments shall have been approved by at least one Division of the Association, or approved by at least one affiliated Association or approved by the Bylaws Committee, or approved by the AVA Board of Directors.
- C. Proposed amendments shall be reviewed by the Bylaws Committee, and said Bylaws Committee may recommend acceptance or rejection.
- D. Proposed amendments shall be printed in an issue of The American Vocational Journal two months prior to the convention and the affiliated Associations shall be notified of proposed amendments at least 60 days prior to the Annual Convention by the Executive Director.

- E. The proposed amendments shall then be submitted in writing to the House of Delegates at a regular meeting during the Annual Convention.
- F. Amendments to the Bylaws shall be by a majority vote of all members of the House of Delegates present and voting at the Annual Convention, and unless otherwise provided by the amendment, they shall be effective immediately on their adoption by the House of Delegates.
- G. The Articles of Incorporation may be amended only by a two-thirds vote of all members of the House of Delegates present and voting at the annual convention and such Articles of Incorporation shall be amended only as provided by the laws of the State of Indiana.

NOTE: The proposal was later adopted by the AVA House of Delegates.

INVITATION TO 1972 CONVENTION

Lowell Hillen, President of the Illinois Association, invited the delegates to attend the 1972 Convention to be held in Chicago, Illinois.

ALTERNATE VICE PRESIDENTS INTRODUCED

Alternate Vice Presidents for 1971-72 were introduced as follows:

Region I	Roy Reno, Wyoming
Region II	Ray Seale, Texas
Region III	John Murray, Minnesota
Region IV	Jim Guillinger, Illinois
Region V	H. I. Jones, Georgia
Region VI	George Dunsmore, Vermont

NEWLY ELECTED VICE PRESIDENTS

Fred Beckman, retiring Vice President for Region I introduced the new Vice President - Luther Lalum, Kalispell, Montana.

Howard Teal, retiring Vice President for Region VI, introduced the new Vice President - James Shadle, Hegins, Pennsylvania.

AWARDS PRESENTED

President McDowell presented the following awards:

TO - Fred Beckman and Howard Teal, retiring Vice Presidents - a plaque and a Life Membership in NVATA.

TO - Bill Harrison and Odell Miller, Vice Presidents completing their first year of service - NVATA National Officer Service Keys.

REMARKS BY THE RETIRING PRESIDENT

Glen McDowell made the remarks which follow:

* * * * *

As I have traveled about this Nation and met with teachers of Vocational Agriculture, people in government, state supervisors, teacher educators, and listened and observed, what I heard and witnessed, when coupled with the knowledge I believe I have of what it is all about in this day and age we live in, I can't help but feel it is a must that this organization

continue to remain strong -- not only for ourselves, and maybe our selfish interests, but for this Nation. I believe all of us here can defend this position anywhere and say that we feel teachers of Vocational Agriculture are in top position to effect the happenings in our land.

I am going to give a few charges to you as your retiring President. If you have not done this, do it! Structure your State Association to involve your membership. This can be done by or through:

1. Constitution
2. Aims and purposes adopted
3. Committee structure
4. Program of Work
5. Communications system you have -- and we all should know this means person-to-person, personal letters, and news letter contacts to members

Gentlemen, you cannot place a high enough value on an effective, up-to-date communications-system to members. Some one has to take time out, however, to do this.

And, I want to ask have you done this?

- .. Organized and put into action a state support committee;
- .. Set up and put into action a legislative committee;
- .. Organized a past president's committee, or Association or Organization;
- .. Established a top to bottom and up communications system among the members in your state, among the lay citizenry and to government (when I say government here, I mean to our school officials and to our elected officials);
- .. Attained 100% membership or near to that figure;
- .. Faced unafraid and with faith in our cause the issues of the day;
- .. Entered the NVATA contests and awards programs;
- .. Made reports on time to your National organization?

The past is prologue and is here defined this way....."Prologue is the introduction to a play and in turn the past can only be an introduction to the future." So, although the past of the NVATA, Agricultural Education and the FFA is a great one indeed, past achievements can only serve us as an introduction to the future.

Will you be disciples of change and not its victims? I would say to you.. stand tall, stand firm, and keep your powder dry! The future looks good. And, you have been most kind to me.

* * * * *

PASSING THE GAVEL

President McDowell introduced the new President, Howard Teal of Boonville, New York and turned the gavel over to him.

PRESENTATION TO RETIRING PRESIDENT

President Teal presented an engraved gavel and plaque to Glen McDowell the retiring President.

OFFICER CHARGE AND INSTALLATION

The "Charge" to all officers was given by retiring Past President, Millard Gundlach.

ACCEPTANCE SPEECH

Howard Teal, newly installed President, made the following remarks:

* * * * *

I realize that election to this office is the highest responsibility that can come to a teacher of Vocational Agriculture. I accept this gavel with all humility and can only hope that I am equal to the task.

I realize also, that I will be following in the footsteps of many outstanding leaders over the years - not the least of which is our now Past President, Glen.

My first aim will be to continue the fine work which these men have initiated and pursued. The last few years the NVATA has taken many new steps forward so that it is now recognized as the organization where the action is. The status of Vocational Agriculture, at all levels, has improved considerably; the last two years. The NVATA, in cooperation with its sister organizations can take a large measure of credit for this.

In the area of member information and relations a considerable improvement has taken place. We have reversed the trend in the membership percentage. Several new services to members have been implemented.

Today we took a big step forward in voting a dues increase to make our association financially more sound and in a position to continue presently expanded member services and to make possible the implementation of several more that are now in the planning stage. A number of other important decisions have been or will be made at this convention that will have a marked effect on the future of our organization. One of special note, I will point out to you.

Your Executive Committee has taken action to set up a Leadership Training Seminar for all NVATA Vice Presidents that it is hoped will considerably enhance their ability, in turn, to provide leadership training for state association officers.

Jim Wall has already mentioned to you the need to add an Assistant Executive Secretary. Action will need to be taken here, and I agree with Jim that it should be done with all deliberate speed.

I personally feel that all of the organizations in the Agricultural Division need to work more closely together to effectuate our common goals and resolve our common problems.

I foresee an extremely busy and important year ahead for the NVATA, and if we make good and sound decisions, I also foresee a very fruitful one.

On my part I can only pledge you this: I WILL EXERT EVERY EFFORT, IN THE CONFINES OF MY ABILITY, RESOURCES AND PHYSICAL STAMINA, TO WORK FOR THE GOOD OF THE NVATA AND THE PROFESSION OF EDUCATION IN AGRICULTURE. I BELIEVE THAT I CAN ALSO PLEDGE THIS SIMILAR EFFORT ON THE PART OF OUR ENTIRE EXCELLENT EXECUTIVE COMMITTEE WITH YOUR SUPPORT AND COOPERATION WE CAN MOVE AHEAD.

I most sincerely thank you for your confidence in selecting me for this leadership position.

May we all have a good trip home and a good year ahead.

* * * * *

ANNOUNCEMENTS

The following announcements were made by the Executive Secretary, James Wall.

- ..Entrants in "Ideas Unlimited Contest" check with your Regional Vice President. He has a ball point pen for you.
- ..See Mrs. Wall for extra convention pens. She still has a few for sale.
- ..Materials on the table, including President McDowell's talk, may be picked up as you leave the meeting.
- ..Please remain for the Ag Division Business meeting which will be held in this room immediately following adjournment.
- ..Extra favor bags will be available after 12:00 noon in the Studio Suite.
- ..Regional publicity committee members have negatives of pictures taken.
- ..Orders will be accepted for the Convention Slide Series until December 10.
- ..Award winners can pick up their pictures at the NVATA Office after noon today.
- ..News releases on new officers will be available at the NVATA Office after 4:00 P. M. today.
- ..The NVATA Office will be closed at 7:00 P. M. tonight.

DOOR PRIZES

Winners of door prizes provided by the Utah, Washington and Wyoming Associations were:

Gerald Wagner, South Dakota - Fish Eggs.
Guy Angel - North Carolina - Blanket
Rees Kilgore, Alabama - Gold Fleece

ADJOURNMENT

President Teal declared the meeting adjourned at 10:45 A. M.

Respectfully Submitted,
JAMES WALL
Executive Secretary, NVATA
Box 4498
Lincoln, Nebraska 68504

MINUTES OF REGIONAL MEETINGS

REGION I

FIRST SESSION
December 4, 1971

PORTLAND HILTON HOTEL
Parlor F

The meeting was called to order by Region I NVATA Vice President Fred Beckman.

Sixty-eight members were present from the following states: -

Arizona 4, California 2, Idaho 3, Montana 8, Nevada 1, Oregon 21, Utah 7,
Wyoming 6 and Washington 16.

Chairman Beckman presented 100% membership buttons to delegates from Montana, Utah and Wyoming.

Eugene Forrester gave a Public Relations Committee report announcing the opportunity for states to order the convention slide series for \$10.00 on a pre-pay basis.

Fred Faulkes, chairman of the Resolutions Committee announced that all resolutions must be acted upon by the Region and turned over to the NVATA Executive Committee within 6 hours after the last Region meeting.

Clark Cleveland, Chairman of the State Presidents Panel asked for written comments from the State Presidents on the subject, "What Makes Your State Association Strong"? This would provide background for his panel report at the President's Dinner.

Wyoming moved that the election for Region I Vice President and Alternate Vice President be held at 3 o'clock, December 5. The motion was seconded by Oregon. The motion passed.

Nominations were opened for Region I Vice President. Luther Lalum and John Elliot were nominated.

Nominations were opened for Alternate Vice President. Roy Reno was nominated. There were no further nominations.

The State Association reports were passed out for reviewing. The oral report will be given at the Second Regional Meeting.

The AVA Task force reports were distributed with the evaluation forms. Members were asked to complete the evaluation forms.

The FFA Supply Service and Magazine were discussed. The following general comments were made:

- ...1. The size of the FFA Magazine is becoming smaller and has fewer articles and more advertizing.
- ...2. The FFA Notebooks in quality and price leaves something to be desired.
- ...3. Cheap packaging for mailing seemed to be a general problem.
- ...4. It was suggested that the Region investigate the possibility of being able to purchase metallic emblems for their own mounting on Chapter designed awards. Chairman Beckman recommended that chapters contact the Advisory Board and the FFA Supply Service on all poor services that are rendered.

Chairman Beckman asked for discussion on the Agricultural Directory purchase possibility. Numerous opinions pro and con were expressed. No final recommendation was made.

The Region I meeting was adjourned at 4:30 for preparation of the NVATA Reception.

* * * * *

SECOND SESSION
December 5, 1971

HEATHMAN HOTEL
Parlor C

The meeting was called to order by Vice President Fred Beckman.

Jack Humphrey of Wyoming gave his report of the National FFA Judging Contest Committee actions. The proposed Agriculture Mechanics Contest was discussed and the minutes of the special study committee was reviewed.

Jack Humphrey informed the group that out of the \$85,000.00 budgeted by the National FFA Association for the contests, only \$25,000.00 went to the participating FFA members. A plea was made for ideas and recommendations from the State Associations.

The Oregon delegation moved that Region I recommend to the NVATA Executive Committee that the NVATA take over the operation of the National FFA Judging Contest if the opportunity arises. The motion was seconded and passed.

A motion was made that Region I go on record as not supporting any current action to move the NVATA office from the present Nebraska location. This motion was seconded and carried. A motion was made that Region I be opposed to any Constitutional Change that would form any possible block of Democratic process in the AVA by restricting the present flow of resolutions. This motion was seconded and passed.

The following convention proposal was recommended by individuals in Region I: -

-1. That meetings not be scheduled at the same time and that a little more freedom of time be allowed.

Chairman Beckman recommended that members send letters of appreciation to persons and companies on the list provided in the NVATA registration packet.

A motion was made, seconded and approved that this group adopt a resolution that the majority of the National FFA Contest rules committee be composed of practicing High School Agricultural Instructors and FFA Advisors.

Clark Cleveland of Montana moved that a unanimous ballot be cast for Roy Reno of Wyoming as Region I Alternate Vice President for the ensuing year. Verlin Herman of Oregon seconded the motion. The motion carried.

Verlin Herman moved that the Regional Leadership Conference be held in Boise on April 21 and 22 in conjunction with the Pacific Region Supervisors Meeting. The motion was seconded and carried.

A motion was made that Region I recommend a NVATA dues increase of \$5.00. The motion was seconded and passed.

It was recommended by the group that the NVATA produce a fact sheet for membership promotion information on where the National Dues goes.

The election for Region I Vice President was held. Luther Lalum was elected as the new Vice President for Region I.

An expression of appreciation was applauded to Fred Beckman for his outstanding work as Region I Vice President.

The meeting was adjourned at 3:30 P. M.

Respectfully submitted,
LUTHER LALUM
Alternate Vice President
Region I
Kalispell, Montana 59901

REGION II

FIRST SESSION
December 4, 1971

YMCA BUILDING
Room 3F

The Region II Vice President, Bill Harrison, called the First Regional Meeting to order at 2:45 P. M. Thirty-seven members were present.

The Invocation was given by Ray Seale, Past President of the Texas Association, asking Gods' Blessing on our Sincere Efforts.

Item three and four on the Agenda, the welcome and introduction of guests were accomplished quickly, since there were none.

Les Olsen of Kansas and Coy Jagers of Texas moved and seconded to adopt the Agenda Motion passed by voice vote.

Our Vice President announced that pictures would be taken during the break and that Portland Convention pens would be sold at 25¢ each.

Andy Bassel of Colorado moved and Coy Jagers of Texas seconded to approve the minutes of the prior Summer Conference at Dodge City, Kansas. Carried by voice vote.

State reports were given. A copy will be on file at the National Office.

- Arkansas - Not present - no report given.
- Colorado - Andy Bassel, President gave the report.
- Kansas - Les Olsen, President gave the report.
- Louisiana- Leighman Martin, President gave the report.
- New Mexico - Dwight Houston, President gave the report.
- Oklahoma - Jim Boston, President gave the report.
- Texas - Herman Stoner, President gave the report.

Glen McDowell, NVATA President and Cliff Saylor, National FFA Vice President from Arizona made brief remarks, offering their help if needed.

Bill Harrison gave the following figures on the membership report. These were the latest certified figures.

- Kansas - 186 members - 4 delegates present and 5 delegates allowed.
- Colorado - 82 members - 3 delegates present and 3 delegates allowed.
- Arkansas - 224 members - no delegates present and 5 delegates allowed.
- Louisiana - 245 members - 5 delegates present and 6 delegates allowed.
- New Mexico - 86 members - 100% - 2 delegates present and 3 delegates allowed.
- Oklahoma - 408 members - 100% - 9 delegates present and 9 delegates allowed.
- Texas - 760 members - 11 delegates present and 16 delegates allowed.

There is a total of 1991 members - 34 delegates present and 47 delegates allowed in Region II.

Mr. Harrison gave a report on all Region memberships and increases in membership, and Region II stood tall in comparison with all other Regions.

The Alternate Vice President gave a report on activities since Dodge City Summer Conference. He stated that Bill Harrison's visit to the Texas State Conference and his speech to the membership is largely the cause of an increase in membership from that state.

After the Texas conference the Alternate Vice President and Vice President visited the New Mexico State Conference in Las Cruces. Both gave talks to the entire delegation stressing the importance of dues. This along with President Rupert Mansell's persistency brought New Mexico into the 100% fold. The Alternate Vice President and Vice President visited the conference for about 3 days and were given a nice introduction at their state AVA banquet. It was also stated by the Alternate Vice President that Bill Harrison had as his goal an increase in membership and that he had worked hard toward that goal and the results are evident in the above figures.

The Ideas Unlimited Contest was explained by our Vice President. We were reminded of changes in the rules and encouraged to participate. Andy Bassel of Colorado asked if Item #9 in the rules could be changed to allow representation. Our leader said he would check into it.

The publicity report was given by Leighman Martin, President of the Louisiana Association. He encouraged the membership to fill out the fliers in our folder and leave them in the Headquarters Office. Also he stated that states would have to make their own arrangements for their group pictures before leaving the conference.

Chairman Bill Harrison announced that the film presentation worked up by Sam Stenzil called "Highlights of NVATA" is available at \$10.00 per set to all states.

Andy Bassel, President of Colorado in his resolutions committee report stated that their committee had not completed their functions and had to report back to complete the review of resolutions. Colorado presented a resolution for consideration by Region II, concerning move to Washington, D. C. Andy Bassel of Colorado moved and Ray Seale of Texas seconded the motion that the resolution be accepted. The motion was carried by voice vote.

Then came the break during which time pictures were taken, printed material concerning transitions in Ag Education, questionnaire on reactions to National Seminar, Denver, and consideration; NVATA purchase of Ag Teachers Directory.

The meeting reconvened at 4:22 P. M. after a seven minute break.

We picked up item 16 on the Agenda. Bill Harrison stated that the key to active membership was in the young teachers coming into the profession. He informed the assembly that all states in Region II increased their student membership in NVATA. The FFA Alumni Association was then presented, explained and urged.

Our worthy chairman then gave in detail facets concerning above printed material. He then outlined our status concerning considerations in the purchase of the National Directory & Handbook and said that this was for discussion and consideration and not necessarily for action. However, Harold Williams moved and Les Olsen seconded a motion that Region II go on record as opposing the purchase of said Directory and Handbook. After some discussion the motion carried by voice vote.

The Vice President moved through the next four items of business in quick order and stated that we should thank the sponsors of our activities and show our appreciation to them.

He called for state conference dates, spoke of state newsletters and reminded the states that this was one of the qualifications for the state association award.

Then the states were tactfully reminded of the importance of promptness in returning NVATA reports to Regional and National Offices.

Nominations were accepted for Alternate Vice President of Region II. The nominees were Ray Seale of Texas and Jack McClasky of Kansas.

The time was 4:52 and our leader declared adjournment until 1:15 P. M. Sunday, December 5, Parlor D, Portland Hilton Hotel.

SECOND SESSION
December 5, 1971

PORTLAND HILTON HOTEL
Parlor D

At 1:15 P. M. the second session of Region II NVATA was firmly called to order by Vice President, Bill Harrison.

Guests, Jim Beech of Oklahoma, Bob Nattery of Colorado and Dr. Robert Price of Oklahoma were introduced to the 42 members present.

Beginning business with awards. The delegation was urged to increase participation and were told of changes in The Geigy Award. Also, that the "30 Minute Club" certificate will be changed.

Bill explained the proposed Bylaws Amendments.

Dwight Houston, President from New Mexico obtained the floor and gave quite a pitch for presented information concerning the Region II Summer Conference to be held in Las Cruces, New Mexico, June 20-23, 1972. He warned of, but did not dwell, on the hazards of fast horses and faster women.

At 2:35 P. M. we reconvened after a 7 minute break without losing a man. In fact we gained one who was introduced as Lloyd Wiggins, a guest from Oklahoma.

Andy Bassel handed out the printed resolutions and completed his report of the resolutions committee. After reviewing the printed resolutions Jim Boston of Oklahoma stated that he had voted on the prevailing side and moved that we reconsider the motion on Region II Resolution concerning the move of NVATA Headquarters to Washington, D. C. Les Olsen seconded the motion. The motion to reconsider failed. By show of hands 13-15.

Item 23 on the Agenda was opened but Arkansas had no further information concerning 1973 Summer Conference for Region II.

The floor was turned over to the Alternate Vice President for comments. He stated that in addition to his prior report he had helped register at this convention and would help judge the "Ideas Unlimited Contest". He further explained the Ben Miller boot deal, its inception and present status and a few ground rules involved. His conclusive statements were bent toward gratitude for the opportunity to work with such a fine group, having learned so much from Bill Harrison and his appreciation for Bill's leadership ability. Actually he began his comments with a joke, but not being much of a story teller, the groups response silently told him why he was not re-elected.

Master Bill Harrison appointed the Presidents of Arkansas, (Chairman), Oklahoma and New Mexico to handle the balloting in the election of the Alternate Vice President of Region II, NVATA.

Ray Seale, Texas was elected. His acceptance speech, which was nothing, was better than the outgoing Alternate Vice President's joke.

Region II's choice Vice President made his report by stating that it has been a fulfilling year after, at first, many qualms and discouragements. He took a second look and hit the road. He visited the Kansas Association Conference, conducted the Dodge City Conference, went to Lincoln, Nebraska for the Executive Committee meeting, visited the Texas Convention, The Oklahoma Conference, the New Mexico Conference and then came to Portland determine to do all he could for Region II and our membership as a whole. He commended individuals and state associations and the collective membership. In closing Bill asked for assistance and invitations to State Meetings. He had kind and bordering on untruthful words for the Alternate Vice President.

There being no unscheduled or new business, final announcements were made and on a happy, inspirational note adjournment was declared at 3:25 P. M. by a very thorough and able Bill Harrison.

Respectfully submitted,
DAVID T. McVEY
Alternate Vice President
Region II
El Paso, Texas 79999

REGION III

FIRST SESSION

Saturday, December 4, 1971

HEATHMAN HOTEL
Parlor C

Region III meeting was called to order by Vice President Francis Murphy at 2:48 P. M. in Parlor C of the Heathman Hotel.

Norman Bohmbach of Minnesota gave the Invocation.

General announcements were given by Vice President Murphy, and the Agenda was presented.

It was moved by John Murray of Minnesota, seconded by Dave Flint of Iowa to adopt the minutes as printed by Secretary Grover Mehe of Iowa. Motion carried.

Introduction of state delegates included Iowa - 11; Minnesota - 14; Nebraska-5; North Dakota - 1; South Dakota - 4; and Wisconsin - 11.

Voting strength by states and membership reported to be :

Iowa - seven delegates - 286 members
Minnesota - eleven delegates - 477 members
Nebraska - four delegates - 170 members
North Dakota - three delegates - 95 members
South Dakota - two delegates - 71 members
Wisconsin - seven delegates - 318 members

Comments were made concerning registration, voting cards, thank you lists, etc.

It was announced that The FarmFest would be held September 11-17, 1972, at Vernon Center, Minnesota.

Each member was urged to give consideration to the purchase of the Ag Teachers' Directory and Handbook.

Dave Flint of Iowa member of the resolutions committee presented preliminary information on resolutions. It was moved by Wacholz of Minnesota and seconded by Esser of Wisconsin to refer the USDA resolution to a committee of Ferries, Flint and Murray. Carried.

Resolution No. 2 - Moved by Ferries of Wisconsin seconded by Hill of Minnesota to adopt--carried. This was appreciation to President Glen McDowell.

Resolution No. 3 -- NVATA officers visits to State Associations. Moved by Esser of Wisconsin seconded by Wacholz of Minnesota to adopt. Carried.

Resolution No. 4 -- Veterans' Farm Training -- Moved by Bohmbach of Minnesota, seconded by Statler of Iowa to adopt. Carried.

Resolution No. 5 -- Establishment of the Bureau of Occupational Education. Moved by Maurina of Wisconsin to strike out the last three lines after (public law 90-576). Seconded and carried. Moved by Simmons of Nebraska and seconded by Murray of Minnesota to adopt as amended, carried.

Introduction was made of Glen McDowell, NVATA President and Cliff Saylor, National FFA Vice President of Arizona.

The meeting was recessed to take pictures of each state delegate group. Following this recess, Roy Esser of Wisconsin publicity chairman, presented his report. Moved by Flint of Iowa, seconded by Kubista, Minnesota to accept the report. Carried.

The procedure for electing Alternate Vice President was presented.

Poll of states was taken for the nomination of Alternate Vice President. All states passed with the exception of Wisconsin. Roy Esser nominated John Murray of Minnesota. There were no other nominations.

The state presidents gave reports of association activities since the Regional Meeting in Brookings, South Dakota. Each President distributed a copy of his report to the members and a copy will be on file at the National Office.

With time running late, Vice President Murphy recessed the meeting at 5:15 P. M. until Sunday, December 5 at 1:15 P. M.

SECOND SESSION
Sunday, December 5, 1971

PORTLAND HILTON HOTEL
Parlor E

The second session of Region III convened by order of Vice President Francis N. Murphy at 1:20 P. M. in Parlor E, Hilton Hotel.

Announcements were made by Chairman Murphy.

report of National Judging Contests and recommendations were presented by special committee member Grover Mische, of Iowa. A brief discussion followed.

Alternate Vice President, Grover Mische, presented his report. Moved by Murray and seconded by Soldwish of Iowa to accept the report. Carried.

Mische of Iowa presented the "30 Minute Club" report which stated that 160 certificates were distributed during the year. He urged the members to keep up the good work.

Murphy encouraged all states to continue participation in awards for instructors and Association, "Ideas Unlimited" Contest.

The NVATA registration fee received no unfavorable comments. The increase in AVA registration fee was in question.

It was moved by Esser of Wisconsin and seconded by Schock of Nebraska that nominations cease. Carried. Moved by Eidet of South Dakota, seconded by Jochem of Nebraska that John Murray of Minnesota be elected unanimously as Alternate Vice President of Region III. Carried.

It was announced that the 1972 Summer Leadership Conference would be held at the University of Wisconsin, River Falls, June 15-16.

Dates of the State Association Summer Conferences were announced as follows:

Iowa	Downtown Holiday Inn, August 10-11
Minnesota	Minneapolis-Nicollet Hotel, July 6-8
Nebraska	Omaha, July 13-15
N. D.	Bismark, no date
S. D.	No place or date
Wisconsin	Madison, July 10-14

It was stated that Vice President Murphy had visited all state conferences except Wisconsin. State officers were encouraged to visit other State Conferences.

It was moved by Ferries, Wisconsin, seconded by Barber, Minnesota, that Region III go on record as favoring the USDA Support resolution. Carried.

Statler of Iowa moved and Hermance of Nebraska seconded that the resolutions committee report, presented by Flint of Iowa be accepted. Carried.

Bohnbach of Minnesota moved and Soldwish of Iowa seconded the Vice President's report be accepted. Carried.

It was moved by Hermance of Nebraska and seconded by Webster of Iowa that we recommend that Region III support the dues increase as suggested by the Executive Committee. Discussion followed. Motion carried.

Murray of Minnesota and Schock of Nebraska seconded that Region III favor the hiring of an Assistant Executive Secretary if the increase in dues is approved. Discussion followed. Motion carried.

It was moved by Esser of Wisconsin and seconded by Hill of Minnesota that Region III go on record as not in favor of the purchase of the Vo Ag Teachers Directory at any price. Carried unanimously.

The Alumni FFA was discussed with emphasis on local grass roots initiation rather than from National emphasis on down.

It was indicated that the AVA Constitutional changes in the making would have a tendency to kill democratic action on the part of members.

It was moved by Jensen of North Dakota and seconded by Simmons of Nebraska that we dispense with the President's Panel. Carried. Materials were distributed.

John Murray of Minnesota was officially installed as Alternate Vice President of Region III by Vice President Francis Murphy.

It was moved by Hermance of Nebraska and seconded by Wacholz of Minnesota that all members of Region III recognize the outstanding work of Alternate Vice President, Grover C. Miehle of Iowa during the past year, and thank him for his efforts. Carried.

Soldwish, of Iowa moved and Hermance of Nebraska seconded that the meeting adjourn. Carried. Meeting adjourned at 3:40 P. M.

Respectfully submitted,
GROVER C. MIEHE
Alternate Vice President
Region III
Monticello, Iowa 52310

REGION IV

FIRST SESSION

Saturday, December 4, 1971

HEATHMAN HOTEL
Parlor Room B

The first session of Region IV, NVATA was called to order, December 4, 1971 at 2:45 P. M. by Vice President Odell Miller. The Invocation was given by Warren Reed, Past President of the Ohio Vocational Agriculture Teachers Association.

Vice President Miller introduced the Regional Award winners in the Outstanding Young Member and Career Orientation Contests. Outstanding Young member Gary Bauer, Sunbury, Ohio and Career Orientation Winner Glenn Griffith, Westerville, Ohio.

NVATA membership buttons and ball point pens were distributed to the group.

The following State Presidents: Lowell Hillen of Illinois; Ken Brashaber of Indiana; Jerry Greer of Kentucky; Keith Griffin of Michigan; Linville Hardin of Missouri; and Robert Phillips of Ohio introduced the members from their respective states.

The names of the deceased members since the Summer Conference were entered and a moment of silence was observed. The following names were entered: Gordon Struble of Michigan; Paul Anderson and Don Tucker of Missouri.

Voting strength of the assembled delegates was determined by the following poll of the groups:

STATE	TOTAL MEMBERS	VOTING STRENGTH	NUMBER PRESENT TO VOTE
Illinois	330	8	8
Indiana	230	5	4
Kentucky	205	5	3
Michigan	137	4	3
Missouri	300	7	7
Ohio	474	10	10

A motion by Lowell Hillen of Illinois and seconded by Bill Harrison of Michigan was passed to have the minutes of the Summer Conference accepted as printed.

Vice President Miller suggested additional items be added to the Agenda and called for any additional items from the group.

A motion by Cedric Gowler of Illinois and seconded by Keith Griffin of Michigan was passed to accept the proposed Agenda with the additional items suggested.

President Glen McDowell spoke briefly to the group followed by Cliff Saylor, National FFA Vice President of the Pacific Region who welcomed the delegates to the Pacific Region.

The meeting recessed for 15 minutes in order that National Treasurer Sam Stenzel could photograph those state delegations in attendance.

Jay Benham spoke briefly to the group concerning the progress of the National FFA Alumni Association.

Bill Harrison of Michigan, Chairman of the Region IV Resolutions Committee reported to the group concerning any Regional Resolutions to be presented for consideration by the National Association.

A motion by Lowell Hillen of Illinois and seconded by Robert Phillips of Ohio was passed concerning the adoption for consideration by the Region of an Illinois Association resolution on Teacher Training in Agriculture Education at Illinois State University, Normal, Illinois.

Lowell Hillen of Illinois, Chairman of the Region Publicity Committee reported a set of slides were being developed about the convention and would be available at a later date. The cost will be \$10.00 and the money must accompany the application requesting the slides.

Alternate Vice President, Jim Gulinger, distributed his report to the members present.

A roll call of states was called for nominations for Alternate Vice President and the following names were submitted: Jim Gulinger of Illinois and Bill Harrison of Michigan.

Vice President Miller summarized the following items on the Agenda for the Region to act upon in its second session:

1. Agriculture Directory proposal
2. AVA Relations with NVATA
3. Agriculture Education Magazine
4. Proposed AVA Amendment concerning the By-Laws Committee
5. Preparation of the most important problems concerning NVATA for Mr. Jim Dougan's use.
6. Ideas Unlimited Contest

Meeting adjourned at 5:00 P. M. until Sunday, December 5, 1971.

SECOND SESSION
Sunday, December 5, 1971

HEATHMAN HOTEL
Parlor Room B

The second session of Region IV was called to order December 5, by Vice President Odell Miller. The Invocation was given by Linville Hardin, State President of the Missouri Association.

Mr. Don Coil, Illinois, Mr. W. H. Hamilton of Indiana, and Mr. R. D. Hagen of Missouri were recognized by the group as visitors.

Vice President Miller introduced the life NVATA members of Region IV:

Eldon Aupperle, Jim Gulinger, Charles Harn, Lowell Hillen,
Cedric Gowler and Eldon Witt all of the Illinois Association.

Richard Barnes, Adelbert Huber and Stanley Knopf of Michigan Association.

Region IV is the first NVATA Region to have paid life members.

Each State Association President was given five minutes to present the current

activities and status of their respective State Association.

MISSOURI again 100% membership, the only state in the Region. They also reported on their excellent relationships with their State Office and Teacher Training institutio . ILLINOIS has developed an extensive legislative committee which has been very effective in serving an increase in FFA Fair Premium money for students. INDIANA is seriously considering the possible employment of an Executive Secretary. MICHIGAN has developed an effective legislative committee to contact their teachers and alert them to react to emergency situations concerning legislative bills. OHIO co-sponsors with the Ohio FFA a legislators breakfast which has proven to be a highly effective method of acquainting legislators with Vocational Agriculture and the FFA.

The delegates were asked to discuss the NVATA proposal concerning the purchase of the Agriculture Directory. After much discussion the delegates recommended by a substantial majority against the purchase of the Directory.

Bill Harrison of Michigan and Chairman of the Region IV Resolutions Committee reviewed the resolutions from the NVATA Resolutions Committee and reported a copy would be available at the final NVATA Session. The Illinois resolution concerning Teacher Training Institutions presented on Saturday was re-written by the delegates in order that it might be adopted by the Region.

A motion by Lon Rossell of Missouri, seconded by Ken Brashaber of Indiana to adopt the revised Illinois resolution on teacher training institutions was passed and adopted as a Regional Resolution. (See NVATA Resolutions Committee Report).

Ned Stump, President Elect of Indiana was chosen to be Chairman of the Region IV Resolutions Committee for the coming year. The other members of the Committee will be the Presidents of the respective states in the Region.

The election of the Alternate Vice President was brought before the delegates. Bill Harrison of Michigan withdrew his name from nomination and moved to cast a unanimous ballot for Jim Gulinger of Illinois to serve another one year term. The motion was seconded by Robert Phillips of Ohio and passed.

The following Summer Conference dates are listed by each State:

Illinois - Champaign, Illinois - June 20-23, 1972
Indiana - Indianapolis, Indiana - August 13-16, 1972
Kentucky - Information not available.
Michigan - East Lansing, Michigan - July 25-28, 1972
Missouri - Columbia, Missouri - July 25-27, 1972
Ohio - Columbus, Ohio - July 10-12, 1972

The Regional Summer Leadership conference is to be held at Kenlake State Resort Park, Hardin, Kentucky, June 23 and 24, 1972. President Jerry Greer of Kentucky will send additional information to all State Presidents in the Region in April for reservations to be made.

Vice President Miller reviewed the new NVATA State Report form which must be completed in order that a State be recognized at the next NVATA Convention.

The following Ideas and Concerns of Agriculture Teachers were brought forth from the group which NVATA should consider:

- A. Twelve months employment of Agriculture Teachers
- B. Credit for industrial work on a salary schedule when employed as a teacher.
- C. Encourage teacher training institutions to concentrate training of new Ag Teachers in skills and technical abilities instead of a broad track system of Education.
- D. Re-emphasis that FFA Jackets have only appropriate items attached to them and be worn appropriately.
- E. Develop better lines of communication within the NVATA from the top to the member and upwards.
- F. Study the Funding of Vocational Agriculture programs and how they affect the local school.
- G. Limitation of proper work in the form of extra reports to Governmental Offices.
- H. Encourage the U. S. Labor Department to develop a much improved method of determining the number of persons needed to fill Agricultural jobs in the U. S. with more valid statistics.
- I. Secure booklets from Standard Oil Company on hydraulics, diesel engines, etc. in quantity for use as instructional materials in high school and adult classes.

A motion by Ken Brashaber of Indiana, seconded by Jerry Greer of Kentucky was passed, commending Alternate Vice President Jim Guilinger for his excellent work during the past year.

The group commended Vice President Miller for his excellent work during the past year.

The meeting was adjourned at 3:15 P. M.

Respectfully submitted,
 JIM GUILINGER
 Alternate Vice President
 Region IV
 Sycamore, Illinois 60178

REGION V

FIRST SESSION
Saturday, December 4, 1971

Heathman Hotel
Parlor A

The first session of Region V was called to order by Region V Vice President D.P. Whitten in the Heathman Hotel, Parlor A, December 4 at 2:45 P. M.

Invocation was given by Lloyd Smith of Mississippi and a cordial welcome extended by D. P. Whitten to delegates and guests present.

The State Presidents presented delegates from their respective states and each person was encouraged to attend the important and educational sessions of NVATA and AVA.

State associations with one hundred percent membership received their 100% pins, and a report of Region V's membership was given the delegation.

J. W. Brown of Florida, Public Relations Chairman for Region V, had a report for state association pictures. He stated no slides of convention highlights would be sent to any state association unless a check for ten dollars came with the order. The Region took a short break for state association pictures.

J. W. Brown stated that pictures could be picked up at the breakfast on Tuesday morning by the State Presidents.

J. Benham from the FFA Alumni Association was given time on the program to make a report on the members in Region V, and gave examples of what an Alumni Organization could do in each state with little effort by each Advisor.

The minutes of the Region V Leadership Conference were passed out, read and approved with necessary corrections. Motion made by J. M. Morris of Alabama and seconded by R. E. Balkom of Georgia.

Several items were added to the Agenda and a motion was made by Thomas Weaver of Georgia and seconded by Lloyd Smith of Mississippi to accept the Agenda. Motion carried.

Visitors to the Region were Glenn McDowell, NVATA President and Cliff Saylor National Vice President of FFA.

The resolutions chairman, Jimmy Morris, from Alabama gave a brief report on resolutions, and requested that all resolutions be written and turned into the NVATA resolutions committee right away.

The Ag Teachers Directory was brought up for discussion, along with a contract given each delegate to study and discuss. After much discussion by a show of hands Region V voted to work with a figure of \$20,000.00 to \$25,000.00 if the Executive Committee thought this was in the best interests of NVATA.

Thomas C. Weaver reported on the state President's Dinner and a few reports were needed to make Region V complete.

Remarks on the working relationship with the USOE and NVATA was given and this gave the entire Region V inspiration.

The following teachers of Region V were congratulated as winners of the following awards: Russell Watson of Smithville, Tennessee, U. S. Steel winner and Guy Angel of Waynesville, North Carolina New Holland Award. Then the new filing system was presented, and many certificates that can be awarded along with the new ones. All delegates were asked if they had members in their states for Regional honors or recognition to have their names to the Vice President by December 5, 1971.

The Policies were then stated for electing the Alternate Vice President and the House was open for nominations. The following nominations were made: Glynn Key of Florida nominated by J. W. Brown of Florida; Ralph Moffatt of Tennessee nominated by John Leehman of Tennessee; H. I. Jones of Georgia nominated by C. P. Williams of Georgia. It was moved by R. E. Balkcom of Georgia and seconded by W. C. Parmer of Alabama that the nominations be closed on the three said names. Voted and passed. The meeting adjourned to meet December 5, 1971 at 1:15 P. M. to 3:30 P. M. in the Heathman Hotel, Parlor A.

* * * * *

SECOND SESSION
Sunday, December 5, 1971

HEATHMAN HOTEL
Parlor A

The meeting was called to order with Region V Vice President D. P. Whitten presiding. Invocation was offered by R. E. Balkcom of Georgia.

Plans for the 1972 Leadership School were discussed and it will be held in Alabama with a tour being arranged of Huntsville, Alabama.

The resolutions were presented for information and the main issue that did not receive a favorable report was the move of the NVATA Office. Amendments to the Constitution was then presented for consideration and any action that might take place for the next general session.

The Blue Coats discussion came to the floor as information for the alertness of the membership in Region V.

It was moved by R. E. Balkcom of Georgia after much discussion and seconded by W. H. McLeod that the Regional Citation be given next year to Outstanding Friends of Agriculture that had made contributions on more than a state basis, and amended by A. O. Ramay, Georgia that an application form be made out. Seconded by Lloyd Smith. John Leehman, of Tennessee made a motion to refer to a committee seconded by Lloyd Smith of Mississippi and a report be made in June. The motion passed. The committee appointed are as follows: R. E. Balkcom, Chairman, W. S. Harmon, Jr., Thomas Weaver A. O. Ramay and H. I. Jones. The committee is made up of members of the Georgia Association.

Guy Angel winner of the New Holland Award from Waynesville, North Carolina was called upon to make remarks in regard to his winning of the contest.

The State reports were called for and the following information was given from each state:

1. Jimmy Morris of ALABAMA stated: Full allowance had been allowed to the convention because his state was 100% in membership.
2. J. W. Brown of FLORIDA stated his association gave door prizes at their convention and dues had to be paid in order to get prizes.

3. H. I. Jones of GEORGIA stated support committees had helped Georgia in their state with Vocational Agriculture programs.
4. William George of GEORGIA stated their association plan to have a mid winter conference this year the the two programs are the same.
5. J. B. Hartley of MISSISSIPPI stated they had a Vocational Agriculture Teachers Conference for the first time in 8 years, and they plan to help bring Agriculture Teachers back together as they were before they stopped having conferences.
6. Lloyd Smith, MISSISSIPPI stated they had similar problems.
7. W. A. McLeod, Jr. of NORTH CAROLINA stated, we had problems, however Agriculture programs are making progress and NORTH CAROLINA had an increase in membership this year.
8. W. B. Owens, SOUTH CAROLINA stated, D. P. Whitten visited the Conference this year and a re-evaluation of Agriculture was going on in SOUTH CAROLINA especially production Agriculture.
9. Paul Dixon of TENNESSEE stated ag programs are making progress and they do have plans for a Summer Conference.

At this time the following people were named to count votes for the position of Alternate Vice President:

J. B. Hartley of Mississippi, W. B. Owens of South Carolina and Jimmy Morris of Alabama.

The following candidates were running for office:

Glyn Key of Florida, Ralph Moffatt of Tennessee and H. I. Jones of Ga.

After the votes were counted, H. I. Jones of Georgia was declared Alternate Vice President for Region V for 1972.

A motion was made by H. I. Jones of Georgia and seconded, thanking W. D. Neill for the work done in Region V this year.

W. B. Owens of South Carolina stated we should thank D. P. Whitten for the way he carried out his job as Vice President this past year. This was accepted by the entire Region.

W. D. Neill thanked the Region for the support given him as Alternate Vice President. As there was no further business, the meeting was adjourned.

Respectfully submitted,
W. D. Neill, Jr.
Alternate Vice President

2015

REGION VI

FIRST SESSION

Saturday, December 4, 1971

HEATHMAN HOTEL
Parlor "D"

CALL TO ORDER

The first session was called to order by Vice President Howard Teal at 3:00 P. M.

INVOCATION

The Invocation was given by George Dunsmore, President, Vermont Association.

ANNOUNCEMENTS

Vice President Teal informed the delegates that the prior report informing the delegates that James Shadle was ineligible for office was no longer true since the facts on which the Executive Committee based their decision were not accurate and therefore they reversed their decision. President Teal wanted to inform the delegates immediately on this decision.

MATERIALS DISTRIBUTED

Program Development Task Force Report was distributed. A reaction sheet of this report was also distributed to be turned in the next day.

State Officer list was distributed.

State Conference Annual Information List was distributed. Two copies are to be returned to Teal.

Teal gave the 1971 convention highlights - checked on meal tickets and contest winners.

FFA ALUMNI ASSOCIATION

Jay Benham of the FFA Alumni Association was given the floor to promote this association. He explained its purpose, what is needed to charter an association within a state and some expected news releases in the near future.

CERTIFICATION OF DELEGATES

The following delegates were certified per state with the corresponding number present:

Connecticut	2 delegates certified and one was present
Maine	1 delegate certified and none were present
Maryland	2 delegates were certified and none were present
Massachusetts	2 delegates certified and none were present
New Jersey	1 delegate certified and none were present
New York	3 delegates certified and two were present
Pennsylvania	4 delegates certified and four were present
Rhode Island	1 delegate certified and none were present
Vermont	2 delegates were certified and one was present
Virginia	8 delegates certified and eight were present
W. Virginia	2 delegates certified and two were present

100% MEMBERSHIP

Vermont, Virginia, Rhode Island will receive 100% certificates.

Virginia and Rhode Island were 100% for five continuous years; therefore, these states will be receiving special plaques. 100% membership buttons were distributed to these states.

MINUTES

Dick Strangeway, New York, moved, seconded by Dr. Smeltz of Pennsylvania that the minutes be approved as printed. Motion passed.

AGENDA

The agenda was reviewed and the following items were added by Vice President Teal:

36. NVATA Workshop
37. Regional Citation
38. Ag Division Business Meetings
39. Nominations and Elections

The Agenda was then accepted as presented.

PUBLICITY

Dick Glass, Publicity Chairman, asked all to fill out the publicity release as found in their packet and either give them to him or turn them into NVATA Headquarters for mailing. Arrangements were made for pictures, both by state and Regions.

RESOLUTIONS

Richard Strangeway - Region VI Chairman of the Resolutions Committee, discussed the policy of the Resolutions Committee. Vice President Teal appointed Harry Karpiak of New York to help with the wording of the resolutions. There were as yet no printed copies of the resolution available but the resolution from New York concerning UPAE was read and also the one concerning the AVA structure change. These were discussed but no action was taken.

Teal then discussed the proposed NVATA constitution revision concerning the acceptance of teacher trainers and state supervisors as active members of NVATA with all rights except holding office.

NATIONAL FFA OFFICER

At this point President Glen McDowell presented National FFA officer Cliff Saylor of Arizona who extended greetings from the National FFA to NVATA.

STATE PRESIDENT'S PANEL

George Dunsmore reported on the State President's Panel. The title for the panel is "What Makes Your Organization Work." Connecticut, Pennsylvania, Virginia, and Maryland were the states that reported to George. New York and West Virginia said they would after this meeting.

IDEAS UNLIMITED

At this point Alternate V.P. Shadle reported on the Ideas Unlimited Contest. A copy of the contest was in each packet of material distributed. Entry deadline date is Sunday at 5:00 in the NVATA office.

AGRICULTURAL TEACHER'S DIRECTORY & HANDBOOK

Vice President Teal discussed all eleven points. The consensus of opinion was that \$35,000 was too high and \$20,000 was a more realistic amount for its purchase.

STATE PRESIDENT'S REPORT

Connecticut - Roy Denniston, President, presented a written and verbal report.
Delaware -
Maine -
Maryland - David Miller, recipient of U. S. Steel Award winner reported verbally for State President Ralph McDonald. Junior high vo-ag was emphasized.
Massachusetts -
New Hampshire -
New Jersey -
New York - Richard Strangeway, President, presented a written and oral report.

NOMINATIONS

Vice President Teal opened the nominations for Vice President of Region VI.

Roy Denniston of Connecticut nominated George Dunsmore of Vermont. Lewis Ayers of Pennsylvania nominated James Shadle of Pennsylvania. Smelts of Pennsylvania moved, seconded by Karpiak of New York that the nominations be closed. Motion passed.

After discussion for the term of office for Alternate Vice President Lewis Ayers moved, seconded by David Miller of Maryland, that the term of office for Alternate Vice President of Region VI be for one year. Motion passed.

Harry Karpiak nominated Richard Strangeway of New York as Alternate Vice President. This nomination was left open until after the election of the Vice President so that the loser could be nominated as Alternate Vice President.

Recess 5:10.

STATE REPORTS CONTINUED

Pennsylvania - Lewis Ayers, President, presented a written and oral report.
Rhode Island - Walter Waterman presented an oral report for his state.
Vermont - George Dunsmore, President, presented a written and oral report. He emphasized support committee and State Vocational Advisory Committee.
Virginia - D. D. Oliver, President, made a special thanks to the New York Association for their fine Region VI meeting at Castile, New York. The New York group said that a special thanks should go to Donald Robinson who took care of most of the arrangements.
West Virginia - Richard Glass, President, presented his states report. He commented on the State Teacher of the Year Award and the National Teacher of the Year Award. In 1972 they expect to start a Young Farmer Association.

USOE

Vice President Teal reported that this position is much improved and reasonably good.

ALTERNATE VICE PRESIDENT

Shadle reported on his activities since the meeting in New York. In addition to working with the State Association, he instructed the senior class in Agricultural Education at The Pennsylvania State University on all the professional organizations.

REGIONAL VICE PRESIDENT

Teal presented a written report of his activities. A rising vote was given Teal in his support for NVATA President and his work in Region VI.

RESOLUTIONS

At this point Richard Strangeway read over the printed resolution for our information.

Lewis Ayers moved, seconded by Oakes that Region VI oppose moving our National office to Washington, D. C. Motion passed. If needed from the floor, Dunsmore, Oakes and Karpiak will speak for this resolution defeat.

REVIEW OF NVATA PROGRESS

Most of these items were covered in Castile. A special comment was made on citations. It is recommended that most of these be given at the Regional level. However, if they so merit, they could also receive one at the National level.

AVA RELATIONS

These are improved. The matter of direct membership is settled. Thanks go To Teal, Hilton, McDowell and Smith.

GEIGY

The Geigy Award score card will be changed.

ALUMNI ASSOCIATION

This was covered by Jay Benham yesterday.

REGIONAL NEWSLETTER

Recommended the sketches of state presidents be continued. Miller of Maryland discussed distribution of both newsletters. Possibility of bulk mailing to the states was discussed.

NATIONAL OFFICER VISIT

This was covered in previous discussion on policy.

NVATA WORKSHOP AND SITE SELECTIONS

Executive Committee will be holding workshop for state officers (Regional Leadership Conference) prior to state meetings. This almost seems impossible for this year in Region VI since a date and place from New Jersey is already committed. August 8-10 at Pennington, New Jersey.

CONSTITUTIONAL REVISIONS

There were no questions after reviewing these on the printed material. Passage of all was urged.

CONVENTION EVALUATION

These are to be written and turned into the new Vice President.

FFA CONTESTS

No additional information. Question arose as to who makes the final decision.

USES MADE OF DIRECTORY

1. Use to get teacher's aids (special tear out sheets).
2. Use book for list of state supervision.
3. Use to get names for list used in Master's thesis.
4. When going home from Convention, use to check on names to remember.

TORT LIABILITY INFORMATION
AVA now has coverage.

PROGRAM OF WORK
Will be revised.

APPRECIATION LIST
At least one person from each state should write in behalf of each state.

STATE PROBLEMS
Already covered in State Reports. Use of support committees will continue to grow in the Region.

ELECTIONS
Teal appointed Glass and Oliver as tellers.
James Shadle was elected Vice President of Region VI.
Denniston then nominated Dunsmore of Vermont for Alternate Vice President, seconded by Waltermann of Maryland.
Karpiak moved, seconded by Paul, to close nominations. Motion passed.
George Dunsmore of Vermont was elected Alternate Vice President of Region VI.

MOTION
Strangeway moved, seconded by Karpiak, that Region VI go on record to thank Howard Teal of New York for the job he did as Vice President of Region VI and to pledge his full support as NVATA President. The same to go for James Shadle of Pennsylvania as Alternate Vice President of Region VI and now Vice President of Region VI and to George Dunsmore of Vermont as Alternate Vice President. Motion passed.

ADJOURNMENT
The meeting was adjourned by Vice President Teal.

Respectfully submitted,
JAMES S. SHADLE
Alternate Vice President

PRESIDENT'S REPORT

After receiving the gavel in New Orleans, I stated my purpose would be to pursue and expand the moves to enhance the position and stature of Vocational Agriculture on the National, State and Local levels; recognizing, however, the progress made was dependent upon the extent and strength of actions in each of our six Regions, in each district, and by individual members.

It can be reported here and now that an over-all strong National position continues for Vocational Agriculture (now identified as Agri-business and Natural Resources Occupations in the U. S. Office of Education), and the FFA. Likewise, the NVATA has increased in status and stature, and throughout the Nation strong State associations have become stronger and others have awakened and are now on the move. These positives were made possible by the scores of leaders and organizations, some of long standing, within and outside our professional family who have given of their time, talents and monies to protect and advance our causes. The effect I may have had personally on the continuation of the forward moves and new thrusts will, of course, be determined by the NVATA membership, my judge and jury of concern.

Much remains to be done, however, if we are to realize our objectives. Continued effort and cooperation from the Executive Committee, State Associations, the AVA - Ag Ed Division and our friends in the Agricultural Complex, in government, and among the lay public are prerequisite to the achievement of this end.

This Convention is designed to cause us to take a brief look at where we have been, assess where we are now, and to explore future roads to travel. These I will discuss with you in my talk.

Thus, rather than submit a detailed close report of specific happenings - actions (some confrontations) during the past year, it is believed the following list of my activities and meetings attended, when coupled with the various reports of members of the Executive Committee and Executive Secretary, James Wall, will tell the 1971 NVATA story. It will be noted that many people and organizations have contributed to, cooperated with and supported the NVATA again during this year.

OFFICE ACTIVITIES

1. 339 letters written about business of the NVATA and/or letters of appreciation, w/numerous copies.
2. 4 memorandums with enclosures to members of the Executive Committee.
3. 3 memorandums RE: Situation U.S.O.E., with copies of letters enclosed to State Associations Presidents and Secretaries, NVATA Executive Committee, Head State Supervisors and selected individuals. *1
4. Developed in-depth "Recommended Guidelines - Criteria for Selecting Teachers of Vocational Agriculture for Honorary American Farmer Degree" (35 Criteria with divisions and points to be earned).
5. Edited "Suggested Changes and/or Additions to Proposal for a Professional Leadership Seminar at request of and for consideration of Executive

- Secretary, James Wall.
6. Challenged AVA "Direct Dues" collection and secured clarification of procedure and intent of the AVA - RE: Collection of dues by mail.
 7. With Executive Secretary, James Wall, set up Special Committees to "work" during Summer Executive Committee Meeting.
 8. Developed Agenda items for Special Meeting (March 3) of officers of NVATA, AATEA and NASAE.
 9. Developed, with James Wall, "Table of Contents" for NVATA officers Notebooks.
 10. Set up "Kentucky Group" at request of AVA Executive Director, Lowell Burkett, to meet with Congressman Natcher and other members of the Congress, from Kentucky, RE: Appropriations for Vocational Education.
 11. Revised, with assistance of William Smith (at request of Dr. Lloyd Briggs of the U.S.O.E.), Proposal for a Professional Leadership Seminar.
 12. Edited NVATA President's Message for the Agriculture Teachers Directory and Handbook.
 13. Challenged by "Questioning Letter" to U. S. Commissioner of Education certain alleged plans and/or happenings in the U.S.O.E. considered to be damaging to Vocational Education and moved, with assistance of Executive Secretary, James Wall, nationwide questioning of the Commissioner.
 14. Appointed Dr. James Durkee to study and develop a NVATA position paper, with rationale, for having a U. S. Department of Education.
 15. Requested in-out from all members of NVATA Executive Committee, William Smith and W. T. Black RE: NVATA Goals and Challenges for 1970-71 Year. Response received from all.
 16. Appointed Wenroy Smith of Pennsylvania to represent NVATA at the H.E.W. Secretary's Regional Conference on Vocational Education in New York City on May 12 and May 13. Excellent report received from Wenroy on the Conference.
 17. Served on and/or serving on following Special Committees:
 - a. National Advisory Committee on planning Denver Seminar.
 - b. National Program Development Task Force of AVA - AG ED Division for Agricultural Education.
 - c. Continuing Consulting Committee on Transitions in Agricultural Education (follow through on Denver Seminar).
 - d. Ad Hoc Advisory Committee for the FFA Magazine.
 - e. AVA Task Force on Institutional Memberships.
 18. Prepared article for American Vocational Journal, November 1971.
 19. Edited Committee III, Transitions in Leadership Development Organizations for Youth", Denver Seminar, from original "rough draft" submitted as recorder.
 20. Developed 25 word re: Memorandum of Understanding - BOAC, and 500 words on "What We (Vo-Ag Teachers) Can and Should Do With This" for publication by F. H. A.
 21. Negotiated, in cooperation with Executive Secretary, James Wall, with Mr. and Mrs. T. L. Faulkner, RE: NVATA purchase of Agriculture Teachers Directory and Handbook. Counter proposal to Faulkners' offer developed and will be considered by NVATA Executive Committee at this Convention.
 22. Developed a revised report on "Transitions in Leadership Development Organizations for Youth" from proceedings of National Advisory (Summation) Committee and original Committee III Report for consideration of Dr. Harold Byram, Denver Seminar Secretary, in development of the over-all Seminar Report. Copies distributed with cover memorandum to National FFA officers, Members of National FFA Board of Directors and Members of Advisory (Summation) Committee.

23. Served as a judge to select the Star Agribusinessman of the FFA.
24. Gave some 16 greetings - talks in promotion of Vocational Agriculture and NVATA Goals at various meetings of professional organizations and other groups.

*1 = Printed by and mailed from the National Office.

- December 1-8 NVATA Executive Committee Meeting(s) and NVATA-AVA Conventions, Portland, Oregon.

- * AT NO EXPENSE TO NVATA
- ** PARTIAL EXPENSE TO NVATA

CONCLUSION

Serving as your President has been a priceless honor and an exciting challenge. Along the way I have gained and stored fond memories for my quiet times and the rewards I have received overshadow any contributions I may have made for the good of our Association.

Inspiration, assistance and understanding have come my way from many concerned and dedicated people during my tenure. May I here say a special thank you to the many members I have met and worked with in my NVATA travels; the Executive Committee, Jim and Georgia Wall; the Pike County Board of Education; my Superintendent, Tilden Deskins, and my Principal, John Lester; and, last but not least, my family.

Again, let me say this has been an exciting as well as a busy year, and my view for the future of our profession remains a positive one.

Respectfully submitted,
GLEN D. MCDOWELL
NVATA President
Box 252
Pikeville, Kentucky 41501

PAST PRESIDENT'S REPORT

The NVATA has had a productive year under the capable leadership of your President, Glen McDowell, and the Executive Committee. The voice of your organization is being heard by an ever-widening circle of people in influential positions in government and industry that can, most certainly, affect the future of Vocational Agriculture and the FFA.

We, as professionals, must do everything in our power to demonstrate the trust these people place in us is well founded. One of the surest ways to accomplish this is to be unceasing in our efforts to continually work to make our state associations strong, independent organizations. This is especially necessary for the future because the current legislation under which we operate delegates most of the authority for programs to the state level. Only with strong associations, can the grass-roots, the Teachers of Vocational Agriculture, have the inputs they need to make their contribution to the program in their state.

As state associations strengthen so the NVATA will strengthen because the NVATA is formed by the affiliation of the many associations nation-wide.

Certainly, we must continue to increase our efforts on local, state and national levels to continue Vocational Agriculture and the FFA as an effective educational program that is an integral part of the American economy.

This report concludes five years of service as a member of your NVATA Executive Committee. It is an honor to have the opportunity to say, "Thank You", to the many fine Executive Committee members it has been my pleasure to have served with and to the Officers and members of all the state associations. A special thanks to Jim and Georgia Wall for their dedicated service to the NVATA. As well as giving the service their position demands, they have been an inspiration to me in my efforts in your behalf.

Serving our great organization is an opportunity of a lifetime and the pinnacle of my career as a teacher of Vocational Agriculture. My service to you has provided many fond memories that I will always cherish.

MEETINGS ATTENDED

- | | |
|------------------|--|
| * December 19 | Recognition banquet for Mr. Greiber, Wisconsin retiring Director of Vocational Education, Madison, Wisconsin. |
| * December 21 | National FFA Alumni Association Council, Chicago. |

*At no expense to the NVATA.

** Partial expense to the NVATA.

Respectfully submitted,
 MILLARD GUNDLACH
 Past President, NVATA
 Box 55
 Montfort, Wisconsin 53569

EXECUTIVE SECRETARY'S REPORT

FOREWORD

The report which follows is for fiscal year 1970-71. By reporting on a fiscal year basis it is hoped that the permanent records of the Association will be more complete and meaningful. This procedure is the continuation of a policy started in 1958 when the present Executive Secretary assumed his position.

The report will include some important activities and accomplishments, certain recommendations, a list of meetings attended, materials distributed and other pertinent information.

The 1970-71 fiscal year has been one of challenge, success and disappointment. The main challenge faced by NVATA was that of regaining identification for Vocational Agriculture and the FFA by the USOE. Dr. Lee Hardwick was appointed as Associate Commissioner for Vocational Education and the NVATA-USOE Committee enjoyed an excellent working relationship with him. Dr. Hardwick reorganized the staffing pattern of the Vocational Division, identified Vocational Agriculture and the Youth Organizations and assigned two persons to work in the Agriculture Area.

Delegates attending the New Orleans Convention heard Dr. Hardwick speak and were favorably impressed with his philosophy of Vocational Education and his plans for upgrading and operating the program.

However, Vocational Educators in general and NVATA members in particular were disappointed to learn that Dr. Hardwick was to be moved, sometime in May, from his position as Associate Commissioner to some obscure position in the USOE.

Dr. Hardwick's departure does not necessarily mean that another reorganization will take place.

NVATA is meeting with some success in its efforts to have state associations form "support committees" for Vocational Agriculture and the FFA. A number of committees have been appointed and are already active. Several states are presently organizing committees.

A slight drop in membership for the second consecutive year is disappointing. However, most of the loss has occurred in 3 or 4 states where the program has been disrupted by those who have attempted to adjust it along lines recommended by the Washington bureaucrats.

With the many changes taking place in our system of education and with a tendency to shift leadership and funding from the Federal to the State and Local levels, it becomes increasingly clear that teachers need to assume a much more active role in professional leadership.

ACTIVITIES AND ACCOMPLISHMENTS

....Sponsored a Careers Booth at the National FFA Convention for the 5th Consecutive year.

Executive Secretary's Report - (continued)

-Sponsored a "Coffee Hour" for trainees and a reception for Ag Teachers attending the FFA Convention.
-Cooperated with Agricultural Industry in sponsoring contests that gave 15 members all-expense trips to the National Convention and one member a 10 day trip to Europe.
-Past President Millard Gundlach was named as an Outstanding Teacher of Vocational Agriculture on the "Agriculture USA" program and flew to California to receive the Award and to make a tape that will be shown on National television.
-A first was the invitation to teachers to participate in a national seminar called by the USOE. Over 40 teachers attended the seminar held in Denver and according to all reports made many excellent contributions. Glen McDowell, and Howard Teal served on the Seminar Planning Committee.
-The NVATA President and Past President are serving on the National FFA Foundation Board of Trustees.
-The NVATA President is an ex-officio member of the National FFA Board of Directors.
-Four teachers of Vocational Agriculture are serving on the National FFA Judging Contest Committee.
-Special notebooks were developed for members of the Executive Committee.
-Ad-Hoc Committees of NVATA officers and members met on two occasions with Ford Motor Company personnel to review and make recommendations on a safety film being developed by the company.
-For the first time NVATA was invited to participate in meetings called by H.E.W. - U.S.O.E.
-NVATA was also asked by the USOE to serve on numerous FFA Committees that met in Washington and Kansas City.

RECOMMENDATIONS

-Continue to urge state associations to organize state support committees for Vocational Agriculture and the FFA.
-Continue the work of the NVATA-USOE Committee. Schedule a meeting with the new Commissioner at an early date.
-Place more emphasis on having state associations name winners in each of the NVATA Awards Programs.
-Extend efforts to keep the membership informed. The average member is quite far removed from his National Organization and many do not understand the purpose of their organization and the services it provides. Funds from dues are not adequate to make regular mailings to the entire membership. It would be helpful if in some way one or two mailings a year could be made to all members.

Executive Secretary's Report - (continued)

-There is a need for all members and especially leaders of the state associations to become more concerned and more responsible.
-Continue to urge State Associations to have active Public Information Committees that contribute materials on a regular basis to the Ag Division Public Information Committee.
-Increase efforts to secure State Association and NVATA memberships and participation from the many post-secondary institutions. This area is one in which much work needs to be done.
-Have a leadership training program for state association officers - National and/or Regional.

MEETINGS AND ACTIVITIES

June 30 - July 3, 1970	NVATA Executive Committee Meeting, Lincoln, Neb.
July 19 - 20	Ag Hall of Fame, Bonner Springs, Kansas
August 2 - 5	American Institute of Cooperation, Columbus, Ohio.
August 10 - 11	Region VI Leadership Conference, Morgantown, West Virginia.
August 30 - 31	NVATA - USOE Committee, Washington, D. C.
* September 7	Judged Beef and Dairy Showmanship, State Fair, Lincoln, Nebraska.
* September 29	Spoke to Ag Ed Seniors, Lincoln, Nebraska.
October 12 - 16	National FFA Convention, Kansas City, Missouri.
November 30 - Dec. 10	National Convention, New Orleans, Louisiana.
January 18 - 20	A. I. C. Committee, Denver, Colorado.
January 28 - 29	National Safety Council, Chicago, Illinois.
February 1	Ag Hall of Fame, Kansas City, Missouri.
* February 6	District FFA Public Speaking Contest, Waverly, Nebraska - Judged this contest.

CONCLUSION

It should be crystal clear that NVATA must assume more leadership for the profession. Leadership at the National level has been so reduced and "ham-strung" by the Administration and the USOE that very little, if any, help can be expected from that source. Mr. Hunsicker and Mr. Gray are doing the best they can with limited help and resources available to them. Similar situations have developed in several states.

Executive Secretary's Report- (continued)

Vocational Agriculture Education and the FFA has many friends in positions of influence that are willing to assist in speaking up for the program. The NVATA and its affiliated associations needs to work closely with these people and encourage them to help in maintaining and improving the program that has served this nation so well for over 50 years.

Respectfully submitted,
JAMES WALL
Executive Secretary
Box 4498
Lincoln, Nebraska 68504

REGION I

It has been an honor and pleasure for me to serve this past year, the last of my 3-year term as your Vice President. I would like to thank the other NVATA officers, State Officers, State Staffs and especially Jim and Georgia Wall for the help and encouragement during the past years.

Our Regional membership started to climb a little during the past year - through the good work of you in the State Associations, it will continue.

The Region I Leadership Conference was held in Boise, Idaho, April 23-24, with Kay Hult, Idaho President, as host. Eight States were in attendance. This was the best and most productive Regional Conference I have ever attended. We had a display of agriculture products which was saved for the Portland Convention.

I was able to attend State Association meetings in Montana, Oregon and Washington. All were outstanding with enthusiasm for our profession.

New Holland Award in the Region was won by Dan Birdsell of Deer Park, Washington, and the U. S. Steel Award by Ed Strong of Payette, Idaho.

A special thanks to my family and local administration for making the time available for me to serve you. I only hope the NVATA has received as much as I have.

ACTIVITIES FOR 1970-1971

*December 29-30

Meeting with Idaho Vocational Agriculture Teachers Executive Committee on formation of State Support Committee.

April 22-23-24

Region I Leadership Meeting, Boise, Idaho

June 6-7-8

Montana Vo-Ag Teachers Conference, Butte, Montana

*June 9-10-11

Idaho Vo-Ag Teachers Conference, Moscow, Idaho

June 15-16-17-18

Oregon Vocational Agr. Teachers' Conference, Medford, Oregon

June 28-29-30-July 1-2

NVATA Executive Meeting, Lincoln, Nebraska

July 27-30

Washington Vo-Ag Teachers Conference, Bellingham, Washington

*October 7-8

Idaho Vo-Ag Teachers Fall Conference, Boise

November 30-December 8

NVATA-AVA Convention, Portland, Oregon

*NO EXPENSE TO NVATA

Respectfully submitted,
FRED BECKMAN
Vice President, Region I
Box 30
Weiser, Idaho 83672

REGION II

At the conclusion of the first year as NVATA Vice President for Region II, appreciation is expressed to the Executive Committee, Officers and Members of Region II and all others who have provided assistance and counsel in furthering the work of our organization. The cooperation received has contributed much to the activities within the Region and will result in increased activity in the years ahead. Let us all rededicate ourselves to working together for an even stronger National Vocational Agriculture Teachers' Association.

ACTIVITIES

Colorado, Kansas, Oklahoma, Louisiana, and Texas had entries in the U. S. Steel, Outstanding Young Member Award contest. Allen Nelson, Colorado Association was the Region Winner.

Colorado and Louisiana had entries in the New Holland, Career Orientation Award Contest, with Eugene Ruby, Colorado Association being the recipient.

Colorado, Kansas, Louisiana and Oklahoma had entries in the Geigy Professional Recognition Award for NVATA Members and Mel Adams, Colorado Association was the Region Winner.

Participation in "30 Minute Club" showed a good increase with a total of Forty-seven awards being made by state associations. Colorado 18 - Kansas 6 - Louisiana 8 - Oklahoma 7 - and Texas 8.

Colorado, Kansas and Oklahoma qualified for the NVATA Professional State Association Award.

Region II held a very successful Leadership Conference at Dodge City, Kansas with all seven states represented and a total of sixty-three NVATA members in attendance.

ACTIVITIES OF YOUR VICE PRESIDENT

	Edited Six Newsletters.
	Made 174 contacts by mail and phone concerning NVATA matters.
*March 16-18	South Central Member Relations Conference at Stillwater, Oklahoma. On discussion panel chaired by Dr. Walter Jacoby.
*March 29-31	Conference of Southern Region of Agriculture Workers at Oklahoma City, Oklahoma.
*May 11-13	National Seminar on Agriculture Education at Denver, Colorado.
June 1-4	Kansas Vocational Agriculture Teachers' Conference, Manhattan, Kansas
June 23-25	Region II Conference, Dodge City, Kansas
June 29-July 2	NVATA Executive Committee Meeting, Lincoln, Nebraska
August 3-5	Texas Vocational Agriculture Teachers' Conference, Dallas, Texas

*August 8-10

*August 10-12

December 1-8

Oklahoma Vocational Agriculture Teachers'
Conference, Stillwater, Oklahoma
New Mexico Vocational Agriculture Teachers'
Conference, Las Cruces, New Mexico
NVATA Executive Committee Meeting and NVATA
AVA Convention, Portland, Oregon

* AT NO EXPENSE TO NVATA

Respectfully submitted,
BILL HARRISON
Vice President, Region II
Box 208
Leedey, Oklahoma 73654

REGION III

As Vice President of Region III I am happy for the opportunity to relay my thanks to the members of the Executive Committee and to the members of NVATA in Region III for making my duties much more enjoyable and rewarding. A special thanks to my good friend Jim Wall and his wife Georgia for their assistance, guidance and patience over the year. I felt that the work of the State Officers in Region III this past year was outstanding and feel that this demands special mention.

Alternate Vice President Grover Mlehe is to be commended for a great year for output by the membership in "30 Minute Club" activities. With all six states in Region III submitting articles a grand total of 160 "30 Minute Club" certificates were distributed. A special thank you is due also to the men who took the time and prepared the articles, newsletters, etc. responsible for his receipt of the award.

South Dakota hosted the Summer Leadership Conference in Brookings, home of South Dakota State University. A fine turnout helped make the meeting a great success. A total of 72 NVATA members from Region III attended the conference. Much of the success for the Conference must go to Dr. H. W. Gadda, Teacher Trainer at SDSU and to Bob Pollman, President of the South Dakota Vo-Ag Teachers Association as a result of the great amount of leg work and many contacts that had to be made preparatory to the meeting. The presence of Executive Secretary Jim Wall, his wife Georgia and Past President of NVATA, Mick Gundlach added much to the impact of the conference. A thank you is definitely in order for these folks.

Not feeling that a good thing can be overdone I would like to again congratulate the officers in the Region with whom it was my pleasure to work with for the past year. I do not think that it would be possible to put together a more willing and capable set of men to work with--thank you fellows for making my job much easier. The newsletter writers in the Region did a real fine job in not only preparing a fine group of newsletters, but in making sure that the Vice President received each and every issue, this was greatly appreciated.

As your Vice President I wish to thank the State Associations of Nebraska and Iowa for their invitations to attend each of their State Conferences and for the wonderful hospitality shown me during my visits to their meetings. All of the states that I have visited the past two Summers have a special knack for making one feel very much at home.

The response to the Outstanding Young Educator and Career Orientation Award programs was very gratifying to this Vice President. All of the candidates were outstanding. Congratulations to the winners and also to those who did not win first as there was not a loser in this group of fine candidates.

ACTIVITIES OF THE VICE PRESIDENT - REGION III - January-December

*March	Attended two District Leadership Meetings and Contests. (FFA)
*April	State FFA Convention - SDVATA Meetings
June 18	Region III Leadership Conference, Brookings, South Dakota

June 29-July 2	NVATA Executive Committee Meeting, Lincoln, Nebraska
July 14-15	Nebraska Summer Conference, Scottsbluff
August 9-10	Iowa Summer Conference, Des Moines, Iowa
*August 11-12	South Dakota Annual Conference, Huron
*October 6-8	South Dakota Education Association, Mitchell
October 11-14	National FFA Convention, Kansas City, Mo. (Work with the Career Booth)
November 30-December 8	NVATA Executive Committee Meeting and NVATA AVA Conventions, Portland, Oregon

Edited 10 Newsletters
 Wrote approximately 121 letters and memos
 Wrote several thank you letters
 Wrote three Congressmen concerning the Washington situation
 Processed the Professional Improvement segment of the Program of Work

*AT NO EXPENSE TO NVATA

 FRANCIS N. MURPHY
 Vice President, Region III
 Box 46 - Route #3
 Madison, South Dakota 57042

REGION IV

This has been a most exciting and rewarding year for me since my election as Region IV, NVATA Vice President.

My sincere thanks to the members of Region IV, President Glen McDowell, Jim and Georgia Wall, and the members of the NVATA Executive Committee for all of the help they have given me this year.

My thanks also go to my administration and the Marysville Board of Education for allowing me to pursue the duties of the NVATA.

ACTIVITIES OF THE VICE PRESIDENT - REGION IV

- | | |
|--------------------|--|
| *April 3-4 | Attended the OVATA Executive Committee and discussed the workings of the NVATA. |
| *April 19 | Met Alternate Vice President, Jim Guillinger, in Plymouth, Indiana and planned the agenda for the Regional Summer Leadership Conference. |
| May 11-14 | Attended the Denver Seminar, Agricultural Education in Transition. |
| *May 28 | Attended an Ohio Vocational Education meeting in Dayton, Ohio. |
| June 9-11 | Attended the Kentucky Vocational Agricultural Teachers Conference. |
| June 23-24 | Conducted the Region IV Summer Leadership Conference at Prudenville, Michigan. |
| June 29-July 2 | Attended the NVATA Summer Executive Meeting, Lincoln, Nebraska. |
| July 8-10 | Attended the Ohio Vocational Agricultural Teachers Conference. |
| July 29-30 | Attended the Michigan Vocational Agricultural Teachers Conference. |
| August 9-10 | Attended the Illinois Vocational Agricultural Teachers Conference. |
| *October 12-15 | Attended the National FFA Convention. Helped in the NVATA Booth and represented NVATA at the National Committee for Judging Contests. |
| October 24-25 | Represented the NVATA at the National Safety Congress in Chicago, Illinois. |
| November 30-Dec. 8 | Plan to attend the NVATA Executive Committee Meetings and the NVATA-AVA Convention, Portland, Oregon. |

*AT NO EXPENSE TO NVATA.

Edited 9 Newsletters for a mailing list of 274.

Wrote 111 letters for NVATA concerns.

The Region had the following entries in the "30 Minute Club", The U. S. Steel Young Teacher Award Contest, and the New Holland Career Orientation Award Contest:

<u>STATE</u>	<u>"30 MINUTE CLUB"</u>	<u>U. S. STEEL YOUNG TEACHER AWARD</u>	<u>NEW HOLLAND CAREER AWARD</u>
Indiana	24	X	
Illinois	20	X	X
Kentucky	3	X	X
Michigan	4	X	X
Missouri	27	X	X
Ohio	14	X	X

The Region has three NVATA Life Members--Richard Barnes and Del Huber both of Michigan and Alternate Vice President Jim Guillinger of Illinois.

A special thanks to Alternate Vice President, Jim Guillinger, for his visits to four State Conferences: for the many letters he wrote in behalf of the NVATA; and for the way he promoted the "30 Minute Club" and other NVATA activities this year.

As my first year comes to a close as Vice President of Region IV, I fully realize how interesting and challenging it has been. Again, my sincere thanks to all who have helped me in any way.

Respectfully Submitted,
ODELL MILLER
Vice President, Region IV
Route #1
Raymond, Ohio 43067

REGION V

It doesn't seem possible that my second year as Vice President of Region V is coming up for evaluation. All states in this Region have suffered varied degrees of problems, but they are to be complimented for the way that they have faced and solved many of these problems. The partial solving and continued work upon these nation-wide problems have in my opinion strengthened NVATA in Region V.

Scheduling the last two States for March and June of 1972 completes my visitation to each Association. It has indeed been a gratifying experience to visit the states and observe the improved professional spirit and re-dedication and what they are doing for Vocational Agriculture. It is my belief that even though we have lost some memberships, we are stronger and a better organization maybe because of our nation-wide problems.

It has been a short, hard, busy and rewarding year. I want to extend appreciation to Glen McDowell and other NVATA officers; Jim and Georgia Wall, State Association Presidents, Alternate Vice Presidents Glenn Key, Jr., and W. D. Neil, Jr., and to all others who have helped me through this year.

CORRESPONDENCE

Eight issues of the Region V Newsletters were mailed to approximately 225 persons. Some 125 individual letters were written in the interest of NVATA.

REGIONAL LEADERSHIP CONFERENCE

Our last Leadership Conference, at least for a few years, was held in Athens, Georgia. Beginning in 1972 host states for this conference will rotate alphabetically beginning with Alabama.

THIRTY MINUTE CLUB

Fourteen "30 Minute Club" Certificates were awarded in Region V. More work needs to be done toward getting our accomplishments and programs before the public.

NVATA CONTESTS

Five states selected Outstanding Applicants for New Holland's Career Orientation Award. Guy Angel of Waynesville, North Carolina was selected Region V winner.

Four states selected an Outstanding Young Member to compete in U. S. Steel's Outstanding Young Member Contest. James R. Watson, Smithville, Tennessee was named the Region V winner.

Alabama, Georgia and Georgia Colored achieved 100% membership.

ACTIVITIES OF REGION V VICE PRESIDENT - 1971

*May 11-14

June 29-July 2

August 2-4

Denver Seminar - USOE

NVATA Executive Committee Meeting - Lincoln, Neb.

Florida Annual Conference, Miami, Florida

August 6-7	Leadership Conference - Athens, Georgia.
August 12-13	North Carolina Annual Conference - Greensboro, N. C.
August 16-17	South Carolina Annual Conference - Rock Hill, S. C.
*August 18-19	Alabama Annual Conference - Birmingham, Alabama.
October 11-15	FFA Convention - Kansas City, Missouri.
*October 23	Alabama Executive Committee Meeting - Auburn, Alabama.
December 1-9	NVATA Convention - Portland, Oregon.

*NO EXPENSE TO NVATA.

A total of 35 days and 15,528 miles.

Respectfully submitted,
D. P. WHITTEN
Vice President, Region V
730 College Street
Centre, Alabama 35960

REGION VI REPORT

As the Portland Convention comes to an end, I complete the third year of my three year term as Vice President for Region VI. It has been a unique honor and privilege to serve Region VI and the NVATA as a whole in this capacity. I express sincere gratitude to those who selected me and to the great many others who gave me a large measure of support and cooperation throughout the entire term. I have exerted my best efforts to use this support and cooperation for the good of the NVATA. I can only hope that I have been able to give to the NVATA in some proportion to what it has given me.

I extend special appreciation to Glen McDowell and the other NVATA officers, Jim and Georgia Wall, State Association Presidents and Alternate Vice President, Jim Shadle.

CORRESPONDENCE

Twelve issues of the Region VI Newsletter were mailed to approximately 250 persons. About 150 individual letters were sent in the interest of NVATA.

REGIONAL LEADERSHIP CONFERENCE

New York did an excellent job in hosting our Regional Leadership conference at the Letchworth State Park. President McDowell was present for the entire conference and added much to the value of the conference. The registration was the largest in, at least, many years. Special thanks go to Bruce Hilton and the New York group for the excellent arrangements.

THIRTY MINUTE CLUB

Fifty-one "30 Minute Club" certificates were awarded in Region VI.

NVATA CONTESTS

Four states selected outstanding applicants for New Holland's Career Orientation Award. Oscar J. Harris, Sandyville, West Virginia was named Region VI winner. Eight states selected an Outstanding Young Member to compete in U. S. Steel's Young Member Contest. David A. Miller, Gaithersburg, Maryland was pronounced the winner for Region VI.

Donald Watson, North Syracuse, New York was judged to be the Regional winner in Geigy's Professional Member Contest.

OUTSTANDING STATE ASSOCIATIONS AWARD

This NVATA Award was achieved by New York, Pennsylvania, Vermont, Virginia and West Virginia.

100% MEMBERSHIP PLAQUES

Recognizing five years of continuous 100% membership, these awards go to Rhode Island and Virginia.

NEW FFA HORTICULTURE CONTEST

Region VI members were very much involved in securing and setting up a National FFA Horticulture Contest for future years.

MEETINGS ATTENDED

The Region VI Vice President attended the following meetings since the New Orleans Convention to represent the NVATA:

- | | |
|--------------------|--|
| * February 18-19 | National Planning Committee for Denver Seminar, Chicago, Illinois. |
| May 10-15 | National Seminar for Agricultural Education, Denver, Colorado. |
| * May 23-25 | National Committee on Ornamental Horticulture Alexandria, Virginia. |
| June 28-July 2 | NVATA Executive Committee Meeting, Lincoln, Nebr. |
| August 8-10 | Regional Leadership Conference, Castile, New York. |
| November 3-5 | North Atlantic Regional Research Conference, Galilee, Rhode Island. |
| November 30-Dec. 8 | NVATA Executive Committee Meeting and NVATA-AVA Conventions - Portland, Oregon |

Attendance at several State Association meetings was impossible due to conflict with the Mid-Year NVATA Executive Committee Meeting.

* At no expense to the NVATA.

Respectfully submitted,
HOWARD TEAL
Vice President, Region VI

MISCELLANEOUS REPORTS

NATIONAL SAFETY COUNCIL

The Farm Conference of the National Safety Council meets three times a year. One meeting is held in October in connection with the National Safety Congress while the other two are usually held in January and May. Your NVATA Representative attended the January meeting. Odell Miller, NVATA Vice President for Region IV, represented NVATA at the Safety Congress in October and his report follows this one.

Your NVATA representative serves as a member of the Awards and Recognition Committee. The Farm Conference is interested in all phases of farm safety and especially in rural youth safety. It sponsors various programs for youth and has provided safety programs for the FFA such as the Safe Corn Harvest Program, the Farm Power Safe Use Program, the Rural Highway Accident Prevention Program and the Safe Farm Shop Program. Many safety bulletins and materials are developed by the Farm Conference Staff which are made available to FFA Chapters. The conference also has available the services of staff members to assist local and state groups in planning safety programs.

A number of FFA boys attend the Safety Congress. Some are sponsored by interested local organizations or by their State FFA Association. It is pleasing to note the leadership ability of FFA boys attending the Congress.

It is felt by your representative that NVATA makes many valuable contacts with leaders in business, industry and education while working with and assisting with the Farm Conference in their many safety activities and he recommends continued cooperation with the Conference. For further information, write to - Mr. Phil Schmidt, Farm Department, National Safety Council, 425 North Michigan Avenue, Chicago, Illinois 60611.

Respectfully submitted,
JAMES WALL
NVATA Representative

NATIONAL SAFETY COUNCIL

Representing the NVATA, I attended the National Safety Congress, October 24, 25 1971 in Chicago, Illinois. During the conference, I attended the youth sessions especially the FFA meeting on Sunday night and the FFA breakfast on Monday morning.

Mr. William Paul Gray, National FFA Executive Secretary, was in charge of both meetings. There were 38 FFA members and eight advisors in attendance. The discussion was on, "How FFA Members Can Promote Safety in Their Chapters". Several of the Gold Emblem Chapters in Safety were represented and their members presented facts on what their chapters had done in safety.

Monday morning, October 25, I attended the annual meeting of the Safety Congress, the Farm Council Luncheon, and the Farm Council Meeting. It was most interes-

ting to see a number of people vitally interested in promoting farm safety.
It was indeed a pleasure to represent the NVATA at this inspiring conference.

Respectfully submitted,
ODELL MILLER
NVATA Representative

PROFESSIONAL PERSONNEL RECRUITMENT COMMITTEE

Members of the NVATA Executive Committee set up and operated a "Teach Vocational Agriculture" booth as a part of the Career Show during the National FFA Convention in Kansas City during October. Several other NVATA members and students in Agricultural Education from Kansas State University and Wisconsin State University assisted in operating the booth. Interest in the profession was high with FFA members. Approximately 2,000 brochures, "Opportunities in Teaching Vocational Agriculture" were distributed.

Respectfully submitted,
SAM STENZEL
Member of The Committee

SOUTH CENTRAL MEMBER RELATIONS CONFERENCE

The South Central Member Relations Conference, sponsored by the Farmer Cooperative Service and the American Institute of Cooperation, was held at Oklahoma State University, Stillwater, Oklahoma, March 16-19, 1971. The theme of the conference was, "Members Growth-Cooperative Growth-A Team Approach".

Following a keynote address entitled "Where Do Members Get Information About Their Cooperative?" delivered by Dr. George Beel, Chairman Department of Sociology and Anthropology, Iowa State University, Ames, Iowa, a panel reacted with discussion on "What This Means To Us". The panel was chaired by Dr. Walter Jacoby, Director of Youth Education, American Institute of Cooperation, Washington, D. C. and your NVATA representative served as a panel participant.

A summation of the discussion and comments made by panel members concluded that "Total" Communication could be achieved only when there is complete participation by all people in any organizational structure. In the case of cooperatives that the lines of communication must be open between the Manager, Employees, Patron Members and the Board. Communication pays in General Planning and Decision Making.

It was a privilege to serve as NVATA representative at this conference.

Respectfully submitted,
BILL HARRISON
NVATA Representative

NATIONAL FFA CONVENTION

-Your President, Executive Secretary, Treasurer, Past President and the Region III, IV and V Vice Presidents participated in the 1971 FFA Convention.
-President McDowell received the Honorary American Farmer Degree. He also served as one of the judges to select the Star Farmer of America and was a busy man in many other ways.
-The NVATA sponsored reception for Vo-Ag teachers and guests was especially well attended. Members throughout the Nation were able to mix in an informal and friendly atmosphere. Over 450 were in attendance.
-Sam Stenzel is to be complimented for putting together a very interesting and eye catching exhibit for the NVATA Booth at the Career Show showing the need for Vo-Ag Teachers by states. The interest shown by many outstanding FFA members in teaching Vo-Ag bodes well for the future. The NVATA booth and the other Agriculture Career booths served a very useful purpose at the National FFA Convention.
-Odell Miller served as a member of the National FFA Contest Committee. Three other teachers of Vocational Agriculture also served on the committee.
-A reception and meeting was held for student teachers attending the convention with over 225 present.
-President McDowell and Past President Gundlach met with the National FFA Foundation Board of Trustees. Gundlach also met with the National FFA Board of Directors.

Respectfully submitted,
JAMES WALL
Executive Secretary, NVATA
Box 4498
Lincoln, Nebraska 68504

NATIONAL FFA JUDGING CONTESTS

The Committee for the National FFA Judging Contests includes teachers, one of which is a member of the NVATA Executive Committee.

The committee met on Friday morning during the 1971 National FFA Convention. The following items were discussed:

1. The Board of Directors voted to extend Bulletin No. 4 to include the 1972 Contest rather than print a new Bulletin this year.
2. The Board of Directors voted to have contests in Farm Mechanics and Ornamental Horticulture provided sponsors can be found. The cost of each contest is about \$8,000.00.
3. Dairy Products -- There was much discussion about the type of contest.

Finally, it was moved to expand the contest to include cheeses, milk, and ice cream. The scoring is to be on a positive means rather than the negative means now being used. This action cannot take place until 1973.

4. Dairy Cattle -- The group felt oral reasons should be left in the contest, and the cattle should be numbered left to right from the rear.
5. Livestock -- The group felt a class of feeder cattle should be dropped, and yield to be included with the grade.
6. Meat -- Because of the scarcity of lambs for judging, the group felt it advisable to drop lamb grades and replace it with a yield class of beef grading.
7. Poultry -- It was felt oral reasons do not add to the poultry contest, and since the broiler breeding class is impractical, it should be deleted.

It was a pleasure for me to serve on the Committee on National Judging Contests and to represent the NVATA.

Respectfully submitted,
ODELL MILLER, Vice President
Region IV - NVATA
NVATA Committee Member

NACTA CONVENTION

The Annual Convention of National Association of Colleges and Teachers of Agriculture was at Sterling, Colorado in June. The organization is dedicated to the improvement of college teaching of agriculture. The convention theme centered on "Teaching Agriculture in an Ecology Conscious World". It was well attended and many NVATA members were present. It was an outstanding professional convention.

Respectfully submitted,
SAM STENZEL, NVATA Treasurer
Box 731
Colby, Kansas 67701

AGRICULTURAL HALL OF FAME AND NATIONAL CENTER

Your representative has been a member of the Board of Governors of the Agricultural Hall of Fame since April 1, 1958 when the first meeting was called. He was named to the organization's executive committee on November 2, 1965, and was elected as Vice President in charge of Library Development on September 29, 1967, a position he still holds.

The Hall of Fame is being constructed on a 275 acre site located about 12 miles West of Kansas City. The site has been paid for, ground has been cleared and seeded and 2 buildings of the ten-building complex have been completed and are open to the public. In addition to the buildings, there will be restorations of replicas of historical buildings and other out-door attractions such as a

country village and various crop and horticultural display plots.

For further information write to - Administrator, Agricultural Hall of Fame,
630 N. 126 Street, Bonner Springs, Kansas 66012.

Respectfully submitted,
JAMES WALL
NVATA Representative

AGRICULTURE USA

AGRICULTURE USA is a National TV program bringing information on the agriculture industry to thousands of viewers.

Mr. John Sterns, Director of the Program, was awarded the Distinguished Service Award by the National FFA at the 1971 Convention in Kansas City.

I was selected to represent the profession for the program's annual AGGIE Award program, filmed May 22, 1971.

Accepting the award as one of the nation's outstanding Vo-Ag teachers, was truly an honor and recognition of the outstanding service of 10,000 NVATA members nation-wide.

Respectfully submitted,
MILLARD GUNDLACH
Past President, NVATA
Montfort, Wisconsin 53569

AVA ADVISORY COUNCIL

The AVA Advisory Council usually meets twice during the AVA National Convention. Normally the meetings conflict with other NVATA commitments and your representative is unable to attend. Under those circumstances, an alternate is asked to attend the meetings. Meeting dates have not been established at this time and it appears conflicting meetings will again be scheduled.

Respectfully submitted,
SAM STENZEL, Representative
Colby, Kansas 67701

AMERICAN INSTITUTE OF COOPERATION

Your NVATA representative is a member of the American Institute of Cooperation Youth Education Consulting Committee. Membership on this committee provides an opportunity to work with representatives of other groups and organizations in advising the AIC in regard to their youth activities.

During the past year, your representative met with the committee to help plan the Institute which was held at Fort Collins, Colorado.

Your NVATA representative urges all FFA Chapters to participate in Co-op contests at the state level and all State FFA Associations to submit entries for the National Contest.

For further information about the American Institute of Cooperation program for Chapters, contact your State Supervisor or write to - Dr. Walter Jacoby, Vice President, Programs, American Institute of Cooperation, 1129 - 20th Street, N. W., Washington, D. C. 20036.

Respectfully submitted,
JAMES WALL
NVATA Representative

THE NATIONAL FFA BOARD OF DIRECTORS

As the NVATA representative, I served as consultant and attended three meetings of the Board of Directors and National FFA Officers during 1971, January, July and October.

At each meeting, I was given the opportunity to express opinions on matters as they might apply to the NVATA or the local chapter of the FFA. All opinions expressed were given due consideration in the areas which they applied.

The position of consultant from the NVATA has been well received by the Board of Directors and the National FFA Officers and the opportunity for an equal position was extended to the AATEA at the July meeting. In compliance with Public Law 740, the positions of consultants from the NVATA and the AATEA does not have voting privileges.

Respectfully submitted,
WILLARD GUNDLACH
Past President, NVATA

ALPHA GAMMA RHO SCHOLARSHIP

In 1968, NVATA assumed responsibility for promoting and judging the Alpha Gamma Rho Scholarship Contest. Alpha Gamma Rho was ready to drop the program in 1967 when only one member applied for the \$300 scholarship. In 1968 - twenty-one (21) states submitted applications, in 1969 applications were received from sixteen (16) states, in 1970 eleven (11) applications were received and in 1971 seventeen (17) applications were received.

Each State Supervisor is entitled to submit the application of one outstanding member. Application forms will be sent to State Supervisors at the proper time.

The 1971 winner of the \$300 scholarship was - Daryl I. Sywassink, Rural Route #2, Muscatine, Iowa 52761. First Alternate was Paul Albert Beckman, Box 30, Weiser, Idaho 83672. Second Alternate was Larry Ware, Route #1, Box 147, Attapulga, Georgia 31715.

Entries were submitted by the following states: California, Idaho, Montana, Nevada, Oregon, Wyoming, Kansas, New Mexico, Iowa, Minnesota, South Dakota, Michigan, Ohio, Georgia (c), Massachusetts, New York and Pennsylvania.

Respectfully submitted,
JAMES WALL
NVATA Representative

"THIRTY MINUTE CLUB"

Agricultural educators were quite active in contributing information to news and publication media in 1971. Twenty-six state associations submitted requests to the Regional Vice President for 316 "Thirty Minute Club" certificates.

REGION I	2 Associations	12 Certificates
REGION II	5 Associations	48 Certificates
REGION III	5 Associations	113 Certificates
REGION IV	6 Associations	94 Certificates
REGION V	1 Association	4 Certificates
REGION VI	7 Associations	45 Certificates
TOTAL	26 Associations	316 Certificates

Several of the recipients contributed more than one article. The 339 articles were published in the following types of media:

94	Agricultural Education Magazine
9	National Future Farmers Magazine
21	Other Professional Journals
185	State Association Publications
16	Agricultural Magazines and Publications
14	Other Publications
339	TOTAL

Associations utilized different means to identify the authors. Most designated a Publicity Chairman who kept the records. He then submitted the completed form to the Regional Vice President (in some Regions to the Alternate Vice President). The Vice President forwarded the certificates to the State Association President and the official record to the NVATA "Thirty Minute Club" Chairman for tabulation. Associations are encouraged to promote this activity to help "tell the Agricultural Education Story as it is".

Respectfully submitted,
SAM STENZEL, Chairman
Colby, Kansas 67701

NATIONAL ASSOCIATION OF COUNTY AGRICULTURAL AGENTS CONVENTION

The National Association of County Agricultural Agents again extended an invitation for your President to attend their Annual Convention and to bring Greetings from the NVATA.

The days of September 9-10 at Ohio State University in Columbus with County Agents from across the Nation were pleasant and informative. It pleases me to report that the NVATA and your President were received in a most cordial way and duly recognized. A spirit of cooperation was in evidence.

Mr. Larry Iverson of Valley City, North Dakota, President, NACAA is to be commended on the fine Convention he chaired, and the expertise and pleasing personality of the new President, D. W. Strobbehn of Atlanta, Georgia. I am looking forward to Doug's visit with us at our Portland Convention.

Respectfully submitted,
GLEN D. MCDOWELL
NVATA Representative

NVATA CONTESTS AND AWARDS

Following is a list of NVATA Contests and Awards with the names of the 1971 winners -

NVATA YOUNG MEMBER AWARD PROGRAM UNITED STATES STEEL

Vocational Agricultural Education is continually faced with a shortage of qualified teachers. While college enrollment in Vocational Agriculture training programs has been increasing, unless those who have been trained enter and remain in the profession for a period of several years, the teacher shortage will continue.

As a means of encouraging young men to stay in the profession of teaching Vocational Agriculture and to encourage and recognize participation in the activities of The National Vocational Agriculture Teachers' Association, an awards program is being sponsored by United States Steel Corporation in cooperation with the NVATA.

The 1971 winners of trips to the National Convention for Outstanding Teachers from all Regions who have taught less than 5 years are -

REGION I	ED STRONG, 1131 North 11th Street, Payette, Idaho 83661
REGION II	ALLEN H. NELSON, Sunburst Trailer Park, Space B-5 Fort Morgan, Colorado 80701
REGION III	LEE G. MENDENHALL, High School, New Richland, Minn. 56072
REGION IV	GARY BAUER, 262 Orchard Lane, Sunbury, Ohio 43074
REGION V	JAMES WATSON, Box 7J, Evins Avenue, Smithville, Tenn. 37166
REGION VI	DAVID A. MILLER, 17022 King James Way, Apartment 102 Gaithersburg, Maryland 20760

NEW HOLLAND NVATA CAREER ORIENTATION AWARD SPERRY RAND DIVISION OF NEW HOLLAND

The NVATA Agricultural Career Orientation Awards program was conceived jointly by the NVATA Executive Committee and by New Holland to encourage vocational agriculture teachers to put continuing emphasis on informing rural youngsters about the opportunities in agri-business and to recognize teachers whose programs are especially worthy of note. The winners of these awards are not necessarily giants who conduct astounding feats of classroom derring-do. They are vocational agriculture teachers whose interest in their students and the future of American Agriculture has caused them to devise and conduct strong, innovative career orientation programs as part of the normal routines.

Winners of the Career Orientation Awards in 1971 are -

REGION I	DAN BIRDSSELL, Box 728, Deer Park, Washington 99006
REGION II	EUGENE R. RUBY, 9400 East Hampden Avenue, Denver, Colorado 80231

REGION III	DON C. LEIBELT, 381 Bader Street, Green Bay, Wisconsin 54302
REGION IV	GLENN H. GRIFFITH, 2770 Maxtown Road, Westerville, Ohio 43081
REGION V	GUY J. ANGEL, Route #3, Box 134, Waynesville North Carolina 38786
REGION VI	OSCAR J. HARRIS, Route #3, Box 41-1-A, Sandyville, West Virginia 25275

The above men will attend the National Convention with all expenses paid as winners of this award.

GEIGY PROFESSIONAL AWARD FOR NVATA MEMBERS

Each year an outstanding teacher of Vocational Agriculture, who is a member of NVATA, is selected to make a 10 day, all expense-paid agricultural tour of Europe. The member selected joins representatives of several other organizations as guests of Geigy Agricultural Chemicals, Division of CIBA - Geigy Corporation, for the tour held in mid July.

Geigy provides certificates for all state winners and a trophy for the National winner.

Winners to date are --

.....1970 - MILLARD GUNDLACE, Box 55, Montfort, Wisconsin 53569

.....1971 - DONALD KABLER, Route #3, Box 398, Corvallis, Oregon 97330

PFIZER AWARDS CHAS. PFIZER & CO., INC.

The Charles Pfizer Company awards \$500 checks to the Advisors of the Star Dairy, Livestock and Poultry Farmers.

The 1971 winners of these awards are -

Ed Fisher, High School, Hilmar, California 95324 - Dairy Farming

Jerry Sherwin, High School, Cuba City, Wisconsin 53807 - Poultry Farming

Roy Reno, High School, Riverton, Wyoming 82501 - Livestock Farming

PROFESSIONAL STATE ASSOCIATION AWARD NATIONAL VOCATIONAL AGRICULTURAL TEACHERS' ASSOCIATION

Your National Organization can be no stronger than its affiliated state associations. In order for a state association to be strong it must aggressively

engage in certain well-planned activities designed to serve the best interests of the members and the profession.

In order to encourage professional activities among the affiliated state associations, NVATA will present an engraved and framed certificate of appreciation to the President of each Association meeting five of these six items listed on the application form.

- ...1. Ninety-five to one-hundred percent (95%-100%) of the teachers of vocational agriculture were members of NVATA in 1971-72.
- ...2. New Officer List for 1972-73 was sent to the Executive Secretary within 10 days after election.
- ...3. Program of Work report forms for 1971-72 were sent to the Regional Vice President within 10 days after the State Association Convention.
- ...4. NVATA dues for 1971-72 were remitted to the Executive Secretary's office within 30 days following the state conference - (initial list) associations which do not have a conference shall remit their initial list and dues no later than October 1.
- ...5. Four or more issues of the State Association Newsletter for 1971-72 were provided to all members, the NVATA Regional Vice President and the Executive Secretary.
- ...6. A State Program of Work for 1971-72 was developed and distributed to all members and committees were organized to implement it.

The last complete fiscal year of the State Association shall govern the period of time for which the Award application is made.

The following Associations are 1971 winners of this Award:

REGION I

ARIZONA	DWAIN A. GALE - President
CALIFORNIA	EDWARD LEAL - President
MONTANA	DANIEL P. WATTS - President
OREGON	WRIGHT NOEL - President
UTAH	MARIO RUSSIO - President
WASHINGTON	JOHN MYER - President
WYOMING	OLIVER R. WILLE - President

REGION II

COLORADO	HERBERT LIGHTSEY - President
KANSAS	GARY JONES - President
OKLAHOMA	CLIFFORD CHRIST - President

REGION III

IOWA	GROVER C. MIEHE - President
MINNESOTA	JOHN MURRAY - President
NEBRASKA	MYRON R. SCHOCH - President
NORTH DAKOTA	HOWARD PEARSON - President
SOUTH DAKOTA	ROBERT POLLMAN - President
WISCONSIN	JAMES FERRIES - President

REGION IV

ILLINOIS
MICHIGAN
MISSOURI
OHIO

CHARLES HARN - President
WILLIAM HARRISON - President
JEFF BATTLES - President
WARREN REED - President

REGION V

GEORGIA
NORTH CAROLINA
TENNESSEE

JAMES C. ODOM - President
JACK C. COLE - President
RALPH MOFFATT - President

REGION VI

NEW YORK
PENNSYLVANIA
VERMONT
VIRGINIA
WEST VIRGINIA

BRUCE HILTON - President
LEROY SMELTZ - President
JOSEPH BUTTON - President
JOHN FREDERICK PAPPER - President
PAUL K. SILCOTT - President

* * * * *

100% ASSOCIATION AWARDS

Two awards are available for State Associations attaining 100% of their potential membership - (1) Associations that have attained 100% membership for five (5) continuous years will receive a plaque. (2) Associations that attain 100% membership by November 1 of the current fiscal year will receive framed certificates.

The following associations have qualified for framed certificates:

MONTANA
*UTAH
*WYOMING

CLARK CLEVELAND - President
BYRON MEMMOTT - President
JIM WILSON - President

REGION I

* OKLAHOMA
NEW MEXICO

JIM BOSTON - President
DWIGHT HOUSTON - President

REGION II

* NORTH DAKOTA
* SOUTH DAKOTA

CURTIS JENSEN - President
PALMER EIDET - President

REGION III

* MISSOURI

LINVILLE HARDIN - President

REGION IV

* ALABAMA
* GEORGIA
* GEORGIA (c)

JAMES MORRIS - President
T. C. WEAVER - President
WILLIAM GEORGE - President

REGION V

*RHODE ISLAND . STEPHEN DELPOZZO - President
VERMONT GEORGE DUNSMORE - President
*VIRGINIA D. D. OLIVER - President
*Qualified for 5 Year Plaques

Respectfully submitted,
JAMES WALL
NVATA Representative

NATIONAL ASSOCIATION OF STATE DEPARTMENT OF AGRICULTURE CONVENTION

Your President was invited to attend the NASDA Annual Convention held in Miami Beach, Florida November 3-6 and was given a place on the program at one of the business sessions to make comments regarding NVATA activities and how they relate to NASDA. This invitation was accepted and the dates of November 5-6 set to attend the Convention.

NVATA involvement in this Convention is the beginning of a new and important relationship and our first move toward meeting the challenge - "let us know how we can better relate our activities and work together" made to me and Norman Bohmbauh, President Elect of the Minnesota VAIA by Don Wilkinson, Minnesota Commissioner of Agriculture. He gave this challenge to us when we visited with him at the "snacks" and Information Program Don and his staff had arranged at the Wisconsin Department of Agriculture for members of the W.V.A.I.A. at the Associations Annual Conference in Madison.

A thank you for involving the NVATA is extended to NASDA President, Doyle Conner.

Respectfully submitted,
GLEN D. MCDOWELL
NVATA Representative

NATIONAL LIVESTOCK FEEDERS ASSOCIATION CONVENTION

The NVATA was well received and pleasingly recognized when your President visited the NLFA Convention in St. Louis, on February 4-5, 1971.

While in attendance, numerous contacts were made with individuals, many of whom were representatives of strong agri-business firms as well as leading members of the NLFA. NLFA President, Gilbert Hadley and Executive Secretary, Don Magdanz were gracious hosts. These individuals were concerned with the future for Agricultural Education and the FFA. Strong support was expressed for our cause.

From this experience, early in my term of office, the high status and stature enjoyed by the NVATA among agricultural organizations was made more clear and further mandated that the NVATA cooperate with all agricultural organizations at every opportunity.

Respectfully submitted,
GLEN D. MCDOWELL
NVATA Representative

NATIONAL FFA FOUNDATION BOARD OF TRUSTEES

Millard Gundlach, Past NVATA President, and I represented the NVATA, local FFA Advisors as it were, on the National FFA Foundation Board of Trustees. The Board met in Alexandria, Virginia on January 27-28 and in Kansas City, Missouri on October 11.

The fine reception we received from members of the Board and the consideration given to the opinions we expressed were pleasing. Having two votes certainly has involved the NVATA in the actions and has also obligated the Association to strongly support the Board's Programs, including funding activities.

Important changes and forward moves have been made by the Board in administrative procedures, modification, expansion and funding of contests and awards programs during recent times. In order to fully appreciate the extent and value of these moves, one would have to review the minutes of meetings, in particular the ones held since Donald McDowell became Executive Director of the Foundation Sponsoring Committee.

Mr. John Streetman, Vice President of Allied Mills, Inc., was elected chairman of the Executive Council of the Foundation's Sponsoring Committee at the Sponsors October Meeting in Kansas City. He succeeds Mr. Fred Stines, Publisher of Successful Farming, who will remain on the Council as Past Chairman. Other elected members were: Malcolm McVie, 1st Vice Chairman and who is President of Elanco Products Company; and, Robert Walston, 2nd Vice Chairman and who is Vice President, Marketing - Funk Brothers Seed Company. L. W. Davis, of Allis Chalmers Company, retired Vice President, leaves the Council after years of dedicated service.

Congratulations and a thank you are in order for Mr. Stines. He and "his men" set a goal to raise \$300,000 and passed that mark. In addition, among other firsts he proposed a new nation-wide "Blue Jackets" leadership program for youth through the FFA. Let Mr. Stines and the Sponsors in your state know you appreciate their efforts and get behind John Streetman and his team.

Respectfully submitted,
GLEN MCDOWELL
NVATA Representative

AVA TASK FORCE ON INSTITUTIONAL MEMBERSHIPS

The AVA invited the NVATA President to represent Vocational Teachers on the Task Force on Institutional Memberships. The group met in Washington, D. C. on October 19 along with the AVA President and staff members.

The Task Force's assignment was to project and/or develop:

1. Values to be derived by Institutions enrolled (services - loyalty).
2. Suggested kinds of memberships and dues.
3. Tentative guidelines (criteria) for such memberships.

It was agreed Institutional Memberships would be advantageous to the AVA and member Institutions as well and the Task Force recommended that the AVA Board of Directors make such available, which will require a change in the By-Laws.

The items listed above were also developed for consideration of the Board.

Present at the meeting were:

T. Carl Brown, AVA President, of Raleigh, North Carolina.

Task Force Members:

Dr. Byrl Shoemaker, State Director of Vocational-Technical Education for Ohio, of Columbus, Ohio.
Edwin J. Taibl, Dean, Technical Division, Milwaukee Technical College, Milwaukee, Wisconsin.
G. Herman Porter, Director, Division of Institutional Evaluation and Accreditation, State Board of Education, of Raleigh, North Carolina.
Glen D. McDowell, NVATA President and Teacher of Vocational Agriculture, the Johns Creek School, of Pikeville, Kentucky.

AVA Staff:

Lowell A. Burkett, Executive Director; Dean Griffin; "Dusty" Rhodes; John Hudson; and Mary Allen.

Respectfully submitted,
GLEN D. MCDOWELL
Task Force Member

AVA DEPARTMENTAL (SECONDARY)

The Committee met in St. Louis, Missouri the afternoon of March 5, 1971. The session was directed by Nina Keeton, Chairman and D. E. Coordinator of Little Rock, Arkansas. Nine members and four guests were present. The NVATA was represented by Glen McDowell, President.

Some of the Committee's suggestions and/or actions are as follows:

1. More members should be involved in the development and implementation of the Departmental Program of Work.
2. Improvements are needed in the Program of Work and more people should be involved (speaking and otherwise participating) in Departmental meetings at the AVA Convention. A consensus of opinion - more people want to be involved.
3. Faculties must be educated to Vocational Education, including teachers at grade levels K through post-secondary.
4. Wide and planned use should be made by Vocational Education of communications media (emphasis on TV) in telling others.
5. Specifics -- Portland Convention, Department Meeting(s):

...Recommended that David Brinkley, I.T.C. Co-ordinator be asked (invited) to give talk on Vocational Programs.
...Have a young man, successful in his field and having had Vocational Training, give a talk.
...Suggested theme: "Leadership and Development".
..."Reaction Panel" to be appointed from various disciplines, Jerry Greer, President of the Kentucky VATA to represent the NVATA.

...Joint session to be held with Post-Secondary Department during morning, Monday - December 6. Theme: "Reaching Others - Working with others".

...Evaluation instrument to be developed and used re: Department Program.

Evelyn Robenson (Mrs.), COE Coordinator of Westlake, Ohio was elected Program Chairman and Edith Myers (Mrs.), Home Economics Teacher of Stoneboro, Pennsylvania was elected Secretary. I volunteered to serve as the Portland Convention Proceedings Digest Recorder for the Department.

A matter of concern: Only 2 secondary Vocational teachers are currently serving on the Secondary Department Committee. Should not the AVA consider expanding the Committee membership to have at least one "grass roots" teacher from each discipline involved? This statement/question is not intended to any way to challenge or rule out any present non-teacher member of the Committee. Their service is, as I have observed it, needed and top rung.

Respectfully submitted,
GLEN D. MCDOWELL
NVATA Representative

PROGRAM OF WORK COMMITTEE REPORTS

MEMBERSHIP

Thirty-five State Associations submitted reports on the Membership section of the NVATA Program of Work. A summary of the response follows:

	<u>YES</u>	<u>NO</u>
1. Does your Association use a "package system" (includes only State VATA, State VA, NVATA, and AVA dues, all mandatory, none optional) of collecting dues?	31	4
2. Was your Association 100% in NVATA membership for the past fiscal year?	11	24
(a) Was your association recognized at the last National Convention for having 100% NVATA membership?	9	26
3. Were Agricultural Education trainees in your state informed about the NVATA by a member of your association?	32	3
(a) Did your association secure student NVATA memberships?	15	20
4. Did trainees from your state attend the NVATA reception for student teachers at the National FFA Convention?	22	13
5. Did Vo-Ag teachers from your state attend the reception for teachers at the National FFA Convention?	33	2
6. Did your association recommend anyone for Honorary NVATA Membership and/or the NVATA Distinguished Service Citation this year?	16	19
7. Did your association present NVATA years of service Keys to members during your Annual Conference?	30	5
8. Did your association present NVATA Years of Service and/or Outstanding Service Certificates to members during your Annual Conference?	28	7

The highest dues paid under the "package plan" was \$51.00; the lowest was \$24.50; the average amount for the 31 State Associations was \$32.25. The average amount charged for State Association Vocational Agricultural Teachers' dues was \$8.50; the highest was \$16.00 and the lowest was \$1.50. Three associations (Colorado, Illinois and Texas) assessed dues using a mill levy against annual salaries. Their lowest dues were \$36.00 and the highest were \$85.00. State Vocational Association dues ranged from a low assessment of 25¢ to a high of \$21.00. The average dues were \$5.07.

The reports indicated that a high percentage of the reporting State Associations presented Service Key and/or Service Certificate Awards. The report did not request the number of Service Keys given but the Associations reported 483 Service Certificate Presentations.

Respectfully submitted,
SAM STENZEL, Chairman
Box 731
Colby, Kansas 67701

TEACHER WELFARE

Thirty-five State Associations submitted reports on the Teacher Welfare Section of the NVATA Program of Work.

Fifteen Associations reported a recent study on teachers load. It seems most states have guidelines for upper limits on enrollment--about 60 day students was considered a full load.

Twenty-two associations reported sabbatical leaves available -- 17 with some salary and 5 with no salary.

Sick leave for most part is a state or district policy. However those with extended employment, 12 months, should consider receiving more days than the regular 9 month teacher.

All thirty-five associations reported some type of retirement benefits available.

FFA transportation was financed by teacher, chapter and school district and varied within states. It appeared from the reports where the school district financed travel the programs were more effective.

Openings for teaching positions were available from either the State Supervisor, placement service, employment service or Teacher Educators.

Twenty-eight (28) associations reported active teacher recruitment committees. Only 2/3 of the associations had any type of organized program for new members. This is an area needing to be worked on.

Salaries varied from \$6,200 to \$18,500. Arizona puts out a calendar of activities including their program of work. This makes it effective and usable.

Many new ideas were presented. They will be passed on to areas in the association for considerations.

My personal thanks to all who reported and may your state association benefit from your efforts.

Respectfully submitted,
FRED BECKMAN, Chairman
Box 30
Weiser, Idaho 83672

PROFESSIONAL IMPROVEMENT

Thirty-five states submitted reports of their activities in this section of the Program of Work.

A summary of these reports follows:

1. Twenty-two states reported conducting Exchange of Ideas Contests.
2. Three hundred ninety entries were received and recorded in the Exchange of Ideas Contest.

3. All twenty-two states reported giving prizes to the Exchange winners.
4. Twenty-nine states reported having companies or organizations furnishing scholarships to agriculture teachers seeking advanced training.
5. Some of the special problems studied during the year and reported at the National Convention were: Teacher recruitment, evaluation of the agriculture department, formation of Ag Support Committee on state wide level, communications of NVATA activities to all members on state level, state association help to beginning teachers, FFA Supply Service, State Advisory Committees, public relations.
6. Thirty-four states reported workshops and some sort of short courses as a form of in-service training. Some of the areas included in the courses were: Ag Mechanics, Farm Management, Agribusiness, Horticulture, welding, small engines, surveying, electricity, pastures, judging, range management, landscape, natural resources, concrete, wood working, water systems, cold metals, and masonry.
7. Thirty-one of the thirty-five states indicated that college credit was given for working on special problems when not in residence.
8. Only six states indicated that college credit was given for attendance at State Ho-Ag conferences.
9. Twenty-one states indicated that sabbatical leave was given for professional improvement.
10. Orientation of the new officers was carried out in several manners, namely; the work-up program through the ranks, work with retiring officers, incoming officers spend time on board of directors prior to election, joint staff meetings during conference, distribution of materials to new officers, executive committee meetings during August, October and January.
11. All thirty-five of the reporting states encouraged their members to subscribe to THE AG EDUCATION MAGAZINE.
12. Twenty-four states reported a committee to review professional materials.
13. Only ten of the states indicated making an effort to meet with the officers of the state school administrators association. Six states reported that their officers met with the officers of the state school administrators association.

It would seem that a number of states have made a real effort in the area of professional improvement as indicated by their reports. I wish to thank those states who reported for their time and effort in preparing the reports and as such making this summary more meaningful. I would like to encourage those states that did not, to make an effort to do so in the future.

Respectfully submitted,
 FRANCIS N. MURPHY, Chairman
 Box 46
 Route #3
 Madison, South Dakota 57042

FFA RELATIONS

Thirty-four Associations submitted reports on FFA Relations.

Twenty-five states had considered revisions of National FFA Judging Contests.

Constructive ideas for improving National FFA Judging Contests:

7 states ---	Add National Agricultural Mechanics Contest
4 states ---	Add Horticulture Contest
2 states ---	Add Agronomy Contest
2 states ---	Add Farm Management Contest
2 states ---	Add Agri-business Contest

Constructive Ideas for Improving FFA Supply Service

7 states ---	Faster Service
3 states ---	Lower prices where they will be competitive
3 states ---	Make girls tailored jackets
2 states ---	Don't try to make money
5 states ---	It is improving
12 states ----	No comment

Twenty-one states participated in developing a code of ethics for FFA members.

Thirty-four states encouraged FFA Chapters to send free subscriptions of National FFA Magazine to businessmen.

Twenty-eight states encouraged local chapters to use official FFA calendar.

Twenty-eight state associations helped secure scholarships for FFA Members.

Thirty-four states urged proper use of the FFA jacket.

Twenty-nine states urged local chapters to observe Farm-City Week activities.

Thirty-one states recommended the use of FFA billboards during National FFA Week.

Respectfully submitted,
D. P. WHITTEN, Chairman

Centre, Alabama 35960

PUBLIC RELATIONS AND PUBLICITY

Thirty-five associations responded. They are as follows:

Region I

Arizona
Montana
Oregon
Utah
Washington
Wyoming
One not identified

Region II

Arkansas
Colorado
Kansas
Louisiana
Oklahoma
Texas

Region III

Iowa
Minnesota
Nebraska
South Dakota
Wisconsin

Region IV

Illinois
Indiana
Kentucky
Michigan
Missouri
Ohio

Region V

Alabama
Florida
Georgia
Mississippi
North Carolina
Tennessee

Region VI

Connecticut
New York
Pennsylvania
Vermont
Virginia

Summary of the reports:

1. 88% of the reporting associations awarded 344 "Thirty Minute" Certificates.
2. 113 members had articles published in The Ag Ed Magazine.
3. 98 members had articles published in National professional publications.
4. 65 members had articles published in other National publications.
5. 97% of the associations sent out news releases for the last NVATA Convention.
 - (a) 100% of the members attending the convention reported to their membership.
 - (b) 100% of the members attending the convention prepared local news releases.
 - (c) 74% had group pictures taken at the convention.
 - (d) 63% released the group pictures to their local news media.
6. 91% of the associations reported publishing a state newsletter. The average number of issues was 5.3 per association. The greatest number of issues reported was 12, the lowest 2.
7. 94% of the associations made awards to groups and individuals for the contributions to Vocational Agriculture.

166 Outstanding Service Awards
332 Years of Service Keys awarded
230 Years of Service Certificates awarded
207 Teacher of Teachers Certificates awarded
8. 51% of the associations named an individual to be responsible for cooperating with the AVA Ag Ed Division Information Committee. 37 articles of information were sent to this committee.

Respectfully submitted,
MILLARD GUNDLACH, Chairman
Montfort, Wisconsin 53569

COMMERCIAL RELATIONS

Thirty-five Associations submitted reports. A summarization of these is as follows:

1. Thirteen associations investigated the possibility of making farm equipment and machinery available to Vo-Ag departments on a rental or loan basis. Apparently this practice is decreasing.
2. Twenty-three associations cooperated with industry in an advisory capacity in the preparation of teaching aids.
3. Thirty-two associations indicated that a company representative attended their conferences.
4. Only nine associations were involved in trying to secure scholarship award programs for Vo-Ag instructors. Of these nine, seven were successful. The number of scholarships received per state varied from one to eleven with a value ranging from \$100 to \$1300.
5. All but one Association distributed the NVATA diary.
6. Twenty associations have State Advisory Councils. One additional association is organizing one.
7. Sixteen state associations have State Vo-Ag support committees. One additional state is organizing one. The use of state support committees appears to be increasing.
8. Thirty-three associations had an entrant in the U. S. Steel Young Farmer Contest.
9. Twenty-five associations had an entrant in the New Holland Career Orientation Contest. Considerable interest continues to be shown in both of these contests.
10. Twenty-two associations had workshops for teaching Agriculture Industry Occupations.
11. Even though no specific question was asked regarding Geigy's Professional Member Award, ten associations responded that they had an entrant. No doubt many more than this actually entered the contest.
12. Twenty associations gave awards to outstanding teachers, many of which were sponsored by commercial concerns. Examples of awards given include:
 - a) Trip to National Convention
 - b) Outstanding Vo-Ag Teacher Awards
 - c) Agricultural Leadership Awards
 - d) Distinguished service awards
 - e) Public Relations Awards
 - f) Special retirement Award
 - g) 25 Year Plaque Award
 - h) 30 Year Watch Award
 - i) 35 Year Luggage Award
13. The following are examples of the major activities of state commercial relation committees:
 - a) Setting up awards with commercial concerns
 - b) Providing certificates for sale to teachers for local recognition
 - c) Encourage tours of commercial concerns
 - d) Securing ag radio men to educate teachers on ways and means of publicity
 - e) Using commercial concerns in workshops
 - f) Securing gifts of farm equipment

- g) Operating instructional materials service
- h) Completing list of resource people from Agri-business
- i) Securing use of commercial concerns people for professional day
- j) Obtaining discounts on cars and other items
- k) Securing industry sponsoring of Vo-ag teacher calendar, State Vo-Ag Teachers Directory and State Vo-Ag Teachers Handbook
- l) Obtaining support from industry and business for Vo-Ag funding
- m) Starting State FFA Foundation

In final summary, it would appear that many Associations are continuing to work closely with commercial concerns to maintain and improve Vo-Ag programs and enhance the Vo-Ag Teaching Profession.

*1 - One report did not have name of state or person sending affixed.

Of the States Reporting:

- .. 91% worked closely with their State Vocational Associations.
- .. 48% indicated that the State Vocational Association shared expenses of delegates to the NVATA-AVA Convention.
- .. 88% reported their State Vocational Association would have a full quota of delegates to the AVA House of Delegates at the Portland Convention.
- .. 100% indicated that their Vo-Ag Association encouraged membership in the AVA.
- .. 100% reported their delegates to the 1970 NVATA-AVA Convention (s) gave complete "Convention" reports to the membership.
- .. 20% received financial help to attend the NVATA-AVA Convention from their State General Education Association.

General Comments/Selected from the Reports:

- A. The reason given by the three states reporting they did not work closely with their state vocational association was (1) the Vocational Association is weak; or (2) one did not exist as such.
- B. All but 3 of the 35 states gave "financial assistance for delegates" as one method used in promoting attendance at the NVATA-AVA Convention. Eight (8) reported using additional encouragements, ranging from publicity, paying expenses of one young teacher, and urging delegates to take wife.
- C. Twelve (12) states reported receiving help from their state education association.

In addition to financial help in attending the NVATA-AVA Convention, as in the case of 7 states, these "helps" included: (a) Providing funds in varying degrees for departmental meeting at in-state conventions - publicity,

speakers, meeting room, etc. (One state reported receiving \$500.00 and another \$200.00.); allotments for publicity (news letters and other publications); and (c) legal advice.

D. Suggestions for improving AVA Services; activities and thrust of the NVATA and your State Ag Teachers Association were received from 19 states and are, or fall, into these categories:

- (a) Legislation: More activity and communications needed on the part of the AVA in promoting and/or securing desirable legislation.
- (b) Leadership and Activities: The AVA should take a more aggressive leadership and activities promoting role, including giving more attention to AVA Field Representatives and more support of the NVATA in the re-identification of Agricultural Education at the National level. And, both the NVATA and the AVA are asked to provide more assistance to their affiliated state associations.
- (c) Publications - Communications: The AVA Journal should be made more readable and have more articles pertaining to Agricultural Education. Communications relative to legislation should be written in more "common terminology" and tell why when asking for support. Information to members through various printed media should be expanded with fewer from the AVA being devoted to insurance only and multi-copy mailings of newsletters, etc. should be made from the National level to district "section" chairmen or directors. One chairman suggested group purchase of a dicta-phone type or recorder for record keeping and turn over to new state officers.
- (d) Cooperation - Unity: The AVA, as well as State Ag Teachers Association should work more closely with the NVATA and the Ag Ed Division of AVA. States should also inform members of NVATA and AVA services and involve members more actively on committees. Unity should be promoted among all Vocational disciplines and better coordination or effort through cooperation is needed at all levels.

One State Chairman gave this advice, to quote: "Get off dead center and get involved in making needed changes" and another suggested the formation of a Young Owls Club to promote interest in the NVATA, AVA, State VATA and State VA.

Respectfully submitted,
GLEN McDOWELL, Chairman
Box 252
Pikeville, Kentucky 41501

INFORMATION COMMITTEE

Following is a tabulation of the thirty-five Associations reporting to the NVATA;

1. Approximately two hundred ninety-two NVATA members, (teachers) from the Associations will attend the NVATA-AVA Convention.
2. One State Constitution was last revised in 1956; one in 1959; one in 1964; one in 1966; one in 1967; four in 1968; five in 1969; seven in 1970; and twelve in 1971.
3. Nineteen secretaries have served for one year; seven for 2 years; one for three years, one for four years; one for five years; one for seven years and one for ten years.
4. Nineteen state association secretary's have served for a period of more than one year.
5. Thirty Associations have written a Program of Work.
6. Thirty-one Associations publish a Newsletter.
7. Thirty-two Associations make the NVATA Information Bulletin available to all members. (Revised in 1967).
8. Thirty Associations have made the NVATA Bylaws which were revised in 1968 available to their members.
9. Thirty-four Associations use official stationery.
10. Thirty-four Associations stationery shows that they are affiliated with NVATA.
11. Twenty-five Associations stationery shows affiliation with the AVA.
12. Twenty-four Associations stationery shows affiliation with the State Vocational Association.
13. Thirty-three Associations use official NVATA pins, gavels, certificates and plaques in making service awards.
14. Twenty-eight Associations make use of the "Teacher of Teachers" Certificate.
15. Thirty-two Associations give the Creed of NVATA to all new members.
16. Twenty-one Associations make copies of the NVATA Student Membership Bulletin available to trainees.

Respectfully submitted,
JAMES WALL, Chairman

AGRICULTURAL DIVISION OF AVA COMMITTEES

NATIONAL PROGRAM DEVELOPMENT TASK FORCE

In compliance with a resolution adopted by the Agricultural Education Division, AVA, in New Orleans, December, 1970, the following Program Development Task Force was appointed by C. M. Lawrence, President, Agricultural Education Division.

C. M. Lawrence, Chairman
Glenn McDowell, President, NVATA
Millard Gundlach, Past President, NVATA
Julian Carter, President, NASAE
J. A. Marshall, Representing NASAE
Gene M. Love, President, AATEA
Charles Drawbaugh, Past President, AATEA
L. Wesley Davis, Consultant, Allis Chalmers Company, Wauwatosa, Wisconsin
John E. Streetman, Allied Mills, Chicago, Illinois
Fred Stines, Publisher, Successful Farming, Des Moines, Iowa
Vernon Schneider, President, American Institute of Cooperation, Washington, D. C.
Stan Cath, Executive Secretary, National Association of State Directors of Agriculture, Washington, D. C.
C. Dana Bennett, Special Consultant, Foundation for American Agriculture, Washington, D. C.

CONSULTANTS

H. N. Hunsicker, U. S. Office of Education, Washington, D. C.
H. Dean Griffin, AVA, Washington, D. C.
Jim Wall, Executive Secretary, NVATA, Lincoln, Nebraska
Don McDowell, Executive Director, National FFA Foundation, Madison, Wis.

EXECUTIVE COMMITTEE

C. M. Lawrence	Glen McDowell	Julian Carter
Gene Love	Vernon Schneider	

The primary purpose of this task force is to develop and implement through the agricultural education professional organizations an effective instructional program for agri - business and renewable natural resources occupations.

The present specific needs of people in view of the continuing scientific, technical, economic, environmental and social changes taking place, require that a broad horizon, basic national program of education be developed and implemented in agri-business, leadership, citizenship and community development. Toward this end, the committee met three times to prepare for and implement the work of the Denver Seminar and serve in an advisory capacity to the AVA and the USOE.

Respectfully submitted,
GLEN MCDOWELL, NVATA President
MILLARD GUNDLACH, NVATA P. President

AGRICULTURAL EDUCATION MAGAZINE

NVATA is represented on the Editing-Managing Board by - Glen McDowell, President; Odell Miller, Vice President for Region IV; Sam Stenzel, Treasurer; and, James Wall, Executive Secretary.

During the past year the secretary has had a column - "News and Views of NVATA" in several issues of the magazine. A number of pictures have also appeared.

The editor has made a special effort to secure articles from teachers of Vocational Agriculture and the Vice Presidents of NVATA have cooperated with him in contacting certain individuals in regard to preparing articles.

A meeting of the board will be held at the Portland Convention. Roy Dillon will become editor of the magazine on January 1, 1972. His address is - Roy Dillon, Teacher Educator, Agricultural Education, College of Agriculture, University of Nebraska, Lincoln, Nebraska 68503

Respectfully submitted,
JAMES WALL
NVATA Representative

PUBLIC INFORMATION

The Committee is composed of -

Alfred Krebs, Chairman
James Wall
Dale Aebischer
Harold Shoaf
Paul Day
Oscar Loreen
Don Reuwee

Virginia
Nebraska
Wisconsin
Kansas
Minnesota
Oregon
Washington, D. C.

Ex. Officio

Ralph Bender
Lowery Davis
C. M. Lawrence
H. N. Hunsicker
Mary Allen
Alton Ice

Ohio
New Mexico
Florida
Washington, D. C.
Washington, D. C.
Texas

The purpose of the committee is - "To provide leadership and coordination in securing, preparing, and disseminating information regarding agricultural education."

Some of the activities the committee proposes are:

1. The development and dissemination of booklets about various phases of the Vocational Agriculture Program.
2. The development and dissemination of short statements of facts about Vocational Agriculture programs.

3. The identification and distribution of statements about vocational agriculture made by well-known persons.

From time to time "Vc-Ag Facts" are sent to the states. States have been encouraged to name a Public Information Chairman who would cooperate with the National Chairman in both securing and distribution of facts.

The AVA Annually provides \$1000 to the Committee for use in employing student help. The Chairman, Al Krebs, is in charge of the account.

Respectfully submitted,
JAMES WALL
NVATA Representative

9. Resolutions Committee procedures
10. Officer supplies
11. Adjournment

CONTENTS OF PRESIDENT GLEN McDOWELL
AT FIRST GENERAL SESSION IN

PORTLAND, OREGON
DECEMBER 4, 1971

At this moment, just a few hours past the clock time beginning of the first day of the rest of our lives, I want to begin my talk with you by saying I feel real good. May I share these feelings with you.

Last evening I was privileged to be a guest of our good friends, The U. S. Steel Corporation, at their dinner for the winners of the NVATA - U. S. Steel Outstanding Young Member Award and their wives. What these young teachers had to say, their attitudes and achievements as reflected (proved that is) by the successes of the students they have touched -- The affluent and academically strong as well as the socio-economically handicapped and the academically weak in both rural and urban situations, said to me that the NVATA has been correct in defending and promoting the expansion of programs in Vocational Education in Agriculture and the FFA. The successes scored by these young teachers and their students are possible everywhere U. S. A. And, just think present here at this moment are delegates representing state associations and some 9,000 teachers of Vocational Agriculture in every clime in our Nation. Many here have come great distances, some are present at great personal sacrifice in time and monies. Too, we are visiting and will be working together in a beautiful and hospitable city. And, perhaps my top feel good factor of all is the fact that the NVATA is in trouble. Any vigorous progressive organization today is involved in trouble and it has a future. A serene, complacent organization may successfully avoid troublesome endeavors and dodge issues, put its head in the sand and its plumed other end in the air as the ostrich does, but it is sure to have a low life expectancy and be of little service to human kind.

All of us here today, our fellow members at home and the lay public are indebted to the past leaders who designed and directed the NVATA toward being an association involved in trouble.

My challenge to you is to become deeply involved in our troublesome matters during this convention. Your expertise and strengths are needed now to chart tomorrows highways to be traveled by the NVATA. And, upon your return home, if this has not already been accomplished, work diligently to structure and direct your state association to defend and expand your state program in agricultural education and the FFA.

The present rule followed by the USOE, which leaves it almost entirely to a state to decide on the kinds of Vocational programs it will have as well as staffing, identities and funding mandates. I believe that state associations be structured and ready, when downgrading effecting our discipline occurs, to move to correct the situation.

When you have the opportunity, I am sure you will review carefully the President's report in the Annual Report and all other reports contained therein. Hopefully, this will provide you with a good background on the actions, thrusts and involvements of your NVATA - 1971.

Your Vice Presidents are keyed to the problems we have, the issues to be considered and will work with you on these in your Regional Meetings.

Serving as your President has been a priceless honor and an exciting challenge. Along the way I have gained and stored fond memories for my quiet times and the rewards I have received overshadow any contributions I may have made for the good of our Association. Inspiration, assistance and understanding have come my way from many concerned and dedicated people during my tenure. May I here say a special thanks to the many members I have met and worked with in my NVATA travels, the Executive Committee, Jim and Georgia Wall, the Pike County Board of Education, my Superintendent, my Principal and last, but not least my family. Again, let me say this has been an exciting as well as busy year, and my future view of the profession remains a positive one.

Respectfully submitted,
GLEN D. McDOWELL
NVATA PRESIDENT
1970-1971
Box 252
Pikeville, Kentucky 41501

REPORT OF THE NVATA EXECUTIVE SECRETARY
NATIONAL CONVENTION, DECEMBER 5, 1971
PORTLAND, OREGON

President McDowell, members of the NVATA Executive Committee, members of the NVATA and guests: I am pleased to have the opportunity to speak to you this morning at the twenty-third Annual Convention of your great organization. For many of you this is your first NVATA Convention. However, I recognize many as having attended a number of conventions. This happens to be the 21st consecutive NVATA Convention that I have attended and the 17th as a member of the Executive Committee or as your Executive Secretary.

This is the first time that the NVATA has met in Portland and I am sure that for many of you this is your initial visit to this beautiful city. I know you will enjoy every moment of your stay here. The people of Portland and the whole state of Oregon have exerted every effort to make your visit a most pleasant and rewarding experience.

Before making other remarks, please allow me to express my sincere thanks and appreciation to the members of the Executive Committee, to the State Association Officers, to the State Supervisory and Teacher Education staffs, the membership at large and to all others who have cooperated so well with the NVATA Office during the past year.

Special thanks must go to President McDowell whose dedication and untiring efforts have been an inspiration to all who have been associated with him in the work of NVATA. One only needs to review his travel record for the past year to learn that he has been a very busy man. He has represented NVATA in an outstanding manner on many, many occasions and I have been told time and time again about the "good job" Glen McDowell was doing. And, believe me such favorable reports makes the work of your National Office much easier and more satisfying. In addition to his duties as National President, Glen has been a full-time teacher of Vocational

Agriculture. Thanks to an understanding Administrator and a cooperative Board of Education, he has been able to be away from his school 100 days during his term of office.

The Executive Secretary's report which appears in the Annual Report brochure shows some of the NVATA activities and accomplishments of the past fiscal year, lists meetings attended and covers some of the office activities. You have a copy of this report and may have already read it. If not, I would suggest that you do so because in the interest of saving time, it is not my intention to dwell at any length upon the contents of the report.

I would also like to point out to you that all of your National Officers have given much of their time and efforts during the past year to the work of the organization. An analysis of the records shows that the nine (9) National Officers spent a total of 393 days away from home and traveled 138,847 miles in carrying out their responsibilities. In addition the Executive Secretary traveled 10,500 miles during 30 days away from the office. This all adds up to a grand total of 432 days and 149,377 miles.

The Executive Secretary has traveled less this year than for several years. The primary reason is that the office work - load has increased to the point where one man can no longer manage it and be away from the office for many days out of the year. A secondary reason is that a recent heart attack made it necessary to forego several meetings that would have otherwise been attended.

As your Executive Secretary, it is my responsibility to report to you some of the accomplishments of the organization for the past year and to make certain recommendations for the year ahead. Here is what I believe are some of the major accomplishments:

.....Continued to work with people in the USSOE in the interest of maintaining proper identification of Vocational Agriculture and the Future Farmers of America and at the same time to develop a blueprint for the new and emerging concepts of Vocational Agriculture. Certain members of the Executive Com-

mittee met and discussed the program with Dr. Harland and Dr. Worthington and others of the ISOE Staff.

-Developed, at the request of the National FFA Board of Directors, a new score card for selecting Honorary American Farmers.
-Held 6 Regional Leadership Conferences with either the President, Executive Secretary or Treasurer in attendance.
-Had two National Officers serve on the Planning Committee for the Denver Seminar. Five committee members and the Executive Secretary participated in the Seminar. Two NVATA members served on the committee to prepare the final draft.
-Developed a notebook filing system for NVATA Officers.
-Developed a position paper, with rationale for having a U. S. Department of Education.
-NVATA continued to cooperate with Agricultural Industry in sponsoring contests that gave 15 members of NVATA all-expense trips to the National Convention.
-NVATA sponsored a "Coffee Hour" for 225 trainees and a "Reception" for 500 An Teachers attending the National FFA Convention.
-NVATA sponsored, for the fifth consecutive year, a "Careers Booth" at the National FFA Convention.
-Donald Kabler, a past NVATA Vice President for Region I represented NVATA on an Agricultural Tour of Europe as a guest of Geigy Agricultural Chemical Company.
-Developed a membership award program with certificates for Associations attaining 100% membership by November 1 and plaques for those with 5 years of continuous 100% membership.
-Past President Willard Gundlach was named as an Outstanding Teacher of Vocational Agriculture on the Agriculture USA Program and flew to California

to receive the Award and make a tape that will be shown on National Television.

NOW FOR A LOOK TO THE FUTURE

Your organization, thanks to hundreds of dedicated individuals has made amazing progress through the years. Other groups and organizations within the education complex often look enviously upon you and wish that they could accomplish even half as much as the NVATA. While accomplishments have been many and success has been a delight, the time has arrived that you must make a decision at this convention that will have a far-reaching effect on the future of NVATA.

I, of course, am referring to the proposal to increase dues. NVATA dues were increased from \$3.00 to \$5.00 in 1967. You as well as I know what has happened to the value of the dollar today compared to 1967. NVATA simply can no longer maintain present services let alone provide new ones without additional revenue.

I believe nothing presents a clearer picture of the financial condition of an organization than does its assets which include cash in the bank, money in savings and bonds and personal property. With this in mind, auditors reports for the past several years were reviewed and this is what was found - In 1966, the year prior to the dues increase - assets stood at \$34,000. In 1967, the first year the dues increase went into effect Assets increased to \$50,000, in 1968 to \$63,000 and in 1969 to \$70,000. Then in 1970 they were down to \$63,000 and at the end of fiscal 1970-1971 had decreased to \$55,000.

The budget adopted for 1971-1972 calls for an expenditure of \$19,000 in excess of expected income which could possibly reduce the net worth to around thirty-six thousand (\$36,000). It is easy to see that at this rate the organization would soon be broke.

The dues situation for organizations is much like the tax situation. Prices for labor and materials increase and people ask for and demand additional services. The only possible solution is more taxes and in the case of the NVATA - higher dues.

It is hardly necessary to explain what would be done with additional money. Some additional funds must be had to continue services at the present level and even more are needed if the organization is to move forward and provide additional services.

A \$3.00 dues increase will raise approximately \$27,000 in additional revenue. This amount will balance the budget and provide some reserve or permit expanded services.

Your paid NVATA staff consists of the Executive Secretary and 2 office secretaries. If services are to be added and the organization is to move forward additional help must be provided. I have already recommended to the Executive Committee that an Assistant Executive Secretary be employed at the earliest possible moment.

We have been fortunate this year that President Glen has been able to travel and assume many responsibilities for the organization. However, it is too much to expect every President to be away from his school so much of the time. Glen was away 109 days and traveled over 44,000 miles.

When the matter of a dues increase was discussed by the Committee serious consideration was given to asking for a \$5.00 increase effective July 1, 1972. However, it was agreed that a \$3.00 increase now with a \$2.00 increase in 2 years would be more palatable and would be easier for you.- the State Association Leaders to sell to your membership.

The Executive Committee is also looking for revenue from other sources. Consideration is being given to purchasing the Agriculture Teachers' Directory. A final decision cannot be made on this matter until the outcome of the proposed dues increase is known, as purchase of the Directory would necessitate the addition of another member to the staff. This individual would probably devote 1/3 to 1/2 of his time on the work of the Directory and the remainder on providing additional services for the organization.

If you believe in NVATA, and I know you do, I urge you to vote for the proposed dues increase on Tuesday and then exert every possible effort to not only maintain but also to increase the membership in your state and national organizations.

NOW - I also recommend that the NVATA during the next year ---

-Continue to urge State Associations to have active Public Information Committees that contribute materials on a regular basis to the Ag Division Public Information Committee.
-Continue to urge State Associations to organize State Support Committees for Vocational Agriculture and the FFA.
-Increase efforts to secure State Association and NVATA memberships and participation from the many post-secondary institutions. This area is one in which much work needs to be done.
-Place more emphasis on having state associations name winners in each of the NVATA Awards Programs.
-Extend efforts to keep the membership informed. A Newsletter will be sent to all members following this convention. This will be the first time a direct mailing has been made to all members.
-We must have strong local programs of Vocational Agriculture. If every teacher of Vocational Agriculture will do a creditable job in his community, we need have no fear of losing the greatest education program this Country has ever known. Your state association must play a leading and vital role in developing and maintaining strong local programs.

In conclusion I must say that I am more optimistic about the future of Vocational Agriculture and the FFA than I have been in recent years. The challenge to provide better Vocational Education for greater numbers of people is being met. The public is becoming more aware of the need for and the value of good Vocational training.

The future lies in your hands.

Success will depend upon the leadership your state association is willing to give. If the lines of least resistance are taken and you wait for someone else to take the lead, I am just as sure as I am standing here today that the program in your state will probably suffer. On the other hand, if strong and aggressive leadership is displayed, I have little doubt that Vocational Agriculture and the FFA will assume an even more important and respected place in our educational system.

I sincerely hope that you will enjoy and profit from this convention and that you will return safely to your respective communities with a renewed enthusiasm for our great program of Vocational Agriculture and FFA. Thank you very much!

Respectfully submitted,
JAMES WALL, Executive Secretary
Box 4498
Lincoln, Nebraska 68504

REPORT OF THE RESOLUTIONS COMMITTEE

Appreciation Resolutions.

WHEREAS, many organizations, commercial concerns, and individuals contributed considerable time, effort, and money in behalf of the NVATA and its members; and

WHEREAS, the success of the NVATA and its annual meeting depends on such efforts,

THEREFORE BE IT RESOLVED, that the NVATA express its sincere thanks to the following:

1. TO: Gordon Galbraith, Specialist, Agricultural Education, Oregon, for his excellent work as Program Chairman for the Agricultural Education Division.
2. TO: The AVA Staff and Board of Directors for their assistance and cooperation in planning and staging the NVATA Convention.
3. TO: The officers and members of the Region I Associations for the reception on Saturday, December 4, providing prizes and favors, and for the many other courtesies extended our group while attending the Convention. (In charge, Verlin Hermann, President, Oregon Association of Agriculture Teachers).
4. TO: Glen McDowell, NVATA President, and Teacher of Vocational Agriculture, Pikeville, Kentucky, for his outstanding leadership in successfully guiding our Association through 1970-1971.
5. TO: Fred Beckman, Weiser, Idaho and Howard Teal, Boonville, New York, retiring Vice Presidents, for their untiring efforts in behalf of NVATA and their respective Regions.
6. TO: The New Holland Division of Sperry Rand Corporation, New Holland, Pennsylvania and Dave Kramer, Assistant Communications Supervisor, for sponsoring the NVATA Career Orientation Award Program which brought six teachers to the Convention with all expenses paid.
7. TO: The Charles Pfizer Company, New York, New York and Robert Bennett, Assistant Public Relations Manager, Agricultural Division, for presenting \$500 checks to the advisors of the National FFA Foundation Award winners in Livestock, Poultry and Dairy Farming.
8. TO: A. O. Smith Harvestore, Inc., Arlington Heights, Illinois and Bob Lyon, Manager, Marketing Information, for sponsoring the Breakfast on Sunday, December 5 for the Combined Agricultural Education Groups and their wives.
9. TO: United States Steel, Pittsburgh, Pennsylvania, and Charles R. [unclear], Manager, Agricultural Supplies-Marketing, for sponsoring the NVATA Young Member Award Program and paying the expenses of the winners from the six Regions to the Convention.
10. TO: The Farm Film Foundation and The Foundation for American Agriculture Hosts: Mrs. Edith T. Bennett, Executive Vice President, Farm Film Foundation, and C. Dana Bennett, Special Consultant, Foundation for American Agriculture and Farm Film Foundation, Washington, D. C. for sponsoring the NVATA Awards Breakfast on Tuesday, December 7.

1. TO: The American Institute of Cooperation, Washington, D. C., Dr. Vernon Schneider, President and Dr. Walter Jacoby, Vice President, Programs, and The National Rural Electric Cooperative Association, Washington, D. C. and Art Mitchell, Supervisor of Youth and Young Adult Activities, for sponsoring the State Presidents Dinner on Sunday, December 5.
12. TO: The d-Con Company, New York, New York and Hamilton Hicks, Educational Director, for sponsoring the NVATA Diary and assisting the organization in many ways throughout the year.
13. TO: All members of the Executive Committee for their time and effort, in behalf of NVATA.
14. TO: James Wall, Executive Secretary of NVATA, Lincoln, Nebraska and the NVATA office staff, for their many efforts in behalf of the organization throughout the year and in particular during the convention.
15. TO: All persons serving as Hosts and Recorders and giving Invocations at NVATA sessions and meal functions.
16. TO: International Harvester Company, Chicago, Illinois for providing funds for Convention speakers.
17. TO: The Alternate Vice Presidents of NVATA who assisted with registration, served as secretaries for the Regional Meetings and as Judges for Ideas Unlimited Contest.
18. TO: The National Conference of State Cooperative Councils and National Cooperative Organizations and Chairman of the event, Mr. Oscar Hagg for sponsoring the breakfast on December 6 for the Agricultural Education Division members and wives.
19. TO: Dr. Robert Worthington, Associate Commissioner, Adult, Vocational and Technical Education, for his inspiring address on Saturday, December 4.
20. TO: Geigy Agricultural Chemicals and Richard Hansen, Publicist, Geigy Agricultural Chemicals, Ardsley, New York, for sponsoring the Professional Recognition Award for NVATA members.
21. TO: The Florida Department of Citrus represented by Hugh D. Lee, Carl P. Schuler and Al Wilson for providing the delicious fruits for delegates at the convention.

SPECIAL APPRECIATION RESOLUTION: - NO. 1

DR. ROBERT WORTHINGTON

WHEREAS, Dr. Robert Worthington took time from his busy schedule to address the NVATA Special Program for the Agricultural Education Division, AVA at this convention, and,

WHEREAS, the remarks given were very inspirational and timely, and,

WHEREAS, his obvious dedication to the sound principles of Vocational Education was shown by his presentation,

THEREFORE BE IT RESOLVED, that we, the delegates of the 23rd Annual Convention of the NVATA, thank him and offer our support for the concept of Career Education as presented.

BE IT FURTHER RESOLVED, that copies of this resolution be sent to the Secretary of Health, Education and Welfare and The Commissioner of Education.

APPRECIATION RESOLUTION: NO. 2

AGRICULTURAL BUSINESS AND ORGANIZATIONS

WHEREAS, many members of Agricultural Business and Organizations have contributed their time and talent this past year to the AVA Agricultural Education Division National Program Development Task Force, and,

WHEREAS, this support has involved many hours freely contributed by these individuals.

THEREFORE BE IT RESOLVED, that the NVATA in Convention at Portland, Oregon convey its sincerest appreciation to the many individuals involved in this effort to develop and implement a National Program in Vocational Education, in Agriculture to be used as guidelines on the local, state and national level.

COMMITTEE RESOLUTIONS

NO. 1 - AVA AGRICULTURAL EDUCATION DIVISION NATIONAL PROGRAM DEVELOPMENT TASK FORCE

WHEREAS the primary purpose of this task force is to develop and implement through the Agricultural Education professional organizations an effective instructional program for Agri-business and renewable natural resources occupations, and

WHEREAS, they have developed a preliminary summation of the results of the seminar held in Denver on transition in Agricultural Education.

WHEREAS, this summation will be presented to the Ag Division for evaluation at this convention.

THEREFORE, BE IT RESOLVED that the NVATA go on record as being in favor of the further activities of this task force.

BE IT FURTHER RESOLVED, that the NVATA President and Executive Committee be empowered to appoint special committees as needed to adequately guide the profession during this transition period.

NO. 2 - NATIONAL FFA ALUMNI ASSOCIATION

WHEREAS, the authorization for the formation of the National FFA Alumni Association has been granted by the National Board of Directors of FFA.

WHEREAS, this is an association devoted to strengthening the FFA, promoting a greater knowledge of the agricultural industry and supporting education in agriculture.

THEREFORE, BE IT RESOLVED that the FFA Alumni Association council develop a specific program of activities for the association.

BE IT FURTHER RESOLVED THAT NVATA members encourage the active support of this association.

NO. 3 - TORT LIABILITY INSURANCE

WHEREAS, for several years the NVATA has requested the AVA to secure sufficient insurance for Tort Liability, and,

WHEREAS in 1971 this insurance coverage for tort liability was obtained and made available to members of AVA.

THEREFORE BE IT RESOLVED that NVATA express appreciation to AVA for securing this insurance for vocational educators.

BE IT FURTHER RESOLVED, that a copy of this resolution be forwarded to AVA Executive Director.

NO. 1 - NVATA OFFICE RE-LOCATION

WHEREAS, it is becoming more evident that improved lines of communication are necessary between the U. S. Office of Education and The National Vocational Agriculture Teachers' Association, and

WHEREAS, major decisions and actions are being made in Washington, D. C.

WHEREAS, due to the location of The NVATA Office it is often difficult to maintain top level communication between The NVATA Executive Committee and The USOE and U. S. Legislators.

THEREFORE, BE IT RESOLVED, that the NVATA go on record supporting a re-location of the NVATA office to Washington, D. C.

BE IT FURTHER RESOLVED, that the NVATA Executive Committee make every effort to plan and affect this move at the earliest possible date.

NO. 2 - ESTABLISHMENT OF THE BUREAU OF OCCUPATIONAL EDUCATION

WHEREAS, occupational education is an important vehicle for progress of mankind, and

WHEREAS, human resources of the Nation are not fully realized; and

WHEREAS, in order for the role of occupational education to function properly, more status and a greater share of the administrative organization is necessary; and

WHEREAS, the proposed occupational education act of 1971 sets forth the establishment of a Bureau of Occupational Education; and

WHEREAS, the Bureau would be headed by a qualified person with the rank of Deputy Commissioner;

THEREFORE BE IT RESOLVED, that the NVATA support the proposed establishment of the Bureau of Occupational Education as described in the Occupational Education Act of 1971 House Bill H. R. 7248, and

BE IT FURTHER RESOLVED, that the concept of the Governor designating an agency to administer occupational education be changed as follows: "Any State desiring to participate in the programs authorized by this Act shall in accordance with State law designate the State Board created by State law to administer the Vocational Education Amendments of 1968 (Public Law 90-576).

NO. 3 - VETERANS' FARM TRAINING

WHEREAS, Public Law 90-631 provides for a program of cooperative farm training for veterans, and:

WHEREAS, this course requires twelve hours of classroom instruction per week for 44 weeks per year, and:

WHEREAS, the act provides for no on-farm instruction, and:

WHEREAS, enrollees must be engaged in some type of farming activity to be eligible for enrollment, and;

WHEREAS, the rigid requirements of the act make it difficult for enrollees to meet the hourly classroom requirements;

WHEREAS, the proposed House Bill H. R. 3351 sets forth more workable requirements;

BE IT FURTHER RESOLVED, that the National Vocational Agriculture Teachers' Association support House Bill H. R. 3351 to amend section 1682 of title 38 of the United States Code, to provide 200 hours of organized classroom instruction and 100 hours of individual instruction per year per veteran.

BE IT FURTHER RESOLVED that the NVATA request AVA to support this Legislature.

NO. 4 - NVATA OFFICER VISITS TO STATE ASSOCIATIONS

WHEREAS, the NVATA has been declining in membership; and

WHEREAS, in several State Associations, the Vo-Ag teachers are employed on less than a year around contract;

WHEREAS, some state associations are becoming less effective because of an apparent lack of leadership at the state level:

THEREFORE BE IT RESOLVED, that the NVATA provide the necessary financial resources so that all NVATA officers can visit State Vo-Ag teacher associations periodically to assist the State Associations with any problems it may have and bring all issues and concerns of the association to its membership.

NO. 5 - TEACHER TRAINING IN AGRICULTURE EDUCATION

WHEREAS: the recruitment of promising young teachers in agriculture education is a priority function to insure the continuing success of vocational agriculture;

and **WHEREAS;** it appears that the teachers accepting jobs in agriculture education fell short of the nation's needs in 1971, as it has in the past twenty years;

and **WHEREAS;** it appears that the affiliated organizations of NVATA must maintain an active recruitment program for promising young teachers in agriculture education;

and **WHEREAS;** vocational agriculture teacher training institutions in the respective states have maintained efficient professional programs in agriculture education since their inception;

and **WHEREAS:** a president of a teacher training institution in Region IV has recommended in a report to the university faculty and as stated will recommend to the administration and Board of Regents that Agriculture teacher training programs be phased out;

and **THEREFORE BE IT RESOLVED;** that the NVATA, a professional organization composed of six Regions--50 states--opposes the recommendation of phasing out Agriculture Education in teacher training institutions until a thorough study of total needs can be made. This recommendation presented at a regular convened session of the NVATA held December 7, 1971, Portland, Oregon;

and **BE IT FURTHER RESOLVED;** that copies of this resolution be transmitted to the University and Board of Regents in the state involved.

NO. 6 - SUPPORT OF UNITED STATES DEPARTMENT OF AGRICULTURE

WHEREAS the USDA in the past has contributed greatly in the growth and effectiveness of the American Agricultural industry.

WHEREAS the USDA is a most important vehicle for maintaining American Agriculture as the most efficient food and fiber producing industry in the world;

WHEREAS there have been recent attempts to de-emphasize the key roll of the USDA in the continued strength of American Agriculture;

BE IT RESOLVED that the NVATA members furnish key legislators the necessary information to make them aware of certain moves to downgrade the important role of the USDA and to encourage them to take the necessary steps to prevent this action.

NO. 7 - NATIONAL FFA JUDGING CONTEST

WHEREAS; the majority of the National FFA contest rules committee is composed of people not in contact with students;

WHEREAS; the current operation of the contests often causes dissatisfaction among advisors and students;

THEREFORE BE IT RESOLVED; that the majority of the National FFA Contest Rules Committee be composed of High School FFA Advisors.

SPECIAL PROGRAM - CAREER ORIENTATION PANEL

Sunday, December 5, 1971

Portland Hilton Hotel
The Galleria

The meeting was called to order at 3:45 P. M. By Glen McDowell, NVATA President.

Mr. McDowell made the following introductions: -

Invocation - Keith Griffin, State President and Teacher of Vocational
Agriculture, Montague, Michigan.

Host - Eugene Forrester, State President and Teacher of Vocational
Agriculture, Ellensburg, Washington.

Recorder - Leighman Martin, State President and Teacher of Vocational
Agriculture, Provencal, Louisiana.

Moderator - Dr. Walter Jacoby, Vice President, Programs, The American
Institute of Cooperation, Washington, D. C.

Dr. Jacoby introduced the 6 panel members, all who were Regional Winners in the
"NVATA Career Orientation" contest sponsored by the New Holland Division of Sperry
Rand Corporation. They were:

Region I - Dan Birdsell, Deer Park, Washington
Region II - Eugene Ruby, Denver, Colorado
Region III - Don Leibel, Green Bay, Wisconsin
Region IV - Glen Griffith, Westerville, Ohio
Region V - Guy Angel, Waynesville, North Carolina
Region VI - Oscar Harris, Sandyville, West Virginia

The panel members discussed among themselves their local programs in "Career Orientation" and then responded to questions from the audience.

The meeting was adjourned promptly at 4:45 P. M.

Respectfully submitted,
JAMES WALL
Executive Secretary

- NVATA RECEPTION -

Saturday, December 4, 1971

Portland Hilton Hotel
Ballroom A

The NVATA Reception for the Ag Division was sponsored by the Associations of Region I with Verlin Hermann, State President of the Oregon Association in Charge.

The reception was held from 5:00 - 6:00 P. M. with approximately 600 guests attending. Punch, coffee, cookies, sandwiches and many other delicacies were served. Guests were entertained by a group of Indian dancers.

Respectfully submitted,
JAMES WALL
Executive Secretary

10th ANNUAL HARVESTORE BREAKFAST

Sunday, December 5, 1971

Portland Hilton Hotel
Ballroom A

The breakfast which was sponsored by A. O. Smith Harvestore Products, Inc., Arlington Heights, Illinois was attended by 521 members of the Ag Division, their wives and guests.

Glen McDowell, NVATA President and Master of Ceremonies made introductions as follows:

- Invocation - Richard Strangeway, State President and Teacher of Vocational Agriculture, Grahamsville, New York.
- NVATA Co-Host- Marlin Wacholz, State President and Teacher of Vocational Agriculture, Renville, Minnesota.
- NVATA Co-Host- Jim Wilson, State President and Teacher of Vocational Agriculture, Glendo, Wyoming.
- Recorder - Paul Dixon, State President and Teacher of Vocational Agriculture, Calhoun, Tennessee.
- Sponsor
Representative Robert Lyon, Assistant To The Director of Marketing - A. O. Smith Harvestore Products, Inc. Mr. Lyon extended greetings to the group.

GREETINGS FROM THE FFA

Clifford Saylor, National FFA Vice President, Glendale, Arizona extended greetings on behalf of the FFA and spoke to the group for approximately 8 minutes.

MEMBERSHIP REPORT - (See Appendix pages 54-55)

The membership report for NVATA was given by Sam Stenzel, NVATA Treasurer. The report showed a gain in membership compared to the same date in 1970.

100% ASSOCIATIONS

Framed certificates were presented to the presidents of state associations attaining 100% membership for 1971-1972 by November 1, of 1971 as follows:

REGION I

Utah
Montana
Wyoming

REGION II

Oklahoma
New Mexico

REGION III

North Dakota
South Dakota

REGION IV

Missouri

REGION V

Alabama
Georgia
Georgia (c)

REGION VI

Rhode Island
Vermont
Virginia

FIVE YEAR - 100% PLAQUES

Engraved plaques were presented to state associations who had maintained 100% membership for 5 consecutive years (1966-67 to 1970-71) as follows:

REGION I

Utah
Wyoming

REGION II

Oklahoma

REGION III

North Dakota
South Dakota

REGION IV

Missouri

REGION V

Alabama
Georgia
Georgia (c)

REGION VI

Rhode Island
Virginia

LIFE MEMBERSHIP

The following were recognized for buying Life Memberships in NVATA: -

REGION IV

Jim Guillinger of Illinois
Charles Harn of Illinois
Lowell Hillen of Illinois
Cedric Gowler of Illinois
Eldon Witt of Illinois

Eldon Aupperle of Illinois
Richard Barnes of Michigan
Adelbert Huber of Michigan
Stanley Knopf of Michigan

REGION VI

Peter Edgecomb of Maine

Respectfully submitted,
JAMES WALL
Executive Secretary

STATE PRESIDENTS DINNER

Sunday, December 5, 1971

Portland Hilton Hotel
International Club

The dinner was co-sponsored by The American Institute of Cooperation, with Walter Jacoby - Vice President, Programs as Host and The National Rural Electric Cooperative Association with Arthur Mitchell - Supervisor of Youth and Young Adult Activities as Host.

Total attendance including current and past NVATA officers and alt. V.P. currently holding office was 110.

INVOCATION

The Invocation was given by Kenneth Brashaber, State President and Teacher of Vocational Agriculture, Rushville, Indiana.

INTRODUCTIONS

President Glen McDowell made introductions as follows: -

NVATA Host - Robert Phillips, State President and Teacher of Vocational Agriculture, London, Ohio,

Recorder - Fred Faulks, State President and teacher of Vocational agriculture, Parma, Idaho.

Vernon Schneider-President of The American Institute of Cooperation, Washington, D. C.

PANEL DISCUSSION

A representative from each of the Regions participated on a panel discussion on - "Why It Works". The panel members explained why certain activities "worked" for their association. Francis Murphy NVATA Vice President for Region III served as panel moderator.

Regional representatives on the panel were -

Region I	Clark Cleveland of Montana
Region II	Les Olsen of Kansas
Region III	Marlin Wacholz of Minnesota
Region IV	Kenneth Brashaber of Indiana
Region V	T. C. Weaver of Georgia
Region VI	George Dunsmore of Vermont

ENTERTAINMENT

Entertainment was provided by the "Joy Boys" - Walter Jacoby and Arthur Mitchell - the co-hosts. It was more or less a consensus of opinion that while the "Joy Boys" were not pros, they were funnier than some that claim to be.

SPECIAL CITATION

A special citation was presented to Arthur Mitchell by Glen McDowell in recognition of his many contributions to the NVATA and the program of Vocational Agriculture.

The program was concluded at 9-25 P. M.

Respectfully submitted,
JAMES WALL
Executive Secretary

CO-OP BREAKFAST

Monday, December 6, 1971

Portland Hilton Hotel
Ballroom A

The breakfast was sponsored by the National Conference of State Cooperative Councils and National Cooperative Organizations.

- PROGRAM -

Master of Ceremonies - Oscar Hagg, Secretary, Agricultural Cooperative Council, Corvallis, Oregon.

Invocation - Lewis C. Ayers, State President and Teacher of Vocational Agriculture,
Ephrata, Pennsylvania.

WELCOME - Wayne Daggett - President, Agricultural Cooperative Council, Portland,
Oregon.

Introductions --

Verlin Hermann, President, Oregon Association of Vocational Agriculture
Teachers - recorder.

Vern Schneider, President of AIC, Washington, D. C.

Neville Hunsicker, USOE, Washington, D. C.

Dean Griffin, AVA Staff, Washington, D. C.

Cliff Saylor, National FFA Vice President from Arizona

Walter Jacoby, Vice President, Programs, AIC, Washington, D. C.

James Wall, Executive Secretary, NVATA, Lincoln, Nebraska

Lowell, Millen, - President and Teacher of Vocational Agriculture,
Illinois - Host.

David Flint, State President and Teacher of Vocational Agriculture,
Iowa - Host.

PARTNERSHIP AWARDS

Vernon Schneider, AIC President presented plaques to -

Glen McDowell, Kentucky, President of NVATA.

Gene Love, Missouri, President of AATEA.

Julian Carter, Vermont, President of NASAE.

RESPONSE

Gene Love, Missouri, President of AATEA, thanked the sponsoring organizations
for the breakfast and for the many other contributions made by cooperatives
through the years to Vocational Agriculture and the FFA.

Respectfully submitted,
JAMES WALL
Executive Secretary

NVATA PAST OFFICERS DINNER AND MEETING

Monday December 6, 1971

Portland Hilton Hotel
Pavilion Room

INVOCATION

The Invocation was given by D. P. Whitten, NVATA Vice President for Region
V, Centre, Alabama.

CALL TO ORDER

After 6:00 P. M. dinner the meeting was called to order by President Luther Hardin of Searcy, Arkansas.

INTRODUCTIONS

Each past and current officer was asked by President Hardin to stand, introduce themselves and tell when he served, offices he held and current employment.

MINUTES

The minutes of the last meeting, held in New Orleans, Louisiana, December 7, 1970 were approved as printed and read by James Wall, secretary.

LETTERS FROM PAST OFFICERS

James Wall, secretary, read letters he had received from past officers who were unable to attend.

Region I

Lionel Cross, California
Alfred Hansen, California
LeRoy Runnell, Tremonton, Utah

Region II

W. T. Black, Pioneer, Louisiana
A. C. Hale, Camden, Arkansas
Tom Devin, Dumas, Texas

Region III

James Hamilton, Council Bluffs, Iowa

Region IV

W. S. Weaver, Delphi, Indiana
Walter Bomeli, Bangor, Michigan
Max Lampo, Neosho, Missouri

Region V

Elvin Walker, Tifton, Georgia
Travis Hendren, Raleigh, North Carolina
Floyd Johnson, York, South Carolina

Region VI

Robert Wall, Blacksburg, Virginia
James Givens, Winchester, Virginia
H. E. Throckmorton, Milton, West Virginia

CERTIFICATES - WIVES OF OFFICERS

Certificates to wives of retiring officers were presented by James Wall, secretary.

.....Johana Smith, wife of Bill Smith.
.....Merle McDowell, wife of Glen McDowell
.....Judy Teal, wife of Howard Teal
.....Joy Beckman, wife of Fred Beckman

Wives not present to receive certificates were:

.....Wilma Gundlach, wife of Millard Gundlach
.....Nettie Black, wife of W. T. Black

ATTENDANCE

The following past and current officers and current alternate vice presidents attended the meeting -

REGION I

Donald Kabler - Oregon
James Durkee - Wyoming
Fred Beckman - Idaho
Luther Lalum - Montana
T. O. Beach - Arizona

REGION II

Bill Harrison - Oklahoma
Sam Stenzel - Kansas
Parker Woodul - New Mexico
Luther Hardin - Arkansas
David McVey - Texas

REGION III

Paul Day - Minnesota
Francis Murphy - South Dakota
Willard Gundlach - Wisconsin
Grover Miehe - Iowa
James Wall - Nebraska

REGION IV

Odell Miller - Ohio
John Matthews - Illinois
Glen McDowell - Kentucky
Jim Guilinger - Illinois

REGION V

D. P. Whitten - Alabama
W. D. Neil, North Carolina

REGION VI

William Smith - New Jersey
Julian Carter - Vermont
Wenroy Smith - Pennsylvania
Howard Teal - New York
James Shadle - Pennsylvania

GUESTS ATTENDING

Mrs. Donald Kabler
Mrs. Fred Beckman
Mrs. Bill Harrison
Mrs. T. O. Beach
Mrs. Francis Murphy
Mrs. Odell Miller
Mrs. Grover Miehe

Mrs. John Matthews
Mrs. Glen McDowell
Mrs. William Smith
Mrs. Julian Carter
Mrs. Howard Teal
Mrs. James Shadle
Mrs. James Wall

SPECIAL PRESENTATION

Willard Gundlach, retiring past president, in behalf of the NVATA, presented a Polaroid Camera to retiring President, Glen McDowell.

REMARKS

Retiring president Glen McDowell made a few choice remarks regarding what NVATA had meant to him and how important the organization was for the well-being of the profession.

ELECTION OF OFFICERS

The following officers were "railroaded" to serve for 1971-1972. -

President - Luther Hardin of Searcy, Arkansas
Vice President - Parker Woodul of Portales, New Mexico
Secretary - James Wall of Lincoln, Nebraska

Respectfully submitted,
JAMES WALL
Executive Secretary

NVATA AWARDS BREAKFAST

Tuesday, December 7, 1971

Portland Hilton Hotel
Ballroom B

SPONSOR

The breakfast was sponsored by the Foundation For American Agriculture, The Farm Film Foundation and The NVATA. C. Dana Bennett, Special Consultant, for the Foundations, was unable to attend but was ably represented by a member of the board, Jim Gibson.

TOASTMASTER - ATTENDANCE

Willard Gundlach, NVATA Past President was toastmaster of the event which was attended by 325 teachers of Vocational Agriculture, wives and guests.

INVOCATION

The Invocation was given by Les Olson, State President and Teacher of Vocational Agriculture, Clay Center, Kansas.

INTRODUCTIONS

The following introductions were made by the toastmaster, Willard Gundlach: -

-NVATA Co-Host - James Boston, State President and teacher of Vocational Agriculture, Adair, Oklahoma.
-NVATA Co-Host - J. M. Morris, State President and Teacher of Vocational Agriculture, Ohatchee, Alabama.
-Recorder - Byron Memmott, State President and Teacher of Vocational Agriculture, Lehi, Utah.

HONORARY LIFE MEMBERSHIP

Warren Weiler, Retired State Supervisor of Vocational Agriculture, Worthington, Ohio.

SPECIAL CITATIONS

Thomas Derveloy, State Director of Vocational Education, Baton Rouge, Louisiana.

William J. Spinabella, Director, Marketing, Research and Education, Sho-Me Power Corporation, Marshfield, Missouri.

Leonard Kunzman, Director, Vocational Education, Salem, Oregon.

Dale Aebischer, Head State Supervisor, Wisconsin, was unable to attend the convention to receive his Honorary membership in NVATA.

Those who were unable to be present to receive special citations were: -

- Tom Falash, Superintendent of Schools, Weiser, Idaho.
- Walter Kerfoot, Principal, Weiser High School, Weiser, Idaho
- Jack Ruch, Head Teacher Educator, College of Agriculture, Laramie, Wyoming
- C. H. Farley, Former Superintendent of Schools, Pikeville, Kentucky
- Tilden Deskin, Superintendent of Schools, Pikeville, Kentucky
- Douglas Zoller, Principal, Adirondack Central School, Boonville, N. Y.
- H. P. Seamon, Retired, Principal of Schools, Boonville, New York

OUTSTANDING SERVICE AND COOPERATION AWARD

The NVATA "Outstanding Service and Cooperation Award" for 1971 was presented to the Farm Film Foundation by Toastmaster Gundlach. Accepting the award for the Foundation was Jim Gibson, member of the Board.

IDEAS UNLIMITED AWARDS

The winners of the "Ideas Unlimited Contest" were announced by Francis Murphy, NVATA Vice President, Region III. Each Regional winner received a Kodak Instamatic Camera, except that the National Winner received a radio. The NVATA Alternate Vice Presidents served as contest judges. The winners were:

Region I	Roy Faught, Lund, Nevada
Region II	Harold Walker, Hico, Texas
Region III	Donald Barber, Owatonna, Minnesota
Region IV	Grant Fettig, Grant, Michigan
Region V	Thomas Weaver, Braselton, Georgia
Region VI	Stanley Oakes, Rexford, New York

The National Winner was Donald Barber of Owatonna, Minnesota.

Respectfully submitted,
JAMES WALL
Executive Secretary

NVATA POLICIES

I. GENERAL

1. The primary purpose of the NVATA shall be for professional reasons and not for gain of individual members.
2. Interpretation of Section 2, Article III, NVATA Bylaws, entitled Membership, is inclusive of the following: Active Membership shall be defined as persons professionally qualified and certified by the State certifying agency to include secondary teachers, Junior College teachers and teachers in community colleges and university systems or similar nomenclature of programs offering less than a baccalaureate degree in Vocational Agriculture.
3. Every member has an opportunity to express his ideas and to make suggestions through his district and state organization. If his state organization believes his ideas and suggestions to be worthy of further consideration they can and should be presented at a Regional NVATA Meeting. If accepted by the Region, they can then be considered by the delegates to a National Convention and/or by the Executive Committee. Resolutions shall be presented to the NVATA Resolutions Committee no later than 6 hours after the final Regional Meeting at the National Convention and must be presented in proper form and verbage before they will be considered.
4. When reports are presented in an Executive Committee meeting, or in a general session, and accepted, it shall mean that the report is accepted for attention of the Executive Committee. Implementation of the report is the responsibility of the Executive Committee.
5. The NVATA can, through its elected officers, be prepared to and will, when the opportunity presents itself or action is needed, testify before committees of the Congress and to: provide information to Congressman and/or other officials of government; the lay public; and the membership on Bills before the Congress. This information may be factual statistics and/or philosophies and views as well as supportive or in opposition to said Bills. It shall, therefore, be the policy of the NVATA Executive Committee to act through the President and he, in cooperation with the Executive Secretary, to determine whether or not pending legislation on education or related matters will be beneficial or harmful to Vocational Education in Agriculture and to provide information to the State Associations and to any other group or individual whom they believe should be made aware of the pending legislation.

IT SHALL also be the policy of the NVATA to not support any legislation unless said Bill or Bill's have first been cleared through the National Office by those person (s) or Group (s) promoting said legislation.
6. Membership cards are to be sent through state associations' and not to individual members, except in cases of direct membership.

7. Delegates to the National Convention and Regional Meetings shall be certified on the basis of paid membership at the time of the first Regional meetings at the Annual Convention.
8. The NVATA shall sponsor a "Coffee Hour" each year for trainees attending the National FFA Convention in Kansas City, and shall also hold a reception for instructors attending the FFA Convention.
9. The NVATA shall not endorse any product or any sales promotion plan.

II. DUTIES AND RESPONSIBILITIES OF OFFICERS

1. The representative on the AVA Advisory Council shall be the Treasurer of NVATA and the alternate shall be a first year Vice President appointed by the President.
2. In general, it shall be the policy that a Vice President may visit each association in his Region once during his term of office. Normally additional visits should be made at State Association expense. In problem or special situations the Regional Vice President in consultation with the President and Executive Secretary shall determine action in regard to second visits.
3. The President may designate the Executive Secretary, a member of the Executive Committee or a past national officer to attend the Summer Regional Leadership Training conferences.
4. The President may appoint past officers or others to represent the Association as needed.
5. The immediate Past President shall serve as chairman of the NVATA Resolutions Committee.

III. FISCAL

1. Annual year of the Association shall run from July 1 to the following June 30.
2. The Treasurer and Executive Secretary shall be adequately bonded at all times.
3. For retirement purposed six percent of the Executive Secretary's salary shall be deducted from each pay check, and a like amount shall be contributed by the NVATA. On or about January first and July first of each year the accumulated retirement monies shall be invested in the name of the current executive secretary in a manner agreeable to him and the Executive Committee of the NVATA.
4. The Executive Secretary is to be notified at the annual meeting previous to the expiration of his 3 year term of office if his services are no longer needed starting the next July 1. The Executive Secretary, in turn, shall give the committee at least 90 days notice for termination of his contract.

5. Officer expenses:
 - a. Actual expenses are to be paid upon receipt of an itemized statement. (meals ordinarily allowable, \$7.50 daily maximum.)
 - i. Expenses for other than their regularly called meetings are to be paid upon prior approval of the President.
 - c. Clerical help, postage, clerical supplies, etc. are authorized for officers and are to be paid upon approval by the President. Claims for such expenses are to be made on or about June 1 and December 1 of each year.
 - d. Travel pay may be allowed (for other than state association business) within a state upon prior approval by the President.
8. Travel: If travel by auto is over 1,000 miles (round trip), the rate to be paid shall be plane fare. If travel by auto is less than 1,000 miles (round trip), the rate is to be 10¢ per mile. If other transportation is used, actual expenses incurred will be paid. When an auto is used for travel of over 1,000 miles (round trip), one additional day can be allowed for room and meals. Reimbursement for parking shall be either actual cost or double the mileage to and from the local depot or airport, whichever is less.
7. The NVATA will advance transportation costs to members of the Executive Committee upon approval of the President.
8. The President, Executive Secretary, NVATA member of the Professional Personnel Recruitment Committee and two Vice Presidents may attend the National FFA Convention at NVATA expense. The Vice Presidents from Regions II and IV shall attend in 1969, the Vice Presidents from Regions I and VI shall attend in 1970 and the Vice Presidents from Regions III and V in 1971 and this rotation shall be continued in succeeding years.
9. Alternate Vice Presidents will be allowed \$100 each to attend the National Convention and \$50 each to attend the Regional Leadership Conference.
10. Use of funds by special committees:
 - a. Special committees working for the NVATA are encouraged to use their own funds in so far as possible to complete their assignments.
 - b. NVATA funds used for special assignments shall have prior approval of the executive committee and shall be included in the budget.
 - c. Any funds needed by special committees, other than their own funds, shall be secured by means approved by the executive committee.

IV. AWARDS AND RECOGNITION

1. Retiring Presidents and Vice Presidents serving for 3 years with NVATA are to be made Life Members of the organization.
2. Officer appreciation certificates and plaques are to be awarded at the end of a term of office.

3. An NVATA officer key is to be awarded at the end of one year of service in the Association. The key is to be engraved with the words "National Officer - (year)".
4. Recommended use of NVATA insignia:
 - a. Membership pin or button - for all members.
 - b. Service charm or pin - 5, 10 or 15 years of service.
 - c. Service key or pin- 20, 25, 30 or 35 years.
 - d. Retirement Key - at retirement.
5. Persons who contribute to the furtherance of Vocational Education in Agriculture on the National level may be considered for citation at the mid-year meeting of the Executive Committee.
6. Persons who have made outstanding contributions to the NVATA and the program of Vocational Education in Agriculture may be considered for Honorary Membership at the mid-year meeting of the Executive Committee.
7. State Associations shall be considered to have 100% membership only when dues have been received in the National office for every teacher of Vocational Agriculture whose name appears on the state supervisors list.
8. An engraved watch or equivalent gift, other than money, is to be provided the retiring presidents of the organization.

A. TRANSMITTAL LETTER

TO: The Nebraska State Board of Vocational Education

FROM: The Nebraska Advisory Council for Vocational Education

SUBJECT: The 1971 State Evaluation of Vocational Education

Transmitted herewith is the annual evaluation report of the Nebraska Advisory Council for Vocational Education. This report is in compliance with Section 102.23 of Rules and Regulations of P.L. 90-576. This is the second evaluation report to be completed by the Nebraska Council.

The Council respectfully directs the State Board's attention to the statutory requirement that this report is to be submitted to the U.S. Office of Education Commissioner and National Advisory Council by October 1. This report may be accompanied by such comments from the State Board as deemed appropriate. Such comments may be directed to issues that support or differ with evaluation results of the Council.

This report is submitted with the sincere belief that implementation of recommendations will result in educational benefit and enhanced employability for the people of Nebraska.

Respectfully submitted,

Virginia Viereg

Dr. C. A. Cromer, Executive Director
Nebraska State Advisory Council for
Vocational Education
Box 33, Henzlik Hall
University of Nebraska
Lincoln, Nebraska 68508

Dear Dr. Cromer:

The oral report on the evaluation of vocational education was presented to the State Board for Vocational Education on Friday, September 3, 1971. Ten days prior to that time all State Board members received copies for study and review.

The State Board is appreciative of the many hours of study and research which have gone into the 1971 Council report and is in agreement with the findings and recommendations. The Council's evaluation has been derived from a conscientious evaluation of vocational education in the State and is a constructive and realistic assessment. The State Board urges all organizations and agencies to which recommendations have been addressed in the report to comply to the best of their ability.

Specifically, the Board supports the concept of career education, as developed by the U. S. Office of Education and recommended by the Council, to assure more relevance and realism to our total educational approach.

Sincerely,

Cecil E. Stanley

CECIL E. STANLEY
Commissioner of Education and
Executive Officer of the State Board
of Vocational Education

S/MN

CC: Mrs. Viereg

B. SUMMARY STATEMENT

Many different aspects of vocational education in Nebraska have been considered in this evaluation. In addition, the concept of career education was injected into recommendations which were offered. After considering the variety of influences which affect vocational education in Nebraska, the Council decided that the overall theme of the evaluation should be phrased in the language of the "now" generation—Getting It All Together.

The underlying philosophy of career education as advocated by Commissioner Marland is the merging of general and vocational education into a concept which is more responsive to the present-day educational needs. Other benefits of the merger are greater relevance and realism in terms of our modern society.

This report also incorporates the other influences that affect vocational education; such as, occupational orientation, preparation of teachers, and the image in which vocational education is viewed, to name a few. In assembling these influences into an annual evaluation report, the Council felt the theme of "Getting It All Together" to be most appropriate.

A new feature in the 1971 report is the identification of top State priority need areas. This was done to emphasize the urgency of the need to marshal the various resources toward corrective action. Another new feature is the shading which was used to make the Council's recommendations stand out from the related rationale in the report.

An evaluation of the product of vocational education was conducted this year for the first time and is included as part of the report. Personal interviews were made to industrial employers for the purpose of obtaining their evaluation of the quality and benefit of four different types of previous preparation of their employees. A specially adapted semantic scale was developed to measure the employers' reactions. The procedure holds promise for assessment of other areas of education.

This report is addressed to many groups, organizations and agencies whose support is needed for the implementation of the recommendations. The Council especially solicits the cooperation from the agencies that are concerned in the priority areas of the report and the Nebraska State Board for Vocational Education. The priorities designated and the need for increased professional personnel are key factors in realizing the full potential of the Act.

Base line documentation for recommendations of this report are the result of assessment activities which have been in process throughout the year. A special appreciation is extended to those individuals and agencies that provided data for the evaluation activities. Their cooperation was a great help to the Council and provided documentation for the recommendations.

C. EVALUATION AREAS

GOAL I: STATE GOALS AND PRIORITIES

1. A NEW EMPHASIS FOR EDUCATION

THE COUNCIL RECOMMENDS TO THE STATE BOARD FOR VOCATIONAL EDUCATION AND THE LOCAL BOARDS OF EDUCATION THAT A NEW EMPHASIS BE PLACED ON BOTH ACADEMIC AND VOCATIONAL EDUCATION IN TERMS OF THE PHILOSOPHY OF CAREER EDUCATION. SPECIFICALLY, THE COUNCIL IS SUGGESTING THAT ALL STUDENTS BE AFFORDED THE OPPORTUNITY, AT THE ELEMENTARY AND SECONDARY SCHOOL LEVELS, TO ACQUIRE AWARENESS, EXPLORATION, ORIENTATION, AND IMPLEMENTATION TOWARD ENTRY LEVEL SALARIED EMPLOYMENT. Career education is best described as an integration of vocational education into the presently academically oriented curriculum in an effort to make the total educational program more realistic as it relates to professional or occupational goals. This philosophy has been expressed by Dr. Sidney P. Marland, Jr., U.S. Commissioner of Education, in an address, *Career Education Now*. 2

I want to state my clear conviction that a properly effective career education requires a new educational unity. It requires a breaking down of the barriers that divide our educational system into parochial enclaves. Our answer is that we must blend our curricula and our students into a single strong, secondary system. Let the academic preparation be balanced with the vocational or career program. Let one student take strength from another. And, for the future hope of education, let us end the divisive, snobbish, destructive distinctions in learning that do no service to the cause of knowledge, and do no honor to the name of American enterprise.

It is terribly important to teach a youngster the skills he needs to live, whether we call them academic or vocational, whether he intends to make his living with a wrench or a slide rule, or folio editions of Shakespeare. But it is critically important to equip that youngster to live his life as a fulfilled human being. As Secretary Richardson said, "I remind you that this department of government more than anything else is concerned with humanness."

To accomplish this restructuring of educational emphasis, the Advisory Council for Vocational Education suggests that Nebraska secondary schools implement the following recommendations:

- a. **THE SCHOOLS' EFFORT IN OCCUPATIONAL ORIENTATION TO THE WORLD OF WORK SHOULD BE**

INCLUDED IN THE GRADES THROUGHOUT JUNIOR HIGH AND AT THE SENIOR HIGH LEVELS. A GREATER EFFORT IS NEEDED IN DEVELOPING THEIR FULL HUMAN RESOURCE POTENTIAL.

- b. NEBRASKA SECONDARY SCHOOLS SHOULD GIVE MUCH MORE ATTENTION TO THEIR STUDENT DROPOUT PROBLEM. A SPECIAL CONSIDERATION SHOULD BE GIVEN TO PROVIDING MORE FLEXIBLE CURRICULA WHICH ARE MORE RELEVANT TO THE POTENTIAL DROPOUT. Data have been developed which assist schools in recognizing the characteristics of a potential dropout long before the student actually leaves the school.

- c. SCHOOLS WITH OCCUPATIONAL PROGRAMS SHOULD ENCOURAGE MORE STUDENTS TO ENROLL IN THESE CLASSES. MANY OF THE CLASSES COULD CARRY A LARGER ENROLLMENT. THE REASONS STUDENTS DO NOT ENROLL IN OCCUPATIONAL PROGRAMS SHOULD BE CLOSELY MONITORED WITH CORRECTIVE ACTION TAKEN LOCALLY TO ASSURE HIGH EDUCATIONAL QUALITY OF THE PROGRAM.

- d. The fact that opportunities for vocational education have not been provided for many students is an educational injustice which needs immediate attention. THE MOST CRITICAL NEED FOR A BROAD OCCUPATIONAL OFFERING IS FOUND IN THE INNER-CITY GHETTO AND RURAL POVERTY AREAS. THE COUNCIL RECOMMENDS THAT THE OPPORTUNITY FOR VOCATIONAL EDUCATION BE EXTENDED TO ALL STUDENTS, REGARDLESS OF THEIR LOCATION IN THE STATE OR THE SCHOOL DISTRICT WHICH THEY ARE ATTENDING.

- e. THE COUNCIL BELIEVES THAT THE COMPREHENSIVE HIGH SCHOOL IS THE MOST FEASIBLE SECONDARY SCHOOL STRUCTURE FOR MEETING THE NEEDS FOR ALL YOUTH. SECONDARY SCHOOLS WHICH SERVE ONLY THE LIBERAL ARTS NEEDS OF YOUTH ARE NOT REALISTICALLY PREPARING THEIR STUDENTS FOR THE DEMANDS OF OUR PRESENT SOCIETY.

ONE OF NEBRASKA'S MOST DYNAMIC RESOURCES IS HER YOUNG PEOPLE. EACH PROSPECTIVE CITIZEN SHOULD HAVE THE OPPORTUNITY TO DEVELOP WHATEVER SKILLS HE NEEDS TO

ENTER AND BE SUCCESSFUL IN THE WORK FORCE. IT SHALL BE THE GOAL OF THIS STATE TO MAKE OCCUPATIONAL EDUCATION AVAILABLE TO EACH PERSON AS A PART OF HIS EDUCATIONAL PROCESS. THE EDUCATIONAL EXPERIENCES OF STUDENTS SHOULD BE TIED CLOSELY TO THEIR FUTURE CAREER GOALS.

2. VOCATIONAL LEADERSHIP PERSONNEL

Inadequate staff within the State Division of Vocational Education seriously limits the statewide expansion of vocational education. Local schools must have individual guidance and interpretation to grasp new concepts and implement the many special features in the Vocational Education Act in the scope needed to serve the whole state of Nebraska. Personnel limitations imposed by the Nebraska Legislature and the Governor are inconsistent in meeting the needs of the State and are woefully inadequate in terms of making maximum utilization of this valuable educational resource. Present enrollment in the following vocational education programs is far below the employment opportunities which have been identified within the State:⁴

- a. Wage-earning Home Economics
- b. Health Occupations
- c. Trade and Industrial Occupations
- d. Vocational Adult Education
- e. Off-farm Agriculture
- f. Disadvantaged and Handicapped

Since the passage of the 1968 Amendments¹¹ there have been many more categorical areas, increased program scope, and administrative responsibilities without a proportional staff increase.

THE COUNCIL VIEWS THE RESTRICTED ADMINISTRATIVE STAFF OF THE VOCATIONAL DIVISION AS A SERIOUS DETERRENT TO FUTURE GROWTH AND EXPANSION OF VOCATIONAL EDUCATION STATEWIDE. THIS PERSONNEL RESTRICTION MUST BE REMOVED IN ORDER FOR NEBRASKA TO REALIZE THE FULL POTENTIAL OF THE ACT.

3. NEW PRIORITIES

A good showing has been achieved in the new features of the Vocational Education Amendments of 1968. The evaluation of the first full year of operation shows commendable activity in the following categories under the Act:³

- a. Cooperative programs (Part G) including mediated instructional aids
- b. Enrollment in postsecondary programs
- c. Exemplary programs (Part D)
- d. Vocational research (Part C)
- e. Work Study
- f. State plan for Educational Professions Development
- g. Disadvantaged and handicapped (Part B)

The statewide progress in serving the disadvantaged has been notable. The needs of many urban and rural disadvantaged have been served, but many more have not been reached. The areas of high priority where the greatest need is presently identified is the ghetto community of our metropolitan cities and the state institutions that are involved with rehabilitation type educational programs. TO BE EFFECTIVE IN REACHING THIS EDUCATIONAL SEGMENT WILL REQUIRE MORE LOCAL EFFORT AND INCREASED STATE LEADERSHIP BECAUSE OF THE MAGNITUDE OF THE TASK.

The growth and expansion of other new aspects under the Vocational Education Act of 1968 are hampered by the State staff personnel restriction mentioned previously. In many cases, new program administration has become an added assignment to an already overloaded staff member. THE COUNCIL RECOMMENDS TO THE STATE BOARD OF VOCATIONAL EDUCATION THAT ADDITIONAL FULL TIME VOCATIONAL STAFF MEMBERS BE ADDED TO INCLUDE ADMINISTRATIVE PERSONNEL TO ASSIST WITH STATE AND LOCAL PLANNING, EDUCATIONAL CURRICULUM DEVELOPMENT AND THE BUDGETING PROCESS. OTHER NEEDED STAFF INCLUDE: A DIRECTOR FOR HEALTH OCCUPATIONS, A CONSULTANT FOR ADULT BASIC EDUCATION, A CONSULTANT FOR BUSINESS AND OFFICE OCCUPATIONS, A CONSULTANT FOR HOME ECONOMICS RELATED OCCUPATIONS, AND SUPPORTING CLERICAL ASSISTANCE.

4. VOCATIONAL PLANNING

There still appear to be some local communities conducting the same type of vocational program(s) with the same emphasis that prevailed before the Vocational Education Act of 1963. Many local vocational programs could benefit from the new aspects of the 1963 Act; such as: off-farm agriculture, wage-earning home economics, cooperative programs and other aspects of the new vocational education acts as determined by the local need.

SECONDARY SCHOOLS SHOULD PLACE MORE EMPHASIS ON PREPARING STUDENTS TO ENTER POSTSECONDARY VOCATIONAL

TECHNICAL SCHOOLS AND UPON PROVIDING THE NECESSARY LEARNING EXPERIENCES SO THEY CAN SUCCESSFULLY COMPLETE THAT INSTRUCTION BY:

- a. PROVIDING MORE EXPLORATORY WORK IN THE PREVOCATIONAL AND VOCATIONAL COURSES.
- b. COMBINING VOCATIONAL AND GENERAL EDUCATION SO THAT EDUCATION BECOMES MORE MEANINGFUL TO THE POTENTIAL DROPOUT AND TO THE DISADVANTAGED LEARNER AS WELL AS TO THE MOTIVATED STUDENT.

AS MORE WOMEN ARE ENTERING THE LABOR MARKET, SECONDARY AND POSTSECONDARY SCHOOLS SHOULD REFLECT BROADER CURRICULA TO MEET THEIR NEEDS IN ALL MAJOR SECTIONS OF VOCATIONAL EDUCATION.

VOCATIONAL PROGRAM PLANNING SHOULD TAKE INTO CONSIDERATION THE NEW AND EMERGING OCCUPATIONAL AREAS. THE U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE VOCATIONAL EDUCATION AND OCCUPATIONS PUBLICATION⁹ SHOULD BECOME THE BASIS FOR LOCAL VOCATIONAL CURRICULAR PLANNING. VOCATIONAL COURSE CONTENT SHOULD PROVIDE FOR JOB CLUSTERS OR GROUPS OF JOBS WITHIN A BROAD OCCUPATIONAL INSTRUCTIONAL PROGRAM.

5. LOCAL VOCATIONAL PLANS

The Council is concerned with the quality of local planning that is reflected in many of the local applications for vocational education.⁶ The guide for preparing local plans has been revised and simplified to facilitate the local planning effort. IN REVIEWING THE LOCAL PLANS, IT IS DIFFICULT IN MANY CASES TO FIND EVIDENCE OF INVOLVEMENT AND CONSULTATION WITH LOCAL VOCATIONAL EDUCATION ADVISORY COUNCILS, AND OTHER GROUPS WHICH HAVE INPUT TO EDUCATIONAL AGENCIES FOR MEETING THE VOCATIONAL NEEDS OF INDIVIDUALS AND THE COMMUNITY. IN SOME CASES IT MAY NOT BE POSSIBLE TO JUSTIFY THE PRESENT VOCATIONAL OFFERING FROM THE NEEDS AND OPPORTUNITIES WHICH HAVE BEEN SET FORTH IN THE LOCAL APPLICATION. The diversity of input and quality of data make it impossible to project a state need by summarizing the local plans which have been submitted.

A special commendation is extended to the sixty-plus local educational agencies in the State which scheduled special meetings and solicited assistance from the State Vocational Division staff for the purpose of discussing their local application for vocational education and improving the quality of planning effort.

6. FOLLOWUP

THE COUNCIL RECOMMENDS THE STATE BOARD OF VOCATIONAL EDUCATION SHOULD INITIATE A SYSTEM OF STUDENT FOLLOWUP ON A DEMONSTRATIVE BASIS WITH THE VIEW THAT SUCH A SYSTEM COULD BE IMPLEMENTED STATEWIDE BY SEPTEMBER, 1973. IT IS FURTHER RECOMMENDED THAT THE SYSTEM BE BASED ON SOCIAL SECURITY NUMBERS AS A MEANS OF STUDENT IDENTIFICATION. An analysis of the local plans for vocational education revealed that local schools are unaware, for the most part, of their effectiveness in serving students. **LOCAL SCHOOLS SHOULD BE INVOLVED IN THE STATE SYSTEM OF STUDENT FOLLOWUP AS THE FEEDBACK FROM FORMER STUDENTS IS VITAL IN MEETING STUDENT NEEDS.**

7. ADULT EDUCATION

It was learned from the survey of administrators of vocational programs¹⁰ that adult education was a lower educational priority for the secondary schools. Even though adult education is served by the community colleges in some localities, the local educational system is the only medium through which such a program may be made available to most local communities. **THE COUNCIL RECOMMENDS THAT THE PUBLIC SECONDARY SCHOOLS BE RESPONSIVE TO THE TOTAL EDUCATIONAL NEEDS OF THE COMMUNITY, INCLUDING EDUCATION FOR THE ADULTS.**

8. VOCATIONAL ORIENTATION OF ADMINISTRATORS

It was also learned from the administrator survey that fewer than half of all superintendents and principals of secondary schools in the State have had vocational courses or formal orientation to vocational education in their professional preparation. **THE COUNCIL SUGGESTS THAT ADMINISTRATORS WITH VOCATIONAL PROGRAM OFFERINGS BECOME MORE PROFESSIONALLY ORIENTED WITH VOCATIONAL PROGRAMS AND PHILOSOPHIES THROUGH INSERVICE COURSES EITHER ON OR OFF CAMPUS.**

9. COMMUNICATION BETWEEN VOCATIONAL TEACHERS AND ADMINISTRATORS

Reactions from administrators indicated that communication with the vocational teachers should be improved to facilitate the program operation. Of particular importance are the special provisions that pertain specifically to vocational programs; such as, extended contracts, local advisory councils, vocational image, and programs for disadvantaged. **BETTER COMMUNICATIONS ARE SUGGESTED AS A MEANS TO IMPROVING EDUCATIONAL QUALITY. AT THE SAME TIME, VOCATIONAL INSTRUCTORS SHOULD BE AWARE OF THEIR RESPONSIBILITY TO THE ENTIRE LOCAL SCHOOL SYSTEM.** Some vocational teachers have confined their activities to their program and have become isolated from the rest of the school system.

GOAL II: SERVING PEOPLE AND THEIR NEEDS

GUIDANCE
AND
COUNSELING

The information service, one of the basic services in the school guidance program, focuses on educational and occupational information and planning. Realistically, the educational needs of students cannot be adequately met unless the student has set challenging life goals, including goals related to the "world of work." Making wise decisions related to occupational choices, at best, is not an easy task. **THUS, IT BECOMES IMPERATIVE THAT SCHOOLS ORGANIZE GUIDANCE PROGRAMS WHICH ASSIST STUDENTS IN UNDERSTANDING THE WORLD OF WORK, EXPLORING THEIR VOCATIONAL INTEREST, AND PLANNING THAT TYPE OF CONTINUING EDUCATIONAL PROGRAM WHICH WILL BEST ENABLE THEM TO REACH THEIR GOALS.**

The K-14 orientation to the world of work should include the total educational system as recommended by U.S.O.E. Commissioner Marland² in the Career Education Models which suggests as follows:

- K-6 An awareness program of the world of work
- 7-9 Exploratory and orientation experiences in vocational education
- 10-12 Further exploration and entry level training
- 13-14 In-depth technological training

a. **IN ALL INSTRUCTIONAL AREAS, FROM THE GRADES THROUGH JUNIOR AND SENIOR HIGH SCHOOLS, ORIENTATION TO THE WORLD OF WORK NEEDS TO BE GREATLY INCREASED.** Exemplary projects funded for this purpose have shown encouraging promise. **A GREATER COMBINED EFFORT ON THE PART OF ALL EDUCATORS IS NEEDED TO ASSIST STUDENTS IN MAKING WISE OCCUPATIONAL DECISIONS, CONTINUING THEIR EDUCATION, AND DEVELOPING THEIR FULL HUMAN RESOURCE POTENTIAL.**

b. The importance of occupational guidance to the total school system has been reflected in the frequency with which Exemplary Programs funded through the State Board have focused upon this problem. Exemplary projects are now underway which are developing new approaches to occupational orientation through:

1. Integrating the elementary curriculum
2. Use of a mobile unit
3. Individualized single-loop film concepts
4. Better serving the dropout

Schools seeking solutions to problems may find approaches and materials already developed within the state which are applicable to their situations.

c. **THE COUNCIL SUGGESTS THAT ALL POSSIBLE METHODS OF INDOCTRINATION BE UTILIZED TO PREPARE COUNSELORS AND TEACHERS TO ORIENT STUDENTS TO THE WORLD OF WORK MORE EFFECTIVELY, USING INNOVATIVE APPROACHES, SUCH AS, ETV AND INSERVICE SESSIONS. WORKSHOPS FOR GUIDANCE COUNSELORS SHOULD BE PROVIDED TO INCREASE AWARENESS OF MEANS AVAILABLE, PARTICULARLY ON THE SECONDARY LEVEL, FOR INDIVIDUAL AND GROUP WORK DISCOVERY PROJECTS, PROPER USE OF APPROPRIATE TESTING SERVICES, AND DEVICES.**

d. In summarizing the testing activities which have been conducted throughout the state⁶ it was found that schools are conducting four times as many intelligence tests as vocational aptitude and interest tests. The analysis shows

that some schools which were offering vocational classes were doing no aptitude or interest testing. It would certainly seem that determination of student interest and aptitudes would be a prerequisite to meeting their educational and occupational needs.

e. **GREATER EFFORT SHOULD BE MADE (1) TO AROUSE THE INTEREST OF BUSINESS, INDUSTRY, AND TRADE PERSONNEL, (2) TO UTILIZE THEIR ADVICE, AND (3) TO MAKE ADMINISTRATORS, TEACHERS, AND CITIZENS AWARE OF THE NEED FOR IMPROVED GUIDANCE AND COUNSELING PROGRAMS IN "CAREER EDUCATION."**

f. **COUNSELORS' CONTRACTS SHOULD BE EXTENDED BEYOND THE BASIC NINE MONTHS TO (1) HELP STUDENTS SECURE SUMMER EMPLOYMENT, (2) DETERMINE LOCAL OCCUPATIONAL OPPORTUNITIES AND COMMUNITY NEEDS, AND (3) ASSIST IN THE PREPARATION FOR THE LOCAL PLAN FOR VOCATIONAL EDUCATION.** This concept could be joined with Federal and State programs which now provide incentive for other vocational education programs.

g. **EDUCATIONAL SERVICE UNITS ARE ENCOURAGED TO BECOME INVOLVED IN PROVIDING CAREER ORIENTATION FOR SCHOOLS IN THEIR SERVICE AREA.** Many smaller schools are without the services of a full time counselor, and providing this service on an area basis may be the best approach to the problem.

h. Another important source of occupational information is the state system of technical community colleges. Students, secondary schools, and counselors may now seek assistance from these agencies to supplement career orientation resources.

**OCCUPATIONAL
TEACHER
PREPARATION**

It is self-evident that the preparation of occupationally competent vocational teachers at the secondary and postsecondary levels, represents a critical limiting factor to the viable growth and expansion of occupational education for today's youth in Nebraska.

An analysis of the State's accomplishment in occupational teacher preparation has prompted the following recommendations:

- a. The organization of the Council for Occupational Teacher Education in October of 1969 was a commendable accomplishment.
- b. A greater coordination of combined effort is necessary to meet the needs of occupational teacher preparation in the State. Teacher education agencies now function as separate entities when, in reality, there exist many commonalities among the agencies. **THE COUNCIL RECOMMENDS THE ESTABLISHMENT OF A DEPARTMENT OF OCCUPATIONAL TEACHER EDUCATION WITHIN THE PARENT INSTITUTIONS TO PROVIDE THE NEEDED COORDINATION YET ALLOW FOR THE INDIVIDUALITY OF THE AGENCIES.**
- c. The mortality dropout rate of those prepared and certified to teach, compared with the number of individuals who actually take vocational teaching jobs, is a situation which contributes to the problem of teacher shortage. (Appendix B) **EACH OCCUPATIONAL TEACHER EDUCATION AGENCY MUST ASSUME A GREATER ACCOUNTABILITY FOR PLACEMENT AND FOLLOWUP OF THOSE QUALIFIED TO TEACH IN VOCATIONAL PROGRAMS.**
- d. **RECRUITMENT OF ENOUGH INDIVIDUALS TO FILL THE STATE NEEDS SHOULD BE A RESPONSIBILITY OF THE TEACHER EDUCATION AGENCY.** The annual teacher needs should be a well-calculated fact. Recruitment of the number needed should be commensurate with the need identified.
- e. **THE RESEARCH RESPONSIBILITY FOR VARIOUS INDIVIDUAL OCCUPATIONAL AREAS SHOULD BE CENTERED WITHIN THE TEACHER PREPARATION AGENCY AND COORDINATED THROUGH THE NEBRASKA RESEARCH COORDINATING UNIT FOR VOCATIONAL EDUCATION.** The teacher preparation agencies should be alert to the utilization of the supportive funds as appropriated through Part C, 90-576, and Title II, Part F, 90-576. E.P.D.A.
- f. **TEACHER EDUCATION SHOULD ASSUME A RESPONSIBILITY FOR THE PREPARATION OF TEACHERS FOR THE DISADVANTAGED AND HANDICAPPED AS AN INTEGRAL PART OF THEIR RESPONSIBILITY.** Example: Teachers

certified to teach vocational home economics should be prepared to teach the disadvantaged in that instructional area.

- g. **THE NEED FOR TEACHER PREPARATION FOR HEALTH OCCUPATIONS IS STILL UNMET IN NEBRASKA. SUCH A PROGRAM SHOULD BE ESTABLISHED WITHIN THE VOCATIONAL TEACHER EDUCATION DEPARTMENT OF A FOUR-YEAR EDUCATIONAL INSTITUTION WITHIN THE STATE.** The major emphasis in the beginning should be on inservice education and should be oriented directly to serve secondary, postsecondary, and adult educational needs in the Health Occupations areas.

3. COORDINATION AND ARTICULATION AMONG SECONDARY, POSTSECONDARY, AND ADULT EDUCATION AGENCIES

The Council found need for more articulation between secondary programs and postsecondary and adult education agencies. The format for coordination of these agencies has been established and functioning in some instances. Certainly, with the passage of L.B. 759¹ there should be improved coordination of the levels of vocational education within the state.

4. STATE DATA FOR DETERMINING JOB OPPORTUNITIES AND MANPOWER NEEDS

The Nebraska Model for Determining Occupational Opportunities⁴ in terms of employer needs is a well-conceived procedure in Nebraska which fulfills the stipulations in P.L. 90-576. Dr. Thaine McCormick, Region VII Director for Adult, Vocational, and Technical Education, has commended Nebraska's data as meeting the needs as well as any state in his region.

CONTINUED EFFORT SHOULD BE GIVEN TO PERFECTING AND UPDATING THESE DATA. THE MASTER INDEX OF FIRMS SHOULD BE UPDATED AND THE UPDATING CONTINUED ON AN ANNUAL BASIS UNTIL A DATA BASE IS WELL ESTABLISHED AND STABILIZED FOR EACH OF THE OCCUPATIONAL CLUSTERS UPON WHICH PROJECTIONS ARE BEING ATTEMPTED.

The cooperation which has been developed between vocational education and the State Department of Labor has proven wholesome and beneficial to both agencies in fulfilling their responsibilities.

5. PLACEMENT AND FOLLOWUP OF STUDENTS

The Vocational Amendments of 1968¹¹ have increased the emphasis upon placement and followup of students. In general, the technical colleges have been doing the most conscientious, systematic job of student placement and followup of former students. **THE COUNCIL RECOMMENDS THAT MORE SECONDARY SCHOOLS BECOME INVOLVED IN THE PLACEMENT AND FOLLOWUP OF STUDENTS AS A PART OF THEIR ON-GOING PROGRAM OF SERVING STUDENTS.**

6. OCCUPATIONAL AWARENESS AND ORIENTATION

Within the state a good beginning has been made toward integrating world of work illustrations and examples into the elementary offerings. The U.S. Office of Education has given leadership to this issue through the implementation of the career models. **THE COUNCIL ESPECIALLY RECOMMENDS THAT EACH SCHOOL SYSTEM IN THE STATE MAKE A THOROUGH STUDY OF THE CAREER EDUCATION MODELS WITH CONSIDERATION TO IMPLEMENTATION.** Guides for integrating the elementary curriculum have been developed and are in the testing stage. The implementation stage should be already for consideration. Assistance can be obtained from the Division of Vocational Education, teacher education agencies, or the RCU.

7. INDICATION THAT VOCATIONAL PROGRAMS MEET THE NEEDS

During the past year the Council conducted a study to quantify the quality and effectiveness of vocational educational programs in the state. A reactionnaire was designed to measure the capabilities of vocational trainees as compared with non-vocational students as viewed by personnel directors and managers of industrial firms in the state. (Appendix C). Four groups of workers were categorized according to their educational preparation; i.e.:

Group I - Less than high school graduate with no vocational education.

Group II: High school graduate without vocational education

Group III: High school graduate with vocational education

Group IV: Students with post secondary vocational education

The personnel directors and managers were asked to rate the four groups on a seven point semantic scale using bipolar adjectives for eleven competency areas.

The firms interviewed were randomly taken from a list of manufacturers compiled by the State Department of Economic Development.⁵ A total of 103 firms was interviewed personally. Vocational trainees were accorded substantial advantage over those without vocational training in all eleven areas with the greatest advantage in mathematical skills, reading and interpretive skills, communication skills, theoretical job knowledge and clerical skills. Lesser advantages were shown in work safety attitude, supervisory skills, personal relations and attitude toward work. In all eleven categories the high school dropout rated well below the other groups. The study confirmed the value of vocational training programs for preparing students for industrial type jobs.

THE FACT THAT 42.5 PERCENT OF THE RESPONDENTS COULD NOT DISTINGUISH A DIFFERENCE AMONG THE GROUPS BEING EVALUATED INDICATES THAT EMPLOYER AND STUDENT NEEDS COULD BE BETTER SERVED. THE FACT THAT NEGATIVE VALUES APPEARED IN GROUPS III AND IV IS EVIDENCE THAT SOME VOCATIONAL STUDENTS STILL LACKED CHARACTERISTICS WHICH WOULD MAKE THEM OF MAXIMUM VALUE TO THEIR EMPLOYER.

8. SERVING THE DISADVANTAGED

The accomplishments of the State in serving the disadvantaged have been encouraging when considering the progress to date. (Appendix A). The Vocational Division leadership has been fully dedicated to expanding this area of education, and substantial growth has been recorded. The projects funded by the Exemplary Program funds have been directly oriented to serving a segment of the disadvantaged. However, the fact remains that only a small segment of the total state need has been met to date, and the need to expand the total state effort in serving the disadvantaged is clearly indicated. **LOCAL SCHOOL AGENCIES HAVE NEED TO FURTHER EXPAND PROGRAMS TO SERVE THOSE WHO ARE NOT BENEFITTING FROM THE REGULAR INSTRUCTION AND TO RESTRUCTURE THE EDUCATIONAL OFFERING TO BECOME MORE RELEVANT AND MEANINGFUL TO THESE STUDENTS.**

The availability of teachers with specific preparation to work more effectively with disadvantaged students also has been a deterrent to expansion in this area. This need has been

recognized by the Vocational Division. A summer inservice training work shop has been conducted the past two years to assist teachers to meet this instructional need; this should be a great help in providing specially prepared teachers for this instructional area.

IN ORDER TO FURTHER IMPLEMENT PROGRAMS FOR THE DISADVANTAGED, THE COUNCIL RECOMMENDS THAT A SERIES OF NOT FEWER THAN FOUR MEETINGS BE SCHEDULED DURING THE EARLY FALL IN THE MAJOR POPULATION CENTERS OF THE STATE. THESE MEETINGS ARE TO BE FOR THE PURPOSE OF ASSISTING EDUCATORS IN DEVELOPING PROGRAMS TO BETTER SERVE THE DISADVANTAGED.

9. INVOLVING OUTSIDE AGENCIES IN EDUCATION

EDUCATIONAL AGENCIES AND THE APPRENTICESHIP SYSTEM SHOULD DEVELOP CLOSER TIES IN ASSESSING THE STATEWIDE OCCUPATIONAL TRAINING NEEDS. LOCAL EDUCATIONAL AGENCIES SHOULD ALSO SOLICIT INPUT FROM EMPLOYER ASSOCIATIONS, LOCAL LABOR UNIONS, AND THE COOPERATIVE AREA MANPOWER PLANNING SYSTEM (CAMPS) IN STRUCTURING AND REDESIGNING OCCUPATIONAL TRAINING PROGRAMS AT THE LOCAL LEVELS. IN PARTICULAR, SUCH THINGS AS CRAFTSMANSHIP, DIGNITY OF WORK, ENTHUSIASM FOR LEARNING, AND PERSONAL GROWTH CAN BE MADE MORE RELEVANT AND MEANINGFUL. BUSINESS AND INDUSTRY CAN EXERT A GREAT IMPACT UPON YOUNG PEOPLE IN MAKING THEM AWARE OF THE POTENTIAL EARNING POWER IN THE VARIOUS VOCATIONAL CAREERS. THE INFLUENCE OF THESE AGENCIES CAN MAKE AN IMPORTANT CONTRIBUTION TO THE VOCATIONAL YOUTH CLUBS AND THE LEARNING ACTIVITIES OF THE INSTRUCTIONAL PROGRAM.

GOAL III: EXTENT TO WHICH COUNCIL RECOMMENDATIONS HAVE RECEIVED DUE CONSIDERATION

I. TO WHOM RECOMMENDATIONS WERE MADE

Many specific groups and individuals were addressed in the 1970 evaluation.³ Those who were designated in the report included the State Board of Vocational Education, the Division of Vocational Education, local school boards,

secondary and postsecondary administrators, vocational teachers, counselors, vocational teacher education agencies, educational service units, local Advisory Councils for Vocational Education and the Nebraska Legislature. It was the purpose of the Council to address all individuals and agencies that were in a position to exert an influence upon vocational education in the state.

2. ACTIONS TAKEN AS A RESULT OF THE PREVIOUS EVALUATION

Part III of the 1971-72 State Plan for Vocational Education⁷ refers to recommendations of the Advisory Council in six different places. Recommendations made by the Council have been valuable in establishing statewide priority areas for marshalling the state's resources for vocational education.

The Advisory Council has generated an awareness for priority needs by identifying the needs and formulating recommendations in the evaluation. This is the reason why overall priorities have been designated for the 1971 report.

Recommendations in which greater accomplishment was achieved are:

- a. State master plan for postsecondary vocational technical education was listed as Goal IV on the 1970 Evaluation Report.³ A compromise plan was enacted in the 1971 Legislature.¹
- b. A significant accomplishment was made in the inservice preparation of teachers for the disadvantaged and handicapped through summer work shops which were specifically designed for that purpose. Other summer inservice activities, particularly in the Adult Areas, were helpful in program implementation.
- c. Overall growth expansion of vocational education statewide showed a significant accomplishment in spite of restrictions in professional staff, imposed by the Governor and the Legislature.
- d. The 1970 Evaluation Report³ recommended a Statewide Master Plan for Guidance and Counseling. During the last few months of fiscal 1971, a series of meetings was scheduled for the purpose of developing a State Guidance Master Plan. A plan is now in existence and is undergoing refinement. Other state resources were focused upon strengthening of occupational counseling. The problem was pursued by the Division of Vocational Education throughout the year.

The Exemplary Projects funded in the state were focused upon occupational orientation or strongly related areas. Vocational research projects funded were also directed toward the problem in varying degrees.

- e. The staff of the Division of Vocational Education, through the special direction of the Assistant Commissioner, accepted Council recommendations as priorities during the year's activities. The leadership and manpower resources of the Vocational Division were specifically directed to establishment and implementation of new aspects of the Act plus growth and expansion of the ongoing program. This also included interpreting specific Council recommendations as applicable to local schools.
- f. The supply of well-trained vocational teachers was identified as a high priority in the previous report. Even though no appreciable increase in the supply of teachers was noted, there were several accomplishments during the year to strengthen this segment. Research proposals were funded to Industrial, Distributive, and Business and Office Teacher Education Departments. In addition, the State Plan for Educational Professions Development has been prepared and approved, supplementing all areas of Occupational Teacher Education.

The State TTT Committee Title IV has included the need for occupational teachers in their state plan as documented from the Council.

3. FACTORS INFLUENCING SUCCESS OR FAILURE OF RECOMMENDATIONS

The involvement and dissemination activities of the Council and its staff were helpful in achieving a maximum impact from the Evaluation Report.

- a. A series of meetings was held with the groups and agencies directly addressed in the report; such as, the Division of Vocational Education, teacher education agencies, educational service units, and the postsecondary technical colleges.
- b. Two special news conferences were held during the year with specially prepared news releases which amplified recommendations. This activity was focused upon guidance counselors and local administrators of vocational education.

- c. The Council established a lobbyist for the Nebraska Legislature. This is the first official legislative voice that vocational education has had. The lobbyist was coordinated with the State Board, the Nebraska Association of Technical Colleges (NATCO), the Nebraska Council on Occupational Teacher Education, and the State School Boards Association in supporting legislation which affected vocational education in the state.
- d. Additional follow through of Council recommendations has been assured by Council representation on other various committees. The Council has had direct input into the following agencies or committees which have some influence on implementations of Council evaluative recommendations: Nebraska Council for Training of Teachers of Teachers (TTT), Higher Education Facilities Commission, Education Professions (EPD), and development of the State Plan.
- e. Without question, implementation of Council recommendations to a great extent is due to the efficient communication between the Council and the staff of the Division of Vocational Education. The relationship has evolved into a greater statewide concern and desire for vocational education.
- f. The Nebraska Council was represented at all of the various state, regional, and national conferences which were conducted for Council orientation and indoctrination. Another State Council was visited and four members of the Nebraska Council participated in the Regional Fact Finding Conference called by the Secretary of Health, Education and Welfare.

GOAL IV: IMPROVING THE IMAGE OF VOCATIONAL EDUCATION

1. HOW VOCATIONAL EDUCATION IS VIEWED

A priority statewide concern should be to improve the image and extend education to more students. The concept must be presented that vocational education is not designed for someone else's children. Vocational education is not something which can be obtained only at a specialized school nor is vocational education a terminal experience since education is a life-long process.

VOCATIONAL EDUCATION SHOULD BE VIEWED AS AN INTEGRAL PART OF THE MODERN COMPREHENSIVE HIGH SCHOOL, DESIGNED TO MEET THE NEEDS OF YOUTH IN A TECHNICAL AND CHANGING SOCIETY. STUDENTS SHOULD HAVE THE PRIVILEGE OF MOVING INTO AND OUT OF OCCUPATIONAL PROGRAMS AND OF SELECTING MIXTURES OF VOCATIONAL AND ACADEMIC COURSES.

SCHOOLS HAVE THE RESPONSIBILITY TO RESEARCH THE DEMOGRAPHIC MIGRATION PATTERNS OF YOUTH AND MEET THE OCCUPATIONAL NEEDS OF THOSE THAT STAY IN THE COMMUNITY AND THOSE THAT MIGRATE TO URBAN CENTERS FOR EMPLOYMENT. The students that wish further intensity and depth of instruction after high school should have the opportunity without restriction to attend public post-high school programs to prepare for employment at their highest potential.

The attitude that the only good education is the academic, college prep education must change. Opportunities for future employment are increasing for the vocationally and technically trained and decreasing for the unskilled. The Nebraska Advisory Council for Vocational Education is calling for an increase in educational emphasis. THE FINANCIAL SUPPORT FOR THE EDUCATION OF THE DECIDED MAJORITY SHOULD BE PROPORTIONAL TO THAT GIVEN TO THE 50 PERCENT THAT PURSUE THE BACCALAUREATE DEGREE AND THE 20 PERCENT THAT EVENTUALLY REACH THAT EDUCATIONAL LEVEL.

It has been the inherent privilege of the youth in America to be born into a society which believed that all should have an opportunity for an education, an education which would provide them with tools of understanding so that they might make the greatest possible individual growth. The tools of understanding are all-encompassing; and the occupational decision reached by the individual, regardless of the topic, is based on the quality of his tools.

The goals of all educational institutions provide statements relative to "economic efficiency" and "vocational interests." The problem becomes one of putting the philosophy into practice. Those persons who have had the opportunity to work with a young person who is making decisions relative to his vocational future know this youth cannot choose what he does not know, and many of the educational opportunities and the resulting vocational choices are not known to us. Wise decision-making requires accurate information.

Information alone is not enough. Knowledge and

acceptance of one's own abilities, aptitudes, interests, values, feelings, fears, likes, and dislikes are also essential.

It then becomes obvious that knowledge of vocational education experiences and vocational choice can be effectively applied only when the individual knows something about himself. It is equally obvious that knowledge of oneself can be effectively applied to the choice of an educational experience or vocational choice only when one knows something about the area. Either without the other is incomplete.

Thus, it can be concluded that if the maximum potential of our youth is to be reached, opportunities must be provided for them to receive factual information regarding all types of educational opportunities as they relate to the world of work.

2. EDUCATIONAL CAREER DEVELOPMENT

THE CONCEPT OF EDUCATIONAL CAREER DEVELOPMENT SUGGESTS THAT VOCATIONAL EDUCATION MUST BECOME A PART OF THE EDUCATIONAL EXPERIENCE OF ALL PEOPLE IN NEBRASKA. ABOUT 35 PERCENT (APPENDIX A) OF THE SECONDARY SCHOOL POPULATION IS BEING SERVED BY SPECIFIC OCCUPATIONAL SKILLS TRAINING IN TERMS OF INDIVIDUAL NEEDS. ALL STUDENTS, WHETHER IN GENERAL EDUCATION, VOCATIONAL, OR IN COLLEGE PREP CURRICULA, NEED SALABLE JOB SKILLS.

Vocational education can provide the framework for the career education system that will:

- a. Introduce the elementary school child to the world of careers and the dignity of work
- b. Provide exploration, guidance and counseling for career choices throughout elementary and secondary education.
- c. Provide specific skills training, job clusters skill, or pre-technical education at the secondary level
- d. Provide more technical education at the secondary and postsecondary levels
- e. Provide upgrading and retraining opportunities throughout adulthood

3. VOCATIONAL EDUCATION FOR DISADVANTAGED STUDENTS

If vocational education is to serve as a means for expanding opportunities for the disadvantaged

members of our society, the image must be maintained at the highest possible level. Image cannot be improved by setting restrictive limitations for entry into training as this would only exclude those with the greatest need. Nor can image be enhanced by administratively grouping the disadvantaged students into a proverbial "dumping ground."

VOCATIONAL IMAGE CAN BE IMPROVED BY DEVELOPING THE FLEXIBILITY FEATURES OF VOCATIONAL EDUCATION TO SPECIFICALLY CHALLENGE ALL LEVELS OF STUDENTS. THE ULTIMATE OBJECTIVE IS TO ASSIST THE DISADVANTAGED STUDENTS IN MAKING THEIR WAY IN THE MAINSTREAM OF AMERICAN LIFE, AND THIS CAN BEST BE ACCOMPLISHED BY KEEPING THEM IN THE MAINSTREAM OF OUR EDUCATIONAL SYSTEM. The Federal Register, Section 102.6 c ⁸ states, "To the extent feasible, disadvantaged or handicapped persons shall be enrolled in vocational programs designed for persons without their handicapping condition. Educational services required to enable them to benefit from such programs may take the form of modifications for such programs or of supplementary special educational services."

4. IMPROVING THE IMAGE OF VOCATIONAL EDUCATION

THE COUNCIL RECOMMENDS THAT ALL PERSONS IN EDUCATION FROM THE STATE BOARD TO THE LOCAL TEACHER SHOULD STRIVE TO FURTHER THE IMAGE OF VOCATIONAL EDUCATION. ACQUIRING A JOB SKILL SHOULD HAVE EQUAL PRESTIGE WITH THE ACADEMIC REQUIREMENTS FOR STUDENTS. POST-SECONDARY OPPORTUNITIES FOR CONTINUING VOCATIONAL EDUCATION SHOULD BE STRESSED AND FINANCIALLY SUPPORTED WITH EMPHASIS EQUAL TO THAT GIVEN TO HIGHER EDUCATION. IT IS THE COUNCIL'S CONCERN THAT EVERY NEBRASKAN BE EDUCATED TO HIS HIGHEST POTENTIAL. Issues that may inhibit fulfillment of that objective have been a priority of this evaluation.

The Council has reason to believe that the image factor in the past may have prevented some students from enrolling in vocational programs. One of the major concerns of this evaluation is to enhance the image by upgrading the educational quality of vocational programs and minimizing influences that may have nurtured such a negative concept. The Council is confident that the image can be improved. All segments of our society that have a potential to exert a positive influence are being solicited toward that end.

07. Health Occup.	none	none	none	none	none	none	none
09.01 Home Ec Voc. Cons.	159	12	0	48	6	103	14
Voc. Hero	none	none	none	none	none	none	none
14. Office Occup Voc.	93	23	5	66	21	24	10
*Voc. Rel.	52	1	0	18	6	19	10
16. Technical Voc.	3	0	0	2	1	0	0
*Voc. Rel.	none	none	none	none	none	none	none
17. Trade & Ind. Voc.	20	0	0	18	1	1	1
*Voc. Rel.	62	1	0	33	16	1	12
Guid. & Counseling	0	105	2	35	9	62	1
Cooperative	21	5	2	14	3	6	5
Disadvantaged & Handicapped	29	47	0	50	16	10	

*Voc. Rel. - means vocationally related in the occupations area but not qualified for certification or approval in a vocational reimbursed program.

NOTE: Information concerning unfilled vacancies of vocational teachers was not readily available because vacancies on this date are usually filled by provisional teachers who promise to meet the qualifications within three years.

Follow-up for Placement

Several programs maintain contacts with most schools in the State and assist with placement. Also keep abreast of needs for staff and inservice training programs through the State Department of Education and an inservice staff member

Most programs at most colleges and universities reported they used their placement service for this purpose. However, they felt it was difficult to secure accurate records of placement and admitted they did not know but were interested in knowing.

Several said, "We just don't keep these kinds of records, and if we did it would be difficult as students seldom let us know where they go."

Recruitment Activities

Use of special brochures, college staff at career days, and other career programs

Recommendations from vocational technical colleges

Assist with recruitment for technical staff

Hold a vocational tea once each year

Inservice Activities

Workshops - coordinating techniques - held during summers

Evening classes - organization and administration of vocational education

Faculty visits to new teachers and special visits to any school that requests assistance

Special summer conferences and workshops provided for many vocational teachers

APPENDIX C EFFECTIVENESS EVALUATION OF VOCATIONAL EDUCATION

The First Biennial Report of the Advisory Council for Technical-Vocational Education in Texas, in accordance with Section 15 of Senate Bill 261, enacted by the Sixty-First Legislature, Regular Session, is transmitted herewith.

Study by the Council of Senate Bill 261 has revealed that the statute is a profound document, setting forth goals and directives that will result in an education system fully capable of meeting the needs of ALL citizens. A further finding of the Council is that considerable time will be required to fulfill the legislative intent of this statute.

Members of the Advisory Council and its staff are available to the Legislature as resource persons within responsibilities outlined in Senate Bill 261.

On behalf of the Council, may I express appreciation to all of you for your support and able assistance through the specific guidelines set out in Senate Bill 261.

Respectfully submitted,

E. D. Redding
Chairman

FOREWORD

The Advisory Council for Technical-Vocational Education in Texas has been aware continuously of the general purpose of the Council stated in Section 3 of Senate Bill 261, "to cause to be established a climate conducive to the development of technical, vocational and manpower training in educational institutions in the State of Texas to meet the needs of industrial and economic development of the State." This statement of purpose is a part of the letterhead of the Council. A reproduction of Senate Bill 261 is contained on pages 30-37 of Attachment 2.

After the first full year of operation of the Council, it is evident to the Council that assignments outlined in Senate Bill 261 are very broad and the full discharge of these responsibilities will require considerable time for assessment and even longer for implementation.

When the Council began to examine its responsibilities, certain priorities were established: (1) education of the Council; (2) acceptance of the Council by citizens and educators; and (3) presentation of basic recommendations to the State Board for Vocational Education. It was necessary that (1) and (2) occur before serious attention could be given to (3) and others.

The Advisory Council has been encouraged by a climate of interest, concern and support as it has worked with state and local government agencies, groups, and individuals throughout the State. The legislation passed during the Sixty-First Legislative sessions is a testament to the support of the lawmakers of our state. The continued priority, visibility and dedicated support of the Governor of Texas has been most encouraging and helpful. The State Board of Education and staff under the direction of the Commissioner of Education have been responsive, and there is strong evidence that local boards of education and their administrative units are giving serious consideration to many concerns of the Council and citizens of the state in the area of technical-vocational education. The Council will be following these developments with interest.

An example of a school district taking steps in this direction is the Houston Independent School District. Their Board of Education adopted during its August 1970 meeting, "A Statement of Policy on Occupational Education in Houston", which will be most helpful to this local district administration in developing programs responsive to the needs of individuals and the community. The President of the Texas Federation of Women's Clubs has announced that a special concern during her administration will be technical-vocational education. These two examples are an indication of the favorable climate developing within the state.

An indication of the concern of citizens of the state for technical-vocational education was the response to and support of the Governor's Conference on Technical-Vocational Education which was held earlier this year. The proceedings of this conference are included in this report as Attachment 3. Special attention is directed to the Introduction which gives information on those who participated in the Conference. Future plans of the Council call for fourteen regional "grass roots" hearings early in 1971, to provide citizens throughout the state the opportunity to present their views on technical-vocational education.

The growth and development of technical-vocational education at the secondary level is evidenced by the increase in programs for 1970-71 which is twice any previous annual growth. Technical-vocational programs in the post-secondary institutions continue to expand at an annual rate of approximately 15%.

Texas is fortunate to have a fine education system evidenced by its accomplishments through the years. As Texas grows and existing industry changes, our education system is called on to support such changes. The Advisory Council has attempted to make realistic recommendations in Attachment 1 for changes to "bridge some gaps" in education for "living" and "making a living", and to make some adjustments to the entire education system.

The Council will be following with interest further developments and responses.

PART I

REVIEW OF COUNCIL ACTIVITIES

The Advisory Council for Technical-Vocational Education in Texas was organized under the provisions of Public Law 90-576 during the early months of 1969 and held its first meeting March 4, 1969. The passage of Senate Bill 261 and the Governor's signature on April 22, 1969, brought into being a state statute establishing the Advisory Council as the first in the nation secured by state law. On September 1, 1969, the effective date of the legislation, the Advisory Council for Technical-Vocational Education in Texas was reconstituted under the provisions of Senate Bill 261, Acts of the Sixty-First Legislature, Regular Session.

After election of a Chairman, the Council organized into six committees. The organization and lines of communication charts were developed and approved by the Council on March 18, 1969. Your attention is called to the charts on pages 26 and 27 of Attachment 2. In the same publication, page 25, you will find a list of committees and membership as of May 1970.

The Steering Committee of the Council serves as the Executive Committee of the Council and was responsible for developing the Council staff. A Council Secretary was employed effective May 1, 1969. Two additional professional persons were subsequently employed and one additional secretary. The Council has employed part-time and temporary personnel as needed. In accordance with Senate Bill 261, the Council offices are provided by the Texas Education Agency.

Rules and Regulations of the Advisory Council were developed and approved by the Council during the October 16, 1969, meeting and transmitted to the Secretary of State on October 27, 1969.

Meetings of the Council since organization have been as follows:

DATE	PLACE	SPECIAL ACTIVITIES
March 4, 1969	Austin, Texas	Address by Governor Preston Smith Elected Chairman Conducted Business
March 18, 1969	Austin, Texas Commodore Perry Hotel	Adopted Organization of Council Briefing by staff of Texas Education Agency Business Items

November 10, 1970	Austin, Texas S. F. Austin Hotel	Vocational Youth Report Study of Report to Legis- lature Business Items

The Advisory Council is aware of many restrictive influences on the development of technical-vocational education in Texas. Heading the list is "attitude" of all citizens. Much of the problem of attitude is that of relating technical-vocational education to jobs, particularly on the part of some parents. Many parents think technical-vocational education is wonderful for "someone else's child."

The Council moved to secure support for production of a film on technical-vocational education entitled "The Future ... My Destination" which was funded by the Halliburton Educational Foundation and was premiered before the State Board of Education at its meeting on September 12, 1970. Several prints of the film were purchased, and they are heavily booked for the next several months. With utilization of the film throughout the state, it is hoped citizens will respond to the concluding point of the film, and "think about technical-vocational education". Several organizations and groups have pledged support in educating their members in this important aspect of our education system.

The ACTIVE News, the newsletter of the Council began publication in May 1970 on a monthly basis and is presently mailed to fifteen hundred citizens representing many interests throughout the state. The newsletter reports on activities of the Council and highlights technical-vocational education activities from a variety of sources throughout the state.

The six committees of the Council meet periodically for study and work on matters within their assignment. The work of the committees is discharged by members and by assignments to the Council staff. For example, during the study and development of Recommendation II, pages 37-40, Attachment I, three Council members studied area technical-vocational school programs in four states.

The Council Chairman and Executive Director have participated in three biannual joint conferences of National and State Advisory Councils on Vocational Education, benefiting from the mutual exchanges.

PART II

REVIEW OF COUNCIL ACTIVITIES RELATED TO SENATE BILL 261

Section 7(a)

Recommend and evaluate the role and scope of secondary institutions, public junior colleges, community colleges, technical training institutes, and public senior colleges and universities in a comprehensive plan for developing manpower education and training in the State of Texas;

The responsibilities outlined in this section have not received indepth study by the Council to date. Some factors influencing this area of responsibility are as follows:

1. A comprehensive system of technical-vocational education in Texas has not yet reached maturity. For example:
 - a. Although substantive progress has been made in the last five years in providing vocational education at the secondary level in gainful employment areas, the Council in its Recommendation I, pages 36 and 37, Attachment 1 suggests that the entire education system in Texas be adjusted toward education for "living" and "making a living" as equal partners.
 - b. Several junior colleges have given serious attention to technical-vocational education needs of the areas they serve. However, of the forty junior colleges in the state, nine enroll 65% of all the technical-vocational students in the junior colleges.
 - c. The Texas State Technical Institutes have been in operation less than five years with substantial program offerings having taken place in the past two years.
 - d. Adult education programs in Texas have developed to a minimum level in response to federal programs. However, neither a commitment to adult education needs nor the funds have been forthcoming from state government. The full development of an adult education program is imperative to correct many deficiencies in a comprehensive system of technical-vocational education. For example, many adults function educationally below the eighth grade level which means they cannot effectively participate in occupational training programs. Many remain in entry level and dead end jobs for years because of a lack of education and marketable skills. Refer to page 14 and 15, Attachment 1, for additional information.
2. Information and data necessary for planning a comprehensive program are inadequate, and the Advisory Council has suggested action in Recommendation VII, page 45 of Attachment 1 to the State Board of Education to correct this deficiency.
3. Education has not identified job market areas to suit their needs. Several community colleges are making considerable progress through program development officers on their staffs. However, these probably represent less than 40% of the community colleges, and such information is not developed

PART II - Section 7(a)

to give a statewide picture. There is a need for a coordinated statewide study to determine occupational preparation required by employers as a guide to effective program planning.

4. A review of programs in post secondary institutions indicates there are several offerings which should be presented at the secondary level. However, in many cases, the courses have not been developed at the secondary level, and the post secondary institution is responding to a community need. There must be close integration of curriculum between the secondary and post secondary levels. This would not necessarily alleviate the necessity of offering lower division courses at the community college, but provision would be made for advanced programs for student clientele. Basically the 13-14 year level programs will assume their proper role, when our 11-12 year programs fulfill their role, when kindergarten through the 10th year functions are realized as they relate to "education for making a living".
5. Public post secondary program offerings in Texas during 1969-70 totaled ninety different programs. An analysis of these offerings reveals the following information from which several conclusions can be drawn:
 - 67% of all programs were offered in 17 institutions with 2,000 or more total student enrollment.
 - 65% of technical-vocational student enrollments were in 9 institutions.
 - 23 institutions with less than 2,000 total student enrollment per institution offered only 33% of the technical-vocational education programs in post secondary institutions. These 23 institutions offered 41 of the 90 programs offered in the state. However, 21 of the 41 programs were single offerings, usually peculiar to the geographic area served. Also 65% of programs offered were concentrated in ten program areas which are listed in rank order --- Data Processing; Drafting and Design; Accounting and Computing; Licensed Vocational Nurse; Electronics; Stenographic and General Secretary; General Office Clerical; Auto Mechanics; Mid-Management; and Welding.
6. It is evident from the above analysis that comprehensiveness of program offerings is a critical problem in 23 of the 40 junior colleges. As technical-vocational education expands in our post secondary institutions, approval of new programs must be based upon job market needs with consideration given to local, regional and state requirements.
7. The roles our institutions play will vary with local and state needs, development of the system, maturity and needs of students, and expansion of occupational education at all levels. Coordinated activities between all institutions must be strengthened and program approval exercised with discretion.

The responsibilities outlined in this section will require the continuous study of the Council to make necessary and realistic adjustments as needs change and as our education system matures in response to these needs. The Council is addressing itself to the broader implications of these responsibilities in Recommendations I and II of Attachment 1, pages 35 through 40.

PART II - Section 7(b)

Recommend the appropriate subjects to be taught at each level of training and in each of the above types of institutions;

The Council defines "subjects" as programs of instruction. Examples of these are: Auto Mechanics; Ornamental Horticulture; Data Processing; Machine Shop; Cosmetology; Dietitian Aide; Child Care Aide; and Printing.

The subject offerings of the above types of institutions will vary with the needs of individuals, state and local job markets, and available funds for program expansion. New programs and services that resulted from federal legislation are included in the State Plan and are summarized in Item 2, page 23, Attachment 1.

The Council is concerned that professional education leadership be competent in determining approved subjects to be taught in keeping with the needs of individuals and the job markets. It is necessary that the school administrator understand the economy of the community, the workings of the job market, the role of education in the job market, and how these are related to the needs of individuals. The Council in Recommendation V, page 43, Attachment 1, has made recommendations designed to provide knowledge and experience for administrators.

In Recommendation I, page 35, Attachment 1, the Council has suggested to the State Board of Education that the education system of the state be adjusted to provide a chronologically integrated system responsive to individual needs regardless of the age or level of the individual.

PART II - Section 7(c)

Recommend a state plan designating the method and the criteria to be utilized in establishing area technical schools which will be consistent with the Vocational Educational Act of 1963, as amended, the Manpower Development and Training Act of 1962, as amended, and other federal statutes;

The Advisory Council has spent considerable time and effort in reviewing present area vocational school activities, including a questionnaire study of school districts operating area vocational schools. Members of the Council have studied programs in other states for further ideas.

In Attachment I, on pages 37-40 information is given along with Recommendation II, outlining a proposed system of Area Technical-Vocational School Jurisdictions. This recommendation is under consideration by the State Board of Vocational Education. If adopted, as recommended, legislation and appropriations would be required to implement it.

The recommendation, if implemented, could, in a very positive manner, affect the total effort in technical-vocational education in the state, especially in the areas of redirection, quality, quantity and comprehensiveness. The level of technology is such that this or a similar system of technical-vocational education for Texas is imperative.

PART II - Section 7(d)

Recommend and evaluate a list of courses offered by these types of institutions eligible to be funded by the Legislature or through the allocation of federal funds. These courses shall be freely transferable among the public institutions in the State of Texas, with credit for such courses to be given on the same basis as if they had been taken at the receiving institution;

The list of courses referred to in this section is prepared by the Associate Commissioner for Occupational Education and Technology in accordance with Section 18(d), Senate Bill 261.

The free transfer of such courses among public institutions in Texas requires additional study and investigation on the part of the Council.

PART II - Section 7(e)

Recommend to the Governor and the Legislature methods of funding existing programs and propose methods for funding new programs;

One of the first concerns of the Council in this area was to study the real and total costs of technical-vocational education in Texas. A contract was initiated for study of costs at the post secondary level. The results of the study are being used as a guide or base upon which to determine levels of recommended appropriations. The Council study encountered difficulty in determining costs because of inadequate and inconsistent records. The Council expects to maintain the data base established in the initial study; and the Council in part two of Recommendation XI, page 49, Attachment 1, has asked the Texas Education Agency to devise a uniform cost accounting system which will display all elements of cost in technical-vocational education.

The Council is concerned that funding of technical-vocational education is inadequate and has spoken to this need in part one of Recommendation XI.

At the secondary level, substantial progress has been made in redirecting programs, expansion of several programs and development of new programs in keeping with job market needs. In Attachment 1, page 10-12, trends in vocational education are discussed; and on pages 13-16 there is information on groups to be served. There is an urgent need to strengthen the area schools throughout the state to make technical-vocational education readily available, of high quality and comprehensive. The recommendations are contained in Attachment I, pages 37-40, Recommendation II.

The Advisory Council did a study on the "Present Patterns of Source, Management and Application of Public Funds used in Technical-Vocational Education and Directly Related Activities in Texas". The study confirmed elements of duplication and competition with strong evidence of proliferated management structure at all levels, pages 5-7, Attachment I.

Recommendation III, page 41, Attachment I, makes provisions for financial support for maximum utilization of technical-vocational facilities. State funds are required in Recommendation IV, page 42, Attachment I, for training and economic development; to develop professional education leadership, Recommendation V, page 43, Attachment 1; and the development of an electronic data system to provide appropriate data for education requirements and projections, Recommendations VII, page 45, Attachment 1.

PART II - Section 7(f)

Suggest and evaluate pilot projects and present recommendations to the Governor and the Legislature for implementing cooperative programs among the several types of institutions named hereinabove, which will provide a more effective and efficient method of supplying business and industry with trained manpower;

The responsibility outlined in this section is very broad and the Advisory Council has made several recommendations which should contribute to the supply of trained manpower to business and industry in the state.

Recommendation II on pages 37 through 40 of Attachment 1 on area technical-vocational school jurisdictions, when fully financed and implemented, should meet training needs in most of the state. The plan envisions the utilization of total public and private resources of the jurisdiction in meeting the technical-vocational needs of individuals and employers.

In Recommendation IV on page 42 of Attachment 1, three important suggestions are offered to make training resources responsive to economic development needs of the state. Cooperation between appropriate state agencies and groups is outlined and encouraged. Implementation of this recommendation would involve the cooperation and support of public education institutions at all levels as well as private education and other training resources.

In Recommendation VIII on page 46 of Attachment 1, the State Board of Vocational Education and the Coordinating Board, Texas College and University System, are encouraged to develop consortium relationships between institutions with vocational teacher preparation programs to better serve this need. Presently, teacher preparation programs are conducted in many institutions along traditional lines with a minimum of coordination. There are areas of commonality which can be more effectively served by much closer coordination. Institutions are also encouraged to expand internship and cooperative relationships with employers in both pre-service and in-service teacher preparation activities. There is a critical need for recognizing appropriate non-teaching work experience in determining salary schedules and credit toward degrees for teachers of approved technical and occupational skill areas.

PART II - Section 7(g)

Recommend the establishment of the responsibility of public schools, public junior colleges, community colleges, technical training institutes, and public senior colleges and universities in adult basic education, adult technical education, and adult vocational education.

Adults are defined for the purpose of this section as persons 16 years of age or older who are not enrolled in public school education.

The Texas Education Agency is administering a substantial adult basic education program, supported by rather static levels of federal funding without the aid of state funds. Local school districts have a very limited commitment to serve the adult needs. Refer to pages 14 and 15, Attachment 1, for information on adult education.

The Texas Department of Corrections (TDC) reports only 22% of the individuals in the state prison system have completed high school and the average educational achievement is 6.3 years. The TDC is operating a very comprehensive educational program for adults from the first grade through college. As soon as the inmate acquires sufficient basic education, major emphasis is placed on occupational preparation. This information supports studies indicating that persons with less than an eighth grade education find it difficult to function in our present society.

The institutions listed in Section 7(g) conduct adult education programs throughout the state, but generally within their mode of operation and with limited or nonexistent outside funding. There is an urgent need for state support for a viable adult education program at all levels to serve the vast and increasing adult education needs of the state. The continued health of the economy and society depend upon such a program.

The Texas Education Agency administers a program to establish the High School General Educational Development (HS GED) of individuals which is useful for purposes of employment and may be used for entrance into education programs beyond the high school level.

A variety of programs have been initiated for many adults under provisions of the Manpower Development and Training Act (MDTA) of 1962, as amended. The MDTA provides for training in addition to a large number of manpower services essential for the training and employment of these adults. Legislation is pending before the Congress to expand and strengthen these programs of remediation.

The Advisory Council made several recommendations in Attachment 1 designed to establish the responsibility and commitment for adult education firmly with the public education institutions of the state. For reference, see Recommendations I, pages 35-36; II, pages 37-40; III, page 41; IV page 42; XI, page 49, and there are implications for adult education in other recommendations of the Council.

Adult technical-vocational education will be a special subject of concern in the Council's regional hearings scheduled for January and February 1971 throughout the state.

PART II - Section 7 (h)

Recommend, encourage and evaluate cooperative programs between educational institutions and industry, and, with the assistance of industry, assist in the development of new curricula and institutional materials as may be required for new and emerging occupational categories as may be prescribed by industry;

In March, 1970, the Council co-sponsored with the support of the Governor and 18 business firms and organizations and approximately 40 exhibitors, the Governor's Conference on Technical-Vocational Education. See page 3, Attachment 1.

Industry-education cooperation is evidenced in the Texas Education Agency's Environmental Technology program in cooperation with the Construction Industry Council for Manpower, Education, and Research. The Council has cooperated with and supported this program.

In recognition of the need for a statewide comprehensive technical-vocational curriculum and materials system to serve technical-vocational education at all levels, the Council recommends such a system with provisions for the involvement of industry. See Recommendation IX, page 47, Attachment 1.

The Council is aware of the necessary involvement of business and industry in an effective system of placement and follow-up. Such a system is outlined in Recommendation X, page 48, Attachment 1.

The Council is conscious of the relation between industry and education for economic development, and has in Recommendation IV, page 42, Attachment 1, outlined needs in this important area.

Indicative of industry-education cooperation is the rapid growth of cooperative training programs in technical-vocational education. Through this arrangement, the facilities of employers in the community are utilized instead of duplicating these facilities in the school.

A staff analysis of Texas Education Agency's data indicates that public school cooperative vocational education programs have increased from 1,065 units in 1969-70 to 1,370 units in 1970-71, an increase of 306 units or 29%. The overall increase in total programs in vocational education during this period is 20%. Progress is being made in industry-education cooperation.

The Council will continue to seek opportunities for establishing and developing meaningful industry-education relationships for the mutual benefits of all citizens.

PART II - Section 7(i)

Provide up-to-date statistical data on employment opportunities in the Texas economy to persons trained in these institutions through cooperation with the Texas Employment Commission and other appropriate research agencies at both the state and national levels;

The Council has given considerable study to the rather complex and difficult job of providing up-to-date data on employment opportunities in Texas to persons trained in our institutions. The major problem lies in "interfacing" the broad Texas economy with the "grass roots" or local education effort. Training and employment data is collected by several agencies and groups for a variety of purposes, posing a problem in relating employment data to education planning or relating education programs to employment opportunities. There must be developed a "universal language" in this important area.

The Texas Employment Commission (TEC) has a comprehensive network of offices throughout the state offering extensive services in collecting employment data. There are several developments within this agency which offer considerable promise.

In addition to the TEC's present capability to provide information on employment opportunities in the State is the development of a matrix job forecasting system. The system will give predictive information useful in establishing various types and levels of programs for job entry. Secondly is the Job Bank which will be developed into a state and national daily display of available jobs with location and requirements. A third program is Employment Security Automated Reporting System (ESARS), a system of electronic monthly follow-up reporting of all activities in TEC offices across the State. In addition to report on job orders and placements all manpower development training is reported. In the future each of these three programs will be tied to a national system.

A state sponsored program which has promise in the area of up-to-date data on job opportunities is the Input-Output Study. This study will allow the state planners to approximate various reactions to changes in the industrial and/or economic make-up of the state.

The Texas Industrial Commission is expected to initiate training programs in response to needs of new and expanding industries. Information from this section of the Governor's Office will be very important in developing the overall training approach and maintenance of training. See Attachment 1, Recommendation IV, page 42.

The Council staff has held two meetings with state agencies to gain working knowledge of the availability of various statistical data for information and planning purposes. Each agency continues development of their electronic data processing systems.

There are a number of proposals under consideration by the Texas Education Agency, Division of Occupational Education Research and Development having to do with data gathering, transmission and storage. The Council is exploring methods of gathering employment data for Texas by Standard Metropolitan Statistical Areas giving existing employment, replacement needs, growth patterns, training program locations and outputs. This information would be for the use of those mentioned in this section of Senate Bill 261.

PART II - Section 7(i)

To help refine training supply information, and to respond to demand information from the economy, the Council has recommended that the State Board for Vocational Education initiate planning to implement a coordinated information retrieval system. See Attachment 1, Recommendation VII, page 45.

The State Board of Education on November 9, 1970, approved a proposal to initiate a statewide program at the post secondary level which will (1) provide information on occupations to prospective students; (2) provide an evaluation of programs and institutions, and (3) provide follow-up studies on students who have pursued technical-vocational education programs.

The staff is in the process of surveying management, business, commercial, professional, trade, labor and similar organizations, to determine what information they have concerning their needs for manpower. While preliminary indications are varying, organizations either have information or are willing to gather it. This study was high priority because of the Council's regard for information gained from these private sources as a correlation factor with state agency information.

PART II - Section 7(j)

Recommend a state plan for the development of a comprehensive manpower program in conjunction with the Manpower Development and Training Act of 1962, as amended;

In studying this responsibility, one of the first essentials is to define manpower. In this section it is believed that the legislature meant a broad definition of the word. Dr. F. Ray Marshall, University of Texas, in an address to the State Manpower Advisory Committee in July 1970, defined manpower as ... "preparation for existing and future jobs. It means all phases of training, labor market information systems and programs to match people with jobs through mobility programs." He further pointed out that manpower must have employability attached to it. That it does not mean ... income maintenance, unemployment insurance, economic development, job-creation nor that it can single-handedly solve all our social and economic problems.

All twelve recommendations of the Advisory Council are designed to strengthen all phases of the education and training aspects of a Comprehensive Manpower Program in Texas. The intent of the recommendations, particularly I, pages 35 and 36, Attachment 1, is to establish a commitment on the part of the education system to adequately serve the career needs of citizens from the elementary through adult years. The Council holds the view that aggressive action must be taken to stop the flow of persons into the pool of unemployed and underemployed, while at the same time utilizing remedial programs for the pool which already exists.

The Advisory Council is alarmed at the proliferation of management found in its study of the flow of funds as outlined on pages 5 through 7 of Attachment 1. This referenced study attempted to deal only with the training and directly related activity aspects of manpower. Related activities of manpower have not been traced, but no doubt are a part of most state and federal agency activities.

A Comprehensive Manpower Planning Staff (CMP) was established in the Office of the Governor with objectives similar to those outlined in this section. The Advisory Council has worked with this (CMP) Staff in complementary efforts. The Advisory Council staff has participated in State Cooperative Area Manpower Planning System (CAMPS) meetings. The Council has studied the State CAMPS organization and plan. Legislation has been pending in the U. S. Congress, throughout the life of the Council, which would, if implemented in the state, bring about rather drastic changes in the flow of funds and the administration of manpower programs supported by federal agencies. The state, regional and local CAMPS activities have made worthwhile contributions at all levels in coordination of resources for meeting needs of people principally in the area of remedial programs.

No longer can we think of the Texas Education Agency as the sole agency involved in all aspects of education and training. There are few, if any, state and local governmental agencies that are not involved in some aspects of education and training, and our private institutions, employers and others are deeply involved in education and training.

The Advisory Council is convinced that the unnecessary establishment of dual systems and activities simply accelerate costs and general frustration. Present education institutions must assume their full responsibilities for the TOTAL education of citizens. They should have responsibility for the remedial

PART II - Section 7(j)

education and training work which previous and present programs make necessary in order to make corrections to present programs. The Advisory Council has made several recommendations directed to the needs of adults; expansion of technical-vocational education opportunities; and the placement and follow-up of students. See Recommendations II, pages 37-40, III, page 41, XI, page 49, Attachment 1.

PART II - Section 7(k)

Recommend the state plan, training institutions, and means of coordination of manpower training as provided in the Manpower Development and Training Act of 1962, as amended; and

This section of the law is one with which the Advisory Council has had difficulty since there is also a State Manpower Advisory Committee charged with the same responsibility under provisions of the Manpower Development Training Act of 1962, as amended. The Manpower Advisory Committee should become part of this bill or the bill should clarify the role of the Advisory Council on Technical-Vocational Education in Texas.

This will be the subject of further comment and explanation from the Council when Senate Resolution 865 is explored.

PART II - Section 7(1)

Recommend research projects as may be necessary to implement and improve a statewide system of technical, vocational and manpower training from funds provided by appropriations from the United States Congress or private gifts, grants or awards;

The Advisory Council has participated in the following contracted and staff studies during the last year:

1. The Advisory Council joined the State Board of Education, and the Coordinating Board, Texas College and University System, in a request to the Texas Research League to conduct a study entitled, "Financing a Statewide Community College System in Texas". The study which was completed in August 1970 is under consideration by the Council.
2. The Advisory Council funded "A Study of Program Costs of Technical-Vocational Education", by Central Texas College, which was completed in August 1970. The study has been accepted by the Council as a guide for development of realistic levels of funding for technical-vocational programs at the post secondary level. See Recommendation XI, page 49 of Attachment 1 for further information.
3. The Advisory Council provided a limited amount of funds and joined the Texas Hospital Education and Research Foundation in developing a "Status Report on Employment in Allied Health Manpower in Texas 1969". The Allied Health Manpower field is one of the fastest growing in technical-vocational education and the shortage of personnel in this field is most critical.
4. A consultant contract was initiated by the Advisory Council with Dr. Ken Hoyt, University of Maryland, to explore with post-secondary institutions in Texas, a "Specialty Oriented Student Research Program", a system of follow-up and feedback on students completing vocational education programs, at the post secondary level which will (1) provide information on occupations to prospective students; (2) provide an evaluation of programs and institutions, and (3) provide follow-up studies on students who have pursued technical-vocational education programs. The program has been successfully utilized in other states for several years and study is underway by the Texas Education Agency for implementing the system in Texas. The program would provide information badly needed by institutions, prospective students, the Advisory Council and others.
5. A consultant contract was initiated with Dr. Robert E. Kraner, by the Advisory Council, EPIC Diversified Systems, Tucson, Arizona, for an evaluator review of evaluation guidelines. The review was for the purpose of giving direction to the Council staff in evaluation which is one of the principal responsibilities of the Council.
6. A study was done by the Council, completed in March 1970, entitled "A Look at the Present Patterns of Source, Management, and Application of Public Funds Used in Technical-Vocational Education and Directly Related Activities in Texas, Fiscal Year 1970". The summary of the study is found on pages 5 through 7 of Attachment 1. The study revealed the many trails funds take in the technical-vocational education field, which points up the need for better coordination to

PART II - Section 7(1)

eliminate much duplication of effort.

7. A staff study of the training resources in technical-vocational education was completed in March 1970. The study is reported on page 8 of Attachment 1. This is a continuing study which is being updated and expanded.
8. A Council Study of Student Follow-Up at the Secondary Level was initiated a year ago, and completed in July 1970. The study is reported on pages 8 and 9 of Attachment 1. The study revealed a serious deficiency in reliable information on follow-up students, and the Council made a recommendation on page 48 of Attachment 1, which, if implemented would correct this.
9. Several staff analyses have been made for use by the Council. These involve special treatment of data provided by the Texas Employment Commission, Texas Education Agency and other agencies and groups.
10. A grant was secured from the Halliburton Educational Foundation for the production of the film, "The Future ... "My Destination".

Further studies are urgently needed and will be conducted as identified to fulfill the responsibilities of the Council.

PART II - Section 7(m)

Recommend and evaluate a program of teacher certification for instructors of occupational training courses;

The Council in its investigation has been made aware that the supply of technical-vocational teachers relies upon proper certification of quality instructors. However, the availability of teachers may depend upon the economic relationship between teaching and similar jobs in industry.

The sources of technical-vocational teachers are degree programs, successful employment experience and in some cases a combination of the two. The Council in Recommendation VII, page 46, Attachment 1, has made recommendations designed to provide a good supply of well qualified technical-vocational personnel.

Closely related to the question of effective teacher certification is the matter of professional education. The Council's recommendation in this area of concern is found in Recommendation V, page 43, Attachment 1.

PART II - Section 7(n)

Recommend and evaluate a state-wide plan for the development of a comprehensive program of apprenticeship training.

The Council has had apprenticeship training under study for the past year but is not in a position to make a recommendation for a state-wide plan.

Recent Bureau of Apprenticeship and Training (BAT) figures reveal the following broad listings of occupations in Texas utilizing registered apprenticeship programs to train journeymen:

Construction - 7448
Metal Manufacturing - 799
Non-Metal Manufacturing - 655
Public Utilities - 17
Trade Services - 825
Mining - 9

This listing totals 9,503 apprentices, 74% in construction trades, 26% in non-construction trades, and includes 700 registered programs in 380 apprenticeable occupations in Texas.

Apprentice training programs are administered under local joint apprenticeship and training committees composed of equal representation from management and labor. Some programs are administered under management committees. Public assistance is not given for the annual 2,000 hours of on-the-job training. These expenses are borne by the employer. State administered federal tax funds are used in reimbursing instructors salaries for the 144 to 250 hours of occupation related classes. The following chart indicates the usual sources of funds for the program:

PART II - Section 7(n)

Type of Training/Costs	Fed. Voc. Funds	Joint Appr. Comm.	Empl.	Appr. Tuition	Local Schools
2,000 hours annual on-the-job training;					
Salary of apprentice			X		
Lost time to employer receiving on-the-job instruction					
Inefficient production as learner			X		
Lost time to employer instruction apprentice					
Salary of journeyman			X		
144-250 hours annual related classroom instruction;					
Salary of instruction	X*				
Approximately 75% of \$6.00/hr.					
Approximately 25% of \$6.00/hr.				X	
Books				X	
Instructional Materials and Supplies		X			
Tools and Equipment		X			X
Classroom & Labs		X**			X

The Texas Education Agency has for many years passed on the limited federal tax funds earmarked for adult training to apprenticeship. As in other adult education, there are no state tax monies expended. For rationale of the Council on adult training, please see pages 14 and 15, Attachment 1.

*TEA data indicate only 55% of apprentices in the state participate in funded related instruction.

**Due to a lack of flexibility, inadequate building programs, and often lack of interest on the part of local administrators, apprentice programs are utilizing private facilities for related instruction.

Due to the small incentive provided by public funds, apprenticeship training is for all practical purposes a private program. Traditionally, BAT has fulfilled a role of promotion and technical assistance to this vital method of training. If the Council is to recommend and evaluate a state-wide plan for the development of a comprehensive program of apprenticeship training, a great deal of study plus close coordination and assistance from management, labor, and the BAT will be required.

PART III

FIRST ANNUAL REPORT The Advisory Council for Technical- Vocational Education in Texas

The First Annual Report of the Council is Attachment 1 to this report. It was submitted to the State Board for Vocational Education on September 12, 1970, was accepted for transmittal to the United States Office of Education and the National Advisory Council for Vocational Education, in accordance with Section 102.23(c), Federal Rules and Regulation, P.L. 90-576.

Appendix C of the First Annual Report contained recommendations to the State Board for Vocational Education in Texas. The State Board instructed its staff to review recommendations and after study and investigation to make recommendations to the Board with the following priorities:

1. Recommendations requiring appropriation of funds for consideration of the Board at the October 3, 1970 meeting
2. Recommendations requiring legislative action to implement for consideration of the Board at the November 9, 1970 meeting
3. Recommendations requiring Board and Administrative action will be considered and acted upon as soon as practical and as appropriate

There are plans for a report from the State Board for Vocational Education to the Sixty-Second Legislature on action taken by the Board on the Recommendations of the Advisory Council.

ABSTRACT - THE PURPOSE OF THIS EXEMPLARY
PROJECT WAS TO DEMONSTRATE A COMPREHENSIVE
VERTICALLY INTEGRATED AND SEQUENCED
VOCATIONAL TRAINING PROGRAM FOR DISADVANTAGED
AND PREVIOUSLY UNSERVED STUDENTS FROM GRADE 5
THROUGH GRADE 12 IN AN URBAN SCHOOL SYSTEM.
THE SUCCESSFUL PROGRAMS IMPLEMENTED INCLUDE:
(1) VOCATIONAL INTEREST CLUBS FOR THE
ELEMENTARY GRADES, (2) CAREER ORIENTATION AND
EXPLORATION AT THE JUNIOR HIGH SCHOOL LEVEL,
(3) SKILL TRAINING IN GRADE 10, (4)
COOPERATIVE AND REGULAR VOCATIONAL PROGRAMS,
AND (5) SUPPLEMENTARY TRAINING PROGRAMS FOR
GRADES 10, 11, AND 12. INSERVICE TRAINING AND
SUMMER WORKSHOPS PROVED USEFUL IN DEVELOPING
TEACHING UNITS. INTENSIVE JOB TRAINING WAS
INSTITUTED FOR DROPOUTS AND SENIOR HIGH
SCHOOL STUDENTS. RECOMMENDATIONS, PROGRAM
FORMS, AND A BIBLIOGRAPHY OF STATE PRODUCED
CURRICULUM AND INSTRUCTIONAL MATERIALS ARE
INCLUDED. (AG)

A. TITLE AND PERIOD COVERED:

Exemplary Project No. 0-361-0123, Contract No. OEC-0-71-0530 (361), as assigned to the Oklahoma State Department of Vocational and Technical Education, sublet to the Tulsa Public Schools for implementation in the four quarter period of May 1, 1970, to December 1, 1971.

B. GOALS AND OBJECTIVES OF THE PROJECT:

The purpose of this exemplary project is to demonstrate a vertically integrated and sequenced vocational training for disadvantaged and previously unserved students from grades five through twelve in a comprehensive urban school system.

The major objective of this project is to develop an exemplary "total" school approach to meeting vocational education needs for disadvantaged and other youth who have not previously received benefit from vocational training. The program exemplifies the impact that a "total" program can have on the youth, their teachers, and the community; culminating therefore, with these three facets working together, in providing the community youth with salable job skills.

Five phases were developed for this "total" school approach to provide the following: elementary school vocational orientation; junior high school vocational orientation and exploration; tenth grade cluster skill training; eleventh and twelfth grade cooperative training for disadvantaged; senior high school intensive job training; and dropout intensive job training.

C. PROCEDURES:

Each of the five phases developed has a specific procedure.

PHASE I. Elementary School--Introduction and Orientation to Occupations

Special interest clubs built on the extension service concept are the heart of this phase. The clubs are formed around the interest of fifth and sixth grade students in such areas as electronics, horticulture, cooking, drawing, etc. In club meetings, all occupations clusters are introduced and job opportunities for each are presented.

PHASE II. Junior High School--Orientation and Exploration of Occupations

A career orientation program is offered for seventh grade in two junior high schools. These programs include foods, sewing, and service occupation training for girls; construction, manufacturing, power and service occupation training for boys.

An exploratory program is provided for selected junior high school students in the eighth and ninth grade levels through a rotation programs using regular practical arts facilities and mobile van units equipped with industrial arts, home economics, and business education facilities.

PHASE III. High School (Grade 10)--Skill Training

One selected high school takes the students who have had the elementary and junior high school vocational training and, under the guidance of vocational teachers, gives skill training in two-semester (two periods per day) programs in one of the career areas the student may choose from the cluster programs previously experienced by her or him in Construction or Home and Community Service programs.

PHASE IV. High School (Grades 11 and 12)--Cooperative and Regular Vocational Programs

The student completing skill training at tenth grade level can now enter regular vocational programs offered in the local high schools or the specialized training offered in the area vocational center.

PHASE V. High School (Grades 10 through 12)--Supplementary Training Programs

This phase has not been fully implemented during this period of time. Occupational areas in business education (typing, filing, bookkeeping, record keeping, use of small calculators, duplicating equipment); marketing and merchandising (retail sales); offset printing; service station attendant and light automotive maintenance and child care aide were offered during the last nine weeks of the 1971-72 school year.

D. RESULTS AND ACCOMPLISHMENTS:

The programs implemented have been well received in our elementary and junior high schools, and interest indicates success is being accomplished at all levels, elementary, junior high, and senior high.

- I. Programs have been established in eight elementary schools, one of which closed at the end of the 1971-72 school year.

- II. Full orientation programs have been developed in three selected junior high schools, one of which closed at the end of the 1970-71 school year.

Exploratory rotation programs in industrial arts, home economics, and business education have been operated for fourteen junior high schools.

- III. Skill training in construction programs and home and community service programs has been fully implemented in the high school serving the junior high schools in which the orientation programs and exploratory programs were given. This skill training was offered for tenth grade level students.

- IV. Eleventh and twelfth grade students received either cooperative or regular vocational training in the high school programs. The student has a wide choice of programs in both regular high school programs and specialized programs in the area vocational center.

Effective programs for the population involved have been developed in monthly meetings involving teachers, principals, counselors, consultants, supervisors, and coordinators. These monthly meetings were held on Saturdays; some called meetings on weekdays were added as needed.

A three (3) week workshop was operated for teachers and staff in the Exemplary program during June. With the aid of AMIDS staff personnel and the curriculum personnel from the Oklahoma State Department of Vocational and Technical Education, the teachers developed teaching units for implementation into the programs.

Through these summer workshops and special group meetings, teaching units have been developed, field tested, revised, refined, and validated in actual classroom presentations. Some of the most valuable revisions have developed from the Saturday group meetings.

Successful classroom results have been obtained from teaching units developed by the curriculum department of the Oklahoma State Department of Vocational and Technical Education as well as some commercially developed units.

E. EVALUATION:

Considering delays encountered in funding certain aspects of the programs, the implementation of the project in Tulsa Public Schools has proceeded quite well.

Completion of the staffing of the project in late August, 1971, finds us in a good position now for more rapid accomplishment during the balance of our project period. The experiencing of

late funding and some necessary reworking of line items in the original budget delayed the filling of the following key positions until that time: program coordinator; junior and senior high school counselors; and the elementary counselor/club coordinator.

Fourteen junior high schools have programs operating under the funding of the Coordinated Vocational Education and Training programs for the handicapped and disadvantaged. These programs are operated at the eighth and ninth grade levels.

The Central High School cluster programs were funded in April, 1970, and planning and acquiring of supplies, tools, and equipment were immediately accomplished. Fruitful results are already being experienced in these programs.

As the Tulsa Public Schools, through the office of the director of vocational education, accepted the Exemplary Program, the high school program at Central and the programs at Roosevelt, Horace Mann, and Lowell Junior High Schools were removed from the CVET program and made a part of the Exemplary Program. This program is now representing the three (3) feeder junior high schools to the inner city high school, Central. With the help of the CVET program, four (4) secondary schools were actually in operation at the beginning of the school year in September, 1970.

When approval and funding were completed for the Exemplary program, eight (8) elementary schools were invited to participate in the project, with fifth and sixth grade students in the after-school career activities. Implementation of this elementary program was in operation at the first of the school year for 1971-72.

An important segment of our successful implementation of the program has been accomplished in our summer workshops and monthly meetings of involved personnel on Saturdays.

Our evaluation was well supported by the report made in September, 1971, by the outside evaluation team. The report of the evaluation team for 1971-72 school year has not been completed.

An advisory committee has been selected for Exemplary program and should enhance the community involvement in the program hereafter.

F. CONCLUSIONS AND RECOMMENDATIONS:

The project is an excellent effort and learning experience in the Career Education concept, having a profound effect in many areas of our school system and community. Many educators outside the vocational area are becoming aware and interested in this thrust. Students involved at the elementary level are becoming aware for the first time of the beneficial effects of the World of Work and the requirements for entering this world. The orientation and

exploration efforts, in addition to our regular industrial arts, home economics, and business education courses, are making an impact on the students, school, and community. Our efforts at the tenth grade level, with specific cluster education and training, is only a small effort relating to the need at this level. We recommend broadening of efforts at this level to better serve the needs of the students and community.

A great many more opportunities in more clusters are needed, in addition to one hour regular classes, in broad areas of industrial arts, homemaking, and business education.

We realize that more effort will have to be put into meeting the objectives as set forth in the original proposal and also realize that we are now in a better position through improved staffing to expend this effort during the forthcoming period of our project.

We recommend the increased implementation of the cooperative on-the-job training experiences in a cluster of occupations to intensify skill training and increase job readiness.

Our supplementary training programs such as summer training for job entry will be developed and implemented.

We plan to add one student group in business and sales at Horace Mann Junior High School with part-time assignment of regular business education teacher and extended day.

A correlation with curriculum at the lower elementary levels with the help of the fifth-sixth grade club activities and staff is proposed for future development and implementation.

The Mini-Model Sand Springs project (K-12) will be aided in any way possible, and we plan to study and learn from their efforts at the K-6 level.

In addition, we recommend the development of a guide for teachers of practical arts in the junior high schools for use in the seventh grade up as an aid in implementing the orientation and exploration into careers related to the subject areas as students are routed through the practical arts units.

BODY OF THE REPORT

A. PROBLEM AREA

This project has been directed toward a career orientated education program that will relate school and careers. Exemplary efforts made in grades five through twelve are providing students with the opportunity to gain a better understanding of the world of work and an individual desire to enter this world of work.

A summer workshop was held before the program was implemented to give the instructional staff some special training in handling the disadvantaged and handicapped population with which they were to be involved in this program. The AMIDS personnel gave specialized techniques for dealing with instruction of these students. The curriculum personnel from our Oklahoma Department of Vocational and Technical Education gave specialized training in the development of teaching units.

During the school year, monthly meetings were held in which the administrative and instructional personnel had an opportunity to develop, revise and refine teaching units to fit the classroom situations in our school system. Involved in these meetings were teachers, principals, counselors, consultants, supervisors, and coordinators. The meetings were held on Saturdays, once a month.

The program was designed as a total integrated program (See Appendix, Abstract, page 20, Description) for grades five through twelve to meet vocational training needs for disadvantaged and other youth who have not previously been served. Each segment with all working together, culminates in youth with salable job skills.

Administrative Structure: The State Director of Vocational Education is responsible for the general administration of the program. The local director of vocational and technical education has overall supervision and administration of the project in Tulsa, working in close cooperation with the State Department, departments of the schools and principals concerned. A project coordinator of the exemplary programs is responsible for the operation of the project. Vocational counselors, teachers, occupations teachers, a vocational club coordinator, and teacher-sponsors are assigned to implement this program.

Program Design: The World of Work project has operated in the following elementary schools: Pershing, Irving, Jefferson, Longfellow, Riverview, Johnson, Lowell, Lincoln; two junior high schools, Roosevelt and Horace Mann; and Central High School which receives students from the elementary and junior high schools listed.

B. GOALS AND OBJECTIVES

Original Objectives: The major objective of this project is to develop a model school situation as an example to that school and others of how

vocational guidance, training, and placement may be most effectively presented to students. Specific objectives toward which the staff of this project will aim are:

1. To establish methods whereby elementary school students may become acquainted with the wide range of occupations and the varied educational offerings of the school.
2. To combine our latest findings relative to vocational guidance into a counseling and exploratory work experience program for junior high school students which will provide them with the necessary skills to make a reasonable occupational and training choice.
3. To provide the skills training in a cluster of occupations at the tenth grade level which will insure entry level competency and potential advancement characteristics for success in cooperative programs or in day trade programs in the area school or home high school.
4. To institute cooperative on-the-job training experiences in a cluster of occupations to intensify skill training and increase job readiness.
5. To provide intensive skill training to those non-vocational about to leave high school for a job.
6. To increase the students' understanding and desire for additional training beyond high school where appropriate.
7. To inaugurate supplementary training programs such as summer training for job entry.
8. To try alternative methods based on related research for using the facilities of the area school in an exemplary program.

Amended Objectives:

Elementary

1. To develop in students an interest in the world of work.
2. To help students relate their preferences to the educational requirements and job tasks needed in various occupations.

Junior High

1. To develop students' knowledge of how to gain entry into and to succeed in the world of work.
2. To increase the students' knowledge of the jobs and occupations within various occupational families.
3. To increase the students' knowledge of vocational interests and capabilities.

Senior High

1. To assist students to narrow their vocational choice to one cluster or occupational family.

2. To offer sufficient exposure to skills and related experiences in an area to provide data for further career planning.
3. To develop students' entry level vocational skills in selected occupations.

C. DESCRIPTION OF GENERAL PROJECT DESIGN AND PROCEDURES

Elementary School: Introduction to Occupations (World of Work) Grades 5-6

A program in eight elementary schools designed for all children in grades five and six to provide a basic understanding of various occupations, to develop the attitude that all honest work is honorable, and to motivate a desire for participation in the world of work.

At these fifth and sixth grade levels, a method useful in occupations orientation has been copied from the successful 4-H Club practices. Special interest clubs have been formed in each elementary school with appropriate projects related to occupation information. These clubs involve businessmen, craftsmen, advanced vocational students, classroom teachers, and parents in sponsoring roles. Special interest clubs such as horticulture, electricity, wild life conservation, small engines, sewing, drafting and design, and health career clubs are the types of clubs that have been successfully organized under the leadership of teacher-sponsors and club coordinator.

Club meetings were held once a week after school (3:00-4:00 p.m.). These teachers have a full schedule of classes as elementary teachers; each taught an extended day for this program. Number of students enrolled in the World of Work Clubs were: Irving, 24; Jefferson, 27; Johnson, 50; Lincoln, 52; Longfellow, 22; Lowell, 25; Pershing, 30; and Riverview, 22. Interesting fact was that these clubs lost no membership during the year; gained each month which indicated that interest started at a high level with the students and remained at this high level.

Materials were developed by Tulsa teachers in the summer workshop and were specially designed for club use. A complete list of the units developed by our teachers are shown on Appendix, page 112, Bibliography of Locally Produced Curriculum and Instructional Materials.

Most often used commercially prepared materials were the S.R.A. Widening Occupational Roles Kit (W.O.R.K.) for Grades 6-9. Occupational information on some 400 occupations is given in capsule form. A short fictional narrative describes the typical person at work in the occupation presented. The narrative depicts typical activities of the worker and some psychological aspects of the job. Topics covered are: required education, useful high school courses, special training or college courses (where applicable), where jobs are found, getting started, training on the job, getting ahead, earnings, number of hours, number of workers, and future manpower requirements.

Two series of filmstrips were exceptionally good for Elementary career introduction: The Working Series, AVID Corporation (6 filmstrips and 4 records) and The Working World (10 filmstrips and tapes). A fuller explanation of these series can be found on Appendix page 61.

Field trips were conducted to give students the opportunity to view occupations at work. Types of industries visited were manufacturers (where students observed occupations from inspector and foreman down to custodian), radio stations, churches (one minister spoke to students on social services), clothing factory, public utilities (gas and electric), airline maintenance center.

Guest speakers for club meetings were very effective. Representative: policemen, radio station and tv station personnel, representatives from Tulsa Area Vocational-Technical Center, advanced vocational students from regular high school programs or Area Vocational-Technical Center, representatives of Tulsa Junior College, a barber who gave a demonstration haircut, hair stylists, beauticians.

More detailed information on each of the eight schools can be found in the Appendix, page 80, under Summary of Activities.

Junior High School: Orientation and Exploration of Occupations - Grade 7
Career Exploration - Grades 8 and 9

At the seventh grade level, all students have an opportunity to learn about the jobs and careers available in the world of work. They have an opportunity to be exposed to various careers so they will be able to decide if they are interested in exploring certain career clusters in more depth at a later time. The Career Orientation Programs are not aimed at decision making, but at providing all students with an opportunity to become exposed to as many different kinds of jobs and careers as possible over a one-year period.

The Career Exploration Program at the eighth and ninth grade levels is a logical next step following the career orientation in that it provides all students with an opportunity to explore some job cluster area: Construction and Manufacturing; Power, Transportation, and Service Occupations; Business, Office, Clerical and Sales; Home and Community Services, and Health Occupations.

The industrial arts, homemaking, and business education courses are a part of the regularly scheduled curriculum at junior high school level, using regular practical arts facilities to implement the program. Four of the five junior high teachers in the exemplary program in Tulsa were on an extended day, teaching an extra hour to offer the orientation and exploration occupations program.

Enrollment in the two junior high school programs was: Horace Mann, Home, Community, and Health Occupations 16; Construction, Manufacturing, Power and Service Occupations 16. Roosevelt, Home, Community and Health Occupations 16; Construction, Manufacturing, Power and Service Occupations 15; Business, Office, Clerical and Sales Occupations 38, in three classes (10, 13, 15). Lowell, closed June 1, 1971.

Each of the instructional areas has hands-on experiences in a number of occupational clusters.

Home, Community and Health Occupations: Learn to operate a sewing machine, make skirts and blouses, learn to use scissors properly, set up a laundry unit, and other hands-on experiences. Actual experience in preparing and serving food, improve grooming and develop personality,

study job application techniques. Child care and home nursing activities are explored. Field trips to local utilities for demonstrations of laundry unit and food preparation methods.

Construction, Manufacturing, Power and Service Occupations: Carpentry, build model houses; masonry, build cement blocks and stepping stones. Construction of dog house. Build concrete forms, trim sidewalks, mow school grounds, cultivate around trees, hedges and shrubs. Line production activities, service and repair of small engines, and small appliance repair. Field trips to construction sites, industrial plants, and service installation.

Business, Office, Clerical and Sales Occupations: Practice using a typewriter, learning shorthand, filing, receptionist activities, using cash register, making out sales slip, using selling techniques, etc.

All of these students receive opportunity to obtain social security cards, work permits, and health cards for service occupations.

More detailed information on each of the five teachers and programs of the two junior high schools can be found in the Appendix, page 87, under Summary of Activities.

Materials used were developed by Tulsa teachers in summer workshops and in monthly meetings during school year. Some units developed at State level have been used at junior high level. For a complete list of the locally developed units and the units developed by our state department of vocational and technical education, see Appendix, page 112.

Senior High School: Cluster and Skill Training - Grade 10

The students are now given an opportunity to become selective. Some of them might select job preparation programs that are offered through regular vocational education and cooperative vocational education programs. Others may prepare themselves for college and become prepared through the academic, baccalaureate degree route. Others may find that they need additional experience and an opportunity to become adjusted to jobs. These students select, then, special needs vocational education programs such as this one offered in Central High School.

The skill training phase of the program is under the direction of vocational education teachers. The program is designed and schools designated so that students will feed from elementary school to junior high school and into this program at high school level.

This two-semester, two periods per day, program will be devoted to some skill training in a cluster selected by the student as a result of his previous experience in the exemplary program. The counselor is a key person in the success of the student and the program.

Two vocational teachers are handling three two-hour sessions each day. Enrollment: girls, three sections, 13, 15, 11 = Total 39; boys, three sections, 9, 17, 15 = Total 41.

Materials were developed by Tulsa teachers in the summer workshop and monthly meetings during school year. Teaching units were designed for particular classroom use. See Appendix, page 112, Bibliography of Locally Produced Curriculum and Instructional Materials for a complete listing of available units.

Activities successfully used in these programs are listed. Industrial Arts: house plans, drawing a set of plans making the front and side elevations, wall section, laying shingles on roof; taught use of drafting tools, hand tools, and power tools; build a one-room house in shop. Guest speaker who owns own company emphasizes importance of being on time, doing good work, and loyalty to employer. Homemaking and Sewing Services: make patch-work pillows, macreme belts, crocheted rings, sell work. Grooming and Personal Development: field trip to Merle Norman for facials, demonstration of straightening black's hair, modeling demonstration by Sears fashion coordinator. Other field trips made to Sky Chef and Bryan's Infant Wear. Assembly line production of garments observed and experienced in classroom training. Students given opportunity to take Vocational Test by Department of Defense.

More detailed information can be found in Appendix, page 80, on these two programs at Central.

Senior High School: Cooperative and Regular Vocational Program
Grades 11-12

After students have completed their cluster skill training at the tenth grade level, they go into either regular cooperative or all day vocational programs in the local high school or the area vocational school. Many of these students who might not have succeeded in the regular program under normal conditions might now, because of their participation in these exemplary programs through grade 10, be ready to move into the mainstream of vocational students. One of the aims of this program is to prepare students for success in the traditional training programs or on the job.

Complete information on the full programs available in the Tulsa Public Schools is given in "Implementing a Program of Vocational-Technical Education in the Tulsa Public Schools."

Senior High School: Cooperative Vocational Programs - Grades 11-12

These programs include Distributive Education, Diversified Cooperative Training, Cooperative Office Education, Agri-Business Cooperative, and Home Economics Job Training Cooperative. They are high skill in nature and include skill and technical related instruction within the school coupled with job training plans and on-the-job supervision and coordination. In addition to these programs, many high skill programs include cooperative placement of students during their last semester prior to graduation and entrance to the world of work.

The exemplary cooperative program may be made available to students who still may not be able to compete in a regular program. Built on the Cooperative Education concept, but offering a wider variety of training opportunities, this semi-sheltered work experience program would provide closely supervised on-the-job experiences in a number of training areas. Managers and supervisors would be used who have an understanding of the special problems of working with slower students. A plan in which an experienced person is encouraged to sponsor a trainee is in operation. The coordinator of these programs is sensitive to students' needs and employers' problems. The success of this phase will depend on the ability of the coordinators to convince businessmen to become a part of the training team for these most needy students.

Senior High School: Supplementary Training Programs - Grades 10-12

A number of short term intensive training programs developed to supplement the four phases of integrated vocational programs. They are directed to meet the needs of two populations: (1) Those who drop out of school without a salable skill, and (2) those who are near graduation and have not been exposed to vocational training.

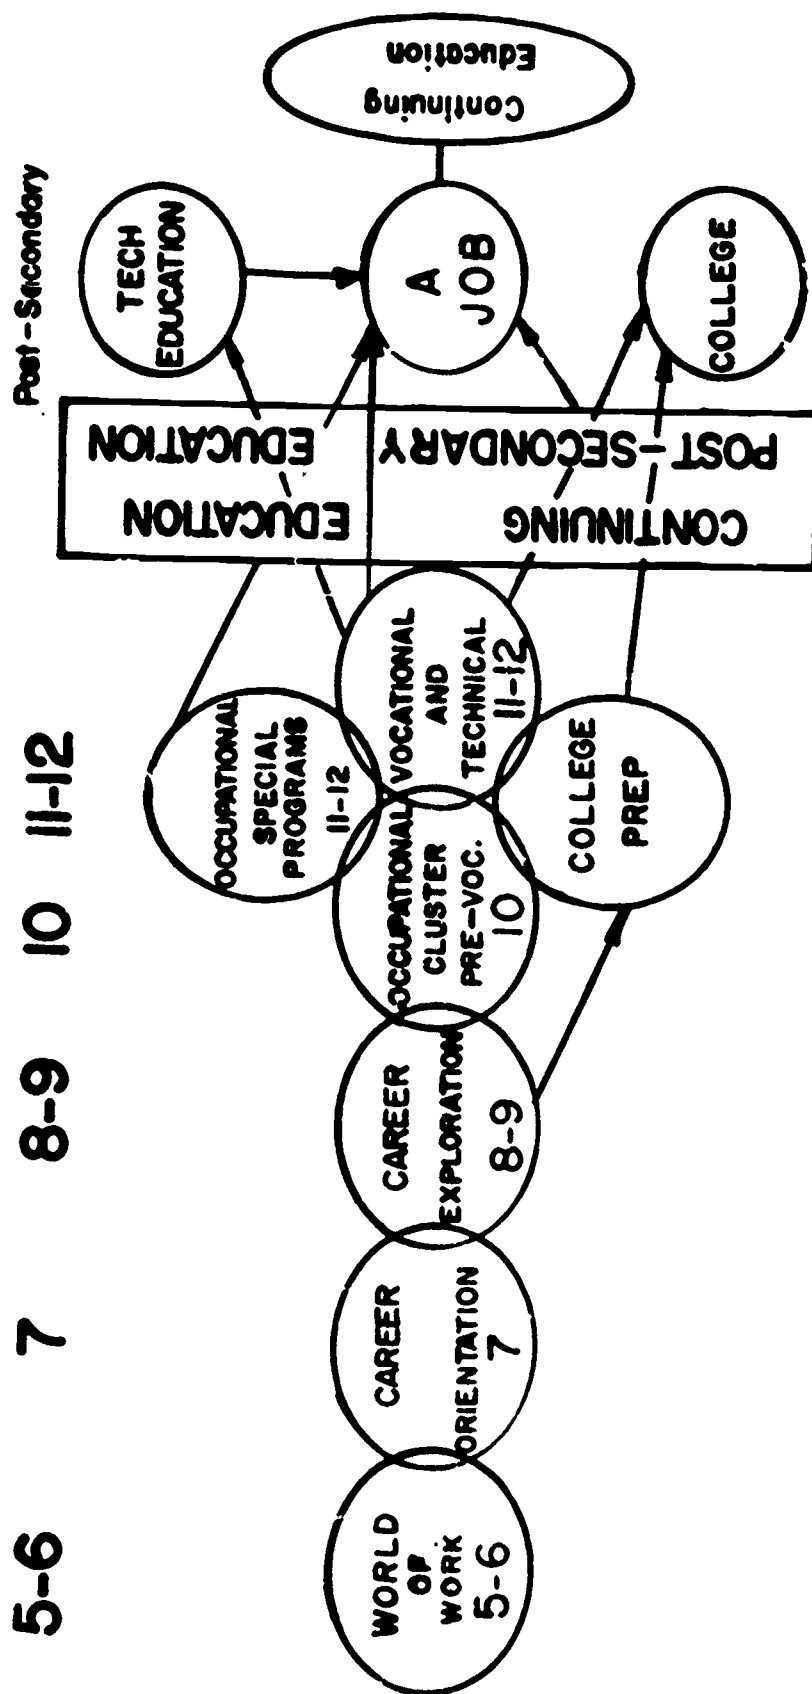

An intensive six-weeks skill training program may be offered at a high school, an area school, or skill training center, for students who failed to enroll in school following the summer vacation. Students for these programs would be recruited through school records, local employment offices, and publicity from available news media--particularly through radio and television spot announcements. Programs offered are based on student desires for training in critical skill areas where successful completion will lead to immediate employment. If there is a demand for them, a second series of programs could be offered in the spring for those who drop out during the school year.

A one-semester program may be offered to graduating seniors the second semester. This program would be only for those seniors who have not previously obtained vocational training. The program would incorporate the State required English course into a full-time vocational program held six hours daily. It would combine skill training in special public school classes with on-the-job training during the last nine weeks. The program would be offered in areas of critical demand by business and industry. An additional two-month summer program may be offered to graduated seniors in July and August if a demand is warranted.

Refer to page 13 for the CAREER DEVELOPMENT CONTINUUM. It will be noted that students are involved in the elementary education World of Work program integrated as a part of the fifth and sixth grade curriculum. It will also be noted that at the seventh grade level, the students will have the opportunity to observe jobs and careers broadly in regular practical arts courses.

This exemplary program has been developed so that it is equally as applicable to students who may enter a career at the highest level, as well as those students who may enter semi-skilled jobs. Programs are designed so that no commitment is made at the elementary world of work or career orientation level, but rather that students as a part of their regular educational program will become involved in career oriented activities so that they will see education as a part of the preparation for life and work, rather than apart from it. The career exploration facet is again for all students and is developed at a depth whereby students can explore and learn in detail about certain job cluster areas that they may have been exposed to earlier. The purpose of this facet of the career development continuum is to help youth gain the necessary experiences and understandings that will help them make a more accurate decision concerning their vocational goals. Their vocational goals may lead them toward enrollment in vocational education job preparation programs at the eleventh and twelfth grade levels, or it may direct them toward the vocational preparation programs offered at college level. In all cases, students progress through the career development continuum toward a job or career. In some cases, youth would enter a job immediately upon graduation from high school. In other cases, they might enter the job upon graduation from a technical school or a college.

D. RESULTS AND ACCOMPLISHMENTS

The thrust of career education has been well received by our community, our educators, and our young people. High interest in our programs would indicate early success being accomplished at all levels: elementary, junior high, and senior high.

- I. Programs have been established in eight elementary schools, one of which closed at the end of 1971-72 school year. None of these programs lost any enrollment during the year; enrollment was added all through the year indicating that those students participating were well pleased and wanted others to have the same opportunity. This also indicated that the counseling efforts have been well directed.
- II. Full orientation programs have been developed in three selected junior high schools, one of which closed at the end of the 1970-71 school year.

Exploratory rotation programs in industrial arts, home economics and business education have been operated for fourteen junior high schools.
- III. Skill training in construction programs and home and community service programs has been fully implemented in the high school serving the elementary and junior high schools in which exemplary programs, orientation and exploratory programs were given. This skill training offered for tenth grade level students is serving this student population very well. More students can be absorbed into the program as the students progress through our school system to this level.
- IV. Eleventh and twelfth grade students receive either cooperative or regular vocational training in the high school programs. The student has a wide choice of programs in both regular high school programs and specialized programs in the area vocational center.

Effective instructional programs for the population involved have been developed in monthly meetings involving teachers, principals, counselors, consultants, supervisors, and coordinators. These monthly meetings were held on Saturdays; some called meetings were held on weekdays as needed.

A three (3) week workshop was operated for teachers and staff in the Exemplary program during June. With the aid of AMIDS staff personnel and the curriculum personnel from the Oklahoma State Department of Vocational and Technical Education, the teachers developed their own teaching units for implementation into the programs.

Through these summer workshops and special group meetings, teaching units have been developed, field tested, revised, refined, and validated in actual classroom presentations. Some of the most valuable revisions have developed from the Saturday group meetings. See Appendix, page 112, for a complete list of units developed locally and at our State level.

E. AN EVALUATION OF OKLAHOMA'S EXEMPLARY VOCATIONAL EDUCATION AND OCCUPATIONAL ORIENTATION PROGRAM, TULSA PUBLIC SCHOOLS

Considering all the problems involved with late funding, the recruitment of new staff, and the initiation of a new comprehensive program, the

progress made by the Tulsa administrators and teaching staff in connection with the exemplary program during the 1970-71 school year is very commendable. It is hoped by the evaluators that the recommendations which follow will be carefully considered by policy makers at all levels regarding the future operation and improvement of this program. The program, in the judgment of the evaluators, has many strengths as well as several components which need improving. Many specific recommendations are made obvious by a review of Section IV of this report, and are therefore, not repeated here.

On the basis of the findings of this evaluation effort, the authors of this report recommend that:

1. Funding of the program should be continued for another year.
2. The program be expanded gradually to include other schools and other students. Although the work being done with disadvantaged youth in this program is excellent and undoubtedly ranks a high priority, the evaluators feel that many students in addition to those classified as disadvantaged could benefit greatly from the program. If finances allow, it should be made available to all students who are interested.
3. A full-time program coordinator and the necessary support staff be employed as soon as possible to give strong leadership to the program. In spite of tremendous efforts on the part of the regular administrative staff, more time and resources must be given to overall coordination and planning of the program.
4. At least three vocational counselor coordinators be employed as soon as possible to assist the teachers and help coordinate the total career development program. The program objectives could be implemented more effectively and completely with the additional staff as originally specified. Ways to achieve closer cooperation between the regular counselors and teachers are also needed.
5. All objectives of the exemplary program be carefully reviewed by the total exemplary program staff to determine both their appropriateness, and to state them in more specific and measurable terms. This effort would help the teachers to better know where they are headed and would make future program evaluations easier.
6. More consideration be given to developing a better integrated program at all levels, K-12. Attention should be given to extending the program downward into the lower elementary grades so as to provide continuity in the career development program, from career awareness at the elementary level to career preparation at the senior high level. Better coordination and integration of efforts is especially needed at the 7th, 11th and 12th grade levels. Teachers at those levels should be involved in all inservice training meetings and workshops.
7. Advisory committees be established to help plan and evaluate the program at all levels. Nearly all the teachers indicated this element was missing - but needed. Such committees would also provide an excellent way to involve more parents, employers, and

- employees in the program.
8. Some type of occupational interest clubs be established for students in grades 7-10. Most of the teachers at this level reported this activity as missing - but needed and such clubs would provide an excellent vehicle for helping with the many aspects of student self-development.
 9. Participation in the exemplary program, in so far as it is possible, should be voluntary and open to all students desiring it.
 10. The intensive training component as called for in Objective #5 be implemented and combined with a strong commitment to place all participating students in either further schooling or employment.
 11. An effort be made to schedule more of the elementary special interest club meetings during the regular school day. These teacher-sponsors should also be provided adequate preparation time and help in locating and contacting resource persons.
 12. The "big brother" craftsman system be implemented and given a serious trial at the senior high level.
 13. Efforts to inform the entire professional staff and the Tulsa community about the exemplary program be continued and expanded.
 14. Continued attention be given to conducting regular exemplary program staff meetings for purposes of coordinating efforts and inservice training of staff. The development of appropriate instructional materials during these meetings and the summer workshops should also be continued.
 15. The independent evaluation agency and team members, employed to conduct the second year and future evaluations, be contacted early in the fall so as to allow more time for planning and conducting all appropriate activities including the collection of pretest data.

F. CONCLUSIONS, IMPLICATIONS, AND RECOMMENDATIONS

Tulsa has been fortunate to have other programs of Special Vocational Education that have made it possible for us to implement similar programs in eleven (11) additional junior high schools. Curriculum being developed for the eighth and ninth grade students is being used both in the Exemplary and CVET program, making a total of thirteen (13) junior high schools.

The staff concerned with the Exemplary project in Oklahoma (Tulsa) will continue to work toward the implementation of all facets of the project as originally written, or as amended and approved. It is our feeling, considering a late start and with only one year of operation,

considerable progress has been made. We will continue to work toward meeting the objectives of the project as written, amended and established.

Emphasis is being given to coordinate the curriculum of the elementary fifth and sixth grades with our after school career (World of Work) clubs.

An effort is being made to develop instructional materials that include hands-on experiences and activities that will relate to a broad occupational clusters and families.

We plan to add one 2-hour block of time at Horace Mann Junior High School for students in Business Education laboratory (if facilities are available and enough interest shown). This will be on an extended day basis.

A proposal to include Career Education as the overall goal of a planned middle school, along with a unified (practical and fine arts) approach in the curriculum has been made. Interest in developing in the Career Education concept or approach and those in the Exemplary, Practical Arts and Vocational Education programs plan to give leadership to this effort.

We are recommending the continuation of this program, with added effort on all objectives and at all levels.

Short term occupational offerings to second semester seniors is scheduled for March 15, 1972. Remedial work at our Instructional Media Center at the Vocational-Technical Education Center is to be done for pre-apprentices, first and second year apprentices who have deficiencies in related and applied math.

Many good and new techniques are being developed and tested in the Special Vocational Program (Exemplary).

A brochure to be developed giving explicit information on the program to help in publicizing the educational opportunities available through this effort.

Detailed procedures for evaluating and reporting quarterly and annually will be established.

Visits from the staff of the U. S. Office of Education (Exemplary), the Regional Office, the State Department Office, and the Evaluation Team will be anticipated and encouraged.

Plans are underway to activate the Advisory Committee.

APPENDICES

ABSTRACT

Title: An Exemplary Comprehensive Occupational Orientation,
Vocational Education Program for Selected Oklahoma
Schools

Project
Director: Ralph Dreessen

Applicant
Organization: Oklahoma State Department of Vocational-Technical
Education

Duration of
Project: May 1, 1970 to April 30, 1973

Total Federal
Funds Requested: \$498,33

The major objective of this project is to develop an exemplary "total" school approach to meeting vocational education needs for disadvantaged and other youth who have not previously received benefit from vocational training. The program will provide elementary school vocational orientation, junior high school vocational orientation and exploration, 10th grade cluster skill training, 11th and 12th grade cooperative training for disadvantaged, senior intensive job training, and dropout intensive job training.

Exemplary features of the project include: Vocational interest clubs at the elementary level, "on-hands" skill training and exploration at the 10th grade level in a cluster of occupation, and intensive skill training for last semester seniors who have had no vocational training before.

The program will exemplify the impact a total program can have on the youth, their teachers, and the community. Each segment of the program will be followed logically by a greater "in-depth" program which, all working together, will culminate in youth with salable job skills. It will also show the positive effects of research as alternative methods based on related research are established in the program.

The cluster concept will emphasize the broad scale of opportunities which exist in all of the occupational areas. None of the programs will be terminal although each of the training phases will prepare students for job entry at some level. The related education so necessary to advancement will be presented in the most acceptable form in order that the student may have every opportunity and inducement to move up in his chosen occupation. The occupational orientation phases, as well as the training phases of the program, will speak strongly to the wide range of opportunities which are achievable for the student who aspires to excel. This concept of advancement and excellence in whatever the chosen occupation will be emphasized.

The section of the proposal relating to student selection will illustrate the program concept of determination to serve those students who have been most poorly served in the past. Students with learning difficulties, students disoriented from education, students of limited experience and background are the people for whom this program is especially designed. To make education real and meaningful for those needing it the most will be the aim of this project.

To summarize, this program will be designed to avoid or correct the problem of meaningless schooling for those students not equipped for or interested in the traditional tract of academic education. A second alternative to occupational stability and life satisfaction will be presented in the form of a comprehensive, integrated program of exploration, guidance, training and experience.

Description:

The purpose of this exemplary project is to demonstrate a vertically integrated scope and sequence of vocational training for disadvantaged and previously unserved students from grades 5 through 12 in a comprehensive urban school system.

The total integrated program, grades 5 through 12, is aimed at meeting vocational training needs for disadvantaged and other youth who have not previously been served. The program will exemplify the impact a "total" program can have on the youth, their teachers, and the community. The administrative organization, listed on page 12, shows the seven programs involved. Each segment of the program will be followed logically by a more sophisticated segment which, all working together, will culminate in youth with salable job skills.

Administration

This program will be under the general administration of the State Director of Vocational-Technical Education for Oklahoma. The State Chairman of Exemplary Programs will serve as interim director of the project until a qualified State Coordinator can be selected. The state coordinator will be selected before June 1, 1970. Within each selected school district, a Local Coordinator of Exemplary Programs will be directly in charge of the training. An Advisory/Evaluation Committee will be formed to work with the local coordinator on all phases of program development and evaluation. This Committee will represent the following groups: local administration, vocational teachers, general education teachers, businessmen, state vocational staff, State Advisory Committee, and State Board for Vocational-Technical Education. Consultants from the Research, Planning and Evaluation Division of the State Department will work with project personnel to insure inclusion of the research and research related materials to be exemplified in the project.

The Oklahoma Center for Continuing Education, University of Oklahoma, has submitted a proposal for an exemplary program entitled "Staff Training for the Development of Exemplary Programs for Handicapped Youth Utilizing a VTE Team Approach." If this proposal is approved for funding the State

would depend on this project for the training of counselors and teachers to more effectively work with disadvantaged students.

A local Coordinator of Elementary Vocational Clubs will direct the activities of the interests clubs which will be sponsored by local businessmen or craftsmen, parents and teachers, and students from advanced vocational training programs who will work on a volunteer basis.

Industrial Arts and Home Economics teachers will be responsible for the exploratory program at the junior high level under the direction of the Local Project Coordinator with the assistance of vocational teachers and counselors. Vocational teachers will provide intensive training at the tenth grade level in a cluster of occupations in order to prepare students for job entry into the exemplary cooperative program or the regular vocational program in the local or area school. The exemplary cooperative program will be under the direction of coordinators who will work with businessmen, supervisors, and craftsmen in on-the-job training programs. Vocational teachers will be in charge of the intensive training programs for late entrants to vocational education. Advisory groups made up of persons with broad knowledge by cluster areas will assist vocational teachers with course content and training methods. Selected skilled craftsmen will be hired on a part-time basis to supplement the training of the vocational teacher and to give a realistic approach to the training of the vocational teacher and to give a realistic approach to the training being given. These craftsmen will also be available to other levels of the program for consultation or resource assistance.

Vocational instructors, skilled craftsmen, as well as counselors will be available to assist with supplementary training programs. These programs will be flexible in order that the varying needs of disadvantaged and handicapped students may be met.

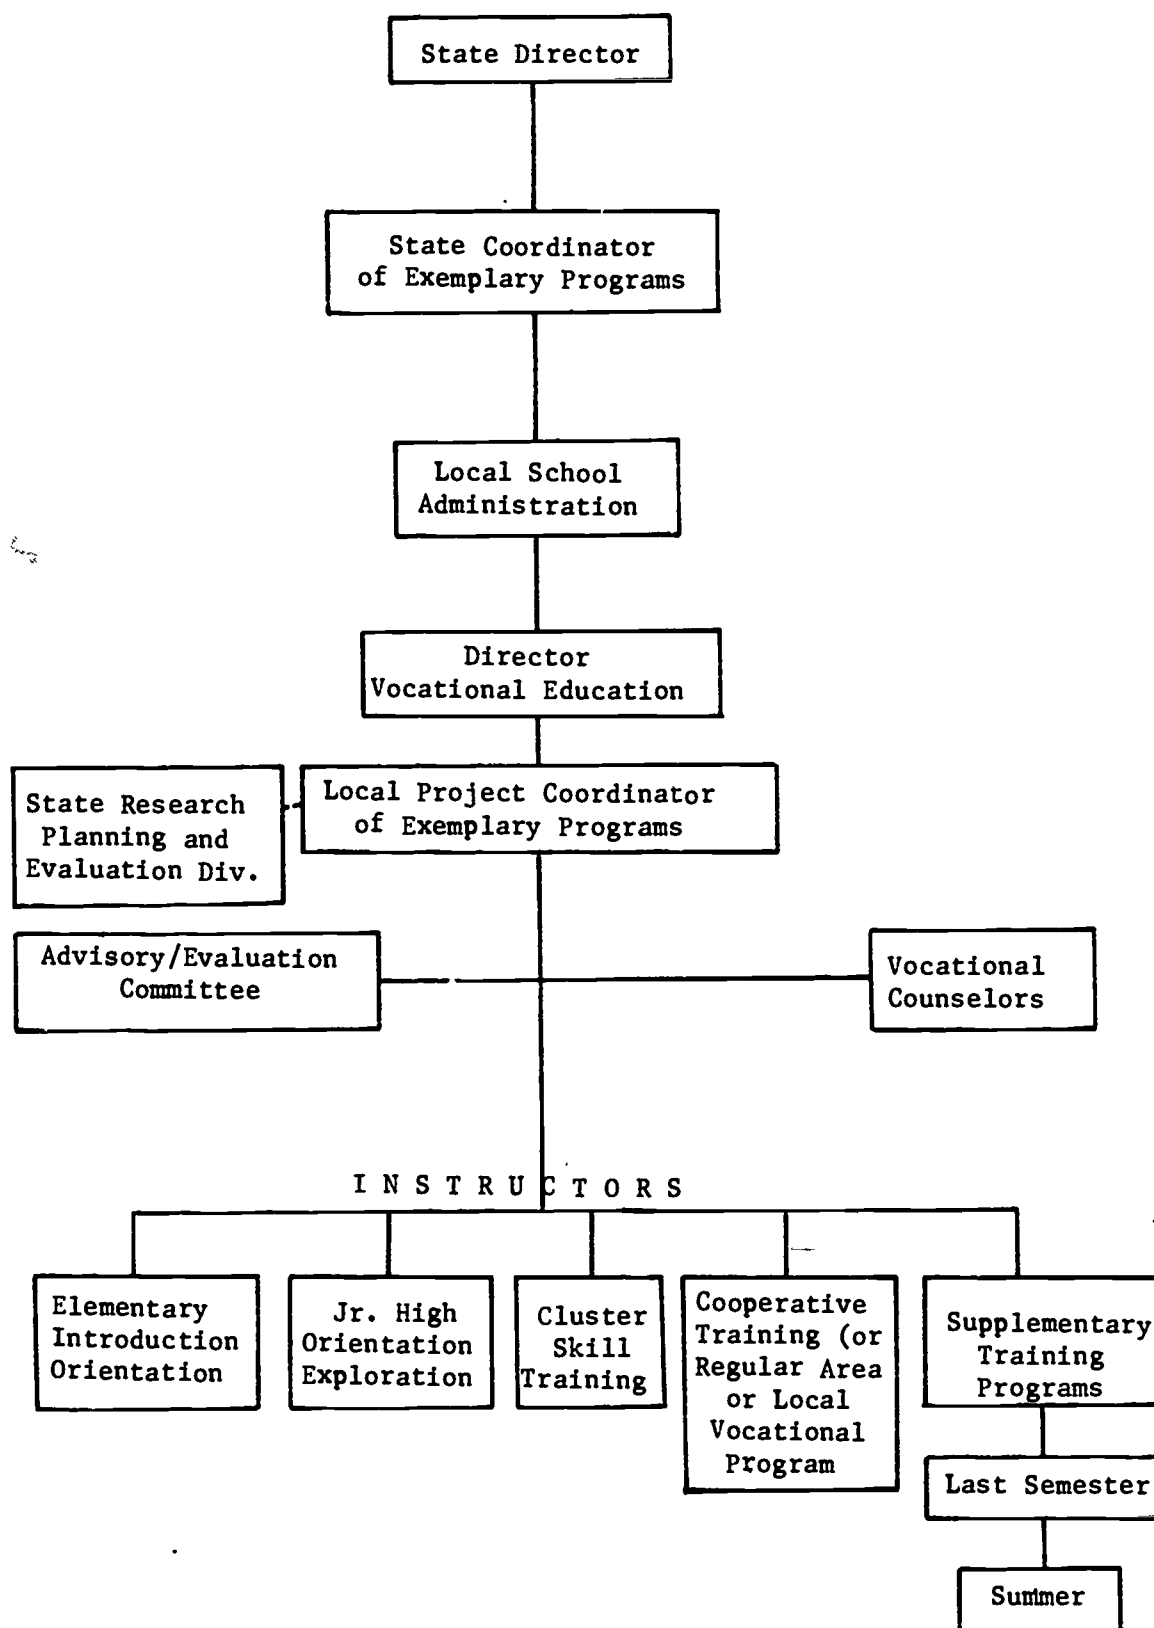

A team of vocational counselors will be working under the direction of the local coordinator and available to teachers and students at any of the levels of the program.

Procedures:

The proposed exemplary program will pull together the best educational and training procedures that can be found in research and experimentation reports in a concentrated effort to break the school reaction syndrome which has limited the effective preparation of youth for work. The uniqueness of this program is the integrating of what has up to now been a rather spotty approach to vocational orientation, exploration, training, experience and placement. This program proposes to combine in one school system, with one segment of the student body all of the best we know about vocational direction and preparation.

- (a) General Design: The general plan of this project is based on the assumption that children can be prepared to more effectively choose an occupation and can be more properly trained for that occupation through a program which moves logically through the decision making and learning phases from elementary through high school to on-the-job performance. This elementary school through high school approach

ADMINISTRATIVE ORGANIZATION FOR OKLAHOMA EXEMPLARY PROGRAMS

with specific goals and assignments for each phase should allow the stated objectives to be met and the system to be checked segment by segment to determine the most appropriate sequence of experiences. This built-in correction factor should assist in program evaluation and improvement.

Phase I. Elementary School--Introduction and Orientation to Occupations

Special interest clubs built on the Extension Service concept will be the heart of this phase of the program. A Vocational Club Coordinator will be employed to plan and supervise the overall operation of the program. Clubs will be formed around the interest of 5th and sixth grade students in such areas as electronics, horticulture, cooking, drawing, etc.

Phase II. Junior High School Orientation and Exploration of Occupations

This phase of the integrated program will depend on a revision of the program of the industrial arts and home economics teachers at the 8th and 9th grade levels. A career orientation course will be offered in the 7th grade in the two selected junior high schools. Cluster explorators experiences will be provided 8th and 9th grade students in industrial arts and home economics programs. Each student will have an opportunity to explore through actual work experiences a number of career clusters during the three years he is in the program at this level. These work experiences will be provided on a rotating basis on work stations which, as nearly as possible, simulate actual tasks performed on the job.

Cluster Concept

Selection of clusters will depend on the occupational demands of the community and the state and the desires and abilities of the students. A suggested list of clusters, a breakdown of the job titles and demand data for two clusters, and a prospective list of teaching materials for two clusters is to be found on page 34 of the proposal.

Phase III. High School (10th grade)--Skill Training

The skill training phase of the program will be established in one selected high school and will be under the direction of vocational education teachers. The program is designed and school designated so that pupils will feed from elementary school to junior high school and into this high school program. This will mean that students entering this program at the tenth grade level will have had the introductory and exploratory experiences described in the preceding phases. This two semester, two periods per day program will be devoted to skill training in four of the jobs in a cluster selected by the student as a result of his previous experiences in the program. At the outset, before the first feeder programs have been completed, most careful counseling will precede each student's selection of a cluster.

Phase IV. High School (11th & 12th grade)--Exemplary Cooperative and Regular Vocational Program

After students have completed their skill training at the tenth grade level they will either go into the regular vocational program in the local high school or the area vocational school.

Phase V. High School (Grades 10-12)--Supplementary Training Programs

A number of short term intensive training programs will be developed to supplement the four phases of the integrated vocational program. They will be directed to meet the needs of two populations: (1)

Those who drop out of school without a salable skill, and (2) those who near graduation and have not been exposed to vocational training.

A one-semester program will be offered to graduating seniors the second semester. This program will be only for those seniors who have not previously obtained vocational training. An additional two-month summer program will be offered to graduated seniors in July-August if a demand is warranted.

Few, if any, private non-profit schools will be within the boundaries of the participating school areas. However, the following services will be publicized and offered on request to any such school:

1. The Vocational Club Coordinator will be available to help form clubs.
2. Materials for the 7th Grade orientation will be available and workshops relating to the course will be open to teachers.
3. Participation in the dropout program will be especially encouraged and school records will be requested that prospective students may be contacted.

It is anticipated that not more than 10 percent of the students in the program will be from non-profit private schools.

Methods and Materials

Elementary School: The basic guide will be, "A Guide for Developmental Vocational Guidance, Grades K-12," Oklahoma State Department of Education, (1968). The success of the 4H Club concept is well-known. There is reasonable expectation that it will serve well in vocational areas, although it may not have been tried before. Vocational guidance curriculum materials developed by Abington School District, Pa. (ED 022 219) will be used in classroom activities to show students the processes through which career decisions may be made.

Junior High School: During the summer of 1969, the Oklahoma Research Coordinating Unit sponsored a workshop to develop a tentative guide in career exploration. The workshop, directed by Murl Venard, Assistant Director of State Department Guidance and Counseling Section, resulted in publication of "Career Exploration, A Tentative Guide for Teachers." The Guide is being used during the 1969-70 school year in approximately 50 schools widely spread across the State. A workshop of participating teachers will be held during the summer of 1970 to revise the Guide and complete the resource sections. It will be published before 1970-71 school year and will be the basic guide for seventh grade classes. ED 010 013 lists clusters for 8th and 9th grade home economics based on a rationale that "among the most important were technical skills involving cooking, sewing, health care, home management, and child care."

At the 10th grade level, job simulation materials such as those developed by Krumboltz (ED 015 517) may be used to augment "hands on" experiences.

A modified design based on the type developed by the New Careers Development Center (ED 020 424) will be useful in the short term intensive training programs. This will force selection of critical needs areas for

skill training where a large number of employment opportunities are assured.

Intensive counseling throughout all phases of the integrated program and after job placement is supported by many documents. Particularly innovative to Oklahoma would be the low ratio of students to counselors and counseling following training or counseling on-the-job.

Evaluation

Several evaluative procedures will be used to assist in determining the extent to which the project is reaching its objectives. The Advisory Evaluation Committee described in the Administration section of this proposal will formally review the work of the program each year and will issue an evaluation report. Teachers and administrators involved in the project will be asked to provide a report which stresses evaluation and suggested improvements. Data on school attendance, academic and vocational achievement, numbers entering vocational or cooperative programs, job placement, employer and employee satisfaction will be compiled to assist in evaluating the program.

A staff member from the Division of Research, Planning and Evaluation of the State Department of Vocational-Technical Education will assist state and local leaders of exemplary programs with evaluation procedures.

Coordination and Dissemination:

The purpose of developing this project in two different school districts (only one school district established) is to manage (at the State Level) the activities of the program in line with the State plan for Vocational Education. If other similar programs are developed in other states, every effort will be made at the State level to cooperate and coordinate activities for the best exemplification of the total system approach to meeting needs of the disadvantaged and unserved youth of our public schools.

Results of the project will be disseminated within the State by visitation to the programs, regular reports distributed through the State Department, and Seminars conducted by the school district and State Department. The final report will include all materials developed by the program or make reference to materials used in the program.

Re: Proposal Number
0-361-0123

Dear Mr. Killian:

Our reviewers have completed a thorough examination of your proposal entitled "An Exemplary Comprehensive Occupational Orientation, Vocational Education Program for Selected Oklahoma Schools." Their summary comments are as follows: "This is generally a well-planned and well-written proposal. With a few modifications it could become a fine project. State sponsorship of the project will facilitate diffusion to other school districts." They believe that if the following modifications were made, the proposal could be recommended for approval and funding:

1. Reduce the Federal column of the budget to \$107,252 per year. This is the FY 1970 amount available to Oklahoma under Section 142-c of Public Law 90-576.
2. Concentrate on one pyramid of five or six elementary schools, two junior high schools, and one high school; do not try to operate in two different school districts. With only \$107,252 of Part D funding to work with, concentration will be necessary to achieve the desired results.
3. Designate the exact geographic location where the project will be conducted. The selection criteria for a site, as outlined in the proposal, are very good. The criteria should be applied, the site should be selected, and a description should be provided of the personnel and facilities available at the location which is chosen.
4. Explain the provisions for carrying the program on with support from regular funding sources after the termination of the Federal assistance under Part D under P.L. 90-576. (This is in accordance with requirement No. 5 on page 2 of Policy Paper No. AVL-V70-1, a copy of which is enclosed herewith.)

Page 2 - Mr. Killian

5. Describe the steps which will be taken to insure initial placement of all students at the completion of their schooling. In its present form the proposal makes strong provisions for intensive occupational guidance and counseling, but is not explicit about the placement function. (This item is related to requirement No. 4 on page 2 of the enclosed policy paper.)

Your assistance in providing us with modifications and additional information will be most helpful in expediting a final recommendation on your proposal. We would suggest that you prepare an addendum to your original proposal, which would be labeled "Addendum to Proposal Number 0-361-0123" and which would cover the five points specified above. The addendum should be submitted to us in thirty copies, and we will attach the addendum to the original proposals.

In preparing the addendum, your staff members might wish to consult with Mr. William Cummins in the U. S. Office of Education's Regional Office in Dallas. In addition, my Branch will be glad to assist your personnel in developing the addendum, either by telephone discussions, by reacting to draft materials which you might mail to us, or possibly by and exchange of visits.

We believe that, upon receipt of a satisfactory addendum from you, we would be in a position to recommend your proposal for approval by the Associate Commissioner. We hope, therefore, that you can send us an appropriate addendum at an early date. If I can be of assistance to you and your staff in accomplishing this, please let me know.

Sincerely yours,

Albert J. Riendeau
Chief, Pilot and Demonstration Branch

August 5, 1970

Dr. Albert J. Riendeau, Chief
Pilot and Demonstration Branch
Department of Health, Education,
and Welfare
Office of Education
Washington, D. C. 20202

Dear Doctor Riendeau:

This is an addendum to Proposal Number O-361-0123. The five suggested items in your letter dated June 25, 1970, have been reviewed and corrected according to your instructions:

1. The budget for Fiscal Year 1970 will be \$107,252 which is the amount available to Oklahoma under Section 142-c of Public Law 90-576. (Budget for Fiscal Year 1971 is enclosed.)
2. The five elementary schools--Pershing, Irving, Riverview, Johnson and Longfellow, and Jefferson; two junior high schools--Roosevelt and Horace Mann; and Central High School will be involved in this exemplary program for Fiscal Year 1970 through Fiscal Year 1973.
3. Tulsa, Oklahoma, Public Schools have been designated as the schools for the state exemplary program. All of the schools are located in the same geographical area of Tulsa, and the area is highly populated and well represented by minority races.
4. At the termination of federal assistance under Part D under P.L. 90-576, this program will be carried on through cooperation of the Tulsa Public Schools and the State Department of Vocational and Technical Education with the use of regular funds and funds that are available for this program.
5. The full-time coordinators for programs for student instruction in this program will be responsible for the placement of students after their schooling. Also, additional State personnel will assist in the placement of these students and provide occupational guidance and counseling to help in the placement of students receiving such training. Business and industry in Tulsa and the immediate areas have been surveyed and known placement opportunities exist for students receiving vocational training. The

Dr. Albert J. Riendeau

Page 2

August 5, 1970

Oklahoma Employment Security Commission has determined the demand occupations and this project will train persons to meet these special needs. The Employment Security personnel will assist in specialized placement, and the vocational instructors in this program and the state industrial coordinators of the area will assist in job placement of vocationally trained persons.

An independent comprehensive evaluation of the program will be provided each year. The evaluation team will be composed of educational and industrial leaders who are not otherwise associated with the State Department of Vocational and Technical Education or the Tulsa Public Schools. The team will be selected by the State Coordinator of Exemplary Programs and the Local Director of Vocational and Technical Education with assistance of the Advisory Evaluation Committee.

The local directors of vocational and technical education, the administrators of the Tulsa Public School System, and the instructors are highly motivated and interested in this project. Many programs now under way are pointing to the implementation of this statewide Proposal Number 0-361-0123.

We respectfully request early approval of this project in order to implement this program in the Tulsa Public Schools during Fiscal Year 1971 through Fiscal Year 1973.

Yours very truly,

Byrle Killian
Assistant State Director
Vocational and Technical Education

Mr. M. J. Ruley, Director
Vocational and Technical Education
P. O. Box 45208
Tulsa Public Schools
Tulsa, Oklahoma

Dear Mr. Ruley:

In keeping with our conversation sometime ago, this letter confirms that the State Department of Vocational & Technical Education will honor an increase in salary schedule as show on the addendum as approved for the Exemplary Program in Tulsa.

<u>Category</u>	<u>Original</u>	<u>Changed to</u>
1. Local Coordinator of Exemplary Program	\$10,000	\$11,000
2. Vocational Counselor for 6 Elementary Schools	8,000	9,750
Vocational Club Coordinator for Elementary Schools	8,000	
3. Craftsmen or Consultants or teacher orientation, 50 days @ \$50/day	2,500	3,300
4. Vocational Counselor for 2 Junior Highs	8,000	9,500
5. High School Vocational Counselor	8,000	9,500
6. Travel and Per Diem - Local Coordinator, Counselor, club coordinator and buses for field trips	400	1,000
7. Other Direct Cost Evaluation and Report	4,000	4,850

Sincerely,

Ralph Dreessen, Chairman
Exemplary Committee

RE: Project Number 0-361-0123
Contract Number OEC-0-71-0530(361)

December 20, 1971

Dr. Sidney C. High, Jr., Chief
Exemplary Programs and Services Branch
Department of Health, Education and Welfare
Washington, D. C. 20202

Dear Dr. High:

Please find enclosed five (5) copies of the line item budget, with explanations and description of original budget line items, as related to the 1971-72 line item budget request for the second year. The layout of the line items as requested in the 1971-72 budget by the Tulsa Public Schools to the State Department of Vocational and Technical Education, was done so that our account system, as followed at the local and state level, are compatible.

The following notes relate to questions that Nancy Rhett had concerning details on items such as instructional supplies and materials, maintenance of instructional equipment and equipment under capital outlay. See attached sample listing of items, as well as requisitions issued at the local level or through the State Department of Vocational and Technical Education.

We are working under guidelines established for us by the State Department of Vocational and Technical Education, purchasing items of equipment under \$25.00 at the local level and items over \$25.00, with prior approval on VE 6001, may be purchased by the State Department or by the local district.

I trust this information furnishes answers to your questions.

Sincerely,

M. J. Ruley, Director
Vocational and Technical Education

Exemplary Comprehensive
Occupational Orientation
Vocational Education Program
Tulsa Public Schools
Bulletin #1

AN EXEMPLARY COMPREHENSIVE OCCUPATIONAL ORIENTATION
VOCATIONAL EDUCATION PROGRAM IN THE TULSA PUBLIC SCHOOLS
In Cooperation With
THE STATE DEPARTMENT OF VOCATIONAL AND TECHNICAL EDUCATION

The Career Orientated Educational Program

There is a vital need to relate school and careers. Many students feel alienated from school due to the inability to understand how their educational program will help them to achieve job and career goals later in life. The acquisition of communicative skills becomes more meaningful when related to real life settings. The Tulsa Public Schools' Department of Vocational Education, in cooperation with the State Department of Vocational and Technical Education, through the implementation of some of the new facets of the Vocational Education Amendment of 1968, is committed to helping education at all grade levels become more career oriented. Exemplary efforts are being made during grades 5-12 to provide students with the opportunity to gain a better understanding of the world of work and a desire to enter it. It has been found that even at early grade levels, the quality of educational achievement in communication is enhanced when coupled to real life situations related to work and the importance of a job in our society.

ELEMENTARY SCHOOL: Introduction to Occupations (World of Work) Grades 5-6

A program in eight elementary schools designed for all children in grades 5-6 to provide a basic understanding of various occupations, to develop the attitude that all honest work is honorable, and to motivate a desire for participation in the world of work.

At the fifth and sixth grade level a method useful in occupational orientation can be copied from the successful 4-H Club practices. Special interest clubs will be formed in each elementary school with appropriate projects related to occupational information. These clubs will involve businessmen, craftsmen, advanced vocational students, classroom teachers and parents in sponsoring roles. Special interest clubs such as horticulture, electricity, wild life conservation, small engines, sewing, drafting and design, and health career clubs are types of clubs that could be organized under the leadership of teacher-sponsors and club coordinator for this activity working out a definite schedule for meetings, format for meetings, and selecting teacher-sponsors for these local clubs which will meet after school at least once each week.

The basic guide will be, "A Guide for Developmental Vocational Guidance, Grades K-12," Oklahoma State Department of Education, (1968). The success of the 4-H Club concept is well known. There is reasonable expectation that it will serve well in vocational areas, although it may not have been

tried before. Vocational guidance curriculum materials (developed by Abington School District, Pa.) (ED 002 219) will be used in classroom activities to show students the processes through which career decisions may be made. The Counselor/Club Coordinator will work with teacher sponsors and principals in helping to develop a variety of activity packages for use in developing the club activities.

JUNIOR HIGH SCHOOL: Orientation and Exploration of Occupations - Grade 7

At the seventh grade level, all students should have an opportunity to learn about the jobs and careers available in the world of work. They should have an opportunity to be exposed to various careers so they will be able to decide if they are interested in exploring certain career clusters in more depth at a later time. The Career Orientation Programs are not aimed at decision-making but at providing all students with an opportunity to become exposed to as many different kinds of jobs and careers as possible over a one-year period as offered in seventh grade.

This is a program designed to provide all seventh grade students with an exposure to the jobs, careers, and professions in the world of work. It is a regularly scheduled curriculum in industrial arts, homemaking, and business education, included at the seventh grade level. All students should gain career orientation curriculum exposure in these practical arts subjects. The emphasis is upon student activity and use of resource persons so that students gain an understanding of all jobs and careers broken into large groups according to the Standard Industrial Classification. Career orientation curriculum units are taught by the teachers in the regular subject areas, namely, industrial arts, homemaking and business education. The program utilizes parents, business, industrial and professional persons in an advisory capacity. Two junior high schools are directly involved, but an effort is being made to give added emphasis to career orientation and exploration.

JUNIOR HIGH SCHOOL: Career Exploration - 8-9 Grades

New and innovative programs in participating schools designed to provide scheduled students in grades 8-9 with information and actual on-the-job experience in clusters of occupations have been initiated.

The Career Exploration Program at the 8th and 9th grade level, is a logical next step following career orientation in that it provides all students with an opportunity to explore in depth some job cluster areas: Construction and Manufacturing; Power, Transportation, and Service Occupations; Business, Office, Clerical and Sales; Home and Community Services and Health Occupations. This exploration will provide youth with a more realistic understanding of careers and a better knowledge base upon which to project sound decisions concerning preparation for a job.

Following the career exploration at the 8th and 9th grade, students would then become more selective. Some might select job preparation programs that could be offered through regular vocational education and cooperative vocational education programs. Others may prepare themselves for college and become prepared through the academic, baccalaureate degree route. Others may find that they need additional experience and an opportunity to

become adjusted to jobs. These students could then select special needs vocational education programs.

SENIOR HIGH SCHOOL: Cluster and Skill Training - 10th Grade (Central High School)

The skill training phase of the program is established at Central High School and is under the direction of vocational education teachers. The program is designed and schools designated so that pupils will feed from elementary school to junior high school and into this high school program. This will mean that many students entering this program at the tenth grade level will have had the introductory and exploratory experiences described in the preceeding phases. This two semester; two periods per day program will be devoted to some skill training in a cluster selected by the student as a result of his previous experiences in the program. At the outset, before the first feeder programs have been completed, most careful counseling will precede each student's selection of a cluster. (Construction occupations for boys, Home and Community Service occupations for girls.) The counselor is a key person in the success of the student and the program.

SENIOR HIGH SCHOOL: Cooperative and Regular Vocational Program - Grades 11-12

After students have completed their cluster skill training at the tenth grade level they will either go into regular cooperative or all day vocational programs in the local high school, or the area vocational school. Many of these students who might not have succeeded in the regular program under normal conditions might now, because of their participation in these exemplary programs through grade 10, be ready to move into the mainstream of vocational students. One of the aims of this program will be to prepare students for success in traditional training programs or on the job. It is felt by the teacher that when the student is ready, he will shift into the traditional program.

SENIOR HIGH SCHOOL: Cooperative Vocational Programs - Grades 11-12

These programs include Distributive Education, Diversified Cooperative Training, Cooperative Office Education, Agri-Business Cooperative, and Home Economics Job Training Cooperative. They are high skill in nature and include skill and technical-related instruction within the school coupled with job training plans and on-the-job supervision and coordination. In addition to these programs, many high skill programs include cooperative placement of students during their last semester prior to graduation and entrance to the world of work.

The exemplary cooperative program may be made available to students who still may not be able to compete in a regular program. Built on the Cooperative Education concept but offering a wider variety of training opportunities, this semi-sheltered work experience program would provide closely supervised on-the-job experiences in a number of training areas. Managers and supervisors would be used who have an understanding of the special problems of working with slower students. A plan in which an experienced person is encouraged to sponsor a trainee is in operation. The coordinator of these programs would be sensitive to students' needs

and employers' problems. The success of this phase will depend on the ability of the coordinators to convince business men to become a part of the training team for these most needy students.

SENIOR HIGH SCHOOL: Supplementary Training Programs - Grades 10-12

A number of short term intensive training programs may be developed to supplement the four phases of the integrated vocational program. They will be directed to meet the needs of two populations: (1) Those who drop out of school without a salable skill, and (2) those who near graduation and have not been exposed to vocational training.

An intensive six-weeks skill training program may be offered at a high school, an area school, or skill training center, for students who failed to enroll in school following the summer vacation. Students for these programs would be recruited through school records, local employment offices, and publicity from available news media--particularly through radio and television spot announcements. Programs to be offered would be based on student desires for training in critical skill areas where successful completion will lead to immediate employment. If there is a demand for them, a second series of programs could be offered in the spring for those who drop out during the school year.

A one-semester program may be offered to graduating seniors the second semester. This program would be only for those seniors who have not previously obtained vocational training. The program would incorporate the State required English course into a full-time vocational program held six hours daily. It would combine skill training in special public school class with on-the-job training during the last nine weeks. The program would only be offered in areas of critical demand by business and industry. An additional two-month summer program may be offered to graduated seniors in July and August if a demand is warranted.

Attached is the chart CAREER DEVELOPMENT CONTINUUM. It will be noted that students are involved in the elementary education world of work program integrated as a part of the 5-6 curriculum. It will also be noted that at the seventh grade, students will have the opportunity to observe jobs and careers broadly in regular practical arts courses.

This exemplary program has been developed so that it is equally as applicable to students who may enter a career at the highest level, as well as those students who may enter semi-skilled jobs. Programs are designed so that no commitment is made at the elementary world of work or career orientation level, but rather that students as a part of their regular educational program, will become involved in career oriented activities so that they will see education as a part of the preparation for life and work, rather than apart from it. The career exploration facet is again for all students and is developed at a depth whereby students can explore and learn in detail about certain job cluster areas that they may have been exposed to earlier. The purpose of this facet of the career development continuum

is to help youth gain the necessary experiences and understandings that will help them make a more accurate decision concerning their vocational goals. Their vocational goals may lead them toward enrollment in vocational education job preparation programs at the eleventh and twelfth grade level or it may direct them toward the vocational preparation programs offered at the college level. In all cases students progress through the career development continuum toward a job or career. In some cases youth would enter a job immediately upon graduation from high school. In other cases they might enter it upon graduation from a technical school or a college.

GUIDELINES FOR OPERATING THE
WORLD OF WORK PROGRAM IN ELEMENTARY EDUCATION: GRADES 5-6

Exemplary Program for Fiscal Year 1971-72
Department of Vocational Education

Need for and Purposes of the World of Work Education Program at the
Elementary Level

Most students enrolled in present day elementary education programs have little opportunity to become acquainted with the world of work or to see any relationship between their classroom learning experiences and their future job or career.

The purpose of this program is to: (1) develop a respect for all work and (2) motivate all youth to want to participate in the world of work. Students should gain an awareness of the wide range of occupational opportunities available to them, a realization of how education helps to prepare for jobs and careers, and a feeling of respect for opportunities to earn a living. By incorporating into the elementary program procedures whereby each student will have exposure to and experiences with the world of work, he should gain a better understanding of work as a part of life, of its importance in our technological society, and of the wide spectrum of jobs and careers available.

Community involvement is essential to the program and can provide a secondary value to the World of Work Program - that of improved community-school relations.

Hopefully, this program will also contribute to improved academic education through increased student interest and motivation.

Program will provide for all students in grades 5 and 6 from eight elementary schools.

The elementary program will incorporate approximately 36 hours per year of world of work oriented activities and experiences for children in grades 5 and 6.

The basic guide will be, "A Guide for Developmental Vocational Guidance, Grades K-12," Oklahoma State Department of Education, (1968). The success of the 4-H Club concept is well known. There is reasonable expectation that it will serve well in vocational areas, although it may not have been tried before. Vocational guidance curriculum materials developed by Abington School District, Pa. (ED 022 219) will be used in classroom activities to show students the processes through which career decisions may be made.

Local advisory groups will be used in building the program. This committee will include representatives from the following groups: (1) parents (2) teachers (3) administrators and (4) other community representatives.

Provisions have been made for inservice education of teachers.

Program evaluation procedures is to be developed as part of the program. The evaluation plan will provide for on-going as well as final end of year evaluation.

Special interest clubs built on the Extension Service concept will be the heart of this phase of the program. A vocational counselor/club coordinator is employed to plan and supervise the overall operation of the program. Clubs will be formed around the interest of 5th and 6th grade students in such areas as electronics, horticulture, cooking, drawing, etc. Special emphasis by the club coordinator and teacher sponsors will relate to career introduction and acceptance. Teacher-sponsors are used for after school work with students in the club program, along with volunteers, which includes businessmen, craftsmen whose work is closely related to the interest of the group, or high school vocational students with assistance of parents and teachers.

CAREER ORIENTATION PROGRAM
for
SEVENTH GRADE STUDENTS

Choosing a vocation is more difficult for today's young people than it has been for any other generation. There are thousands of different jobs and careers from which to choose. In the traditional programs of our educational institutions today, the student has no opportunity to get a personal acquaintance with more than one or two jobs, if indeed he has that opportunity. The child of today rarely has a first-hand opportunity to observe the industrial processes which produce the products of our society. These products and processes are the foundation of the wealth and technological development of our country. The rapid development of this technology, the increase of occupational specialization, the development of man's interdependence socially, economically, and vocationally has created a need for career guidance and exposure.

Our present educational programs provide little opportunity for students to gain a realistic understanding of various jobs and careers. Youth must have an opportunity to learn about our technological society. They need to learn about jobs and careers so that they have information necessary for establishing job goals in later years.

Junior high or middle school aged youth usually have a very sketchy idea of a few visible careers such as doctor, lawyer, or astronaut. Although they are bombarded by the mass media, their knowledge of jobs in terms of wages, working conditions and opportunity for advancement is limited. The early adolescent is interested in his future work. The role of work is a major portion of a person's life in our society. In a Career Orientation and Exploration Program, it is hoped that through an organized program of student-centered activities, the student will be exposed to a large range of jobs and careers. The Career Orientation concept is to introduce the middle school youth into the world of "working" occupations. The exposure of students to these occupations will broaden the student's knowledge of the world of occupations and present this relationship to his job goals.

A program of Career Orientation should be more than compartmentalization of occupations. Compartmentalization thus far has always meant that occupations were taught by either a guidance counselor or the industrial arts teacher. Occasionally, when it seemed "appropriate," other disciplines would present career information when it could be related to the subject under discussion. In many of these instances only those "glamorous" occupations were given attention. Students were not actually exposed to jobs or to a group of jobs. In most cases, job exposure was minimal or only related to a few professional, industrial, or business careers. This particular method limited the broadening of the student's understanding of job goals. To reorient our educational system to the needs of youth in a

technological society, our traditional program of education must be altered and become more relevant to the world of work. Our schools must offer an integrated program with the job and career goals of students as the central core.

The Career Orientation Program will present to students:

1. A more adequate knowledge of our technological society and jobs and career alternatives.
2. A knowledge of the economics necessary for participating in a technological society.
3. A knowledge of the kind of education or training required and work traits necessary in obtaining employment and gaining success in jobs and careers.
4. A self-appraisal regarding personal skills, abilities, and life aspirations.
5. An opportunity to develop attitudes toward the world of work which enables a person to fulfill his job career goal.
6. An opportunity to develop an attitude that socially useful work has dignity and worth and is necessary as a part of an integrated socio-economic system.

To make a job career choice from the widest range of occupational information, a program must permeate the student's entire schedule.

The practical arts teacher has a certain group of jobs and careers that they are responsible for teaching. This teaching includes extensive use of resource personnel and field trips, as well as the use of instructional materials, filmstrips, and other career oriented media. The first week of each semester will be devoted to lead in preparation which will include class discussion, study groups, projects, displays, orientation and jobs related to study areas. The second week will include parent-involvement as resource persons in the professions such as: law, medicine, engineers, educators, business executives, business parents, industrial parents, and trade parents. Resource persons are to be invited into the schools from business, industry, and the services. They will come to the school and be a part of a planned session for the various classes. Field experiences are to be scheduled when possible to cover some of approximately 200 different jobs, careers, and professions. The planning of field trips and resource personnel are to be conveniently concentrated during the semester. In such an effort, close program coordination and organization is cardinal.

An effective Career Orientation Program requires an intensive planning process in order to develop an integrated program of occupational information and core materials. Many means of exposure to jobs and careers are possible through the seventh grade year. Examples of means of exposure are: Agriculture; Business; Construction and Manufacturing; Distribution

and Marketing; Services: 1. Personal, 2. Repair; Transportation. Field trip experiences emphasize learning about the kinds of jobs and careers in work world. The students would have an opportunity to see and talk with workers. They would be involved in assignments that would cause them to gain an understanding of working conditions, opportunities for advancement, and other benefits of various jobs.

The organization of the Career Orientation Program includes intensive direction by the school principal, practical arts, vocational department and project coordinators. Leadership in helping the teaching staff to plan and develop curriculum is vital to its success. The local administrator involves the guidance department and others in planning the total curriculum. In the local planning process parent groups, as well as business and industrial representatives, are involved.

The Career Orientation Program is operated in the regular practical arts curriculum in cooperation with the total staff. One of the requirements is that a minimum of 180 hours of regularly scheduled career orientation curriculum activities be provided over a one-year period. This means that each seventh grade student, during their one year in this grade, would receive a minimum of 180 hours of career exposure. It also means that every seventh grade student would have an opportunity to learn about all jobs and careers regardless of whether they were going to be a skilled tradesman or a professional person. The objective is not that they would make a commitment in terms of selecting a career, but that they have an exposure to as wide a range of opportunities as possible, so that later they may be able to have a better base upon which to make a selection.

A vital component of program development is involvement of the total teaching staff in an inservice education activity. The schools that are approved for programs need to conduct teacher inservice workshops so that adequate time is available for reorganization for the curriculum and the development of the program. The local schools are encouraged to use their staffs and other community personnel in the development of materials. The resources of existing vocational education instructional materials laboratories will be made available in preparing materials. Vocational teacher educator services are available to school staffs as they conduct inservice education workshops.

REQUIREMENT FOR CURRICULUM PLANNING

For example, the teacher would arrange for a significant block of time devoted to the curriculum blocks in the seventh grade. At least 180 clock hours would be devoted to career orientation regularly scheduled over a one-year period of time. Provisions would be made for regularly scheduled curriculum blocks that would include student activities and experiences related to understanding job opportunities in: Construction and Manufacturing, Business, Distribution and Marketing, Personal, Home, Community, Community, and Health Services, Power, Transportation and Service Occupations. It is noted that the Standard Industrial Classification is to be broken into groups. It is recommended that all levels of employment, i.e.: skilled, managerial, technical, and professional be included as a part of each group.

Emphasis should be placed upon using resource people from the community in agriculture, business and industry, as a means of helping students learn about career opportunities. Numerous field trips to observe jobs should be planned. The real world of work should serve as a part of the laboratory for orientation of careers.

Each of these suggested curriculum block areas should be scheduled so that the students would be in all areas sometime during the seventh grade year of the practical arts curriculum.

The career orientation curriculum blocks would be taught by teachers in existing curriculum areas of the practical arts. For example, industrial arts would handle construction and manufacturing, etc.

NOTE: Vocational education facilities and programs that are available, should be utilized in the orientation program. Industrial arts, social studies, science areas and others can offer curriculum blocks.

POLICIES AND PROCEDURES FOR THE CVET/EXEMPLARY PROGRAMS

All equipment purchased locally or by the State purchasing department for this program, is the property of the State of Oklahoma (Vocational and Technical Education Department). All supplies and other supportive services are being funded 100%.

Equipment inventories and lists of supplies have been developed and copies will be provided for each teacher, with a master copy being kept in the vocational department office.

Class records, including lists of students; if they transfer, where to; hours taught; and other necessary information will be requested from time to time. Equipment and supplies needed for the classroom may be submitted each month. Requests for supplies and/or equipment should be submitted to the Vocational Office. (Do not initiate requisitions through your school office as we will group orders into larger orders.) Needs for supplies should be anticipated at least two weeks in advance, as it may require this much time (and sometimes more) for processing.

A list of companies or business establishments that will be available for possible visitation will be compiled.

Requisitions through your school office for busses to be used in making field trips should be scheduled with plenty of time for processing. The time of day in requesting a bus should be considered, as school busses will not be available when they are transporting students to or from school at the beginning and close of the school day.

Instructional materials have been and will continue to be developed by individuals, group sessions and the State department. As units and materials are developed or received they will be sent to you.

NO CHARGES are to be made to students. If items are produced for sale, a system of resale accounts will need to be established. (See policy and and procedure for deposit of moneys, etc.)

Tape recorders, overhead projectors, and other such equipment has been purchased for use by teachers in the CVET program. Please arrange for storage facilities for materials and equipment in each school so that those concerned will be aware of the plans.

Please keep your records - equipment, supplies and materials - as accurately as possible as we will make periodic evaluations and a final evaluation at the close of the school year.

We will need to continually develop instructional materials, employ new methods and techniques as we work with the students enrolled in the program. The following items are for review:

- a. Laboratory and shop experiences to be scheduled for two (2) consecutive periods.
- b. Twelve (12) to eighteen (18) students in separate groups of handicapped or by separate groups of disadvantaged. (Please refer to the definitions that were furnished at the start of the program.)
- c. Teachers of this project are certified in Industrial Arts, Home and Family Living, and Business Education. Some have vocational certification.
 - (1) Nine months regular contract for junior high schools and ten month vocational contract for senior high school teachers.
 - (2) Extended day of one hour with group, or planning hour and other hour preceding or following (i.e., 5th and 6th periods or 1st and 2nd, etc.)
 - (3) May be a part of regular five period schedule with no extended day.
 - (4) Extended day instructors will receive extra pay as approved for time above regular contract.
 - (5) Planning period to be made up before or after scheduled class day.
 - (6) Stipends to be paid personnel in the project for curriculum development, inservice training or other scheduled sessions not a part of a regular schedule.
 - (7) Teachers from the practical arts may be used with the judgment of the local administration as to ability of the teacher to conduct a program as specified.
 - (8) Proper facilities for the teaching of this program, both laboratories and shops, is needed to conduct this program.
 - (9) Credit for two hours to be given in "Career Exploration, 'CVET'", Industrial Arts, Homemaking, Business Education or vocational as applies for this program.

The central office will make every effort to help teachers carry out individual and program plans.

We need lead time to process requests for supplies and items needed for the various projects.

Meetings on Saturdays, with a stipend, will be held as in the past when there is need. A record of each teacher's extra time will be requested for payroll purposes at each scheduled pay period.

Our first meeting is scheduled for Saturday, September 25, 1971, from 8:30 to 11:30 a.m., in Room 601 at the Education Service Center.

If you have questions concerning the program, contact the following:

PROJECT COORDINATOR
(12 months)
**Exemplary Comprehensive Occupational Orientation Vocational Education
Program**

The PROJECT COORDINATOR shall meet the requirements of a local director as set forth in Policies and Procedures Manual for State Board for Vocational Education. These requirements are as follows:

a. **Minimum Qualifications:**

A degree from a standard four-year college approved for teacher training with a major in a vocational education field and two or more years of teaching experience in an approved vocational education program. They shall hold a valid teaching certificate or credential in a specified vocational field, and preferably should have competency sufficient to direct and assist in the area of vocational guidance and counseling.

b. **Duties and Responsibilities:**

1. Supervise the project and project direction
2. Control the budget
3. Order materials and equipment
4. Develop and organize the inservice program
5. Collect evaluation data
6. Maintain all project records
7. Complete state and local reports as requested
8. Assist teachers and coordinators in developing and implementing a relevant curriculum.

c. **Compensation:**

Salary determined by qualifications and experience in conformity with Tulsa's schedule and the Oklahoma State Plan for Vocational and Technical Education and as called for in proposal for Exemplary Program. Anticipated salary range \$9,000.00 to \$11,000.00. This salary is paid with 100% vocational funds through direct commissioner grant to the State Department of Vocational and Technical Education and assigned to the Tulsa Public Schools Department of Vocational and Technical Education.

VOCATIONAL COUNSELOR
Exemplary Comprehensive Occupational Orientation Vocational Education
Program

Secondary (one (1) Junior High, one (1) Senior High) (9½ months)

a. Minimum Qualifications:

Shall meet the requirements of the State Board of Vocational Education, as set forth in the State Plan: "shall have a valid standard counselor's certificate as required for local school counselors." (The Oklahoma State Board of Vocational and Technical Education has entered into a cooperative agreement with the Guidance and Counseling Division of the State Department of Education for a coordinated program of vocational guidance and counseling for the State). A background of information and experience in the World of Work will be required.

b. Duties and Responsibilities:

1. Assist in student testing, selection and scheduling in programs.
2. Follow-up on students as they progress in the Career Development Program.
3. Identify students for succeeding programs.
4. Assist in evaluation procedure
5. Work with teachers in identifying students with special needs.
6. Provide consultative services concerning the vocational aspects of guidance.
7. Develop, secure and distribute occupational information.
8. Assist with curriculum development.
9. Participate in inservice meetings.

c. Compensation:

Salary determined by qualifications and experience in conformity with Tulsa's schedule and the Oklahoma State Plan for Vocational and Technical Education and as called for in proposal for Exemplary Program. Anticipated salary range \$8,362.50 to \$9,500.00. This salary is paid with 100% vocational funds through direct commissioner grant to the State Department of Vocational and Technical Education and assigned to the Tulsa Public Schools Department of Vocational and Technical Education.

CONTENTS

Five (5) S.V.E. Educational Filmstrips

The filmstrips are excellent to use to promote class discussions. The teacher's guide provides discussion material.

<u>Number</u>	<u>Title</u>	<u>Pages in Guide</u>
A778-1	Who Are You?	5-11
A778-2	What Do You Like to Do?	12-17
A778-3	What is a Job?	18-24
A778-4	What Are Job Families?	25-31
A778-5	What Good is School?	32-37

Five (5) Junior Guidance Series Booklets

These booklets may be used as a reference by the sponsor or by individual students. The students must be able to read comfortably at the sixth grade level to read them independently.

<u>Reorder Number</u>	<u>Title</u>
5-731	All About You Your Abilities
5-732	Getting Along in School The Job in Your Future Making Your Study Hours Count

35 W.O.R.K. Student Record Books

1 Teacher's Guide

400 Occupational Briefs (Divided into three (3) main groups - People, Things, Ideas)

Each brief presents a short fictional narrative that describes a typical person at work in the occupation presented. The narrative depicts typical activities of the worker and some psychological aspects of the job.

Occupational information is given in capsule form. Topics covered are: required education, useful high school courses, special training or college courses (where applicable), where jobs are found, getting started, training on the job, getting ahead, earnings, number of hours, numbers of workers and future manpower requirements.

ADDITIONAL FILMSTRIPS

THE EDUCATION SERVICE CENTER HAS THE FOLLOWING FILMSTRIPS THAT ARE GOOD
FOR ELEMENTARY STUDENTS

One series is entitled The Working Series, AVID Corporation - 6 film-
strips and four (4) records.

Another good set of filmstrips is Working World, The. It is a film-
strip with tape. There are two series. The titles of the individual
filmstrips are listed below and the number of the filmstrip when
known.

1. Working in a Hospital
2. Working in a Laundry and Dry Cleaning Plant
3. Working in Our Town
4. Working in the City
5. Working with Cars SF 671
6. Working with People SF 670
7. Jobs for Young Men SF 672
8. Clerical and Stock Work SF 669
9. The Job Interview SF 666
10. Finding a Job SF 665

Date

Dear _____:

The Tulsa Public Schools have implemented an Exemplary vocational program called the "World of Work". The purpose of this program is to develop a respect for all work and motivate all youth to want to participate in the world of work. The fifth and sixth grade students involved in the program hopefully will gain an awareness of the wide range of occupational opportunities available to them, a realization of how education helps to prepare them for jobs and careers, and a feeling of respect for opportunities to earn a living.

We have eight elementary schools, two junior high schools and one senior high school involved in the program. The eight elementary schools have teacher sponsored club meetings, one evening a week after school from 3:00 p.m. to 4:00 p.m. The club activities expose students to a variety of occupations.

We need VOLUNTEERS including businessmen, craftsmen, technicians, and professionals, whose work is closely related to a variety of interests of the group, who will come to the schools and share their work experiences with the clubs. Volunteer speakers need not prepare a formal speech. It is sufficient that they simply talk to the children and try to answer questions that the children may have. The attached sheet offers some suggestions that may prove helpful to speakers.

We also want to arrange field trips to businesses, plants and firms where children are able to actually observe people at work.

If your company can help us either by allowing us to tour or by providing a speaker or speakers for any of the schools, we would be most appreciative.

Sincerely,

Approved: J. J. Morton,
Administrative Director
for Elementary Education

LaVonne Hunter
Elementary Counselor/Club
Coordinator
World of Work Club, Exemplary
Vocational Program

A LIST OF SUGGESTIONS

Some questions that the children might ask a speaker are:

What qualifications do you need for the job?
What type of training did you have? How long did you train?
What are the duties involved?
What hours do you work?
What tools do you use? What equipment must you know how to operate?
What is the pay?
What are the chances for advancement?
What are the advantages and the disadvantages of the job?
What type of personality is best suited for the job?
What interested you in that type of work to begin with?
What are some of your outside interests? (Example: sports, music, etc.)
Did school relate to your job? How? What skills did you learn in school that you use in your job? (reading, math, etc.)

Perhaps the following list might be kept in mind when relating to the children about getting and keeping a specific job:

Punctuality	Personality
Regular attendance	Cheerfulness
Skills	Appearance
Aptitude	Cooperation
Experience	Communication
Education	Pride
Honesty	Cleanliness

We hope that the children involved in this program will realize:

1. Pride in one's work makes life much happier and adds purpose.
2. They can choose an occupation that they will enjoy.
3. It is necessary to be able to get along with other people no matter what job they do.

SPEAKERS

Below are some suggestions for speakers. If you are interested in particular ones please put a check in the box under the name of your school. If any of the students are interested in other occupations please add them to the list.

TULSA COUNTY, OKLAHOMA

FOR INTER-OFFICE AND INTER-SCHOOL CORRESPONDENCE

To Junior High School Principals
 From Wayne Bland
 Date October 13, 1971

RE: Credit for CVET and Exemplary Program

The Annual Bulletin for Elementary and Secondary Schools, 1971, approves the granting of two (2) units of credit in Coordinated Vocational Education in grades 9-12 to each student who successfully completes a CVET or Exemplary Program which meets two hours daily for the entire school year.

Although the bulletin does not give specific information on these programs in grade 8, it will be acceptable to use the same procedure for recording the course title and amount of credit for all students in the junior high school who complete these programs.

Effort should be made to avoid scheduling students into these programs in lieu of basic courses required for graduation.

Approved:

Dr. Hiram Alexander, Assistant
 Superintendent for Administration

W. Leroy Tharp, Administrative
 Director for Secondary Education

cc: Mr. Morris Ruley
 Mrs. Frances Smith
 Miss Allie Dale Lambert

 Education Services

INDEPENDENT SCHOOL DISTRICT NO. 1
TULSA COUNTY, OKLAHOMA
FOR INTER-OFFICE AND INTER-SCHOOL CORRESPONDENCE

To Principals of Irving, Longfellow and Riverview Elementary Schools
From George D. Wright - Project Coordinator CVET/Exemplary Programs
Date October 29, 1971

This is to confirm our conversation of October 29, relative to Video-taping the Elementary Occupational Exploration Clubs.

The following schools will be taped on the date and time shown below:

Nov. 3 - Longfellow	3:00-4:00 p.m.
Nov. 10 - Riverview	3:00-4:00 p.m.
Nov. 17 - Irving	3:00-4:00 p.m.

LIST OF MEETINGS SCHEDULED FOR ELEMENTARY

November 3	Irving - f/s What Good is School? Riverview - Policeman speaking Longfellow - Fire department - bringing truck and film
November 4	Jefferson - Attorney speaking
November 10	Riverview - Florist (Daryl Browning) showing how to make corsage - telling duties Pershing - trip to Southside Christian Church Lowell - Policeman speaking Irving - f/s What Do You Like to Do?
November 17	Irving - Speaker, KCNW radio - Dick Fain Riverview - Touring KRMG studio Pershing and Johnson together at Pershing to hear Gary Kroll, baseball player Longfellow - Stewardess speaking
November 22	Irving - f/s What is a Job? Longfellow - Student nurse speaker
December 1	Riverview - Luther Roberts, representative from Public Service Irving - f/s What are Job Families? Longfellow - Dental Assistant

PROCEDURE IN SCHEDULING BUSES FOR FIELD TRIPS

ITEMS

1. Field trips will be initiated by the teachers through their school office on RQ-2 with at least two weeks time lapse before buses are scheduled.
2. Students must have signed permission cards, follow procedure in your school.
3. Time allotted for such trips for district-owned buses will be between 9:00 a.m. and 2:00 p.m. Request is written on an RQ 2.
4. There is a budget allocation for student field trips for CVET Projects #2, 5, 8, 11 and the Exemplary program.
5. During the 70-71 year the average time of trip was three hours at a cost of \$20.00 per trip.
6. The number of trips allotted for CVET and Exemplary Programs will be in relationship to the monies provided for in the budget for each project.
7. If unable to schedule a district-owned bus, one may be requisitioned from the Metropolitan Tulsa Transit Authority, 510 S. Rockford. The cost is \$10.00 per hour, with a two-hour minimum, from pick-up point back to their garage. The smallest bus they have carries 45 people. Make an effort to group your classes to cut the number of trips. It will depend on company policies and practices as to the number of students that they will handle. Request should be written on RQ 1 for outside carrier.

THIS WILL BE RE-EVALUATED AT THE END OF THE SEMESTER

SCHOOL BUS TRANSPORTATION (From Policies, Regulations and Procedures for Tulsa Public Schools, 7-1-1970, p 11)

School buses may be used by class groups for field trips where transportation is required and properly authorized. These trips are to be made to a specific place of educational value. Field trips shall be approved only upon written request from the teacher through the principal and with the approval in writing of the Assistant Superintendent for Administrative Services. Final approval to the Transportation Office will be made in writing from the Office of the Assistant

Superintendent for Business Management. This request must be submitted to arrive in the Transportation Office at least two weeks prior to the date of the expected trip. Such field trips during the first month of school each year should be limited so that our regular bus schedules can be properly adjusted.

Approved: Ted W. Coover, Assistant Superintendent
for Business Management

TULSA PUBLIC SCHOOLS
INDUSTRIAL, VOCATIONAL AND TECHNICAL EDUCATION

CVET - EXEMPLARY PROGRAMS

The enrollment form (VE-6000-R) has been designed to provide local, state, and federal decision makers with basic, numerical, management information about all vocational, technical and special programs. One aspect of this study is to determine exactly how many students are being served and to be able to determine if they enter into a regular vocational program from a special program (CVET or Exemplary).

Some items on this form will not apply at the present time to the CVET or Exemplary Programs, such as:

1. Occupational objective
2. The social security number
3. Occupation code

A sample of the VE-6000-R is included showing portions to be omitted.

Complete a form VE-6000-R for each student in your CVET or Exemplary program.

Use Class Code No. 20041

You may have students complete the form as a group under your instruction, or you may complete the forms.

Put in alphabetical order, label from school and teacher and bring to the September 25 meeting.

If there are questions pertaining to the form, contact Mr. Ruley's office, Ext. 318, Education Service Center.

FIELD TRIPS

WHERE DO YOUR STUDENTS WANT TO GO ON FIELD TRIPS? LIST ANY SUGGESTIONS BELOW PLEASE. IF YOU KNOW APPROXIMATELY WHEN YOU WANT TO GO, PLEASE PUT THE DATE TOO.

DATE _____

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or other markings on the paper.

SUGGESTIONS

Radio station KCNW is willing to have elementary students tour.
American Airlines MAY have tours available after January 1st.
The telephone company is working up a new program - ready Jan. 1.
Zebco will accept touring groups
I think I know a dentist that will permit small groups to visit.
Acme Brick Co.
Frankhoma Pottery
KOTV Television
Jan Lester - Brookside Beauty College
Oklahoma Employment Agency - simulated interviews
Midwest Chevrolet

Some schools have begun taking field trips and having speakers from different occupations at the club meetings. In order to obtain speakers for you and arrange field trips, I will need a tentative schedule with approximate dates that you want speakers to represent specific occupations and the places you'd like to visit on field trips.

SUMMARY OF ACTIVITIES

Central High School - Eugene Williams

Positive Reactions to the Project:

1. Students seem to be interested in class
2. All take an active part

Major Activities or Occupational areas:

Drawing set of House Plans

1. Floor plan
2. Front and Side elevations
3. Wall section
4. Laying shingles on roof

Major Units or occupations discussed and explored

1. House plans and drafting tools
2. Hand tools - name, use, safety
3. Power tools - name, use, safety

Future Activities planned:

1. Building complete one-room house in shop
2. Guest speaker - man owns his company will talk about being on time, doing good work, will combine groups with Mrs. Lusty.

Central High School - 'Iwannah Lusty

Positive Reactions to the Project:

1. Students are deeply involved in learning salable skills.
2. Contact with Project 12 and AMIDS on project has been most favorable
3. Mr. Leo Cowan, Borden's Cafeterias, is very interested in project and has promised to aid me with second-year students if class can be worked out.
4. Dr. Katherine Howell, O.S.U., is helping me plan a prospectus for a second-year class.
5. One student transferred from Edison to Central to take the class.

Major Activities or Occupational areas:

1. Sewing Services - patch-work pillows, macreme' belts, crocheted rings,
2. Grooming -- Personal Development - Field trip to Merle Norman for facials, demonstration of straightening black's hair, modeling by Mary Lou Dotson, Sear's Fashion Co-Ordinator.

Major Units discussed and explored:

Sewing Services
Time Clock
Social Security
School Record
Use and care of electric range

List results and/or Hands on experience:

List results and/or Hands-on experience:

Girls are making Macrame' belts and selling them
Crocheting rings has created interest in learning to
do other crochet.

Dissemination Activities:

Co-Ed Magazine has articles every month on Know
Yourself - The girls read them and we discuss and work
out problems that are presented.

Other Activities:

Mr. Burnett, Royal Typewriter Co., loaned us a Time
Clock for one week and the girls clocked in and out.
I figured out their time and paid them on paper for
the time they spent "working".

Staff Utilization:

Mr. Browning has been most helpful
Mr. Duncan (I.E. Bldg.) has made some boards for my girls
to Decoupage.

Future Activities:

Sale of popcorn balls and caramel apples to figure pro-
fit and loss in running a small business in Food Service
area.

Field trips to Sky Chef and Bryan's Infant Wear
Vocational Test by Department of Defense, November 19.

Horace Mann Junior High - Patsy Carson

Major Activities or Occupational Areas

1. Learning to operate a sewing machine

Result and/or Hands-on experience

1. Made skirts and blouses
2. Learned to use scissors properly
3. How to operate an electric sewing machine

Future Activities Planned

1. Start laundry unit
2. Field trip to Oklahoma Natural Gas for a laundry demonstra-
tion

Suggestions for improvement

1. More students

Horace Mann Junior High - Joe Eastham

Positive Reactions to the Project:

1. Gives the student an advantage to succeed in a chosen vocation
2. Helps student to select or think about a vocation from hands-
on experiences.

Major Activities or Occupational Areas:

1. Construction
 - a. Carpentry - Building model houses
 - b. Masonry - Building cement blocks and stepping stones

Major Units or Occupations discussed and explored:

1. Construction
 - a. Carpentry
 - b. Masonry

Future Activities planned:

1. Field trips
2. Small engine repair
3. Construction of dog house

Roosevelt Junior High - Frankie Roemer

Major Activities or Occupational Areas explored

1. Food Services (Learning to be a Bus Girl and Waitress)
2. Safety
3. Applying for a Job
4. Know Yourself
5. Importance of School records
6. Social Security
7. Personality Development
8. Work permits
9. Grooming

List results and/or Hands-on experience

1. We secured social security cards
2. Attempted to secure work permits
3. Girls are improving appearance, they groom one day each week.

Dissemination and other Activities

1. Made rings out of telephone wire; sold them for 20¢ each.
2. Did bulletin board for Main Office.
3. Had 65 visitors from Irving and Pershing Elementary Schools
4. Had a Forum at beginning of school to explain program to all students.

Future Activities planned:

1. Field trip to Oklahoma Natural Gas Co.
2. Mrs. Meleese Forth (special guest)

Suggestions for improvement

1. More money for field trips

Roosevelt Junior High - James Gray

Positive Reactions to the Project

1. Principal is working with our program and is very interested in it.
2. Counselor is helping by placing students in my classes.

Major Activities or Occupational areas:

Service Occupations

1. Trim sidewalks
2. Mowing the school ground
3. Cultivate around trees, hedges, and shrubs

General Construction Trades

1. Concrete Form Building
2. Cement Work

Guidance

1. Know yourself
2. School records
3. Social Security Cards
4. Employment Offices

Major Units or Occupations discussed and explored

1. Service Occupations
2. General Construction Trades
3. Guidance
4. Construction
5. Small Engines

Other Activities:

Students are mowing, trimming and working in the flower beds at our school. Also, these students are building park benches for the outside school ground and they are also working on similar benches for the halls.

Irving Elementary - Karen Tyner

Positive Reactions to the Project

1. We have lost no members and have gained new members each week.
2. Students report on activities to homeroom class.
3. Homeroom teachers report students are interested and excited.
4. So far the things learned have been retained.
5. Other teachers are beginning to become involved.

Major Activities or Occupational areas and accomplishments

1. Field trips to W.C. Norris Co.; Unit Rig Co.
2. Policeman spoke to group.
3. Saw and discussed filmstrip "Who Are You?"
4. Members interviewed workers as to skills needed and duties performed.

Major Units discussed and explored

1. Have completed Unit I - The World of Work

Results and/or Hands-on experience

1. Officer Rossen of Tulsa Police Department gave an excellent talk and then answered questions. Members were impressed with him. They asked questions about duties, pay, retirement, laws, and even what he did for leisure. After the meeting the members fully examined the Police car.
2. In the field trip to W. C. Norris, the students saw numerous occupations from custodian to foreman and inspector. They found that a high school education was necessary for employment and that many make up to \$10,000 annually.
3. The members seem to already have an idea of the limitations involved in dropping out of school.

Dissemination activities: bulletins sent to parents. Discussed program in faculty meeting.

Other Activities: We have discussed the relationships of hobbies enjoyed now to jobs in the future.

Staff Utilization: The sixth grade homeroom teacher allows students to report on meetings to class. She also gives them time in language class to write letters of thanks.

Future Activities Planned:

1. Field trip to Roosevelt
2. Trash hauler will speak
3. KCNW radio station manager will speak
4. Tentative field trip to KCNW

Jefferson Elementary - Garry Nichols

Positive Reactions to the Project:

1. Interest
2. High attendance
3. Great enthusiasm

Major Activities or Occupational areas:

1. Getting to know the terms of work
2. Which jobs we are interested in
3. How to run our meetings

Other Activities:

1. Learning to decoupage; getting supplies, making, figuring cost, selling process.

Future Activities planned:

1. Field trips
2. Speakers
3. Project work
4. Discuss job clusters

Lincoln Elementary - Sara Abel and Helen Bailey

Positive Reactions to the Project:

1. Good attendance and enrollment
2. Students appear enthusiastic

Major Activities or Occupational Areas

1. Filmstrips and interviews showing the relatedness of education to the world of work.

Major Units or Occupations discussed and explored:

1. Medical
2. Construction
3. Business

Results and/or Hands-on experience:

1. Craft consisting of occupational-type puppets.
2. Interviews

Staff Utilization:

1. Display of student activities
2. Information to staff regarding program

Future Activities planned:

1. Speakers
2. Field trip
3. To follow and expand on curriculum developed.

Lowell Elementary - Steve Wigginton

Positive Reactions to the Project:

1. Students enjoying the club.

Major Activities or Occupational Areas:

1. Elected officers for the club.

Major Units or Occupations discussed and explored:

1. None so far, have had only two meetings.

Other Activities:

1. Played pantomime game "What's My Line"

Staff Utilization:

1. Mrs. Price, a social worker for the school, is helping with our club.

Future Activities planned:

1. Disc Jockey from radio station KCNW. He will discuss jobs in radio industry.

Pershing Elementary - Eunice Copeland

Positive Reactions to the Project:

1. Children have benefitted in that they have begun to think about what kind of jobs they might be interested in; how much training the job would require, the rewards of honest work and how they might help finance the training needed.

Major Activities or Occupational areas:

1. Forming rules and electing officers.
2. Equating the importance of school to one's future profession.
3. Listing five occupations they want to know more about.
4. Interviewing two persons about what they do at their job and what school subjects helped them in their profession.

Major Units or Occupations discussed and explored:

1. A talk by Police Officer Rosson
2. A visit to a church where a minister talked of social services.

Results and/or Hands-on experience:

1. School is important and does relate in a meaningful way to one's future.
2. Now is the time to begin planning for what job you are now interested in.
3. How to obtain that job.

Dissemination Activities:

1. Called parents whose students are in WOW to tell them about the program.
2. Talked with parents during Back-to-School night. Room was open so parents could browse, bulletin board was fixed showing coming attractions for WOW participants.

Future Activities planned:

1. Visit from representative of Voc-Tech Training Center
2. A possible visit to Central High
3. A visit from a representative of Tulsa Junior College
4. A possible visit to a clothing factory

Riverview Elementary - Helen White

Positive Reactions to the Project:

1. Very good response from the boys and girls.

Major Activities or Occupational Areas:

1. Visited the Tulsa Public Library after school on October 6.
2. Had a barber come and give a haircut on October 11.

Major Units or Occupations discussed and explored:

1. Interested in radio and T.V.
2. Airlines (Stewardess)
3. Medical vocations, such as nursing, dentists, etc.

Staff Utilization:

1. Very cooperative - The clerk, principal and teachers are very helpful in suggestions.

Future Activities planned:

1. A tour of Public Service plant across river.
2. A Policeman is to come November 3.

Junior High Vocational Counselor - Dewey Martin

Positive Reactions to the Project:

The overall picture of the program in the two Junior High Schools seem to be improving since school has started. The students now are feeling the need and advantage of the classes. The reactions among them (the students) are very good.

Major Activities or Occupational areas and Accomplishments during this period:

The Homemaking areas have covered:

1. Child Care
2. Sewing
3. Meal preparation
4. Personal Grooming
5. Proper Manners.

The Industrial Arts areas have covered:

1. Construction of houses
2. Concrete work
3. Drafting and blue print reading
4. Lawn care

The Business Education area has covered:

1. 10-Key Adding Machine
2. Shorthand
3. Bookkeeping
4. Typing
5. Cash register

Major Units or Occupations discussed and explored

1. Concrete Masonry
2. Blue Printing
3. Construction
4. Assembly-line sewing
5. Cooking
6. Cafeteria food handling
7. Bookkeeping
8. Typing

Significant findings and events: List Results and/or Hands-On Experience

Students that didn't seem to find interest in school find themselves wanting to attend class and take great interest in the subjects covered in World of Work classes.

Other Activities:

1. Field trip to Bryan's Infant Wear
2. Field trip to Oklahoma Natural Gas Co.

Future Activities Planned:

1. Field trips planned to Zebco, Oklahoma Natural Gas Co., American Airlines and Maintenance.
2. Outside speakers in various fields.

Elementary Coordinator/Counselor - LaVonne Hunter

Positive Reactions to the Project:

The enthusiasm of the teacher-sponsors and principals has begun to show rewards. The faculty members of some of the schools are becoming involved in the "World of Work" program.

The students are showing an interest in the clubs. They are expressing interests in particular occupations.

The club sponsors are showing initiative. Many have suggested activities to be tried and occupations to be explored.

Many of the community businesses that have thus far been contacted have shown an interest and a desire to cooperate and aid the program in whatever way they can.

Southwestern Bell Telephone Company is working up a new program to bring into the schools. The program should be ready by January.

Oklahoma Natural Gas Company is doing the preparatory ground work necessary to have speakers go to the different schools and discuss their respective jobs, and discuss their respective jobs, and also to make field trips available to the students so that they may see people actually doing their respective jobs. Four hundred occupations are represented in the company.

The radio station, KCNW has agreed to have speakers talk to the children during their scheduled club meetings and also to schedule tours of the station.

The Police department has sent a policeman dressed in full uniform attire to several schools. The students have been allowed to examine the police car. The policeman spoke about his training and the duties of the job.

The Tulsa City Library hosted a tour of its facilities and explained to the students about the different occupations in a library.

The Norris-O'Bannon Division - Dover Corporation (W.C. Norris) hosted a tour of its plant on North Elwood and had the workers explain to the club members about the work they were doing and the training necessary.

Crane Carrier Company - Division of CCI Corp. (Unit Rig) allowed students to tour plant.

Major Activities or Occupational areas and Accomplishments during this period:

The students are becoming aware of many occupations that are available through discussion, browsing through the W.O.R.K. Kit and other materials, and speakers from different occupations.

Irving School toured the W. C. Norris Plant September 22, 1971.

Irving School toured Crane Carriers (Unit Rig) October 13, 1971.

Riverview School toured the City Library October 6, 1971.

Johnson School is making a quilt and building a brick wall.

These students should learn about the necessity of team work and the planning necessary to complete a job.

Jefferson School saw a demonstration on decoupage. The students plan to decoupage and either sell their products to finance other club activities or use the results as Christmas gifts.

Irving, Pershing, and Lincoln Schools have had a policeman talk to the students about the work of a policeman - the qualifications, training, etc.

Riverview students observed a barber cutting hair. He allowed the students to handle the tools he used and they learned the names of the tools.

Major Units or Occupations discussed and explored:

All eight of the schools involved in the Exemplary program have been using Unit I (Orientation and Introduction to the World of Work Club) in their club meetings.

After completion of Unit I for the World of Work Club, the student should be able to list three rules needed for becoming a club member in good standing and should be able to discuss the purpose and define the organizational procedure needed for their club meeting. He should be able to define parliamentary procedure needed for their club meeting, elect officers and conduct a club meeting. He should be able to discuss ways that school is related to the World of Work and to make a list of five occupations.

Significant Findings and Events: List results and/or Hands-on experience:

Students have learned detailed information about training and duties of a policeman, a disc jockey and a barber. The students have seen the necessity for cooperation between workers in plants visited. Club members are aware that basic skills of reading, writing and arithmetic are required in nearly every job.

Problems/Needs:

We need to be able to take field trips during the school day and have more correlation between regular school work and the World of Work Club.

School bus transportation is not available between 3:00 p.m. and 4:00 p.m. when the clubs have their meetings.

Dissemination Activities:

At the Tulsa State Fair the Exemplary Program was represented in a booth.

Some of the local businesses are now aware of the goals and the aims of the program and are participating in the program.

Other Activities:

Filmstrips, posters, films and games have been used to acquaint students with different occupations available.

Staff Utilization:

Melisse Forth, employee of CVET program spoke to Jefferson School on how to decoupage October 7, 1971.

The teachers of involved schools have given suggestions for resource people and correlated homeroom activities with World of Work club activities when possible. Some schools have used the language period to write thank you notes to companies visited and speakers who have been to club meetings.

Future Activities Planned:

Some of the elementary schools plan to visit junior and senior high schools involved in the Exemplary program.

The following speakers will go to the respective clubs according to the interest of the club members:

1. Florist
2. Oklahoma Natural Gas Company employees (400 occupations represented)
3. Cement mason
4. Construction worker
5. Secretary
6. Clergyman
7. Attorney
8. Telephone Company employees
9. Television and radio repairmen
10. Beautician
11. Cook
12. Salesman
13. Dentist
14. Trash hauler
15. Nurse
16. Employment counselor
17. Electrician

Projected and hoped for field trips are:

1. Oklahoma Natural Gas Company
2. Beauty College
3. Barber College
4. Airport
5. Television stations
6. Radio stations
7. Bank

8. Frankoma Pottery
9. Fire stations
10. Merle Norman studio

Suggestions for Overall Improvement:

If the teacher-sponsors could make a long range tentative plan of speakers and field trips desired with approximate dates it would be easier to help them acquire speakers and arrange for field trips.

EXEMPLARY VOCATIONAL EDUCATION FIELD TRIPS

Date	Destination	Approx. No.
Sept. 23, 1971	Roosevelt Jr. High to Bryan Infant Wear and return	
Oct. 13, 1971	Central High School to Bryan Infant Wear and return	
Oct. 14, 1971	Central High School to Bryan Infant Wear and return	28
Oct. 14, 1971	Central High School to Bryan Infant Wear and return	11
Oct. 20, 1971	Irving and Pershing Elementary to Roosevelt Jr. High and return	
Oct. 26, 1971	Horace Mann Jr. High to Bryan Infant Wear and return	13
Nov. 11, 1971	Roosevelt and Horace Mann to Oklahoma Natural Gas Co. and return	
Nov. 18, 1971	Jefferson and Longfellow Elementary to the Court House, Library and Post Office and return	
Nov. 18, 1971	Horace Mann Jr. High to American Airlines and return	14
Nov. 18, 1971	Lincoln Elementary to Southwestern Bell Telephone Co. and return.	

IRVING WORLD OF WORK CLUB — Karen Tyner

Field trip to Norris—O'Bannon, 10 N. Elwood, September 22, 1971

Benefits to students:

1. Students saw workers on the job. Each person had responsibilities and did his job.
2. Students were told that requirement was high school education. Firm supplies on-the-job training.
3. Students found that laborers made a good living. Pay is \$2.88 - \$3.49 per hour. With overtime, many make \$10,000 yearly.
4. Students saw how each person's work fit together to complete the job. Each person must do a good job.

Points of interest:

1. Computer-operated machine.
2. "Shaker" machine to smooth rough edges from parts.
3. Metal shaves are sold to be melted and re-used.
4. Water-cooled drilling machines.
5. At one machine saw -- the operator, the die fitter, and the inspector which showed a variety of jobs in one firm.
6. Many relatives work there including one family with three generations presently employed.
7. Saw parts of machine in all stages of production, from raw to painted and packed.

Field trip to Tulsa Unit Rig

October 13, 1971

Benefits to students:

1. Saw more types of occupations as they were being done.
2. Students were able to talk to workers and ask questions.
3. Several students stated that the occupations seemed quite interesting. The boys were very interested in welding and mechanics.

Points of interest:

1. Saw men in many stages of production of equipment.
2. Saw a truck over a pit allowing students to go under it. They saw all the parts, then went inside the cab.
3. Saw a cement mixing truck. The workers operated it for the students.

This trip was of much more interest and of more benefit to the boys. Several of the girls had little interest.

Speaker: Floyd Rossen, Tulsa policeman

September 29, 1971

Highlights of talk:

1. Division of police department
2. Must be high school graduate and 21 years of age
3. 12 week training school plus 2-5 days of school each year
4. Starting salary, \$542 monthly
5. Discussed other occupations with force (matron, secretaries, etc.)
6. Equipment used
7. Services other than law enforcement
8. Retirement plan
9. Must be able to get along with people
10. Were allowed to fully explore police car.

Benefits to students:

1. Found excellent rapport with policeman
2. Once again saw need for high school education
3. Learned the variety of duties and different occupations within police force.
4. Saw the need for the ability to get along with others
5. Saw a policeman as a human being

Irving School, Room 1
18 North Maybelle
Tulsa, Oklahoma 74127
November 4, 1971

Bill McKim, Deputy Fire Marshall
Tulsa Central Fire Station
Engine One
411 South Frankfort
Tulsa, Oklahoma 74102

Dear Mr. McKim:

Thank you for an excellent presentation made to the Longfellow World of Work Club November 3. The students were delighted with your presentation, the film, and the fire truck. The video taping was successful and we are most grateful to you for your willingness to lend your time and talent to help the students.

Please give a special word of thanks to the following men:

Captain Ramey
Mike Malone
George Moore, the driver
Ray Enlow for demonstrating the clothing
Bobby Goddard for demonstrating the fresh air mask

The club meeting yesterday will surely be remembered by the children for many years to come.

Thank you for your interest in the future of our young people.

Sincerely,

LaVonne Hunter

Tulsa, Oklahoma 74127
November 5, 1971

Mrs. E. Robert Reed, Jr.
8526 East 31st Street
Tulsa, Oklahoma

Dear Mrs. Reed:

Thank you for agreeing to speak to the Riverview School World of Work Club November 10 from 3:00 p.m. to 4:00 p.m. We appreciate your willingness to have your presentation video-taped.

The purpose of the Exemplary Vocational Program on the elementary level is to develop a respect for all work and motivate all youth to want to participate in the world of work. We want the children involved in this program to gain an awareness of the wide range of occupational opportunities available to them, a realization of how education helps to prepare them for jobs and careers, and a feeling of respect for opportunities to earn a living.

During the first few minutes of your presentation we would like for you to stress the following:

1. The training and education required to become a florist.
2. Describe the typical day of a florist. Tell about the job duties.
3. Tell about the materials you work with.
4. Tell what special skills or talents are needed.
5. The working hours of a florist
6. Anticipated salary
7. The interests that might lead a person into a career as a florist
8. The training available in Tulsa for a person interested in becoming a florist

We would like a question and answer period where you interact with the students.

After this has been presented we would like to see an actual demonstration as we discussed in our telephone conversation.

Should you have any questions about the program or the presentation please call me at 582-4188.

Thank you very much for volunteering your time and talent to help our young people.

Sincerely,

LaVonne Hunter

November 5, 1971

Mr. Dick Fain
KCNW
2805 East Skelly Drive
Tulsa, Oklahoma

Dear Mr. Fain:

The feedback I received from Lowell School on the presentation you made for the World of Work Club, October 20 was most impressive. I am truly sorry that I was unable to attend the club meeting. From all reports I received you stressed all the things we had discussed over the telephone and the children really enjoyed having you.

Thank you for agreeing to speak to the Irving World of Work Club November 17 from 3:00 p.m. to 4:00 p.m. We all appreciate your willingness to have your presentation video-taped.

Most of the material that I will mention in this letter we have discussed over the telephone, but I thought you would like some extra material for reference.

The purpose of the Exemplary Vocational Program is to develop a respect for all work and motivate all youth to want to participate in the world of work. We want the children involved in this program to gain an awareness of the wide range of occupational opportunities available to them, a realization of how education helps to prepare them for jobs and careers, and a feeling of respect for opportunities to earn a living.

During the first few minutes of your presentation we would like for you to stress the following:

1. The training and education required to become a disc jockey
2. The interests that lead a person into the radio business
3. A description of a typical day of a disc jockey--working hours, job duties performed, materials or equipment used, interaction with personnel
4. The training available in Tulsa - if any
5. The opportunities afforded for promotion
6. The different types of occupations needed in a radio station and briefly the skills, talents, education and training needed for them.

We would like a question and answer period where you interact with the students at the conclusion of your presentation.

Should you have questions about the program or the presentation, please call me at 582-4188.

Thank you so very much for volunteering your time and talent to help our young people.

Best regards,

LaVonne Hunter
Elementary Counselor/
Coordinator
Exemplary Vocational Program

TO: World of Work Sponsors

FROM: LaVonne Hunter

DATE: November 8, 1971

I would like to talk to each of you personally to pass on suggestions and get your suggestions, but I know how busy your schedules are and I hate to interrupt you during the teaching day. Hopefully, this memo will serve the same purpose.

Johnson School has been paper hanging and painting a room at the school. Don McGowan thought some of the other schools might like to visit it when they finish and see the work. Anyone interested?

In our meeting about the pre-test it was suggested that the students draw pictures of people in different occupations relating first to people; then to things. The children could put up a bulletin board for each category and label their own pictures.

EXAMPLE:

OCCUPATIONS RELATED TO PEOPLE OCCUPATIONS RELATED TO THINGS

policemen shoe sales man teacher bricklayer mechanic machinist

Some sponsors want tempera and brushes for the students to use in club meetings. Others prefer colored magic markers to save time and mess. What do you want?

There is an excellent manual on field trips available! Let me know if you want to see it. I hope to get a personal copy for each of you later.

Below are some suggestions to discuss BEFORE a field trip:

Have children notice workers and ask themselves these questions:

1. If I wanted to do that job, would I have what it takes?
2. Would that job meet my needs?
3. Would I ENJOY doing it?
4. Of all the jobs I saw today what job could I do best?
5. What job could I do least well?

Thanks to those of you who have turned in your club enrollment forms. There is no need to fill in the columns - IQ and Reading Level. Please send me the forms at your earliest convenience.

Have all of you sent thank you notes to speakers who have talked to your club and places you've visited on field trips? Perhaps that would be one of the club secretary's duties. Some schools have correlated World of Work with some English homeroom activities and written thank you notes in class.

If possible could you give me a general, brief review of speakers who visit the club and a brief report of field trips taken? These could be shared with the other club sponsors.

Drop me a note if you can on scheduled events - speakers, filmstrips and field trips - as far in advance as you know them.

If you have had any especially favorable speakers or have taken any field trips you think others would enjoy, let me know. I'll pass on the good word!

Have you ordered construction paper yet?

Longfellow Club had a fireman November 3. He was video-taped. River-view has a florist coming November 10 and Irving has a disc jockey coming November 17. They will also be video-taped.

I sent a key to the Pre-Test in the school mail. Would you please forward the graded tests to me in the school mail when they are finished? I know some of you had previous speakers engaged and trips planned so you haven't had time to give the tests.

The club meetings I have attended have been most interesting! Your cooperation in all matters has been GREATLY appreciated. Your hard work and enthusiasm appear to be paying off. Keep up the good work!

If it is easier for you to give me the information by telephone rather than written form, the school phone is 582-4188.

DISSEMINATION ACTIVITIES:

Video-tape on Exemplary program presented to:

School Opens Monday For 75,750 Students

By GREG BROADB
Of the World Staff

Tulsa Public School officials estimate 75,750 students will return to classrooms here Monday, along with 3,064 teachers.

Although the student count will not be official until the end of the first and second weeks of school, the total estimate will be very close, officials agree.

For the most part, Tulsa Public Schools students will enter a year of important and innovative changes.

There are well-publicized changes of desegregated junior high schools, the closing of Carver and Lowell Junior Highs, the voluntary white enrollment to integrate Burroughs Elementary School,

and the tightened budget and freeze on teacher pay hikes.

PERHAPS MORE important are changes that will affect the great majority of students and parents.

These revolve mainly around curriculum improvements,

Related Photo on A-1

better teacher preparation, the open school continuous progress program, some new schools, and important challenge programs to make higher-achievers out of students.

To the vast majority of parents, the important items this year are not buses, desegregation, or even tight budgets. They are concerned with quality education.

Among the most dramatic new programs to achieve this goal will be two continuous-progress, open elementary schools—Columbus and Sandburg.

THE SCHOOLS are designed to provide students with an atmosphere conducive to open learning and flexibility of instruction. They are staffed with teachers who have been working all summer at curriculum preparation for this new concept for Tulsa which has only been tried last year in part at Bunche Elementary School and was immensely successful.

The Metro Learning Center at Washington High School is another new first for Tulsa students. It will open with about 50 students and a living-city curriculum aimed squarely at giving high school juniors and seniors — both white and black — an in-depth look at their culture and where they fit into the life style of their generation.

The MLC will bring society and the student together with interpersonal relationships, learning situations, and careful looks at business, government, social institutions, and professions, and the arts.

ALSO NEW this year is the Early Childhood Education Development Center at Lowell Elementary School. This program for 4-year-olds is considered by Dr. Gordon Cawelti, Tulsa schools superintendent, to be one of the most crucial at beginning the educational process.

"We must increasingly be aware of starting education earlier and perhaps cutting it off earlier at the other end. Students come to us knowing more about their world than in the past. And they are expecting to learn a lot more a lot quicker than in the past.

"We are also expecting them to grow up faster and come to grips with more issues at earlier ages than in the past. So the emphasis on working with 4-year-olds . . . is very critical to the whole educational process."

EIGHT OTHER new programs are being placed in front of students this year in Tulsa Public Schools. They are:

1. Reading reinforcement of communication skills, new this year at Gilcrease and Roosevelt Junior High Schools and last year at Anderson Junior High.

2. Computer laboratory at the vocational-technical center, which is available to all high school students, with a 1620 IBM system including all components necessary for practical experience in a field with growing demand.

3. Basic mathematics reinforcement, also at the vocational-technical center, which has been termed a "second-chance" plan to give under-achievers in math a continuous progress program.

4. **MODIFYING** the school environment, which is being put into use at Edison High School, will focus on improvement of dialogue, cooperation, and significant learning activities between students and faculty.

5. Block scheduling goes into effect for sophomores at Will Rogers High School and provides more stability and continuity between student and teacher in utilizing time to its best advantage.

6. Computerized modular scheduling is being initiated at East Central High School. It is a program designed to promote the use of the computer in a master scheduling for the

See School on B-3

Continued from B-1

entire school and ending up with more flexible schedules for students, greater learning options, and more team teaching and joint teacher planning.

7. **MODULAR** English program goes into effect this year at both Hale and Central High Schools, aimed at making the English program more flexible, with greater options.

8. Elementary modular scheduling, similar to what is being done at Rogers and East Central, goes into effect this year at Disney Elementary School to see if it can achieve with younger students the same kind of important flexibility and interaction with teachers as it is hoped to do at senior levels.

Although it isn't new this year, the humanities project at Lewis and Clark Junior High School, which was on the seventh grade level last year, has been expanded to the eighth and ninth grades on a pilot basis. It incorporates art, music, drama, and literature to achieve a total humanities appreciation and knowledge.

THE EXEMPLARY occupational orientation program, which is designed to expose students to the world of work, gives students at Central, Jefferson, Johnson, Roosevelt, Horace Mann, Irving, Lincoln, Longfellow, Pershing, and Riverview opportunities to start learning about management and technical experiences.

An advisor-advisee secondary counseling program developed at Horace Mann brings closer liaison between parents, teachers, and students.

A programmed independent enrichment center to more closely integrate the library with academic programs in elementary schools was begun at Grissom Elementary School last year and this year has been diffused to many other elementary schools.

In relation to other computer

programs, a computer-assisted mathematics program continues at Anderson, Dunbar, Washington, Woods, and Johnson.

IN RELATION to new curriculum programs at Bunche, Lewis and Clark, Columbus, and Sandburg, these schools are also getting a program which focuses on maximizing teacher effectiveness in teaming and relying on particular teacher strengths in instruction.

In five schools, Hamilton (social studies), Skelly (English), Roosevelt (social studies), Wilson (science), and Bell (math) last year, a program of learning was designed to permit students to progress as rapidly as they could through task-oriented activities making them more self-reliant.

The program was so successful in those five schools, it has been increased this year to Foster (social studies, math, and science), Lewis and Clark (science), Clinton (science, reading), Cleveland (science), and science at Skelly, where it already was involved with English.

SUMMARY OF 1970-71 Summer Workshop

The Curriculum Development and Inservice Training of the Exemplary and CVET Programs was conducted June 7, 1971 through June 25, 1971.

There were 15 participants from the Exemplary Program and 14 participants from the CVET Program. All Exemplary people attended at least two weeks and most three weeks. Two CVET instructors could only attend one week but all others attended two and three weeks.

The workshop was attended by the teachers actively involved in the programs on the elementary, junior high and senior high level. There were consultants from the Vocational, Technical and Industrial Education Department, Home and Family Life Department and the Business Education Department.

The Curriculum Development was divided into three areas, three days was spent with AMIDS on orientation; two days were spent with representatives from the Oklahoma State Department of Curriculum Development on the writing of Behavioral Objectives; the remaining time was spent in the writing of units of instruction for the areas involved.

The majority of those attending felt too much time was spent on AMIDS presentation as it was the second time for a number of those attending and they felt a slight review would have been more beneficial, leaving more time for curriculum writing.

Several mentioned the fact that problems were identified, but no solutions were offered. Particular mention was made in several replies that Mrs. J. Hall, the black instructor, was so prejudiced that her usefulness was limited.

The consensus of opinion seemed to be that nothing new was presented. Those hearing it for the first time (Exemplary instructors) found it more interesting but too long and detailed.

The O.S.U. Curriculum Writing Team was highly praised. All felt the sessions were well-planned and very helpful in all areas. Mr. Bob Patton was a splendid instructor and was explicit in what he wanted them to accomplish during this workshop. All felt that the time spent in these two days was highly beneficial.

It was recommended that the O.S.U. Team be asked to come for five days next year and that the presentation be utilized in other workshops, conferences and in-service courses in the Tulsa system.

EXEMPLARY OCCUPATIONAL ORIENTATION PROJECT

Director: Morris Ruley

Evaluator: An outside agency to be contracted later

Evaluation Consultants: Paul I. McCloud and Mary Joe Keatley

Project Schools: Irving, Jefferson, Johnson, Lincoln, Longfellow, Lowell, Pershing, and Riverview Elementary Schools; Horace Mann and Roosevelt Junior High Schools, and Central High School

Project Description

The purpose of this project is to provide occupational information and guidance for disadvantaged students early enough to allow them to make realistic future vocational choices. Students will gain an awareness of the wide range of occupational opportunities available, a realization of how education helps to prepare them for jobs and careers, a feeling of respect for the world of work, and an understanding of their capabilities and limitations.

The project is designed in a sequential pattern through the three educational levels. The curricular content of the project progresses from very general information in fifth grade to specific skills training in the senior high.

Elementary

The elementary phase of the project (Introduction to Occupations) provides occupational orientation for pupils in the fifth and sixth grades. Voluntary special interest clubs in areas such as electronics, horticulture, cooking, drawing, and any other broad career areas meet one day a week after school. Volunteer sponsors from business and career areas work with the teacher-sponsors to furnish the pupils with general occupational information from the world of work.

Junior High

The seventh grade phase of the project provides an orientation and exploration of occupations program in the regular industrial arts, home-making or business education classes. Students are exposed to various careers so they will be able to decide if they are interested in exploring certain career clusters in more depth at a later time. The program is not aimed at decision-making, but at providing students with an opportunity to be exposed to as many different kinds of jobs and careers as possible over a one year period.

The program for eighth and ninth grade students (career exploration) is designed to provide information and actual "hands-on" experiences in clusters or families of occupations in the world of work. This

phase is a logical step following the orientation and exploration phase in that it provides students an opportunity to explore in depth certain job clusters--construction, manufacturing, power, transportation and service, business, office, clerical and sales, home and community services, and health occupations. This exploration will provide students with a more realistic understanding of careers and a better knowledge base upon which to make sound decisions concerning preparation for a job.

Senior High

The skill training phase of the program is for tenth grade students at Central. This portion of the project is devoted to skill training in an occupational cluster selected by the student as a result of his previous experiences in the program. After students have completed their skill training at the tenth grade level, they will go into either the regular vocational program in a local high school, the area vocational school, or one of the cooperative programs.

Project Objectives

Elementary

1. To develop in students an interest in the world of work.
2. To help students relate their preferences to the educational requirements and job tasks needed in various occupations.

Junior High

1. To develop students' knowledge of how to gain entry into and to succeed in the world of work.
2. To increase the students' knowledge of the jobs and occupations within various occupational families.
3. To increase the students' knowledge of vocational preferences and capabilities.

Senior High

1. To assist students to narrow their vocational choice to one cluster or occupational family.
2. To offer students sufficient exposure to the skills and related information in a vocational field to facilitate their career planning.
3. To develop students' entry level vocational skills in selected occupations.

Evaluation Procedures

The evaluation of this project will be conducted by an outside

agency (@ 8% of \$141,000 = \$11,280), as required in the terms of the contract. The local evaluation consultants will monitor the evaluation in process and react to the final evaluation findings of the outside agency.

At this time the focus of the evaluation is on grades seven through ten. The objectives in the junior and senior high schools will be evaluated with instruments being developed by Dr. Mary Joe Keatly, Director of the Department of Psychological Services. The items for the instruments will be administered to students in the project schools in October and again in May to determine changes in pupils' knowledge, skills, or interests during the project year.

The local evaluation consultants are to meet with the project teachers on October 16, 1971, to explain the plan of evaluation, to finalize the evaluation instruments, and to set up procedures for the administration of the instruments to project students in October and again in May.

The outside evaluation agency will be responsible for determining the evaluation procedures to be followed in the elementary schools and for designing further evaluation procedures for the junior and senior high levels. They will gather, process, analyze, and interpret all evaluation data, and will prepare a comprehensive report of the findings.

The Department of Instructional Research will cooperate with the outside evaluation agency in their conduct of the evaluation, and will interpret their findings to the administrative staff of the Tulsa Public Schools.

FOREWORD

Present manpower programs are dedicated toward the simultaneous maximizing of job opportunities and minimizing of unemployment. President Nixon has stated two methods for reaching this goal. "First, to accomplish much needed and long overdue reform of the manpower program set up under the Manpower Development and Training Act and subsequent legislative and thus increase their effectiveness in enhancing the employability of jobless workers; and, second to move toward a broader national manpower policy which will be an important adjunct of economic policy in achieving our Nation's economic and social objectives."

This extensive effort to increase the skill level of our unemployed workers needs some type of direction in order to decide what occupational programs should be geared toward where the demand for workers lies and what type and how much training is needed. It is hoped that occupational projections will contribute significantly in performing this function.

This study represents a joint effort between the Research and Statistics Section of the Tennessee Department of Employment Security and Memphis State University, Center for Manpower Studies. Special appreciation and recognition is owed to Beatrice Hubbard of the Research and Statistics Section of the Tennessee Department of Employment Security for her hard work and dedication to this project. Other staff members contributing significantly to the research and writing were William R. Schriver, Director, Center for Manpower Studies, Robert McCormick, research assistant for the Center for Manpower Studies, Robert M. Beck, statistician for Research and Statistics, and Ormond C. Corry, contributing consultant.

The Southeastern Regional Office of the U. S. Department of Labor provided expert guidance during the course of this project. Special technical assistance was rendered by John Sherman of the Atlanta Office.

INTRODUCTION

It was stated in the 1972 Manpower Report to the President that, "There are few issues of greater concern today, to the Congress and to the President, than the state of the American Economy. We are passing through a period when the economy was inflated by the strain of war to a time when it will be challenged by the needs of peace."

The current state of the economy is also influenced by the increases in the labor force which resulted from the coming of age of youth born during the 1940's and 1950's, by increased labor force participation rates of the population and, especially by accelerating technological changes. The national total labor force is now some 84 millions in comparison with 72 millions in 1960. The inflation is hopefully being moderated but unemployment remains disturbingly high. For Tennessee, employment increased by about 300,000 during the 1960's and the unemployment rate has continued well below the national average rate.

The expanding labor force and the changing technologies made more critical the issues of the amount, kinds and quality levels of education and training needed to meet the industry demands for employment, of the unemployed persons as well as of the new entrants to the labor force. Support for education at all levels was increased but a failure of the total educational system to provide adequate vocational-technical education below the 4-year college level resulted in greater emphasis being placed on it in federal, state and local manpower policies and programs, especially so for Tennessee.

During the past decade in Tennessee, where vocational education had lagged well below the national level, 26 state area vocational schools, 3 state technical

institutes and 9 state community colleges were established largely through the increased availability of federal funds. Vocation education courses and student counseling were also expanded and introduced in most of the public high schools. Special skill training activities for the unemployed and minority groups were conducted in most communities of the state.

The practical, pragmatic nature of vocational education requires that the skills taught be those demanded by industry when the student enters the labor force if not throughout his productive life. But employment opportunities are determined by the shifting relative numbers to be needed in each occupation in all industries. Projections of these occupational employment numbers are measures of the relative opportunities. Thus, the projection of future manpower needs was included in a congressional mandate to the U. S. Department of Labor in 1963.

In carrying out Congress' mandate the Department's Bureau of Labor Statistics projected to 1975 the distribution of total national employment numbers by industry with a cross classification by occupation. The "national matrix" of the projections was tentatively completed in 1966 and published in Tomorrow's Manpower Needs (BLS Bulletin No. 1606) in 1969. Specifically, the matrix was a table of the ratios of change between the percentage distributions of 1960 estimated or recorded and 1975 projected employments in 116 industries and 162 occupations. Historical trends were applied in projecting the changes in the percentage distributions of occupational employment in each of the industries.

The procedures developed in the BLS bulletin and recommended for state and local agency application was that of applying the national matrix ratios, or appropriately adjusted ones, to state and local projected employment by industry to yield the projected employment by occupation. BLS provided the state

employment security and labor department staffs with detailed procedural guides for making the industry employment projections and applying the matrix ratios. Also ELS provided computer services when needed in checking and completing the industry projections, applying the matrix ratios and cross tabulating the resulting occupational numbers. The data for Tennessee reported here were developed with this kind of assistance from BLS.

The logical explanation of the procedures developed by BLS is that industries expand or contract in absolute and relative employment numbers at differing rates. At the same time the occupational composition of each industry changes under the influence of technological innovation. The result of the combined changes is a restructuring of the occupational distribution of total or all-industry employment. The BLS matrix is a projection of the relative shifts in occupational composition of the industries. Its use with the projections of employment by industry then yields the future composition of total employment.

However deaths and retirements over time require that large numbers of persons be replaced over the whole range of occupations at the same time that total employment is changing. The Tennessee projected replacement numbers are about twice the industry growth numbers projected for the 1969 to 1975 period and reported here. There are variations by occupation due to several factors including relative sex composition of employment and physical hazards of the occupation. Transfers between occupations and migrations out of the state or local area may also need to be accounted for and added to industry growth and replacement numbers to get the total number of potential job openings in the several occupations.

The total opening may be filled by drawing upon the pool of currently unemployed persons and on new entrants to the labor force. A major part of manpower planning is thus directed toward providing the education and training which will help qualify persons for the job openings in a number of occupations. The projected data provide guides to the occupations upon which the greater emphasis should be placed. Also, as summarized in a 1967 Manpower Administration bulletin,¹ the projections serve:

1. To alert Government (and other interested parties) to emerging manpower problems: commonly, an imbalance between the demand and supply of workers in the labor force.
2. To help choose between alternative proposed policies.
3. To assist in administering specific Government programs.
4. To provide an essential element for developing other general types of projections by Government and private organizations.
5. To provide information for vocational guidance of young people interested in choosing a field of work.
6. To encourage an informed and responsible public concern for manpower problems; and to help provide the ordinary citizen with information which would be of use to him in his role as a citizen, and apart from that of an economic producer.

1. Manpower Projections: An Appraisal and a Plan of Action (U. S. Department of Labor, Manpower Administration, August 1967), pp. 22-25. Quoted in Occupational Manpower and Training Needs: Information for Planning Training Programs for the 1970's (U. S. Department of Labor, Bureau of Labor Statistics, 1971, Bulletin No. 1701) p. 2.

.....

A most practical and immediate use of the projected openings is to match them on an average annual basis with the aggregate numbers completing corresponding occupational education and training courses or otherwise qualifying themselves for employment. Persons entering the professional and higher level technical fields are much more mobile as to place of employment than are the

graduates of the vocational schools. Their numbers would need to be matched with openings of at least a state or regional basis. But for a large proportion of the entrants to the labor force the demand for workers as represented by the projected annual opening can be matched against the supply originating in a labor market area, or a state planning region or development district.

Descriptions of the job content of occupations and the educational and training needed for entry into them are available from a number of sources. The more convenient ones are the more recent U. S. Department of Labor bulletins. The most complete detail is in the Biennial Dictionary of Occupational Titles. The biennially published Occupational Outlook Handbook (BLS Bulletin No. 1700) places emphasis on the information needed for vocational counseling. The bulletin directly useful for matching the projected annual job opening with the numbers of persons being trained for employment in occupations is titled Occupational Manpower and Training Needs: Information for Planning Training Programs for the 1970's (BLS Bulletin No. 1701).

These sources have been used in the selection and comments on the projections included in the text of this part of the report. Attention is directed first to the projected employment of industries by major group. The "growth" elements included in projected total job openings by occupation for the 1969-75 period are included in Appendix Table A. Likewise the projected job openings by detailed occupations for the period and broken down as openings arising from industry growth, replacements and their total is shown in an appendix (B). The discussion of openings by occupation includes a summary table of selected data in which the projected openings are expressed in terms of their annual averages for the 1969-75 period.

This publication represents Part I of a two part study. Part II of the study will be a separate publication which will extend the projection data to the nine state planning regions or development districts and include as much of the information on matching education and training numbers by occupation as is available.

INDUSTRY EMPLOYMENT GROWTH TRENDS

In the BLS procedures applied in this study the first step is that of projecting employment by industry. These projections made for a total of 116 industries in Tennessee, as shown in Appendix A, are summarized by broad industry group in the following paragraphs. The projections are those of the aggregate employment change over the projection period. Of more importance for this study, they reflect the shifts in the relative numbers employed or in the industry mix and thus changes in the occupational composition of total employment. For instance the indicated further decline in agricultural and increase in manufacturing industry employment means that substantial changes may be expected in the numbers in the occupations affected.

Table 1 provides comparative employment trend data for Tennessee and the nation as a whole. It may be noted that the annual growth rates for all industries are shown as being 1.0 percent for both the state and nation but that there are marked differences in the rates for several of the industry groups. In Table 2 and accompanying Chart 1 the comparative percentage distributions of total employment in Tennessee for 1960, 1969 and 1975 are shown. The differences in shares for agriculture and manufacturing are quite marked as is the increase indicated for the services group.

TOTAL EMPLOYMENT IN THE U.S. AND TENNESSEE WITH ANNUAL GROWTH RATES 1960-1975

	EMPLOYMENT		ANNUAL GROWTH RATES	
	United States	Tennessee	U.S.	Tenn.
	1960	1975	1960-1975	
Agriculture, Forestry & Fishery.	5,591	3,360	198.0	96.6 - 3.5 - 5.0

EMPLOYMENT DISTRIBUTION BY INDUSTRY - 1960, 1969 AND PROJECTED 1975

INDUSTRY EMPLOYMENT TRENDS

Agriculture

The United States is in the midst of an agricultural revolution which is shaping employment trends into patterns previously inexperienced in the industry. The essence of this metamorphosis is based on a rapid mechanization of farm processes. This has two major results. First, increased mechanization raises production capacity which must be fully utilized in order to lower marginal costs. As a result, smaller farmers who possess a capital shortage which precludes automation of the farm processes are being squeezed out of the market. Secondly, automation has significantly reduced the amount of man-hours needed to produce similar volumes and consequently has reduced the demand for farm laborers.

These trends are established in the 1975 employment projections. Agricultural employment in 1960 in Tennessee was 198.0. Realizing a negative growth rate of 5.0% over the next fifteen years, employment plummeted to 96.6. This trend was similar to the national one except that it was more pronounced. The national growth rate in Agriculture over this period was -3.5%.

The same trend is also exhibited when the portion of total employment comprised of agricultural employment is viewed. In 1960 15.0% of all employment fell into the Agriculture classification. This figure decreased to 7.4% in 1969. The projected employment for 1975 would further reduce the percentage of total employment to 5.5%.

Mining

Employment in mining is expected to decline slowly through the 1970's, despite increases in output. Increased demand for mining projects will be met

largely through the use of improved equipment operated by a more highly skilled work force. Even though employment as a whole is expected to decline, different growth patterns are likely within the industry. Employment in coal mining probably will decline more rapidly than employment in metal mining and petroleum and natural gas extraction. Employment in quarrying and nonmetallic mining, on the other hand, is expected to increase.

Employment in the mining industry shows a slight decrease in the period 1960 to 1975. The 1960 employment level of 720 dropped by 1.4% per year during the time-span mentioned above. At this rate, projected employment totals in 1975 would be 585. The Tennessee figures portray a different situation. Employment from 1960 to 1975 increased from 8.2 to 8.4 which is a .2% growth rate. However, the percentage of total employment in the mining industry receded from .6% in 1960 to .5% in 1975.

Construction

Through the 1970's, employment requirements are expected to rise rapidly in the construction industry. As the national economy expands, as population increases, and as personal and corporate incomes rise, the demand for contract construction activities are expected to undergo a substantial increase. Likewise, the number of construction workers employed by State and local highway departments also is expected to increase because of the need to meet the demands of the country's expanding highway systems. Even though employment in the construction industry is likely to grow, the increasing application of the latest technology in tools, material, and work methods, together with the rising skill level of the work force, will make it possible to increase the level of construction activity without a correspondingly large increase in employment.

Construction is one of the fastest growing industries employment wise in Tennessee. The number of workers in this classification rose from 80.1 in 1960 to 118.2 in 1975. This represented an annual growth rate of 2.7% which was higher than the national rate of 2.2% increase. The construction industry also raised its percentage of total employment from 6.1% to 6.8% over the same fifteen year period.

Manufacturing

Manufacturing is the core of our free-enterprise system. It is the process which, in addition to providing the finished product, refines raw materials into intermediate goods. It is responsive to consumer desires by setting volume levels of production. It also affects the consumer's demand by formulating the sale price of an item on the basis of cost of production. As an industry, it provides jobs for over 30% of the total work force. In short, manufacturing is integrally involved with every facet of the labor and goods markets.

Population growth, rising personal income, and expanding business activity will stimulate a substantial increase in the demand for manufactured products through the 1970's. The increase in demand will outweigh the increase in employment since technological labor-saving devices make it possible to significantly increase production of goods without a rise in the work force. The improving skill level of the work force also contributes to the situation. Although the average rate of employment growth will be slow, employment trends of individual industries within manufacturing will vary widely. In the rubber and miscellaneous plastics products and furniture and fixtures industries, employment is expected to increase about one-third, far above the average increase. Employment in several other industries - including machinery, apparel,

Projections for 1975 call for an employment level of 97.7 up from 76.2 in 1960. This is a growth rate of 1.5% annually which exceeds by .4% the national figure. The percentage of total employment which this industry holds is projected to decline slowly to 5.6% in 1975. This represents a .2% decrease from 1960.

Wholesale and Retail Trade

Due to growth in population and increased consumer demands, fostered somewhat by greater urbanization, employment in the wholesale and retail trade is expected to increase during the 1970's. The gain will be tempered by increasing mechanization materials, handling, packaging, inventory control, and billing operations.

Within retail trade employment in department stores, drug stores, restaurants, auto dealerships and service stations is expected to rise the fastest. Among wholesale establishments, the rates of employment growth are likely to be highest in businesses that distribute auto parts, and in firms selling industrial machinery, equipment and supplies.

Employment in this area in 1960 was 246.6. The projected figures show a 2.1% annual growth rate resulting in a figure of 327.6 for employment. This is a greater growth than the 2.0% rate projected for the U. S. as a whole. Individually, the wholesale section is expected to increase at a 2.6% annual rate while retail trade expands at a 1.6% annual rate.

The percentage of the total labor market cornered by this industry will remain fairly stable. Projections for 1975 show a slight increase to 18.8%, up from 18.7% in 1960. This makes it the third largest employment category.

Finance, Insurance and Real Estate

Employment in this industry is expected to increase moderately through

instruments, and stone, clay and glass - is expected to increase more rapidly than the average for all manufacturing. Petroleum refining, tobacco, food, and textiles all may decrease in employment during the 1970's.

Employment growth in the manufacturing industry in Tennessee is projected to rise over twice as fast as the national figures. The increase in employment from 327 to 527 provides Tennessee with an annual growth rate of 3.2% as opposed to the U. S. growth rate of 1.5%. Much of this gain comes from Durable Goods in which area employment rose at a 4.3% annual rate.

Percentagewise - employment in the manufacturing industry in Tennessee has increased greatly. In 1960 this area accounted for 24.7% of all employment. This portion was elevated to 30.2 in 1975 projections.

Transportation, Communication and Public Utilities

Employment in Transportation is expected to increase slowly through the 1970's. Increased demand for air travel and business expansion will elevate employment in the air and trucking industries. Some decline is expected in local transportation and railroad employment.

Employment in communications is expected to grow slowly through the 1970's. Although demand for the industry's services will increase rapidly, advances in technology are expected to limit employment growth, particularly in telephone communications.

Employment in electric and gas utilities also will be affected strongly by advancing technology and employment will grow slowly despite rapid increases in output. Substantial improvements in electric generating equipment through the increasing use of nuclear power, electronic controls, and improved coal-handling techniques, as well as more efficient methods of constructing and maintaining transmission lines will limit employment growth in this industry.

the 1970's as a result of population growth, increasing business activity, and rising personal incomes. However, increasing use of computers for routine clerical and recordkeeping functions may limit employment growth to some extent. Employment is expected to increase more rapidly in the financial sector than in insurance and real estate.

After manufacturing, finance, insurance and real estate encompasses the fastest growing industry in Tennessee. The annual growth rate from 1960-1975 is projected as 2.9% enabling employment in this area to increase from 45.7 to 70.1. The growth in Tennessee exceeds the U. S. increase by .5% annually.

The percentage of total employment covered by this industry has also steadily increased. Projections for 1975 predict a figure of 4.0%, up from the 1960 figure of 3.5%.

Services

Employment in the service is forecasted to show an impressive increase on a national basis through the 1970's. Important factors contributing to this rise include increasing demand for services due to population growth, expanding business activity, rising personal incomes, and the general awareness of the benefits that educational, health and other services can provide. Perhaps even more important is the fact that the service industry's employment will not be as adversely affected as that in other industries by technological innovation. The reason for this is that extensive person-to-person contact in many situations.

Employment in the service industry in Tennessee is also expected to increase during the 1970's. However, projections show that the increase will be from 291.9 in 1960 to 433.8 in 1975. This represents an annual growth rate of 2.7%. This figure becomes very interesting when compared to the national

growth rate of 3.7%. Tennessee's growth in employment in the service industry therefore, will be significantly lower than the nationwide level of growth over the coming years.

The percentage of total employment of the service industry shows a steady but slow decline over the period covered. The 1960 percentage of 22.1% rose to 23.5% in 1969. The 1975 projected figure is 24.8%.

Public Administration

Employment in the Public Administration industry is expected to increase rapidly during the coming period. This gain reflects the increasing demand for services from an ever-growing population and enlarged domestic and international programs. However, the growth of employment will be limited somewhat by increased use of labor-saving electronic data-processing and materials - handling equipment and the introduction of improved data - transmission and communications systems.

Employment in the public administration area in Tennessee is expected to grow, but at a slower rate than national growth. Employment projections show a 66.4 level reached in 1975 up from the 45.7 level in 1960. The annual growth rate of 2.5 is below the national level of 3.1%.

OCCUPATIONAL EMPLOYMENT TRENDS TO 1975

The occupational data projected for use in this study is designed primarily to be helpful to persons planning and administering manpower programs. Also the data can serve a more general interest to give perspectives as to the scope of educational programs needed, the allocations of resources to support them, and the relative emphasis which should be placed on occupations in the programs.

Knowledge of the job content and qualifications for entering and pursuing an occupation, and of the large variety of paths that may be followed to gain entry to most occupations, are among the prerequisites for interpreting and making use of the projections in manpower programs. For instance, the numbers employed and the projected annual opening for employment, even if the same for two occupations, have meaning in manpower program planning only in terms of what the specific occupations are. Thus, however specific the detailed projections may appear they remain only additional evidence for consideration in the total subjective process of manpower program planning and administration.

Certain occupations, such as medical doctors and certified public accountants have educational levels, entry examinations and years of background experience prescribed by statute or state boards. Apprenticeship and formal or informal on-job training may be used to qualify craftsmen. The private business college, or trade school (or institute) can succeed only if the students qualify for and gain entry in their chosen occupations. Expanding technology has made a basic education through at least high school necessary for most apprenticeship, on-job training and public or private vocational school courses. Only the common laborer may need no formal education and only the dropout, hard core unemployed

person in the crash training programs may be admitted with the most limited educational background.

Projections of employment numbers and job openings carry no implication that the occupations of small numbers or even small changes in numbers are not significant. The full range of occupations and implied job specializations is needed in our highly complex economy. Thus the projections for Tennessee occupations in the most practical detail, with the total job opening arising from expansion and replacement needs, are included in the Appendix A table. Chart 2 provides a graphic comparison of the employed numbers by broad occupational classification for 1960 and 1969 and as projected in this study for 1975.

Since manpower programs need to be directed to the most strategic problems and these are best indicated by relative numbers, the projected data have been condensed and adapted in Table 3 to show only the occupations with .005 (1/200th or 1/2 percent) or more of the total number of projected job openings. Three kinds of percentage measures are used in the table. The percentage change in the numbers projected to be employed in the occupations is shown in the third column. The average annual number (for the six-year period) of total projected opening and the percentage distribution of the aggregate are shown in the next two columns. Probably the most meaningful relationships between occupations are those shown in the last three columns. These are the total opening and the expansion-replacement need detail as shares of the 1969 or projection base year employment numbers.

The remainder of this Part 1 of the report presents 1) summary statements of trends, 2) general information about the nature and employment entry qualifications, and 3) projections of job openings from industry employment expansion and from replacement of workers who die or retire, each for selected

occupations within the several broad occupational categories. Here the selection has been made from the occupations listed in Appendix B to indicate something of the range of qualifications or vocational preparations needed rather than the projected number of openings.

Reference was made in the introductory section above to the extensive descriptive materials and aids available on description of occupations, the training needs and other information relating to applying the projections in manpower program planning and administration. Among the information sources named was the BLS Bulletin No. 1700, Occupational Outlook Handbook, 1972-73 Edition. What could be said here about training needs, work experience and other qualifying factors for entry into occupations would parallel statements included in this bulletin. Therefore, liberal use has been made of the statements as direct quotations from the bulletin. Only a parenthetical page reference is included at the end of the statement used.

A major omission from this part of the report has been the available information on the numbers trained or otherwise becoming qualified for employment by occupations. These are the enrollments or course completions primarily of the vocational schools and comparable institutions for most of the occupations. Their use is for matching with the employment openings by occupation: the supply compared with the demand to indicate the extent to which needs are being met. These materials are included in Part 2 of the report with the state total projections from Appendix B allocated by state planning or development district and with most emphasis placed on the groups of occupations of most interest to vocation-technical education.

BROAD OCCUPATIONAL GROUPS AS A PERCENT OF TOTAL EMPLOYMENT IN TENNESSEE
1960, 1969 & PROJECTIONS TO 1975

OCCUPATIONAL EMPLOYMENT TRENDS

BROAD OCCUPATIONAL GROUPINGS

Professional, Technical and Kindred

In 1960 there were approximately 122,300 professional, technical and kindred workers, which comprised 9.3% of the total employment. By 1969, the employment figure had grown to 180,300 or 12.2%. The projected figures for 1975 are on employment of 213,250, which remains 12.2% of total employment. Over the 15 year span rank by size changed two places from sixth in 1960 to fourth in 1975. Over 60,000 total openings will be initiated between 1969 - 1975 which is 14.0% of the total.

Most jobs in professional and related fields require at least a bachelor's degree. However, some jobs require one or more advanced degrees while for others two years of training in a junior college, technical institute, or specialized school is adequate. Another group of professionals which includes performing artists and athletes place a higher premium on skill and creative talent than academics. In many professions either licenses are required to practice or professional societies define membership standards to limit their fields. (22)

Employment 1969.	180,270
Projected 1975 employment.	213,250
Percent growth 1969 - 1975	18.3
Openings 1969 - 1975 total	60,340
Expansions	32,975
Replacements	27,365
Annual Avg. Openings 1969-1975	10,057

Managers, Officials and Proprietors

Employment in 1960 was approximately 97,200 in this category to rank seventh among the nine broad occupational groupings. These workers represented 7.4% of total employment. By 1969 employment had risen to 118,120 or

8.0% of total employment. The projections for 1975 indicate a rise in rank to sixth on the basis of 128,150 workers or 7.3% of total employment. Approximately 25,600 jobs will be available between 1969 - 1975 - nearly 6% of total openings.

A college degree has become increasingly important in terms of promotional opportunities into managerial positions. For beginning management positions each employer looks for different qualifications. Concentration in the areas of economics, finance or more technical areas of engineering and science are generally preferred by employers. The number of companies that have formal management trainee programs is relatively small. As a result, entrance to many management jobs comes after several years of progressively more responsible work experience. (40)

Employment 1969	118,120
Projected 1975 employment . . .	128,150
Percent growth 1969 - 1975 . . .	8.5
Openings 1969 - 1975 total . . .	25,600
Expansions	10,030
Replacements	15,570
Annual Avg. Openings 1969-1975 :	4,267

Clerical and Kindred Workers

This group is one of the fastest growing of the nine broad occupations. Employment projections predict a rise from 152,850 in 1960 to 254,360 in 1975. Such an occurrence will bring about a change in rank from fifth to second with 14.6% of total employment. It also represents a percentage growth of 13.3% between the year 1969 - 1975. In terms of total openings clerical and kindred workers is the highest with 85,800 or 19.6%.

For all but the most routine clerical positions, the minimum educational requirement is usually graduation from high school. High school graduates who have had instruction in business subjects are regarded by most employers

as particularly well-qualified. Qualifications for many types of clerical work include reading comprehension, a knowledge of spelling and grammar, and ability in arithmetic. Practically all beginning clerical workers receive some on-the-job training. (41)

Employment 1969.	224,430
Projected 1975 employment . . .	254,360
Percent growth 1969 - 1975 . . .	13.3
Openings 1969 - 1975 total . . .	85,800
Expansions	29,940
Replacements	55,860
Annual Avg. Openings 1969-1975 .	14,300

Sales

Employment increased from 91,590 in 1960 to 107,610 in 1969 to a projected high of 119,660 in 1975. The percentage of total population is the same in 1975 - 6.9% - as it was in 1960. However, the ranking by size increased from eighth to seventh. Total openings are 37,850 which is 8.7% of all openings.

The educational paths of salesmen vary widely. In routine jobs no specializing training is required. However, a high school diploma is an asset to a beginning jobseeker. A salesman who sells complex products sometimes receives training which lasts many months. Many of these positions require a college major related to the products or services being sold. Salesmen dealing in specialized areas may need technical knowledge taught by universities or manufacturers supplemented by on-the-job experience or home study. (43)

Employment 1969.	107,610
Projected 1975 employment. . . .	119,660
Percent growth 1969 - 1975 . . .	11.1
Openings 1969 - 1975 total . . .	37,850
Expansions	12,050
Replacements	25,800
Annual Avg. Openings 1969-1975 .	6,308

Craftsmen, Foremen and Kindred

This category retained its third place ranking from 1960 through 1975. However, the absolute figures for employment increased from 164,510 in 1960

to 251,960 in 1975. This resulted in an increase in percentage of total employment from 12.5% to 14.4%. Total openings were 53,020 which was also ranked third with 12.1% of total openings.

A large proportion of skilled workers learn the trades through informal on-the-job training and experience. Many others learn their trade through apprenticeship or other formal training programs. Many companies have training programs that also provide on-the-job training supplemented by classroom instruction. In addition, many young men acquire skills in the Armed Forces which enable them to qualify, with additional training for skilled jobs in civilian life. (48)

Employment 1969.	225,340
Projected 1975 employment. . . .	251,960
Percent growth 1969 - 1975 . . .	11.8
Openings 1969 - 1975 total . . .	53,020
Expansions	26,620
Replacements	26,400
Annual Avg. Openings 1969-1975 :	8,837

Operatives and Kindred

This largest category grew in employment from 275,870 in 1960 to 411,520 in 1975. The share of total employment also increased from 20.9% to 23.6%. Openings during the 1969 - 1975 period are listed at 85,100 indicating the greatest need for workers in 1969 - 1975 period.

These workers ordinarily receive only brief on-the-job training. Significant investment in education is not necessary for workers in these jobs. Even the most difficult of jobs in this classification can be learned in a few weeks or months. (60)

Employment 1969.	381,930
Projected 1975 employment. . . .	411,520
Percent growth 1969 - 1975 . . .	7.7
Openings 1969 - 1975 total . . .	85,100
Expansions	29,600
Replacements	55,500
Annual Avg. Openings 1969-1975 .	14,183

Service Workers

The employment level of 158,270 in 1960 is projected to increase to 204,670 in 1975. However, this represents a decline from 12.0% of total employment to 11.7% and a loss of rank from fourth to fifth. Openings number 70,490 during the 1969 - 1975 period which is third highest at 16.1% of total openings.

Training and skill requirements differ greatly among various service occupations. Some jobs require a college or advanced degree while others need specialized vocational training. Many service occupations have no specific educational requirements although a high school diploma is an advantage. (45)

Employment 1969.	184,510
Projected 1975 employment. . . .	204,670
Percent growth 1969 - 1975 . . .	10.9
Openings 1969 - 1975 total . . .	70,490
Expansions	20,160
Replacements	50,330
Annual Avg. Openings 1969-1975 :	11,748

Laborers Excluding Farm and Mine

Laborers decreased in size over the period of 1969 - 1975. Rank remained the same (9) but the percentage of total employment decreased from 5.4% in 1960 to a projected 4.5% in 1975. Employment also decreased from 80,320 in 1969 to 78,770. This established a negative percent growth of 2.3%. Openings for the 1969 - 1975 period are 6,250 or 1.4% of the total -- again ranked ninth. Much of the decline is attributable to increased automation in the laboring class.

Much of the work of non-farm laborers involves simple tasks that require little special training. Brief instruction and a few hours of on-the-job training usually are sufficient for a job as a non-farm laborer. (64)

Employment 1969.	80,320
Projected 1975 employment. . . .	78,770
Percent growth 1969 - 1975 . . .	(-2.3%)
Openings 1969 - 1975 total . . .	6,250
Expansions	(-1,850)
Replacements	8,100
Annual Avg. Openings 1969-1975 .	1,042

Farm and Farm Workers

Employment in this area decreased during the 1960 to 1969 period from 184,950 to 105,610. Projected 1975 employment figures indicate another decline of 20.7% to a level of 83,720. In 1960 this category ranked second in size. Projections for 1975 indicate it will plummet to eighth. The percentage of total employment comprised of farm and farm workers will dip to 4.8% in 1975 as opposed to 14.0% in 1960. A wage-cost squeeze has forced more rapid implementation of automated equipment. This process has also forced the marginal farmer into other fields. Approximately 90,000 workers will be needed on the farm between 1969 and 1975. Expansion needs will decline nearly 22,000, however, this will be tempered somewhat by replacement needs of over 10,000.

Most jobs will continue in the unskilled category, but as mechanization increases higher skill levels will be required. The traditional view of the farmer and farm worker as a relatively uneducated, but still shrewd student of nature is not applicable to current generation. The farmer today has a large investment in land and equipment and must be skilled in a variety of tasks as well as in more and more scientific management practices.

Employment 1969.	105,610

SELECTED OCCUPATIONAL GROUPINGS

Accountants and Auditors

Although junior college, business school or correspondence course training is acceptable for some accounting jobs, many positions require the bachelor's degree with a major in accounting and sometimes a master's degree. All states require "certified public accountants" to be certified by the State Board of Accountants. In nearly all states at least two years of public accounting experience is necessary before CPA certification can be issued. About half of the states do not require the CPA candidates to be college graduates. (29)

Bartenders

Most bartenders learn their trade on the job. Some private schools offer short courses in bartending that include instructions on State and local laws and regulations, cocktail recipes, attire and conduct, and how to properly stock the bar. Some schools maintain a placement service for their students. Beginners usually find the best entry opportunities in small establishments and resorts. After gaining experience, a bartender may transfer to a large establishment where earnings prospects are likely to be better. (341)

Cooks and Chefs

Most cooks - particularly those who work in small eating places - acquire their skills on the job. Less frequently, they are trained as apprentices under trade union contracts or new employee training programs conducted by large hotels and restaurants. Training offered by a number of schools and other institutions is a distinct advantage for applicants seeking jobs as cooks or chefs in some large restaurants or other establishments which provide food. Deliverymen and Routemen

In addition to being a good driver, a routeman must have sales ability. Mathematical ability and mechanical ability are also helpful. Most employers require their routemen to be high school graduates. Courses in salesmanship, public speaking, driver-training, bookkeeping, and business arithmetic provide training for entering the occupation. Most states also require a chauffeur's license, which is a commercial driving permit. (435)

Electricians (construction)

A high school education is required for electrician jobs. An apprenticeship program lasting 4 years and including 144 hours of classroom instruction

each year is recommended. During the 1960's apprenticeship completions numbered about 55 percent of openings resulting from growth and death and retirement. Most cities require electricians to pass licensing examinations. Training may also be acquired on the job. Some skills of the trade may also be acquired through vocational school courses. (391)

Hospital Attendants

High school graduates are preferred for these jobs although most of the training occurs on the job. Training may last several days or continue over a period of a few months, depending on the policies of the hospital, the attendant's aptitude for the work, and the nature of the duties assigned. Many training programs for hospital attendants are aided by funds provided by the Manpower Development and Training Act and the Vocational Education Act. Courses in home nursing and first aid, offered by many public school systems and other community agencies, provide a useful background of knowledge for the work. (355)

Machinists

According to most training authorities, a 4-year apprenticeship is the best way to learn the machinist trade. Many machinists, however, have qualified without an apprenticeship by learning the trade through years of varied experience in machinery jobs. A typical machinist apprentice program lasts 4 years and consists of approximately 8,000 hours of shop training and about 570 hours of related classroom instruction. (452)

Mechanics, Automobile

Most automobile mechanics learn the trade through 3 to 4 years of on-the-job experience. An additional year or two is usually needed to learn a specialty, such as automatic transmission repair. Most training authorities recommend completion of a 3 or 4 year formal apprenticeship program as the best way to learn the trade. Work experience as a gasoline service station attendant, training in the Armed Forces and courses offered at high school, vocational schools, or private trade schools are helpful. (471)

Medical and Dental Technicians (Laboratory)

The usual minimum educational requirement for beginning medical technologists is 4 years of college including completion of a specialized training program in medical technology approved by the American Medical Association. Some technicians have gained their training from the Armed Forces or vocational and technical schools. (122)

Although no minimum formal education is needed to become a dental laboratory technician, a high school diploma is an asset. Typically on-the-job training lasts 3 or 4 years. Some training can be received from junior colleges and post-secondary educational institutions. (89)

Nurses, Professional

A license is required to practice professional nursing in all states and the District of Columbia. Graduation from a school approved by a State Board of nursing and successful completion of a State Board examination are necessary for licensing. All schools of nursing require a high school diploma for admission. Nursing education programs vary in length from 2 to 5 years. Nurses who complete 2 year courses earn associate degrees; those in 3 year programs, a diploma; and students in 4 or 5 year courses are awarded the bachelor's degree. (91)

Personnel and Labor Relations

A college education is becoming increasingly important for entrance into personnel work. Some employers hire new graduates for junior positions, and then provide training programs to acquaint them with their operations, policies and problems. Other employers prefer to fill their personnel positions by transferring people who already have firsthand knowledge of operations. A large number of the people now in personnel work who are not college graduates entered the field in this way. (37)

Stenographers, Secretaries and Typists

Stenographers and secretaries - graduation from high school is essential for practically all secretarial and stenographic positions. Graduates whose high school courses include shorthand, typing and other business subjects meet the requirements of many employers. Some employers prefer having a background of academic high school subjects supplemented by technical training taken after graduation. (299)

Typists - most employers require applicants for typing positions to meet certain standards of speed and accuracy. Typists should have a good understanding of spelling, vocabulary, punctuation, and grammar. Most typists learn their skills by attending day or evening classes in public or private schools. High school graduates generally are preferred by employers. (302)

Welders and Flamecutters

Generally it takes several years of training to become a skilled manual arc or gas welder, and somewhat longer to become a combination welder. Some skilled jobs may require a knowledge of blueprint reading, welding symbols, metal properties, and electricity. Some of the less skilled jobs, however, can be learned after a few months of on-the-job training. For entry in manual welding jobs, most employers prefer to hire young men who have high school or vocational school training in welding methods. Before being assigned to work where the strength of the weld is a highly critical factor, welders may be required to pass a qualifying examination. Where critical safety factors are involved, certification may be necessary. Some localities require welders to obtain a license before they can do certain types of outside construction work. (571)

* "All Other" is total for occupations with less than 1/2 of 1 percent of projected 1969-1975 total openings. These are shown in Appendix Table 2.

METHODOLOGY

The technique used in obtaining the occupational projections in this study consists of two main stages. First, projections of detailed industry employment were made for the target year, 1975. Second, national industry - occupational matrices were used to develop occupational distributions.

Industry Projections:

The future employment level of individual industries is a primary determinant of occupational requirements because each industry has a unique occupational structure. Estimating future employment in individual industries is a major step in developing occupational employment requirements.

Regression analysis was applied to historical time series of the industries to develop first approximations of the projections. Several regression models were applied to all industries. Each projection was then carefully analysed by labor analysts who were familiar with the labor markets, industrial trends and the economy of the State.

Model a). The relationship between State industry employment and time.

Model b). The relationship between the logarithm of State industry employment and time.

Model c). The relationship between the State industry employment and national industry employment over time.

Model (a) assumes a straight-line trend over time. In Tennessee, it has proven to be an adequate method for many industries. Model (b) was used to fit those series which exhibit a curvilinear rather than linear relationship. The assumption associated with Model (c) is that the employment in certain industries is dependent on national demand over time and that the projected national employment has a very strong influence on the projection of the Tennessee employment those industries.

Each of the regression models is expressed mathematically as follows:

Model a $Y = B_1X_1 + Boo$

Model b $\log Y = B_1X_1 + Boo$

Model c $Y = B_1X_1 + B_2X_2 + Boo$

Where: Y = State employment by detailed industry
in 1975

B_1 = Regression coefficient; constant for the
first independent variable

X_1 = Time, in years. First independent variable.

B_2 = Regression coefficient; constant for second
independent variable.

X_2 = National industry employment projections
for 1975 (second independent variable)

Boo = Constant intercept; the value of dependent variable
when the independent variables are zero.

The third model placed a great deal of reliance on national employment projections prepared by the U. S. Bureau of Labor Statistics. The national projections have the advantage of including many more variables than could be considered by most states. In Tennessee, the third method was by far the best in projecting industry employment.

Occupation Projections

The technique used to develop occupational projections presented here relied on the national industry - occupational matrix developed by B.L.S. The 1960 census data with adjustments in some occupations is the primary source for base period estimates for occupations included in the matrix. Since the matrix reflected national staffing patterns, the theoretical

1960-1975 ratios of change were applied directly to 1960 census data for Tennessee to obtain 1975 occupational estimates that were reflective of local rather than national staffing patterns.

Replacement Needs

The need to replace experienced workers who die, retire or leave the labor force for other reasons is an important determinant of manpower requirements. While expansion needs can be projected as the simple difference between employment in the base and target years, replacement needs are not so easily determined.

The method used in this study relies upon national estimates of annual labor force separation by occupation and by sex. The procedure consists of multiplying the annual separation rate by the number of years in the study period to derive a composite rate for the entire period. This rate was then applied to the average employment during the study period. This procedure was duplicated for both sexes and the two figures derived were added to obtain the replacement needs in a certain occupation.

APPENDIX A

Tennessee Employment Outlook 1969-1975

Statewide Tables

TENNESSEE EMPLOYMENT PROJECTION BY INDUSTRY TO 1975 *

Industry Title	Employment (000s)			Percent Change 1960-1969	Percent Change 1969-1975

ABSTRACT - WRITTEN BY A VOCATIONAL HOME
ECONOMICS INSTRUCTOR AT THE HIGH SCHOOL
LEVEL, THE PURPOSE OF THIS STUDY WAS TO
DEVELOP A METHOD OF REPORTING AND EVALUATING
HOME PROJECTS WHICH WOULD INTEREST STUDENTS,
IMPROVE THEIR WORK, AND ALLOW FOR GREATER
TEACHER INVOLVEMENT WITH THE STUDENTS THAN
HAD WRITTEN REPORTS. THE PROBLEMS ENCOUNTERED
BY USING AUDIOVISUAL EQUIPMENT AS THE
TEACHING METHOD ARE DISCUSSED. A CONTROL
GROUP AND THREE EXPERIMENTAL GROUPS,
INCLUDING BOTH STUDENTS WHO WERE EXPERIENCED
AND THOSE INEXPERIENCED WITH THE AUDIOVISUAL
EQUIPMENT, WERE STUDIED IN ORDER TO ANSWER
THREE QUESTIONS: (1) WILL MORE STUDENTS
COMPLETE HOME PROJECTS AS A RESULT OF THIS
REPORTING METHOD, (2) WILL MORE STUDENTS
COMPLETE REPORTING REQUIREMENTS ON TIME, AND
(3) WILL GRADE AVERAGES FOR THE EXPERIMENTAL
GROUPS BE HIGHER THAN FOR THE CONTROL GROUP?
A CHI-SQUARE ANALYSIS OF THE DATA REVEALED
THERE WAS A SIGNIFICANT DIFFERENCE AMONG THE
GROUPS, WHICH DEMONSTRATED THE EFFECTIVENESS
OF THIS INNOVATIVE INSTRUCTIONAL METHOD IN
ACHIEVING ITS GOALS. A SERIES OF
RECOMMENDATIONS AND A DESCRIPTION OF THE
PROJECT DESIGN ARE INCLUDED. VARIOUS TABLES
PRESENT THE DATA. (AG)

INNOVATIONS IN REPORTING AND EVALUATING HOME PROJECTS

By

Mrs. Patricia Sikes
Vocational Home Economics Instructor
C. E. Donart High School
Stillwater, Oklahoma

This project was performed pursuant to a grant from the Oklahoma State Department of Vocational and Technical Education. The opinions expressed herein do not necessarily reflect the position of the State Department.

INNOVATIONS IN REPORTING AND EVALUATING HOME PROJECTS

Purpose and Objectives of Program

The purpose of the research was to develop a method of reporting home projects which would interest and stimulate students and which would involve the teachers with the students to a greater degree than had written reports. It was hoped that more students would complete home projects, get them in on time, and show an improvement in the quality of their work.

Introduction

The method chosen for the reporting of home projects involved the use of audiovisual equipment. During the activity stage of the student's home project, the student could borrow a camera and film to make color slides of her work. For example, students redecorating furniture or a room would take before and after pictures. These pictures were used to let the teacher share with the student in her achievement and for teacher's use in the evaluation of the home project. They were also used to encourage and inspire other students. As each student completed the actual work she had contracted to do for her home project, she checked out her tape and a tape recorder and recorded the report of her home project, her evaluation of it, and a discussion of the learning experiences she had encountered. The teacher listened to each tape and responded to the individual on her tape. Each tape was then returned to the student so that she might hear the teacher's evaluation.

As the research was carried on from semester to semester, there were several difficulties which arose. For example, during the first semester, some students expressed the feeling that they were embarrassed by talking to the tape recorder. In an attempt to help students in overcoming this feeling, the instructor made a tape telling the purposes of home projects and outlining the steps for completing a home project. At the beginning of the second semester, a communications center was set up in the room. In this area

the student could listen to the tape, look at color slides of completed home projects, and pick up printed materials concerning home projects. The students expressed positive feelings concerning this method of introduction to home projects. However, at the end of the semester, 19 students had not completed home projects. (The teacher went back to the oral classroom presentation of home projects the following semester.) Another possible factor which may have contributed to the poor results for that particular semester was that the due date for taped reports and evaluations was the last school day before Christmas vacation.

Another attempt at helping students overcome shyness in connection with the use of the tape recorder was the making of individual tapes to the students concerning the evaluation of their garments constructed in class. These were received enthusiastically by the students. However, it is not known to what extent, if any, that these tapes contributed to positive returns in home project reports.

Another difficulty encountered was the dysfunction of the tape recording machines. It was learned that the recording heads should be cleaned once per semester in order to be maintained.

The first tapes purchased also presented difficulties. The faulty tapes were returned to the place of purchase and were redeemed. Additional tapes, of a better quality, were purchased to substitute for any of the others which might become faulty and to be given to new students who had not been assigned a tape in preceding semesters.

A difficulty which was encountered during the time of the research but which has not been sufficiently corrected was that too many students put off making their tape recordings until near the date they were due. Then, there were not enough machines to supply the demand. One plan to off-set this was to have a center set up in the department so that students could come in to tape during a study period or before or after school. Perhaps a better solution would have been to have had a different due date for each of the five classes with a period of one week between these dates. Such a plan would also afford the instructor an opportunity to make immediate responses to all students. Immediate response was not possible when 50 to 60 tapes were turned in during one week.

Methodology

The research design was originally developed to include a control group and two experimental groups. Two experimental groups were necessary in order to test the effect of experience in reporting by tape. Because of obvious problems with equipment, a third experimental group was added after the project was initiated. Table I indicates the student samples in the project.

TABLE I
STUDENT ENROLLMENTS

	Control 1st Semester 1970-1971	Experimental 2nd Semester 1970-1971	Experimental 1st Semester 1971-1972	Experimental 2nd Semester 1971-1972
Home Economics II Inexperienced	45	46	49	3
Home Economics II Experienced	--	--	--	41
Home Economics III Inexperienced	28	29	9	8
Home Economics III Experienced	--	--	27	25
Total Students	73	75	85	77

Three basic research questions were studied:

1. Will more students complete home projects as a result of the new reporting method?
2. Will more students complete reporting requirements on time?
3. Will grade averages for the experimental groups be higher than for the control group?

In addition, comparisons were made to see if class level or experience in using the new reporting method would have effect on its usefulness. An alpha level of .05 was selected as the criterion for significant differences.

Results of Analysis

Data were collected regarding the number of students who completed reports on home projects. A Chi-Square analysis tested the hypothesis that the control group and three experimental groups were from the same population (See Table II). The results of the analysis indicated there was a significant difference among the groups.

TABLE II
CHI-SQUARE ANALYSIS OF STUDENTS REPORTING HOME PROJECTS

	Control	E ₁	E ₂	E ₃	Result
Reported Project	57	70	67	66	$\chi^2 = 8.57$
Didn't Report Project	16	5	18	11	$p < .05$

E₁, E₂, and E₃ signify respectively the experimental classes taught the three experimental semesters.

When the control group was compared separately with each of the experimental groups, as indicated in Table III, only the first experimental group taught during the second semester, 1970-1971, showed significant gain in reporting home projects.

TABLE III
TWO BY TWO CHI-SQUARE RESULTS OF STUDENTS
REPORTING HOME PROJECTS

Comparison	χ^2 Value	Probability
Control vs. E_1	5.87	$p < .02$
Control vs. E_2	.01	$p > .99$
Control vs. E_3	1.01	$p > .50$

Accurate records were kept by the investigator regarding reports that were turned in after the due date. An analysis of the four groups regarding reporting home projects on time discloses a difference among the groups significant at the .05 level (See Table IV).

Control students were compared with each of the experimental groups to find precisely where differences existed in regard to reporting home projects on time. As was true in regard to reporting projects, the only significant difference in reporting on time was between the control group and the first experimental group. As observed in Table V, the first experimental group had a greater number of students reporting on time.

TABLE IV
CHI-SQUARE ANALYSIS OF STUDENTS REPORTING
HOME PROJECTS ON TIME

	Control	E_1	E_2	E_3	Result
Reported on Time	38	61	52	47	$\chi^2 = 8.45$
Reported Late	19	9	15	19	$p < .05$

TABLE V
TWO BY TWO CHI-SQUARE RESULTS OF STUDENTS
REPORTING HOME PROJECTS ON TIME

Comparison	χ^2 Value	Probability
Control vs. E ₁	6.52	$p < .02$
Control vs. E ₂	1.34	$p > .50$
Control vs. E ₃	.12	$p > .90$

Students experienced in reporting by tape and slide were compared with inexperienced students in terms of numbers who completed reports on home projects. Table VI indicates no significant difference between experienced and inexperienced students with regard to reporting home projects on tape and slides.

TABLE VI
CHI-SQUARE ANALYSIS OF STUDENTS' EXPERIENCE IN
REPORTING HOME PROJECTS

	Experienced	Inexperienced	Results
Reported Projects	80	123	$\chi^2 = .004$
Didn't Report Projects	13	21	$p > .99$

Students in Home Economics II classes were compared with students in Home Economics III classes to ascertain differences in completing reports on home projects by

tape and slide. Table VII indicates that there was no significant difference between Home Economics II and Home Economics III students with regard to completing home project reports on tape and slide.

TABLE VII
CHI-SQUARE ANALYSIS OF STUDENTS REPORTING HOME
PROJECTS BY CLASS LEVEL

	Home Economics II	Home Economics III	Results
Reported Home Projects	114	89	$\chi^2 = 2.94$
Didn't Report	25	9	$p > .50$

The third basic question with which this project was concerned relates to the effects of reporting by tape and slide on the students' class grades. An analysis was made of the control group and three experimental groups to see if there were differences among the groups with regard to grades. The analysis (Table VIII) discloses that there was a significant difference among the groups with respect to grades attained.

TABLE VIII
CHI-SQUARE ANALYSIS OF STUDENTS' GRADES
IN HOME ECONOMICS CLASSES

Class	A	B	GRADES C & D	F	Results
Control	18	18	21	16	
E ₁	35	25	10	5	
E ₂	29	18	20	18	$\chi^2 = 19.26$
E ₃	31	19	16	11	$p < .05$

When the control group was compared with each of the experimental groups, a significant difference was disclosed between the control group and the first experimental group. The first experimental group attained higher grades as a group than did the control group.

Summary of Statistical Results

The first experimental group which made tape and slide reports of home projects during the second semester of the 1970-1971 school year was significantly better than the control group in terms of all three variables of the study--more students reported their home projects, more students reported on time, and they attained better grades in Home Economics as a group. Although neither the second or third experimental groups were significantly better than the control group, the differences were in favor of the experimental groups in every case. Because of the phenomenon of the experimental group being better in every case (although not significantly better), it was concluded that the experimental method does increase the number of students reporting, the number reporting on time, and students attain higher grades. Neither class level or experience with the reporting method has any effect on the number of students who complete home project reports.

Unmeasured results the instructor considers of importance include the rapport and improvement of communications that developed between student and teacher. The one-to-one relationship, the oral communications, and the immediate feed-back to the student built up the student's confidence in the teacher. It also served as a personal media for reinforcement of good work accomplished by the student.

Materials (color slides and taped reports) are available to help in-coming students to understand about home projects and to get some ideas of things they might do for home projects.

Since the cameras, projector, tape recorders, and tapes were available, they were used in many ways to aid the students and the home economics program. Lessons and interviews were taped for future use. Slides were made which illustrated home projects, the work being done in home economics classes, and the activities of the Future Homemakers of America. These slides helped in maintaining and developing good feelings toward home economics and toward the FHA. The students were shown pictures that

they were in on several occasions. These color slides were also shown to eighth grade students, guests at the FHA party, and to parents who attended the FHA Banquet in the spring. The slides will also be shown to parents who come to PTA Open House. Another way in which the equipment was useful was in preparing evaluations concerning clothing construction. The teacher taped an evaluation for each student as she examined the garments which had been constructed in class. This enabled the teacher to make more detailed constructive criticism than she could have made in written form. Also, it is believed that the reinforcement and praise were more meaningful.

According to empirical evidence, students who had produced quality written home projects continued to perform at a high level when reporting home projects on tape.

In several instances, students who had failed to complete home projects when written reports were required, turned in good reports using the taping method. However, it was noted that in several of these instances the poor students returned to their low level of achievement after using the taping method successfully for two semesters. This suggests that the novelty of a new method of reporting is a stimulus for some students.

In several cases, students who had previously shown difficulty in expressing themselves in writing showed improvement when reporting orally. An example was a student with learning disabilities who consistently achieved at a high level when reporting by tape as compared to low achievement on written class work.

Recommendations

It is recommended that in a continuation or adaptation of this study, the following suggestions be taken into consideration:

1. That there be at least three tape recorders available in the department, library, or other center in the school. (It is suggested that many students will own a tape recorder they may use in making their own reports.)
2. That each student be given or purchase one 60-minute tape to be used by the teacher and the student during the year.
3. That the tape recording machines be cleaned once per semester.
4. That the due dates for reports be scheduled to avoid any two classes having a due date within the same week.

5. That the teacher give immediate feedback to the students by taping a response to the project report within one week after it is submitted.
6. That a communications center be set up so that students can make tapes, listen to their tapes, look at their own color slides, and see slides that show suggested home projects.
7. That some printed material be prepared to guide students in carrying out home projects and in reporting and evaluating them.
8. That students be given the option of preparing a written or a taped home project report and evaluation.
9. That the teacher respond on tape to all students.
10. That further research be undertaken to determine if alternating methods of reporting home projects would have effect on achievement in the class.

INNOVATIONS IN REPORTING AND EVALUATING HOME PROJECTS

Statement of Purpose and Objectives of Program

Home projects are important parts of the total learning experiences of vocational home economics students. However, every semester there are students who turn in late home projects, do poor work on their projects, and there are some who never turn them in. Several techniques for attempting to interest these students and for trying to help them to carry through to the finish have been attempted. Home projects have been made a class requirement in order for these students to pass for the semester. However, none of the attempts have been proven successful.

The purpose for this proposal is to try a new and hopefully more innovative method of introducing students to home projects and a method which will involve them more in their home projects, as well as involve the teacher more personally with them. Also, it will involve other students with them and their accomplishments.

Procedures and Personnel Involved

The way in which objectives will be carried out is through the use of several audiovisual techniques. First, instamatic cameras will be secured and will be available for students to check out and use for taking pictures of their projects during the time they are working on them as well as of the completed projects. Some of the pictures will be colored prints and others will be colored slides. The colored pictures will be included in the folders of illustrative materials turned in by the students for evaluation purposes. These pictures will be used in a number of ways, such as on bulletin boards, innovative presentations for giving other students ideas for home projects, and to help the slow students to have better understanding. The colored slides will be used in such presentations for a "show and tell" session when home projects are completed and in a learning center which will be set up for students to go so they may use the materials individually.

The second part of the procedure will be for each student to have one side of a thirty-minute tape on which she will "tell" about the home project she has just completed and evaluate it. Each student will be expected to use only about fifteen minutes of her

tape talking about her project. The remainder of the tape will be used by the instructor's response to the student. For this part of the innovation, cassette tape recorders, ear phones, and about forty thirty-minute tapes will be needed.

The main purpose of the tapes will be for the student to report her home project for evaluation purposes and for the student to have the teacher personally respond to her on tape. Some of the better tapes will be placed in the audiovisual corner also.

There have been students who have used pictures and tape recordings in doing home projects in the past. However, this has been limited to those who could "afford" to do so. It is hoped that this method of reporting and evaluating can be shared by all. Furthermore, it is hoped that the slow and poor students will, in an indirect manner, learn how they might do better work on their home projects and get new ideas for projects they might carry out. Of great importance is the possibility of assisting students in "wanting" to carry through to the completion of projects.

To evaluate this project properly, it should carry through for a three-semester period. First semester of this school year, the students in the classes kept a daily diary while doing their home projects, and when the work was done, each wrote a report and evaluated their projects. A record of these projects has been compiled including the subject or area of work in which the project was done, the grade the student received, if the report was handed in on time or late, and a list of students who did not turn in reports of completed projects. The taped method proposed in this paper for reporting and evaluating home projects will be used this semester and the findings will be compared.

Also, there will be a "show and tell" period at the end of the semester. Selected pictures and tapes will be saved to be used to introduce the next year's students to this method of doing home projects and to give them ideas relating to home projects.

The instructor teaches Home Economics II and III classes. Therefore, the students who are new to the classes next year will have had experience with written reports and evaluations. This group, as well as the students enrolled in Home Economics II and III this year, will be asked to evaluate and compare the two methods. Another method for evaluating next year will be to compare percentages of those completing satisfactory home projects and handing them in on time with the records from this year.

The students, their families, and the instructor will be the only ones involved in this activity, with the exception of having the film developed. This will be done commercially.

Research Design

Table I indicates the approximate enrollments of students in the Home Economics classes during the course of the project.

TABLE I
STUDENT ENROLLMENTS

Class	Control 1st Semester 1970-1971	Experimental Group I 2nd Semester 1970-1971	Experimental Group II 1st Semester 1971-1972
Home Economics II	50	50	60
Home Economics III	30	30	40*

*Approximately 30 of these students will have had experience in the experimental method as Home Economics II students.

Research questions of the study are:

1. Will more students complete home projects as a result of the new reporting method?
2. Will more students complete reporting requirements on time?
3. Will grade averages for the experimental groups be higher than for the control group?

In order to answer these major questions, appropriate statistical comparisons will be made between the control group and the two experimental groups. In addition, comparisons will be made between class levels to see if the level of instruction is related to the method of reporting. The approximately 30 students in Home Economics III, Experimental Group II, who are using the method for the second time will be compared with the control group and those using the experimental method for the first time to see if experience is a factor in the successful use of this method of reporting.

The investigator will make a descriptive case study report of selected students from various socioeconomic levels. The case studies, along with evaluative responses toward the experimental method of reporting, will also be analyzed as an input to the evaluation of the project.

Number to Be Served and Duration of Program

There are approximately 75 students in my home economics classes this year. These students would be served by this project this year. I would like to carry this project through the next year also. Thus, a similar number would be served. This project would extend over a three-semester period, 1971-1972.

BUDGET

<u>Item</u>	<u>Cost</u>
2 instamatic cameras	\$100.00
3 cassette tape recorders	150.00
1 carrousel slide projector	125.00
1 set ear phones	25.00
1 slide viewer	15.00
40 30-minute tapes	25.00
25 rolls color film	40.00
150 flash cubes	55.00
Film processing	50.00
Repairs on equipment (if needed)	<u>20.00</u>

A FOLLOW-UP STUDY OF THE 1969 AND 1970 BUSINESS MAJORS
OF BRADLEY CENTRAL HIGH SCHOOL
CLEVELAND, TENNESSEE

A Mini-Grant Research Project
Presented to
The Tennessee Research Coordinating Unit

by
Edith Baldree

April 1972

The material in this publication was prepared pursuant to a contract with the Tennessee Research Coordinating Unit for Vocational Education, 909 Mountcastle Street, Knoxville, Tennessee, in cooperation with the University of Tennessee College of Education and the State Division of Vocational-Technical Education.

It has been prepared for distribution to selected agencies and individuals on a complimentary basis as permitted by funding under terms of the contract.

ABSTRACT

The purposes of this investigation were to determine whether the 1969 and 1970 business graduates of Bradley Central High School had received adequate training in high school for initial job entry into the business field or if the graduates felt that a vocational office education course would have given them better preparation.

The data for this follow-up study were obtained from a detailed questionnaire which was mailed to 100 randomly selected 1969 and 1970 business graduates of Bradley Central High School. Information concerning the business education curriculum and the class enrollment of the business courses for 1969 and 1970 was obtained from the principal's office of Bradley Central High School.

Between 45 and 43 percent of the total school enrollment were enrolled in the business curriculum during 1969 and 1970.

Most of the business graduates participating in the follow-up study lived and worked in Bradley County. The unemployment rate among the respondents was higher than the rate for Bradley County.

More than half of the respondents had continued their education after graduation from high school, although approximately 68 percent of those who had entered post high school education had already dropped out.

Half of the graduates responding to the questionnaire were employed in the business field. Approximately one-fourth of the graduates felt their business training in high school was inadequate, and particularly their training on business machines.

The graduates reported the most helpful high school courses had been Typewriting I and II and Bookkeeping. The courses needed most which the graduates had not studied in high school were Shorthand I and II. Most of the graduates who had attended college felt Typewriting was needed for college-bound students.

Approximately 83 percent of the graduates felt Vocational Office Education would have prepared them better for the business world.

INTRODUCTION

With society changing rapidly as a result of technological advances which influence business activity and personal living, business educators must strive to keep pace with technological changes and assume the responsibility for meeting the educational needs of youth who enter the business world.

The National Association of Secondary School Principals set forth the Ten Imperative Needs of Youth, the first of which states:

All youth need to develop salable skills and those understandings and attitudes that make the worker an intelligent and productive participant in economic life. To this end, most youth need supervised work experience as well as education in the skills and knowledge of their occupations. (National Association of Secondary School Principals, p. 9)

The President's Advisory Council on Vocational Education in its 1968 report, "The Bridge Between Man and His Work," stated:

In a world where the distance between school and work continually widens, the school must reach forward to assist the student across the gaps. . . It is not enough to dump the school leaver into a labor market pool. The school along with the rest of society must provide them a ladder, and perhaps help them to climb it. (Thompson, 61:291)

Every educational institution, in order to compete with the changes in the world outside the school, should be committed to changes with a purpose. A continuous evaluation of the business program being offered in our high school is necessary to determine whether it is meeting the needs of our students in today's world. (Wanous, 50:84)

STATEMENT OF THE PROBLEM

This study was made to determine if the 1969 and 1970 graduates of Bradley Central High School who majored in business had received adequate training in high school for initial job entry in the field of business, or if the graduates felt a course in Vocational Office Education would have better prepared them.

RATIONALE

Bradley Central High School will move into a new school plant in the fall of 1972 which will allow for some revisions in the curriculum. Wanous stated in his study of curriculum standards that business education leaders believed that the offerings of the Business Department should be based on community surveys and follow-up studies of graduates. (Wanous, p. 53)

No record is available of a follow-up study ever having been made of Bradley Central High School business majors. Thus the results of this follow-up study may be used to study the educational and occupational status of the 1969 and 1970 business education graduates, to improve the guidance program for future business education students, and for possible revision of the 1972-1973 business education curriculum.

OBJECTIVES

In this study an attempt was made to determine if (1) Bradley Central High School met the needs of its 1969 and 1970 graduates who majored in business and (2) to gather suggestions for improving the business curriculum.

METHODOLOGY

The follow-up method of research was used for this study, and a detailed questionnaire was used to collect the information.

Data for this study were obtained from permanent records and preliminary reports in the principal's office of Bradley Central High School, class record books for 1969 and 1970, personal interviews with present and former teachers in Bradley County, high school annuals, and responses to questionnaires mailed to all business graduates of Bradley Central for 1969 and 1970.

The follow-up study included 100 of the 1969 and 1970 Bradley Central High School graduates who completed a major in business. A student was classified as a business major if he had earned three or more credits in subjects classified as business subjects. Since the business majors graduating in 1969 totaled 111 and those graduating in 1970 totaled 84, 50 graduates from each class surveyed were randomly selected.

All addresses were obtainable for the 100 subjects selected for the study, although some of them had moved from the area. Twenty-two of the graduates selected for the study failed to return the questionnaire.

INTERPRETATION OF DATA

The findings of this study may be summarized as follows:

1. The business curriculum at Bradley Central has not changed during the past ten years with the exception that Shorthand II was added and dropped and that Office Occupations was added in the fall of 1970.

2. During 1969 approximately 45 percent of the total school enrollment was enrolled in the business curriculum. During 1970 approximately 43 percent of the total school enrollment was enrolled in the business curriculum, or a loss of 2 percent when compared with 1969. There was a loss of 24 percent in the number of students graduating with a major in business in 1970 compared with 1969.
3. Most of the business graduates from Bradley Central lived and found employment in the Bradley County area. Ninety-one percent of the graduates remained in the area.
4. The unemployment rate for the business graduates was 11 percent as compared with the unemployment rate of 2.5 percent for Bradley County. All of the unemployed graduates were females.
5. Approximately 52.6 percent of the graduates had enrolled in some type of training after high school graduation. At the time the questionnaire was returned, 68 percent of the graduates who had enrolled in post-graduate training were no longer enrolled.
6. Fifty percent of the male graduates and 50 percent of the female graduates were employed in the field of business. Thus half of the graduates could not, or did not try to find employment in the business field. The employment record of the graduates indicated they had averaged 2.57 jobs since leaving high school.
7. Approximately 30 percent of the graduates indicated their business training in high school was inadequate.

8. Approximately 83 percent of the graduates said they would have taken Vocational Office Education had it been in the curriculum while they were in school.
9. Ninety-eight percent of the graduates responding to the question asking if they felt Typewriting was helpful in college indicated Typewriting should be included in the program of all college-bound students.

CONCLUSIONS

1. It can be concluded that while there was little loss in total enrollment in the business program in 1970, there was a sizable loss of students who concentrated their study of business.
2. The graduates did not receive adequate training on business machines while in high school.
3. The most helpful business subjects taken in high school were Typewriting I and II and Bookkeeping. After the graduates became employed, they found they needed Shorthand I and II.
4. The graduates indicated a need for training on business machines and for further study in mathematics.
5. The graduates indicated the training in several courses had been inadequate. No clue was offered as to whether the inadequacy resulted from poor instruction or inadequate subject matter.

RECOMMENDATIONS

Based on the findings of the follow-up study of the 1969 and 1970 business graduates of Bradley Central High School, it is recommended that:

1. Records of the number of students enrolled in the business curriculum be kept by courses of study so that an enrollment trend may be ascertained, and that names, addresses, and telephone numbers of the enrollees also be kept for use in future follow-up studies.
2. The Business Department suggest minimum business courses for vocational business students.
3. The Business Department work closely with the Guidance Department in setting up the business curriculum and in the selection and placement of students in the business courses.
4. A Business Machines course be added to the curriculum.
5. The Business Department continue to offer Bookkeeping, General Business, Shorthand I, Typewriting I and II, as well as Salesmanship, Business Law, Marketing, and Distributive Education. It is also suggested that the present Office Occupations course be changed to Vocational Office Education.
6. A course in Personal Typewriting be offered by the Business Department for college-bound seniors.

7. The business graduates be encouraged to continue their formal education.
8. The Business Department establish a close relationship between the business faculty and the businessmen in the community in an attempt to improve the business training and to facilitate job placement of the business graduates.
9. The Business Department utilize the follow-up study of graduates and of dropouts and the community survey in evaluating, improving, and revising the business curriculum to meet the needs of its students.

APPENDICES

APPENDIX A

FOLLOW-UP OF THE 1969-1970 BUSINESS MAJORS
BRADLEY CENTRAL HIGH SCHOOL
CLEVELAND, TENNESSEE

1. Name _____ Married? _____ Yes _____ No

Husband or wife's name _____

Address _____

Indicate your present status by checking the appropriate item.

_____ Attending school _____ Temporarily employed
_____ Permanently employed _____ Unemployed

2. If you are now attending, or have attended school since graduation, please check the type.

_____ College or university _____ Nurses school
_____ Private business school _____ Beauty school
_____ Vocational school _____ Other (Name) _____

Name of school checked above _____

3. If you are now employed, or have been employed since you graduated from high school, what is your occupation?

_____ Bank clerk	_____ Receptionist
_____ Beautician	_____ Sales clerk
_____ Bookkeeper	_____ Secretary
_____ Cashier	_____ Service station worker
_____ Credit clerk	_____ Stenographer
_____ Entertainer	_____ Teacher's aide
_____ Factory worker	_____ Telephone operator
_____ File clerk	_____ Truck driver
_____ Insurance agent	_____ Typist
_____ Mechanic	_____ Waitress
_____ Nurse's aide	_____ Other _____
	_____ Other _____

Employment Record:

	Name of Firm	Length of Service
--	--------------	-------------------

First position	_____	_____
Second position	_____	_____
Third position	_____	_____

4. Was the business training you had in high school of assistance in obtaining your first position? ☐ Yes ☐ No
5. Do you feel that your business training in high school prepared you well for your position or for college? ☐ Yes ☐ No
6. Please check the information asked for concerning the office machines you have used in your position.

<u>Machine</u>	<u>Trained in High School</u>	<u>Trained in Post High School</u>	<u>Trained on the job</u>
Adding machine	_____	_____	_____
Addressograph	_____	_____	_____
Billing machine	_____	_____	_____
Bookkeeping machine	_____	_____	_____
Calculator	_____	_____	_____
Cash register	_____	_____	_____
Dictaphone	_____	_____	_____
Duplicating machine	_____	_____	_____
Mimeograph machine	_____	_____	_____
Typewriter, electric	_____	_____	_____
Typewriter, manual	_____	_____	_____
Other _____	_____	_____	_____
Other _____	_____	_____	_____

7. Beginning with 1 as the most helpful, please rank in order of helpfulness all the business courses you had in high school.

_____ Bookkeeping	_____ Shorthand I
_____ Business Law	_____ Shorthand II
_____ Distributive Education	_____ Typewriting I
_____ General Business	_____ Typewriting II
_____ Marketing	_____ Salesmanship

8. Which of the above courses offered do you wish you had taken?

Why? _____

9. If you attended college, do you feel that all students who plan to to attend college should take typewriting? ☐ Yes ☐ No
10. If a course in Vocational Office Education had been offered, would you have taken it? (VOE is a course where all office skills generally used are incorporated into one course which is usually taught in a two-hour block of time.) ☐ Yes ☐ No

11. Please list below any training that you feel you received in your business courses in high school which was inadequate in helping you to perform the duties of your position.
12. What suggestions do you have for improving the business courses offered?
13. What courses other than business courses do you wish you had taken?

Please make any comment you wish to make on the back of this sheet.

November 10, 1971

Business Graduates of Bradley Central High School:

A survey is being conducted to determine the value and the benefit of your business training at Bradley Central High School. The information obtained from this survey will be used by the Business Department here at Bradley in planning the business courses and in helping future graduates to be better trained for the modern business world.

Please fill out the enclosed questionnaire as soon as possible and return it in the enclosed envelope. This will enable us to include your ideas and suggestions in the study.

Your prompt response to this questionnaire will be appreciated. Please feel free to make any comments you wish on the back of the questionnaire.

Sincerely,

Edith Baldree, Teacher
Business Department

Knoxville, TN 37916

Dear Mr. Coker:

The enclosed document constitutes my best effort in preparation of A Follow-Up Study of the 1969 and 1970 Business Majors of Bradley Central High School, Cleveland, Tennessee. I hope this study is satisfactory.

Expenses totaling \$143.50 were incurred while conducting the research.

If there are any questions regarding this matter, please let me know.

Sincerely,

Edith Baldree

STUDENT ACTIVITIES IN THE VOCATIONAL-
TECHNICAL SCHOOLS IN WISCONSIN. FINAL REPORT.

WISCONSIN STATE BOARD OF VOCATIONAL,
TECHNICAL AND ADULT EDUCATION, MADISON; OFFICE
OF EDUCATION (DHEW), WASHINGTON, D.C.
MF AVAILABLE IN VT-ERIC SET.

PUB DATE - 21JUL72 174P.

DESCRIPTORS - *SCHOOL SURVEYS; *POST
SECONDARY EDUCATION; *STUDENT ORGANIZATIONS;
YOUTH CLUBS; *COCURRICULAR ACTIVITIES;
RECREATIONAL ACTIVITIES; STUDENT INTERESTS;
*VOCATIONAL EDUCATION

ABSTRACT - DURING A DESCRIPTIVE STUDY OF THE
STUDENT ACTIVITIES OFFERED BY POST-SECONDARY
SCHOOLS IN THE WISCONSIN VOCATIONAL-TECHNICAL
SCHOOL SYSTEM, ALL SCHOOLS IN THE SYSTEM WERE
VISITED, THE FACULTY AND STUDENTS WERE
INTERVIEWED, AND WRITTEN MATERIALS WERE
OBTAINED. IN ADDITION STUDENTS IN NINE
SELECTED SCHOOLS WERE SURVEYED TO DETERMINE
THE ACTIVITIES AND ORGANIZATIONS IN WHICH
THEY PARTICIPATE OR WOULD BE INTERESTED IN
PARTICIPATING. INCLUDED IN THIS REPORT ARE:
(1) TABLES DESCRIBING ATTITUDES ABOUT CLUB
ACTIVITIES AND DESIRED RECREATIONAL PROGRAMS
AT THE DISTRICT AND STATE LEVEL BY MALE AND
FEMALE STUDENTS, (2) CHARTS RELATING
INFORMATION PERTAINING TO CLUB ADVISORS,
FUNDING, AND MEETINGS AT THE DISTRICT LEVEL,
(3) RECOMMENDATIONS THAT SHOULD BE GIVEN
CONSIDERATION IN FUTURE PLANNING OF STUDENT
ACTIVITIES, AND (4) OTHER INFORMATION OF
VALUE TO SCHOOLS CURRENTLY BEGINNING OR
EXPANDING THEIR ACTIVITIES PROGRAM. SOME
CONCLUSIONS WERE: (1) MALE PARTICIPANTS IN
STUDENT ORGANIZATIONS TEND TO BECOME ACTIVE
MEMBERS BECAUSE OF SOCIAL ACTIVITIES OFFERED,
WHILE FEMALES TEND TO BELONG BECAUSE OF
ACADEMIC AND EMPLOYMENT BENEFITS, AND (2)
STUDENTS IN LARGER COMMUNITIES TEND TO RELY
ON THE CITY FOR RECREATION AND ENTERTAINMENT
SOURCES, WHILE STUDENTS IN SMALLER
COMMUNITIES RELY ON THE SCHOOL. (SB)

PURPOSE OF STUDY

In recent years pressure has been applied to organize student activities in the vocational-technical school system in Wisconsin. The main sources of criticism are the State Board of Vocational-Technical Education and the North Central Accreditation Association.

The main purpose of this paper entitled "Student Activities in the Vocational-Technical School System in Wisconsin" is a descriptive study of the present activities offered at this post-high school level. Included in this study is:

1. Tables describing student attitudes about club activities at the district and state level.
2. Tables describing desired recreational programs at the district and state level by male and female students.
3. Charts relating information pertaining to club advisors, funding, and meetings at the district level.
4. Recommendations, at the state and district level, that should be given consideration in future planning of student activities.
5. Miscellaneous items that should be beneficial to schools that are currently beginning or expanding their activities program.

Activities & Procedures

The study was conducted during the spring semester of the 1971-72 academic school year. The writer visited all the schools in the vocational-technical school system, interviewed faculty and students, and obtained written materials. However, only the following schools participated in the distribution of the survey instruments to the student body; Eau Claire, Fennimore, Fond du Lac, Janesville, Madison, Rice Lake, Wausau, Waukesha, and Wisconsin Rapids.

The failure to survey one hundred percent of the schools in the vocational-

technical school system was caused by:

1. A lack of cooperation
2. Problems in distribution of the survey instrument
3. Union contracts sometimes forbid teacher involvement in conducting surveys
4. Problem of surveys being misplaced in the mail

Abstract

The writer, in conducting the survey, discovered that each school in the vocational-technical school system has an identity of its own. Each school differed in philosophy and activities because of the following criteria:

1. Philosophies of district boards and directors varies throughout the state.
2. The size of sociological background of the student body varies from district to district.
3. Location of institutions and type of programs offered play an important role in determining over-all participation in student activities.
4. Educational backgrounds of the activities directors bore a direct relationship to the level of activities offered.

Also, there were other significant conclusions that must be drawn from the over-all study. These conclusions, based on the surveys returned, interviews conducted with faculty and student body, and written materials made available to the researcher, are:

1. Male participants in student organizations tend to become an active member because of social activities offered. This is especially true in the Trade and Industrial areas.
2. Female students tend to belong to student organizations because of academic and employment benefits to be received.

3. Male students that do not participate in student activities either work part-time or just simply lack interest in belonging to any formal group.

4. Female students that chose not to participate in student organizations are married, divorced, or need the time for studies.

5. The smaller schools normally lack written guidelines or policies for student activities.

6. There is a lack of recreational facilities throughout the vocational-technical school system.

7. Women's and co-educational recreation programs are de-emphasized in the school system in comparison to the men's activities.

8. Students in larger communities, particularly Madison and Milwaukee, tend to look to the city to fulfill their entertainment needs.

9. Students in smaller communities, such as Fennimore, and Rice Lake, tend to look to the school for sources of recreation and entertainment.

10. The vocational-technical schools with the most qualified personnel in student activities tend to offer a more enriched program.

11. Schools with large athletic budgets tend to spend very little on intramural programs.

12. Alumni associations, except on an area of training basis, are not successful in the vocational-technical system. Apparently, the student does not identify with the institution after graduation.

RECOMMENDATIONS

The writer, based on the survey, interviews, and written materials suggests that the following recommendations be considered.

State Level

1. The State Board of Vocational-Technical Education hire one person to act as coordinator of a state-wide organization.
2. The schools in the vocational-technical school system should develop an efficient means of communication through a WATTS or DIAN system. Presently, this lack of communication is a major obstacle for improving activities in the state system.

District Level

3. District boards should begin to pay the activities directors salary instead of exploiting the activity fee. Many institutions spend such a large sum of monies on salaried personnel that the money for activities is depleted.
4. Schools should hire qualified personnel to supervise the activities program. Presently, some institutions assign student services personnel the job and they possess little background or interest for the task.
5. Each school should develop school policy pertaining to student activities. This would include an intramural and organizational handbook.
6. The activities director, if possible, should be considered a full-time job. Presently, one activities director has the following job description: Public information, school paper advisor, student center supervisor, advisor to student senate, and intramural director. Oddly enough, the enrollment of this school is projected to exceed 2,000 students next fall.
7. Each activities director should hold an in-service training session for club officers in the fall of each school year. Presently, Wausau and LaCrosse

offer this particular service with good success. This might be a successful tool to communicate to students and to the administration.

8. Social activities, especially in the Trade and Industrial areas, play an important role in the formation of student organizations.

9. Student senate officers and advisors should periodically analyze and update their present constitutions. Some of the present constitutions are unworkable or offer insufficient guidelines. Also, one school reported that no constitution presently existed.

10. More emphasis should be placed on intramural activities in relation to the inter-collegiate sports. Presently, the students pay an activity to support varsity teams and sometimes receive little or nothing in return.

11. The vocational-technical schools, if possible, should obtain recreational facilities such as gyms, softball fields, football fields, etc.

12. More emphasis should be placed on women's intramurals since they too pay an activity fee. It appears many schools simply refuse to acknowledge that female students are interested in participating.

In fact, one activities director related that girls football is only a fad and therefore, it would be foolish to initiate such a program.

13. Co-educational activities, especially archery, volleyball, swimming, and tennis, should become a part of the recreation program. This could serve both a recreational and social function in our institutions.

STUDENT PARTICIPATION IN STUDENT ORGANIZATIONS

State-wide Survey

A total of 2,640 students were surveyed to obtain the compository charts given on the following pages. These students were selected, at random, from the following schools: Eau Claire, Fennimore, Fond du Lac, Janesville, Madison, Rice Lake, Wausau, Waukesha, and Wisconsin Rapids.

The students involved in the study were required to rank, in order, the three main reasons they decided to join or not to join a student organization. Their responses were then weighted according to rank. A first choice was assigned three points; a second choice, two points; and a third choice, one point.

The main purpose of the survey instrument was to evaluate:

1. Why students belong to student organizations.
2. Why students elect not to belong to a student organization.

- F. Do not feel that participation is beneficial to my education
- G. Lack interest in belongin to any student organizations
- H. Other (please specify)

INTERPRETATION OF SURVEYS

Student Organizations Survey on the Participating & Non-Participating Student

The following statements are applicable from the tables listing the reasons for participation and non participation in student organizations in the vocational--technical school system.

1. Male students participate in student organizations in order to become involved with social activities, such as parties, dances, etc. This is particularly true with the Trade and Industrial students.
2. Male Business students join student organizations basically to meet new people. However, social activities and academic benefits are considered important.
3. The female respondents felt the opportunity to benefit academically was the main reason for belonging to student organizations.
4. The Health Occupation participants were primarily interested in furthering their educational goals and meeting people with common interests.
5. The male non participants were not active due to a lack of time. They listed the main reasons as working part-time or needing the time for studies. However, many simply lacked an interest to belong to any organization.
6. The Trade and Industrial non-participating student felt organizations are not consistent with educational goals.. They also lacked interest in participating in any organizations.
7. The female non participant overwhelmingly felt student organizations were not beneficial to their education.

RECREATION SURVEY
IN VOCATIONAL-TECHNICAL SCHOOL SYSTEMS IN WISCONSIN

A total of 1,729 male and 868 female students responded to the recreation survey. These students attend: Eau Claire, Fennimore, Fond du Lac, Janesville, Madison, Rice Lake, Superior, Wausau, Waukesha, and Wisconsin Rapids.

The main purpose of the survey was to:

1. Find student attitudes towards the opportunities to participate, the diversification of recreation programs, and facilities available for student use in the vocational-technical school systems in Wisconsin.
2. Discover which programs, if any, that students want added to present recreational programs.

INTERPRETATION OF RECREATION SURVEY
IN VOCATIONAL-TECHNICAL SCHOOL SYSTEMS IN WISCONSIN

The writer, based on the preceding tables, feels that the following statements may be concluded:

1. Male students agree that all student have the opportunity to participate in recreational activities.
2. Male students slightly agree that adequate facilities, supervision, and a variety of recreational activities are available at the institutions under study.
3. Male students definately feel that archery and rifle would be beneficial to present recreation programs.
4. Female respondents agree that all students have an opportunity to participate in recreational activities.
5. Female students showed slight disagreement and uncertainty that adequate facilities, supervision, and programs are offered at their technical institutions.
6. Tennis, swimming, and archery are overwhelmingly the most popular sports that the female respondents feel should be annexed to present recreational programs.

STUDENT ORGANIZATIONS SURVEY

Club Funding, Advisory Selection, & Activity Meetings

In order to obtain information pertaining to advisory selection, club finding, and meeting times, thirteen schools were surveyed. These school districts included: Eau Claire, Fennimore, Fond du Lac, Green Bay, Kenosha, LaCrosse, Madison, Milwaukee, Rhinelander, Rice Lake, Wausau, Waukesha, and Wisconsin Rapids.

The main purpose of this survey was to discover:

1. How clubs and student organizations receive funds.
2. How student senates and organization advisors are selected.
3. How much, if any, compensation do advisors receive for time spent on organizational activities.
4. How often are advisory meetings conducted at the local level.
5. How many activity directors, if any, delegate full-time responsibility to club and recreational activities.

INTERPRETATION OF SURVEY

Organizational Funding,
Advisory Selection & Meetings, & Compensation

The following statements can be concluded from the chart pertaining to funding, advisory selection, meetings, and compensation:

1. The student senates of all the vocational-technical schools receive funds from the activity fees.
2. Clubs basically raise funds through projects or activity fees. However, in three schools each club is budgeted money through the student senate.
3. Student services personnel, with the exception of Eau Claire, are appointed advisors to the student senate.
4. Five schools, out of the thirteen surveyed, compensate club advisors with money or reduced teaching loads.
5. The smaller schools normally conduct student organization meetings during school time. These meetings are held during an activity period or a block hour when no classes are conducted.
6. An overwhelming majority of schools have two or less advisory meetings per year.
7. Only four schools employ a full-time activities person to supervise student organizations and recreation activities. None of the smaller schools (under 1,500) have a full-time position.

RECOMMENDATIONS

District 12 is in the process of planning a new vocational-technical institute. The new school will be located on a site near Appleton. It is approximately one and half miles from the residential area of the city. If you were going to attend this school, what recommendations would you make concerning the type of facilities you would like to see developed on campus?

Fox Valley Technical Institute
Appleton, Wisconsin

I. INTERPRETATION OF SURVEY

The survey instrument designed for this particular survey was constructed by the Student Services personnel at Fox Valley. The survey attempted to find out what types of activities students were interested in participating in. Also, the survey found out student attitudes toward the amount of activity fee assessed to students at the technical institute.

II. RECOMMENDATIONS

The writer of this paper, using the survey results as a guide, suggests the following recommendations:

1. An intramural program should develop the following:

- a. Basketball (Men)
- b. Bowling (Co-ed)
- c. Flag Football (Men)
- d. Swimming
- e. Tennis (Co-ed)
- f. Volleyball (Co-ed)

2. Clubs should be initiated in the following areas:

- a. Band
- b. Dramatics
- c. Newspaper
- d. Speech
- e. Student Senate

However, there should be caution not to push the club onto the student but to initiate them as student need dictate them.

The writer, based on observations and interviews with Student Services personnel, suggests that the following recommendations be considered:

1. The school should hire someone to supervise the recreation center.

Presently, they have overloaded the person in charge of that program.

This person should be able to get along with students, type, etc.

2. A check-out center should be established in the recreation center.

This might include:

- a. Basketballs
- b. Cards
- c. Checkers
- d. Chess
- e. Cribbage
- f. Football Equipment
- g. Horseshoes
- h. Softball Equipment
- i. Tennis Equipment

3. The center might run tournaments such as:

- a. Checkers
- b. Chess
- c. Cribbage
- d. Ping Pong
 - 1. Singles
 - 2. Doubles
 - 3. Co-ed Doubles
- e. Pool (Men & Women)
 - 1. 14 - 14 - 1
 - 2. 8 Ball
 - 3. Straight Ball

STUDENT RESPONSES

Comments were as follows:

Was really disappointed when I found out there was no gym here

Felt this area of study has some fine instructors and do a complete and thorough job of instructing classes

I would like to get active in these sports here

Don't have much time

Don't think my evaluation is fair--don't know about school activities

A school of this size should compete with other vocational schools

Directors try hard but need more facilities

Everythink OK but pls -off system for every sport should include everyone

This school needs more involvement

Just can't get excited about sports because I do not need that much competition to survive

Does anybody really care

Would be able to participate if activities weren't in the afternoon

Really an excellent intramural program at present

Should have swimming pool

Felt clubs were used as "status" stepping blocks

Think the activities are fine for those that are interested

Felt that clubs aren't advertised enough

More promotion for girls for sports

Not many students involved because of jobs and rides

Think the school better get going in having more activities

Would especially like to learn how to swim

Feel that the groups that are now playing sports are very close--hard to get into if "you weren't a friend."

Student Responses

Felt too much emphasis is being put on these organizations--here for education and nothing else

Haven't been enrolled long enough but might join

Most students can't participate because of part-time jobs

See football as a good sport but just can't see playing touch

Why can't we compete with the college

Wish we would have a ski team to compete with other schools

Major reason for the high mortality rate for a good number of students is non-sufficient preparation for their respective classes. To push for a total country club atmosphere is ridiculous

Too too much of my time

Not interested

Felt that an area should be set aside for weight lifting

Pretty well organized school; instruction is excellent; free time can be spent many ways

Would like to participate, but schedule won't permit it

Would like to play volleyball and basketball but transportation a problem

Hard to find transportation to and from activities

There is an uncommonly good atmosphere here at District I. Please to go to classes and/or cafeteria--feel like I really belong

Wish more students were involved

Would like to see a rifle club started here

District I Technical Institute - Eau Claire .
Eau Claire, Wisconsin

I. INTERPRETATION OF SURVEY

A. MALE PARTICIPANTS - TABLE

The main reason the male students participated in club activities was strictly social. The three main reasons, in order, for participating were:

1. Social activities offered
2. Provides an opportunity to meet new people
3. Provides an opportunity to meet people with common interests

B. FEMALE PARTICIPANTS - TABLE

The main reason the female students participate, unlike the males, was because of academic benefits derived from belonging to a club. Another reason was the opportunity to meet people with common interests. However, it appears that these two reasons are directly related. The three main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Provides an opportunity to meet people with common interests
3. Provides an opportunity to meet new people

C. MALE NON PARTICIPANTS - TABLE

The main reasons the male students elected not to participate in club activities was the lack of time and interest. Surprisingly, the respondents indicated that other activities offered during the activity period deterred them from participating. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Lack interest in belonging to any student organization
3. Work part-time

D. FEMALE NON PARTICIPANTS - TABLE

The female non participants, like the males, felt a lack of time and interest were the main reasons for not belonging to a student organization. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Lack interest in belonging to a student organization
3. Work part-time

E. MEN'S RECREATION

The male respondents agreed that all students have an opportunity to participate in recreational activities. However, uncertainty existed in their mixed feeling towards adequate facilities and the variety offered through the recreation program.

It was apparent that the male students would like the opportunity to participate in the following programs:

1. Archery
2. Fencing
3. Golf
4. Handball
5. Rifle
6. Skiing
7. Soccer
8. Tennis
9. Wrestling

F. FEMALE RECREATION

The female respondents agreed that all students have the opportunity to participate in recreational activities. However, like the male students, felt uncertain about the diversification of the program and facilities available for their use.

They felt the following activities should be initiated into the present program:

1. Archery
2. Golf
3. Hiking
4. Skiing
5. Tennis

II. RECOMMENDATIONS

The writer of this paper, using the surveys as a guide, recommends the following suggestions:

1. More social events should be sponsored by the Trade and Industrial Clubs at District One. It appears that they lack the opportunity to become acquainted with female students because of the block scheduling.
2. The creation of a Police Science Club should be explored and possibly initiated.
3. The following programs should be intergrated into the recreation program:
 - a. Archery (Co-ed)
 - b. Golf (Co-ed)
 - c. Handball (Men)
 - d. Rifle (Men)
 - e. Tennis (Co-ed)
 - f. Wrestling

Based on observations at District One and interviews with faculty and staff, the writer feels that the following recommendations should be considered:

1. Develop some type of in-service training programs for student organizations.
2. Expand the recreational facilities as the student body enrollment increases. This should include a football and softball field.

STUDENT RESPONSES

Comments were as follows:

Not enough selection

Too far to drive for a majority of us

This school needs a gym--would have much more participation

Our school should have more involvement in the intramural program

Activities offered are not enjoyable

Would like to get involved

Need more activities

Don't have time

I'm forced to attend

Should have intramurals during the day and not at night because it's
too far to commute

Work full time

Need a good weight lifting program

Have home and family

Work and go to school

SOUTHWEST WISCONSIN VOCATIONAL AND TECHNICAL SCHOOL
Fennimore, Wisconsin

I. Interpretation of Surveys

A. MALE PARTICIPANTS - TABLE

The main reason the male students participated in club activities was because of the social benefits derived from the club. The three major reasons, in order, for participating were:

1. Provides an opportunity to meet new people
2. Social activities that are offered
3. Provides an opportunity to meet people with common interests

B. FEMALE PARTICIPANTS - TABLE

The female participants, like the males, participated in clubs strictly from a social point of view. The three main reasons, in order, for participating were:

1. Provides an opportunity to meet new people
2. Social activities offered
3. Provides an opportunity to meet people with common interests

C. MALE NON-PARTICIPANTS - TABLE

The male non-participants felt that student organizations provided no academic benefits. Also, many students commute and work part-time. The three main reasons, in order, for not participating were:

1. Do not feel that participation is beneficial to my academic endeavor
2. Lack interest in belonging to a student organization
3. Work part-time

D. FEMALE NON-PARTICIPANTS - TABLE

The female respondents felt it was more beneficial to devote their time for studying rather than participating in club activities. A large number of the female respondents selected "Other" because they were married or divorced with children. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Other
3. Do not feel that participation is beneficial to my academic endeavor

E. MEN'S RECREATION

The male respondents surveyed felt that most students had the opportunity to participate. However, they disagreed that a diversified recreation program was available and that adequate facilities were provided.

It was apparent the the male students would like to participate in the following programs:

1. Archery
2. Flag or Touch Football
3. Rifle
4. Softball
5. Golf
6. Tennis
7. Wrestling

F. WOMEN'S RECREATION

Among the female respondents, it was unanimous that all students had the opportunity to participate. However, there was uncertainty about the variety of programs offered and the adequacy of the facilities available for student use.

The following programs were indicated as being popular by the female respondents:

1. Archery
2. Softball
3. Tennis

II. Recommendations

The writer of this paper, using the surveys as a guide, recommends the following suggestions:

1. More social activities should be sponsored by student organizations.
2. More facilities and supervision should be provided for the intramural program.

3. Students should be better informed as to what activities are available.
4. The following intramural programs should be considered in the future expansion of the Recreation Department:
 - a. Archery (co-ed)
 - b. Rifle club, classes, or instruction (men)
 - c. Softball (men & women)
 - d. Golf (men)
 - e. Tennis (co-ed)

After observing the institute and discussing the over-all program with faculty and students, the writer feels the following recommendations should be considered:

1. A check-out service should be set up in the student center. These activities could include cards, chess, checkers, footballs, softball equipment, and basketballs.
2. The school should consult a person who is well-informed in designing a softball and football field complex.
3. Tournaments should be conducted out of the student center such as 14 - 1 pool, straight ball pool, 8 - ball pool, cribbage, chess, and checkers.
4. A student organization handbook should be formulated pertaining to school policy.
5. An organization should be initiated to provide some recreational and social outlets for divorced women.
6. Recreational facilities should be provided in the vicinity of Fennimore.

Comments on Student Activities Survey

Comments were as follows:

Intramural program is in poor shape and is not a very good recruiting device for new students

More advanced publicity needed for bowling tryouts

Would like to see a trap and skeet team--felt the competition would be unlimited in this area

Could not participate in any activities because they take place after school hours

Would like to go on school skiing trips

Felt student activities and clubs are a waste of time

Need more student participation--didn't know if it was the student's fault or the program itself

An intramural program in the major sport areas would be welcomed and most beneficial to the school

Felt we should have more intramural sport activities such as first year students verses second year students; marketing students verses mechanical technology students; and teachers verses students

A larger sports program

Would like to see basketball or football between different classes

Get inner classes to play games of basketball, softball, and football

Like to see games played between clubs

Like to see a wrestling intramural program

Like to see a rifle, baseball, and judo team

Would like to see more exchange of different students in classes--not the same ones day after day

Sports program could be more complete

Doesn't see why an \$8 fee has to be paid at the beginning of the year and again at midterm--didn't feel the school newspaper was worth it

FOND DU LAC TECHNICAL INSTITUTE
Fond du Lac, Wisconsin

I. Interpretation of Surveys

A. MALE PARTICIPANTS - TABLE

The main reason the male students participated in club activities was because of the social benefits derived from the club. Also, they felt that membership would be beneficial to their academic education. The four main reasons, in order, for participating were:

1. Provides an opportunity to meet people with common interests
2. Social activities offered
3. Beneficial to my academic endeavor
4. Provides an opportunity to meet new people

B. FEMALE CLUB PARTICIPANTS - TABLE

A majority of the female participants, unlike the males, participated for academic reasons. Another reason was the opportunity to simply meet other people. However, it should be noted that social activities such as parties, dances, etc., did not seem important. The three main reasons, in order, for participating were:

1. Educational benefits received
2. Opportunity to meet people with common interests
3. Opportunity to meet new people

C. MALE NON-PARTICIPANTS - TABLE

The male non-participants overwhelmingly felt that a lack of time to devote to club activities was the main reason for not joining a student organization. The three main reasons, in order, for not participating were:

1. Work part-time
2. Need time for studies
3. Lack interest in belonging and do not feel it is beneficial to my education

D. FEMALE NON-PARTICIPANTS - TABLE

The survey instrument for measuring the female non-participants was inadequate since the main reason given was "Other". However, the writer feels that many of the respondents in this category were either working part-time, married or divorced with children. The top three responses, in order, for not participating were:

1. Other
2. Need time for studies
3. Work part-time

E. MEN'S RECREATION

The male respondents slightly agreed that all students have the opportunity to participate in recreational activities. However, a majority agreed that the programs were limited and that there were not enough facilities available for student use.

It was apparent that male students would like to participate in the following recreational programs:

1. Archery
2. Basketball
3. Football
4. Hiking
5. Rifle
6. Skiing
7. Softball
8. Track & Field
9. Wrestling

F. WOMEN'S RECREATION

The female respondents also agreed that all students have the opportunity to participate in recreational activities. However, uncertainty existed in their opinion towards the programs offered and the adequacy of the facilities available.

The females felt the following programs should be initiated:

1. Archery
2. Skiing
3. Swimming
4. Tennis

II. Recommendations

The writer of this paper, using the surveys as a guide, recommends the following suggestions:

1. A club in Food Manufacturing and Ward Clerk area should be initiated.
2. Social activities, especially in the Trade and Industrial areas, should become an integral part of the clubs.
3. The following intramural programs should be considered in the future expansion of the Recreation Department:

- a. Archery (co-ed)
- b. Basketball (men)
- c. Flag or Touch Football (men)
- d. Rifle (men)
- e. Skiing or Ski Club (co-ed)
- f. Softball (men)
- g. Tennis (co-ed)
- h. Wrestling (men)

4. More facilities and organized programs should be made available to male and female students.

From observations of Moraine Park and interviews with faculty and students, the writer feels the following recommendations should be considered:

1. Some working relationship between the University of Wisconsin - Fond du Lac Campus and Moraine Park be established. Maybe one person could coordinate a recreation program between both schools.
2. School policy and guidelines should be established in writing for student organizations.
3. An intramural program should be developed among departments, clubs, and independent groups.

Northeast Wisconsin Technical Institute
Green Bay, Wisconsin

ACTIVITIES QUESTIONNAIRE

Total Sample: 343

Each year a twelve dollar activity fee has been collected from all registering students. This fee is used to fund a number of student functions at NWTI. We, the student government, feel the students should have more to say about how their money is spent. For this reason we have come to you for advice. Some information that may help you make your decision on the questions is as follows: (1) there is a good chance that we will be occupying the new building two miles west of Military on West Mason, (2) there will be no facilities for indoor sports, no gym or pool, and (3) facilities can be located and rented if enough interest is shown.

1. How many basketball games have you attended this year?

Zero: 299	One: 20	Two: 8	More: 14	No Response: 2
87%	6%	2%	4%	1%

2. Considering the number of people that attend the games and the fact that \$1,300 was budgeted to cover the coach's salary, uniforms, transportation, etc., should we continue to fund the Mariners?

Yes: 144	No: 181	No Response: 18
42%	53%	5%

3. \$500 is annually put aside to pay for the all-school chorus. Included in the expenses are director's salary, robes, and music. Should we continue to finance the chorus?

Yes: 108	No: 221	No Response: 14
31%	64%	5%

4. The NWTI TODAY news sheet was discontinued because we had no funds allotted for it, and we also lacked students who would donate the amount of time necessary to produce the paper?

- (a) Should we finance the NWTI TODAY?

Yes: 260	No: 77	No Response: 6
76%	22%	2%

- (b) Would you be willing to work on the staff? If so,

Name _____
Address _____
Phone _____

5. \$2,175 is allotted to the TECH TIMES.

(a) Should we fund the TECH TIMES?

Yes: 144	No: 192	No Response: 7
42%	56%	2%

6. \$2,175 was budgeted to partially finance our yearbook; the students who buy copies pay the remaining amount needed to buy the books from the printer.

(a) Should the system remain as it is?

Yes: 175	No: 133	No Response: 36
51%	39%	10%

(b) Should Student Government pay the full price and give free copies to all students?

Yes: 97	No: 196	No Response: 50
28%	57%	15%

(c) Should we even have a yearbook?

Yes: 231	No: 80	No Response: 32
67%	23%	10%

7. Intramurals are financed through your activity fee at an annual budget amount of \$900.

(a) Have you been involved in the intramural program?

Yes: 48	No: 293	No Response: 2
14%	85%	1%

(b) Would you like to see intramurals continued?

Yes: 231	No: 75	No Response: 37
67%	22%	11%

(c) If yes, which ones of the following would you take part in?

Broomball	28	Football	78
Volleyball	141	Basketball	97
Bowling	116	All City Basketball	45
Track	37	Others	Golf, Tennis, Baseball, Hockey, Swimming

8. The Wisconsin Technical College Conference is made up of Technical schools such as ours for the purpose of athletic competition. Should we join the conference?

Yes: 191	No: 111	No Response: 41
56%	32%	12%

Which of the following would you participate in?

Basketball	<u>85</u>	Volleyball	<u>81</u>
Softball	<u>56</u>	Touch Football	<u>58</u>
Bowling	<u>77</u>	Golf	<u>29</u>
Swimming	<u>47</u>		

Northeast Wisconsin Technical Institute
Green Bay, Wisconsin

I. INTERPRETATION OF SURVEY

A. STUDENT ORGANIZATIONS

Northeast Technical Institute is a new institution that began operation on October 1, 1971. Therefore, many of its programs are in the infancy stage.

Student organizations that currently exist are:

Circle K	17
Credit Club	55
Student Senate	
Vets Club	14
Wisconsin Office	
Education Association	54

B. RECREATION

Intramural sports are offered at Northeast Wisconsin Technical Institute on a limited basis. Again, like other similar institutions, a lack of facilities is the main problem. The following recreational activities are offered on an intramural basis:

<u>Men</u>	<u>Co-ed</u>
Basketball	Bowling
Football	Swimming
	Volleyball

The Student Services Department is currently trying to create a more extensive program for the 1972-73 academic year.

C. SURVEYS

The enclosed questionnaire was distributed to the student body during the 1971-72 school year. The following statements, pertaining to student activities, may be concluded:

1. Students that attend organized inter-collegiate basketball games constitute a small fraction of the student body. However, approximately fifty percent of the non-attending students still favor sponsoring an inter-collegiate team.

2. Students tend to feel that the school chorus should not be financed by activity fee funds.
3. Students agreed that the NWTI TODAY news sheet was beneficial but showed uncertainty in financing the student newspaper, TECH TIMES.
4. Students agreed that it is desirable to have a yearbook but felt that the students should share the burden of the expenses.
5. While a dismal percent of the student body was involved in intramurals, a significant number indicated they would like to participate next year.

II. RECOMMENDATIONS

The writer, based on written materials, suggests that the following recommendations be considered:

1. The constitution of the Student Government should be revised and updated. The changes might be the following:
 - a. Add a method of impeachment of members that is not detrimental to the goals of the government
 - b. Revise the method for adopting or changing an amendment. It appears that such a stringent policy is used to discourage amendment action of the student representative group.
 - c. The discrimination between one-year and two-year students is debatable. The fact remains that each student pays the same activity fee and, therefore, is entitled to equal rights.
2. The school should continue the publication of the NWTI TODAY news sheet during the 1972-73 school year.
3. The intramural program should be re-examined. There is a discrepancy between the students involved and the ones interested in participating.
4. Someone should be appointed to organize the intramural program at NWTI. Whenever the Student Government is given this responsibility, it becomes evident that they lack the contacts, knowledge, and ability to set up a successful program.

5. The survey on intramural activities should be more comprehensive. For example, it should include times, days, and a list of all the programs that could be offered.

Janesville, Wisconsin

STUDENT RESPONSES

Comments were as follows:

No student interest

Women are slighted

Until given survey, was unaware of student organization

Extra responsibilities at home

Have children at home

Student feels that a drama club would benefit the schhol

Drive too far

Belong to other organizations in the community

Go home on weekends

Likes to have an idea of how school is run and likes to have a right to express opinion

Doesn't consider school capable in organizing anything since everything takes so much red tape.

Lack of time

School should be run by students instead of the teachers.

School and town isn't build for students under 21

Transportation

School doesn't offer anything

Organizations provide leadership and knowledge

Students tend to be all for something (clubs, sports, etc.), but after it is started, they show little or no interest.

Feels administration should sponsor some activities instead of leaving the cost to the student government.

Program no good at all

Live out of town

Disagree with \$5 activity fee; shouldn't be any sport programs at all

Student programs alright for people in school just for fun or just using time they have to spare

Feels school activities are complete waste of time. Very bitter about having to contribute \$5 for which nothing is received

No one but "social butterflies" taking cream puff courses would have time for them

Blackhawk Technical Institute
Janesville, Wisconsin

I. Interpretation of Survey

A. MALE PARTICIPANTS - TABLE

The main reason the male students participated in student organizations was academic in nature. However, the social activities were considered important.

The three main reasons, in order, for participating in club activities were:

1. It is beneficial to my academic endeavor
2. Credentials are acquired that will be beneficial to obtaining post-graduate employment
3. Provides an opportunity to meet people with common interests.

B. FEMALE PARTICIPANTS - TABLE

The female respondents, like the males, felt that academic benefits received was the main reason for joining a student organization. The three main reasons, in order, were:

1. It is beneficial to my academic endeavor
2. Credentials are acquired that will be beneficial to obtaining post-graduate employment
3. Provides an opportunity to meet with new people

C. MALE NON PARTICIPANTS - TABLE

The male respondents overwhelmingly felt a lack of time was the main reason for not participating. The three main reasons, in order, for not participating were:

1. Work part-time
2. Need time for studies
3. Do not feel participating is beneficial to my education

D. FEMALE NON PARTICIPANTS - TABLE

The female students, like the males, felt a lack of time was the main reason for not participating in student organizations. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Work part-time
3. Lack interest in belonging to any student organization

E. MEN'S RECREATION SURVEY - PARTICIPANT

The male participants strongly agreed that a lack of diversification existed in the recreation program. Also, a great deal of uncertainty existed in the feeling that all students may participate and that adequate supervision and facilities are provided.

F. MEN'S RECREATION SURVEY - NON-PARTICIPANT

The male non participants overwhelmingly agreed that the present recreation program lacks a variety of programs and that the facilities and supervision was inadequate. Also, a great deal of uncertainty existed that all students have the opportunity to participate.

Interest in participating existed in the following recreational programs:

1. Archery
2. Bowling
3. Rifle
4. Softball
5. Volleyball
6. Wrestling

G. WOMEN'S RECREATION SURVEY - PARTICIPANT

The female participants strongly disagreed with the following statements:

1. All students have the opportunity to participate
2. The intramural program is well diversified
- e. Adequate facilities and supervision are provided

H. WOMEN'S RECREATION SURVEY - NON PARTICIPANT

The female non participants, as one might expect, showed a great deal of uncertainty in all statements given. This is probably due to a lack of interest in the program.

The following programs were indicated by female respondents as being a desirable part of the program:

1. Bowling
2. Tennis
3. Skiing
4. Wrestling

II. Recommendations

The writer of this paper, using the survey instrument as a guide, suggests the following:

1. A Trade & Industrial Club should be initiated.
2. More facilities, programs, and supervision should be included in the recreation program.
3. The following programs should be considered in the future planning of the recreation program:

- a. Archery (Co-ed)
- b. Bowling (Co-ed)
- c. Fencing (Men)
- d. Rifle (Men)
- e. Skiing (Co-ed)
- f. Swimming (Co-ed)
- g. Tennis (Co-ed)
- h. Volleyball (Co-ed)
- i. Wrestling (Men & Women)

The writer of this paper, based on observations, feels that activities will continue to be undernourished unless the schools combine. Presently, there is a campus at Janesville and one at Beloit. Surely, the arranging of facilities, communications, etc., must be a troublesome task. However, the following might be done:

1. Attempt to coordinate a small recreation program for each branch school.
2. Programs should be initiated that would be on the co-ed basis.
3. A tournament should be set up at the close of the league season that would include both branch schools.

June 1, 1972

Mr. Jim Seversen
Student Activities Director
District #1 Technical Institute
Eau Claire, WI 54701

Dear Jim:

Let me apologize for neglecting this letter for so long. However, I previously explained the situation involving completion of surveys and questionnaires has been demanding this year. Therefore, after discussing your questionnaire with Mr. Sather and appropriate personnel which would be involved it was decided that completing yours was not possible.

Not only the previous demands, but instructional time lost through general education courses, where most surveys-questionnaires are completed, was too great, and an internal problem involving a district surveying of students prevailed. Our size does prohibit us from getting to the majority. In a recent survey taken only 22% of our students were reached. So . . . this I feel explains our situation.

May you proceed without us and I wish you success and luck while completing your studies.

Sincerely yours,

Warren W. Greco
Counselor

jd

Kenosha Technical Institute
Kenosha, Wisconsin

I. Interpretation of Survey

A. STUDENT ORGANIZATIONS

The student organizations at Kenosha Technical Institute are orientated to serve the social, academic, and interest needs of the students. Presently, the organizations consist of fraternities, sororities, community orientated clubs, and academic student organizations. These organizations include:

- Airframe and Powerplant Technicians Club
- Alpha Beta Hortus Society (Horticulture)
- Alpha Eta Rho Fraternity (Aviation Programs)
- Alpha Nu Beta Fraternity (open frat)
- Alpha Theta Epsilon Sorority (open)
- Automotive Club of KTI
- Aviation Club of KTI
- Aviation Mid-Management Organization
- Cheerleaders Club
- Chi Omega Phi (Law Enforcement)
- DECA
- Dental Assistants Club
- Fluid Power Society
- Future Data Processers
- Industrial Diploma Club of KTI
- Iota Delta Kappa (Interior Design)
- Library Technical Assistants Club
- Medical Assistants Club of KTI
- Operating Room Assistants Club of KTI
- Practical Nurses Club Jan. & Sept.
- Publications Club (Big Six)
- Ski Club of KTI
- Society of Manufacturing Engineers
- Wisconsin Trade & Industry Assoc. of KTI
- WOWA

Mr. Warren Greco, Counselor, is currently supervising all Student Senate and organizational activities. During the 1971 - 72 year the following activities were conducted through club projects:

- Sadie Hawkins Dance
- Christmas Dance
- Winter Carnival
- Other Dances
- Get-acquainted Fall Picnic
- Road Rally

Christmas Tree Decorating Contest
 Christmas Parties
 Graduation Banquet
 Hayride
 Homecoming (Basketball)
 Beer Parties
 Employer & Employee Banquet
 DECA Week
 WOEI Week
 National & Regional Flying Competition
 Club Field Trips
 Snowskiing Trips
 Christmas Carroling
 Thanksgiving Volunteer Project
 Food Basket Project
 Vietnam Volunteer Project
 Red Cross Activities
 Program-Employer Visits
 Dinner-Dances (Businessman's Banquet)
 Guest Speakers
 Miss Law Enforcement Contest
 Inter-school Modified Auto Construction & Racing
 Nursing Home "Cheer-Up"
 Tour Guides
 Movies

It should be pointed out that top names in the entertainment business, such as Duke Ellington, perform at social and cultural events. Also, top name movies have been shown through the sponsorship of the Student Senate. These include: Billy Jack, Klute, Bonnie & Clyde, etc.

B. RECREATION

The recreation program, headed by Mr. Greco, offers a diversified program in which all students are invited to participate. These programs, except for basketball, cross-country, and wrestling, are offered strictly on an intramural basis. These include:

<u>Men</u>		<u>Women</u>
Basketball	Softball	Bowling
Bowling	Soccer	Golf
Conditioning	Swimming	Ice Skating
Cross Country	Wrestling	Skiing
Football		Softball
Golf		Swimming
Ice Skating		Tennis
Skiing		

Like a majority of vocational-technical institutes, a lack of gym facilities constitutes a major problem. However, KTI has plans of building their own facility within the next two school years.

II. Recommendations

The writer of this paper, using observations and discussions with students as a guide, suggests that the following recommendations be considered:

1. The school should provide a larger auditorium when showing movies. Also, these movies should be shown during after-school hours since they normally last more than one hour.
2. All recreational activities should be properly scheduled and supervised.
3. Establishment of some written guidelines that will be used for all recreation and intramural activities. This should include: scheduling, rules and regulations, entry dates, injury policies, etc.
4. The policy of 25% (\$5,000) of the activity fee money being used for the administration of student organization recordkeeping should be re-examined.

CHARLES G. RICHARDSON
District Director

Mr. Jim Severson
Director Student Activities
District One Technical Institute
620 West Clairemont Avenue
Eau Claire, Wisconsin 54701

Dear Jim:

Just a note regrading the Student Activities Survey. Bad news, our prerequisite was cancelled at the last minute so I wasn't able to get the survey out to returning students.

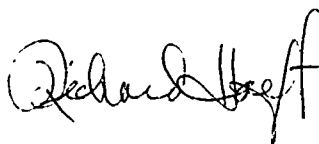

I tried to get them out at graduation but ran into problems and had a very small return.

Meanwhile, I still have about 2000 blank surveys and about 50 completed ones. I didn't have too much time to get them out since I didn't receive them from Lynn until late last week.

Please advise me on the status of the blank surveys.

I won't be back in town until about July 5, but will try to get in touch with you then. Will tell you about my trip.

Sincerely,

Richard Hoeft

Center For Wisconsin Vocational, Technical and Adult Education District No. 2

Western Wisconsin Technical Institute
LaCrosse, Wisconsin

I. SCHOOL ORGANIZATIONS & RECREATIONAL PROGRAMS

A. STUDENT ORGANIZATIONS

Western Wisconsin Technical Institute is one of the more progressive schools in Wisconsin in their attitude towards student organizations. Presently, it is the only technical institute, under 2,000 students, that offers the student an opportunity to belong to fraternities, sororities, and community oriented organizations. The following organizations were active during the 1971-72 year:

<u>Organization</u>	<u>Membership</u>
Accounting	25
Agri-Business	35
Air Conditioning & Refrigeration	16
Alpha Sigma Beta Fraternity	30
Art Club	25
Band	25
Business Club	90
Chi Sigme Chi Sorority	35
Choir	16
Circle K	20
Data Processing	15
Drafting	10
Drama	30
DECA	30
Delta Gamma Phi Sorority	25
Forensics	10
Health Occupations	40
Inter Greek Council	15
Mechanical Design	10
Newspaper	15
Outdoor Club	35
Photo Club	8
Pom-Pom	20
Secretarial	40
Student Congress	30
T & I Club	
Tau IOTA Upsilon Fraternity	35
Vets Club	30

Mr. Dick Hoeft, Activities Director, is in charge of student organization activities. During the past three years he has developed the following:

1. In-service training session for student organization officers.
2. A well-written handbook for student organizational activities.
3. Direct relationship with the University of Wisconsin - LaCrosse in which they send him a field worker to organize student activities.

B. RECREATION

Western Tech has purchased the old Y.M.C.A. to house students and run extensive recreation programs. They presently offer the following recreational activities:

<u>Men</u>	<u>Women</u>	<u>Co-ed</u>
Basketball	Golf	Bowling
Curling	Handball	Swimming
Golf	Track	Tennis
Handball		
Softball		
Track		
Tumbling		

Mr. Hoeft is presently in charge of these activities. Also, he uses work-study personnel and officials from the University of Wisconsin - LaCrosse to carry out the program.

II. RECOMMENDATIONS

The writer of this paper, based on observations, recommends that the following suggestions be considered:

1. WWTI purchase their own equipment that is used in the recreation center.
2. Tournaments should be conducted from the student center such as:
 - a. Checkers
 - b. Chess
 - c. Ping Pong
 1. 8 - Ball
 2. 14 - 1 Ball
 3. Straight Ball

STUDENT RESPONSES

Comments were as follows:

Don't have interest in sports activities, don't believe we should have to pay for an activity fee

Help improve opportunities for students

Student activities are fine because it gives you a chance to get some exercise with the intramural program

For the students who commutes, there is the problem of rides

As far as students are concerned, many like to go home after their classes

The intramurals are more for the students in liberal studies who aren't at the present time working on a particular profession

Enjoy the picnics and dances; an opportunity to meet other students

Gives an opportunity to help fellow students obtain what they want and what is needed

Survey would have been more effective if person handing them out would have explained it or at least asked students to fill them out

Involved with work study and outside job, participating in student activities is limited

Better peers by giving a say in student government

Would have joined if I had heard more about it

Children

Couldn't care less

More dances during school year

Too busy

Women need organizing

Nothing good enough

Older student

Not enough information given in beginning of year

Would like more personal contact with representatives so we would be able to join and participate in things

Lack of contact with student body .

Request that a grievance board be instituted in this school without outside participation unless approval by both parties agree

Not interesting

Teachers encouragement

School has a fine activity list for its size

Too much like high school

They are no good

Would enjoy more rock concerts, preferably in the winter months

Work full time

All time occupied

Programs other than general studies don't get much chance for sports

Need time for art

Could use a good swimming and diving intramural program with competition with other schools

Not enough refreshments

The institution is a tool to obtain knowledge. It's emphasizes should be towards mental awareness rather than physical activity.

Wish they had a football team

Too childish

Co-ed sports

Didn't think student senate had any right to raise student activity fee. Representatives never said anything to the students.

Activities offered are poor

Total waste of time

Student organizations have very little control over their own activities. Students should have more control.

Madison Area Technical Institute
Madison, Wisconsin

I. INTERPRETATION OF SURVEY

A. MALE PARTICIPANTS - TABLE

The main reason the male respondents participated in student organizations was the academic benefits derived from participating. However, the social benefits acquired was indicated as another determining factor for participating. The three main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Social activities that are offered (parties, dances, etc.)
3. Credentials are acquired that are beneficial to obtaining post-graduate employment

B. FEMALE PARTICIPANTS - TABLE

The female respondents, like the males, indicated that academic and social motives were the main incentives for belonging to student organizations. The three main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Social activities that are offered
3. Credentials are acquired that are beneficial to obtaining post-graduate employment

C. MALE NON PARTICIPANTS - TABLE

The male non participants indicated that a lack of time was the primary reason for not joining a student organization. It should be pointed out that the column "Other" might be significantly large to invalidate the results. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Work part-time
3. Lack interest in belonging to a student organization

D. MEN'S RECREATION SURVEY - NON PARTICIPANTS

The non-participating respondents, like the participating males, slightly agreed that "all students have the opportunity to participate." Also, they

showed uncertainty and disagreement over the adequacy of the recreational facilities, supervision, and programs available for their use.

The male respondents indicated that they would like the following programs added to the recreation program:

1. Football
2. Handball
3. Ice Hockey
4. Rifle
5. Skiing
6. Swimming
7. Water Polo

E. FEMALE NON PARTICIPANTS - TABLE

The female non participants, like the males, indicated a "lack of time" was a deciding factor for not belonging to student clubs. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Enjoy other recreational activities offered during an activity period
3. Work part-time

F. MEN'S RECREATION SURVEY - PARTICIPANTS

The male participants slightly agreed that the intramural program is available for all interested students. Uncertainty and disagreement was more noticeable in the adequacy of facilities, supervision, and over-all diversity of the recreation program.

G. WOMEN'S RECREATION SURVEY - PARTICIPANTS

The female respondents overwhelmingly agreed that all students have the opportunity to participate. However, there was only slight agreement that adequate programs, facilities, and supervision is provided for recreational activities.

H. WOMEN'S RECREATION SURVEY - NON PARTICIPANTS

The non-participating females, unlike the participants, only slightly agreed that all students are afforded the opportunity to participate. There was a great

deal of uncertainty and disagreement over the adequacy of programs offered, facilities available, and supervision of programs by the recreation department.

It was obvious that the female respondents felt the following programs should be initiated:

1. Archery
2. Hiking
3. Skiing
4. Swimming
5. Tennis

II. RECOMMENDATIONS

The writer of this survey, using the surveys as a guide, suggests the following recommendations:

1. A Medical Assistance, Real Estate, and Business Machines Club might be initiated.

2. The following recreation programs should be annexed to the recreation department:

- a. Archery (Co-ed)
- b. Football - Flag (Men)
- c. Rifle (Co-ed)
- d. Skiing (Co-ed)
- e. Swimming (Co-ed)
- f. Tennis (Co-ed)
- g. Water Polo (Co-ed)

The writer, based on observations and informal discussions with students, suggests that the following recommendations be considered:

1. More emphasis, time, and money be allocated to the recreation program. Presently, most efforts are concentrated on inter-school activities.

2. Tournaments, such as ping pong, badminton, etc., should be conducted by the recreation department.

3. More recreation programs should be developed for women and on a co-educational basis.

4. The school should develop a more elaborate system of communications to get news out to the student pertaining to clubs and recreational programs.

5. Re-examine the publication of the student yearbook. The writer feels the book is used mainly to promote the school image.

Milwaukee Area Technical College
Milwaukee, Wisconsin

I. INTERPRETATION OF SURVEY

A. STUDENT ORGANIZATIONS

The Milwaukee Area Technical College offers a variety of student organizational activities. The associations include social, political, cultural, community, and academically orientated activities that aim to involve the total student body. The active groups include:

Black Student Union	20
Business Club	25
Christian Science Club	15
Data Processing	20
Fraternities	45
International Students	20
Ski Club	20
Sororities	30
Spanish Club	30
Vets Club	175

The writer, based on interviews with students, feels that the student body looks for the community for their activities. Milwaukee, being the largest city in Wisconsin, offers such a variety of activities that de-emphasize the role of the school. Also, the school is large enough to make activities too formal for students to become well acquainted.

B. RECREATION

The intramural program offers activities for both male and female students enrolled. Presently, the following intramural programs are offered:

<u>Men</u>	<u>Co-ed</u>
Basketball	Badminton
Fencing	Bowling
Gymnastics	
Soccer	

II. RECOMMENDATIONS

The writer of this paper, based on observations and interviews, feels the

following recommendations should be considered:

1. A more extensive intramural program should be organized to include co-ed and activities for women.
2. Some monies should be allocated for intramural instead of strictly on an "inter-collegiate basis."
3. Intramural activities should be offered to all students and not just student organizations.
4. Tournaments might be run by the student center.

Comments on Student Activities Survey

Sports is needed

Schedule other nights besides Monday & Wednesday

Lack of communication to students as to what activities are open to them

Poorly equipped in club mechanics

Live too far away

More recreation facilities: pool tables, ping pong tables, etc

More student recreation facilities

Clubs organized for year-round activities, such as canoeing trips, skiing,
and hiking

There is a lack of student interest and participation

STUDENT RESPONSES

Comments were as follows:

Does not apply to me

Married, work part-time, and lack the time needed to participate in an intramural program

Must babysit immediately after school

The organizations they have don't appeal

Rice Lake Vocational and Technical School
Rice Lake, Wisconsin

I. INTERPRETATION OF SURVEY

A. MALE PARTICIPANTS - TABLE

The male respondents participate basically to meet people. Academic motivations were also significant for participating. The three main reasons, in order, for participating were:

1. Provides an opportunity to meet people with common interests
2. It is beneficial to my academic endeavor
3. Provides an opportunity to meet new people

B. FEMALE PARTICIPANTS - TABLE

The female participants, unlike the males, indicated academic benefits was the main criteria for belonging to a student group. However, socializing did play an important role in participating. The four main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Provides an opportunity to meet new people
3. Social activities that are offered (parties, dances, etc.)
4. Credentials are required that are beneficial to obtaining post-graduate employment

C. MALE NON PARTICIPANTS - TABLE

The male respondents felt a lack of time and interest were the main reasons for not belonging to a student club. The three main reasons, in order, for not participating were:

1. Work part-time
2. Lack interest in belonging to any student organization
3. Need time for studies

D. FEMALE NON PARTICIPANT - TABLE

This survey did not adequately find the reasons why the female non participants did not join clubs. However, the writer feels that marital status played an important role why the female student does not belong to organizations.

The three main reasons, in order, for not participating were:

1. Other
2. Need time for studies
3. Lack interest in belonging to any student organizations.

E. MEN'S RECREATION SURVEY

The male students slightly agreed that all students have the opportunity to participate. However, there was uncertainty and disagreement over the diversification, facilities, and supervision provided by the recreation department.

The males indicated the following programs would be beneficial to the recreation department.

1. Archery
2. Football
3. Golf
4. Handball
5. Hiking
6. Rifle
7. Skiing
8. Soccer
9. Softball - Baseball
10. Swimming
11. Tennis
12. Wrestling

F. WOMEN'S RECREATION SURVEY

The female respondents agreed that "all students have the opportunity to participate." But uncertainty and disagreement existed in their attitudes over the availability of facilities, programs offered, and supervision of recreational activities.

The female respondents indicated the following programs as being desirable:

1. Archery
2. Hiking
3. Skiing
4. Swimming
5. Tennis

II. RECOMMENDATIONS

The writer of this paper, using the survey as a guide, suggests the following recommendations:

1. More recreations programs and facilities should be made accessible for student use.
2. Clubs should be initiated to satisfy student needs for outdoor recreation such as skiing, badminton, horseback riding hiking, etc.
3. The following intramurals should be initiated:
 - a. Archery (Co-ed)
 - b. Football - Flag (Men)
 - c. Handball (Men)
 - d. Rifle (Men)
 - e. Skiing (Co-ed)
 - f. Soccer (Men)
 - g. Softball (Men)
 - h. Swimming & Diving (Co-ed)
 - i. Tennis (Co-ed)
 - j. Wrestling (Men)

The writer of this paper, based on observations and visitations, suggests that the following recommendations be considered:

1. Develop written guidelines pertaining to student organizations and intramural activities.
2. Develop a plan that would pay the intramural director equitable compensation for organizing, scheduling, and supervising intramural activities.

Nicolet College and Technical Institute
Rhinelander, Wisconsin

I. INTERPRETATION OF SURVEY

A. STUDENT ORGANIZATIONS

Nicolet Community College is currently in the building stage of its year old school. Therefore, the amount of activities offered are still somewhat limited. The organizations that are currently active are:

Dramatics	25
Pep Club	15
Ski Club	45
Snowmobile Club	50
Vets Club	40

Unlike the traditional vocational-technical school, none of the organizations are academically orientated. Currently plans are being made to initiated some fraternities and sororities on campus.

B. RECREATION

The recreation program is limited due to the infancy of the school and a lack of facilities. The recreation programs are usually offered on a club and not an individual basis. Naturally, with the club enrollment down, the number of participants is also limited. Currently, the following activities are offered:

Basketball - Men
Flag Football - Men
Weight Lifting

Also, it must be mentioned that other activities are offered through the physical education classes. These include such activities as archery, golf, tennis, etc.

II. RECOMMENDATIONS

The writer of this paper, based on observations, interviews, and written literature, suggests that the following recommendations be considered:

1. The administration should establish some written guidelines pertaining to student organizations.

2. Students should be encouraged to form some academic clubs such as Auto Club, Electronics Club, etc. Basically, the student enrollment consists of the traditional vocational-technical school student.

3. Recreation programs should be orientated to fit the needs of all students. The formation of club teams eliminates many "independent" students that may want to participate.

4. All recreational leagues should have "officials" and be supervised by qualified personnel.

STUDENT RESPONSES

Comments were as follows:

Don't have time

Lack interest in the organizations offered

Don't belong to any specific training

Friends not in these groups

Did belong 1st semester, was the most ridiculous club

Live too far from home

As a nurse in Psychological Training, we are not at school to be able to participate; it also cost too much

Lack of transportation

Was not a worthwhile organization

Have family problems

Family comes first

Enrolled full time, plan to join Secretarial Science next year

Came too late to join

Other things to do

Build a tennis court in area in back of school

Tech. needs some type of on-campus sports program. Gym near campus would keep us occupied; especially in winter. Intramural program through the Y.M.C.A. seems to work well, but the participation could be stronger; more people would participate if facilities were closer to home. Sports around campus are big and the girls would like to be part of it all!

Don't know what we have here

Belong to an organization--just about had to; teacher told me so

No activities for students without a gym or pool--between hours have to spend in lounge or outside

It helps your grades

Waste of time

Didn't like parliamentary procedures

Like to enjoy sports but must work every evening

Inter-school competition in athletics

All this institute, they're all disorganized

Not my type of programs

Take care of children

Bible studies

Being older than quite a few of the students, my social interests are more outside of school

School should have a basketball court on the grounds outside

Didn't pay any dues

Outside interests related to family

Has not received any information as to what intramural activities are offered

Thinks the school is pretty good

Would like to see the use of the city school pools for water sports in the winter.

Would like activities on a more varied time schedule, so people with part-time jobs could participate

Would like a cafe or some sort of quick order restaurant

Keeps in good standing with teachers

Provides an opportunity to serve and lead people

School is more than just a place to learn. People need "fun". Students are people.

Y.M.C.A. membership should be on a voluntary basis only. I feel that the set-up at the Y is second rate. For example, bowling at the Y is not very good. Lanes and fees are substandard.

Help better my confidence with people

School had better get something going to raise the school morale. It's really bad.

Belonging to an organization--something to do and involvement

An opportunity to develop leadership

Inter-school competition would bring school closer together. More students would be playing

Organizations--help make money with club sales

Everyone is in them

North Central Technical Institute
Wausau, Wisconsin

I. INTERPRETATION OF SURVEY

A. MALE PARTICIPANTS - TABLE

The main reason why male students participated in student organizations was the social benefits provided through club activities. However, activities that furthered their academic education was also deemed important. The three main reasons, in order, for participating were:

1. Social activities that are offered (parties, dances, etc.)
2. It is beneficial to my academic education
3. Provides an opportunity to meet new people

B. FEMALE PARTICIPANTS - TABLE

The female participants, unlike the males, participated because of academic reasons and the opportunity to meet new people. Social activities were considered important but far less than academic reasons. The four main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Provides an opportunity to meet new people
3. Credentials are acquired that will be beneficial to obtaining post-graduate employment
4. Social activities that are offered (parties, dances, etc.)

C. MALE NON PARTICIPANTS - TABLE

The main reason the male students do not elect to participate in student organizations was a lack of time for such activities. However, a lack of interest was also deemed an important factor. The three main reason, in order, for not participating were:

1. Work part-time
2. Need the time for studies
3. Do not feel participation is beneficial to my academic endeavor

D. FEMALE NON PARTICIPANT - TABLE

The main reason the females chose not to participate in student organizations was "need time for studies." However, the write. of this paper feels that

marital status was another determining factor. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Do not feel that participation is beneficial to my education
3. Married

E. MEN'S RECREATION SURVEY - PARTICIPANT

The male participant slightly agreed that all students have the opportunity to participate. However, they overwhelmingly felt that the recreation program is not well diversified and lacks adequate facilities and supervision.

F. MEN'S RECREATION SURVEY - NON PARTICIPANT

The male non participant agreed that all students enjoy the opportunity to participate and that the program is well diversified. Also, they disagreed with the statement "adequate supervision and facilities are provided."

It is apparent that the male students would like to see the following programs added by the recreation department:

1. Archery
2. Golf
3. Handball
4. Ice Hockey
5. Rifle
6. Skiing
7. Soccer & Diving
8. Swimming & Diving
9. Tennis
10. Volleyball
11. Wrestling

G. WOMEN'S RECREATION SURVEY - PARTICIPANT

The female participants agreed that all students possess the opportunity to participate in recreational activities and that the present program is well diversified. However, uncertainty existed about the adequacy of the facilities and supervision of the recreational activities.

H. WOMEN'S RECREATION SURVEY - NON PARTICIPANT

The women non participants slightly agreed that all students are afforded

the opportunity to participate. But they disagreed that the programs are diversified and provided proper facilities and supervision.

The female respondents indicated the following programs would be desirable:

1. Archery
2. Bowling
3. Golf
4. Hiking
5. Swimming
6. Tennis
7. Volleyball

II. RECOMMENDATIONS

The writer of this paper, using the survey as a guide, recommends the following suggestions:

1. Social activities should assume an important role in student organization activities--especially in the Trade and Industrial areas.

2. The following programs be added to the recreation program:

- a. Archery (Co-ed)
- b. Hiking (Co-ed)
- c. Ice Hockey (Men)
- d. Rifle (Men)
- e. Skiing (Co-ed)
- f. Swimming (Co-ed)
- g. Track (Men)
- h. Golf (Men & Women)
- i. Handball
- j. Soccer (Men)
- k. Tennis (Co-ed)
- l. Volleyball (Co-ed)
- m. Wrestling (Men)

The writer of this paper, based on observations and visitations with faculty and students, suggests that the following recommendations be considered:

1. The school should hire a full-time activities director to handle all recreational and club activities.

2. Recreational programs should be handled by North Central personnel rather than the Y.M.C.A.

3. Activities should be provided that would benefit non-participants in club meetings during the activity period. This might include:

- a. Basketball
- b. Cards
- c. Football
- d. Movies
- e. Tennis
- f. Volleyball

STUDENT RESPONSES

Comments were as follows:

Not enough time

Boyfriend

Because some people are older, they're not always accepted

Too busy typing for students

Work full time

Anti social

Have better things to do, like being with friends

Have a family

Full schedule

Belong to Decca, would like to see an idea exchange or competition on a local level or between schools in this area

To help the school

Believe that more students would benefit from and participate in student activities if the persons already in the clubs or activities would let a new-comer in. The feeling is that the clubs and organizations either ignore or are not receptive to newcomers. Referring especially to the student government in this respect.

Conflicts with class schedule

Getting married

Student government sets such a poor example that I would be embarrassed to belong to any organization

Less attention paid to intramurals and more to pressing matters such as student government, price of school food, bookstore prices. Get irresponsible jokers out of student government and get someone who is interested in the school instead of his own ego.

Thinks the student association could be improved a great deal

No information published

Intramurals are beneficial to a person, especially if they don't have time for a varsity sport, or if there is no varsity sport like that in existence.

Waukesha County Technical Institute
Waukesha, Wisconsin

I. Interpretation of Survey

A. MALE PARTICIPANTS - TABLE

The main reason male students participated in club activities was the benefits received for future employment. The three main reasons, in order, for participating were:

1. It is beneficial to my academic endeavor
2. Provides an opportunity to meet people with common interests
3. Provides an opportunity to meet new people

B. MALE PARTICIPANTS - TABLE

The female participants, like the males, felt that academic benefits received and the opportunity to meet people were the main reasons for belonging to student organizations. The three main reasons, in order, for participating were:

1. Provides an opportunity to meet people with common interests
2. It is beneficial to my academic endeavor
3. Provides an opportunity to meet new people

C. MALE NON PARTICIPANTS - TABLE

The male non participant overwhelmingly responded that working part-time was the main reason for not joining a student organization. However, many respondents simply lacked any interest in belonging to any student organization. The three main reasons, in order, for non participating were:

1. Work part-time
2. Need time for studies
3. Lack interest in belonging to any student organization.

D. FEMALE NON PARTICIPANT - TABLE

The females, like the males, felt that lack of time was the main reason for not participating. Also the female respondents did not feel that club activities were beneficial to their educational goals. The three main reasons, in order, for not participating were:

1. Need time for studies
2. Work part-time
3. Do not feel that participation is beneficial to my academic endeavor

E. MEN'S RECREATION SURVEY - PARTICIPANT TABLE

The male participants overwhelmingly felt that all students have the opportunity to participate in a diversified recreation program. However, there was disagreement toward the statement "adequate facilities and supervision are provided."

F. MEN'S RECREATION SURVEY - NON PARTICIPANT TABLE

The male non participants slightly agreed that a variety of recreation programs are offered and that all students have the opportunity to participate. Also, there was uncertainty about the adequacy of facilities and supervision provided by the recreation department.

The male students felt the following programs should be added to the recreation program:

1. Archery
2. Handball
3. Rifle

G. WOMEN'S RECREATION SURVEY - PARTICIPANT TABLE

The female respondents, unlike the males, disagreed that all students have the opportunity to participate in recreational activities. Also, a great deal of uncertainty existed in the diversification of programs, facilities, and supervision offered by the recreation department.

H. WOMEN'S RECREATION SURVEY - NON PARTICIPANT TABLE

The female non participants, unlike the participants, felt that all students have the opportunity to participate in recreation activities. However, they responded that uncertainty existed in their feelings towards adequate facilities, supervision, and the variety of programs offered.

The female students felt the following programs should be initiated by the recreation department:

1. Archery
2. Swimming & Diving
3. Volleyball

II. Recommendations

The writer of this paper, using the survey as a guide, recommends the following suggestions:

1. More recreational facilities should be made available for student use.
2. Programs should be added to the recreation program in which women may participate.
3. The following programs should be considered in the future planning of the recreation department:

- a. Archery (Co-ed)
- b. Handball (Men)
- c. Rifle (Co-ed)
- d. Volleyball (Co-ed)

From observations of the Waukesha Country Technical Institute, the writer feels the following recommendations should be considered:

1. A check-out service should be established in the Student Center. This service could provide the following recreational equipment:

- a. Cards
- b. Checkers
- c. Chess
- d. Cribbage boards
- e. Friesbies
- f. Footballs
- g. Tennis equipment

2. Tournaments should be conducted through the Student Center:

- a. Pool
 - 1) 14-1
 - 2) Straight
 - 3) 8-Ball
- b. Ping Pong
 - 1) Singles
 - 2) Doubles
 - 3) Co-ed doubles
- c. Cribbage Tournament
 - 1) Singles
 - 2) Doubles
- d. Chess
- e. Checkers

3. An equitable amount of money, compared to intra-collegiate sports, be allocated to the intramural activities.

STUDENT RESPONSES

Comments were as follows:

Believe intramural program is pretty good--wish there were more activities that both girls and boys could participate in together

Think school should have more social activities

Should have games with major colleges for exhibition

Shouldn't strictly be on Wednesday

Like to see drama or a choir organization

Group lacks good organization

Not much time

Commute

Should offer more so students get to know others better

Part-time student and am not aware of what is offered

Have children--enough to do

Clubs offer a chance to help people

Have night classes

Would like to see a regular physical education class set up as an elective

Want a rifle club

Need more facilities

School meets the needs of its students

Intramural program good but too limited

Considering the facilities of this institution, a tremendous job is being done in all areas of student activities

The school needs much improvement and repair of attitude, enthusiasm, and facilities

MID-STATE TECHNICAL INSTITUTE
Wisconsin Rapids, Wisconsin

I. Interpretation of Surveys

A. MALE PARTICIPANTS - TABLE

The main reason the male students participated in club activities was because of the social benefits derived from the club. Surprisingly, these benefits were far more important than any employment or academic advantages received from participating. The three major reasons, in order, for participating were:

1. An opportunity to meet new people
2. Social activities offered
3. An opportunity to meet people with common interests

B. FEMALE PARTICIPANTS - TABLE

The female participants, like the males, belonged to student organizations for exactly the same reasons previously mentioned. These three reasons, again, were:

1. An opportunity to meet new people
2. Social activities offered
3. An opportunity to meet people with common interests

C. MALE NON-PARTICIPANTS - TABLE

The male students felt that a lack of time was one of the main reasons for not participating in a student organization. However, there was a strong feeling that clubs were not beneficial to their education. The three main reasons, in order, for not participating were:

1. Work part-time
2. Lack interest in belonging to a student organization
3. Do not feel that participation is beneficial to my academic endeavor

D. FEMALE NON-PARTICIPANTS - TABLE

The female students definitely felt that a lack of time kept them from participating in activities. These three major reasons, in order, for not belonging were:

1. Need time for studies
2. Work part-time
3. Are married and lack of any desire to belong to a student organization

E. MEN'S RECREATION

Among the participating male students, it was unanimous that all students had the opportunity to participate and that a variety of programs were offered. However, there was an apparent dissatisfaction with the facilities that were provided.

The non-participants, on the other hand, agreed that the opportunity to participate exists but felt that the programs were limited and that there were not enough facilities available for student use.

It was apparent that the male students would like to participate in the following programs:

1. Archery
2. Football
3. Rifle
4. Skiing
5. Swimming & Diving
6. Handball
7. Tennis
8. Track & Field
9. Wrestling

WOMEN'S RECREATION

The female participants agreed that all students had the opportunity to participate and that a variety of activities were offered. However, uncertainty existed in the adequacy of facilities and supervision provided for recreational activities.

On the other hand, there was light disagreement among the non-participants in relation to an opportunity to participate and the availability of programs in which to participate. Also, there were mixed feelings towards the adequacy of the facilities available for their use.

The programs that the female students wanted included in the recreation program were:

1. Archery
2. Hiking
3. Skiing
4. Tennis

II. Recommendations

The writer of this paper, using the surveys as a guide, recommends the following suggestions:

1. More social events should be initiated through the senate or student organizations.

2. The following intramural programs should be considered in the future expansion of the Recreation Department:

- a. Football (men)
- b. Rifle club, classes, or instruction (men)
- c. Archery (co-ed)
- d. Tennis (co-ed)
- e. Wrestling (men)
- f. Hiking (women)
- g. Skiing (co-ed)
- h. Open swimming (co-ed)
- i. Volleyball (co-ed)

After observing the institute and discussing the over-all program with faculty and students, the writer feels the following recommendations should be considered:

1. The gym should be available for student use other than one night per week.
2. Do not have limitations to the number of times a student may use the Y.M.C.A. facilities.
3. A student organization handbook should be formulated pertaining to school policy.
4. T-shirts should be available to use for the intramural basketball leagues.
5. A student center should be located near a gym.
6. Written guidelines for student organizations should be established.

- STUDENT ACTIVITIES SURVEY -

1. Area of Training _____

2. Sex ☐ Male ☐ Female

3. Check the appropriate box:

Presently, I do ☐ do not ☐ belong to a student organization at this institution.

4. If you belong to a student organization, please answer the question given below. If not, go on to question Number 6.

Check the type of organization you belong to:

☐ Social ☐ Academic ☐ Student Senate

5. Please rank, in order, three reasons why you belong to a student organization (1 - best reason; 2 - second best; 3 - third best).

- _____ A. Social activities that are offered (parties, dances, etc.)
- _____ B. Provides an opportunity to meet new people
- _____ C. It is beneficial to my academic endeavor
- _____ D. Credentials are acquired that will be beneficial to obtaining post-graduate employment
- _____ E. Provides an opportunity to meet people with common interests
- _____ F. Other activities are not available during an activity period
- _____ G. Provides an opportunity to cultivate my hobbies
- _____ H. Other (please specify) _____

Go on to question Number 8

6. Please rank, in order, three reasons why you do not belong to a student organization (1 - best reason; 2 - second best; 3 - third best).

- _____ A. Work part-time
- _____ B. Married
- _____ C. Lack of social activities (dances, parties, etc.)
- _____ D. Enjoy other recreational activities that are offered during an activity period
- _____ E. Need the time for studies
- _____ F. Do not feel that participation is beneficial to my education
- _____ G. Lack interest in belonging to any student organizations
- _____ H. Other (please specify) _____

7. Does a student organization presently exist in your area of training?

☐ Yes ☐ No

If not, would you participate if an organization was initiated?

☐ Yes ☐ No

OVER

STUDENT ACTIVITIES SURVEY

8. I ☐ do ☐ do not ☐ participate in an intramural program at the present time.

9. Please check the box that accurately describes your feeling toward the intramural activities program presently offered at your school.

	<u>Agree</u>	<u>Disagree</u>	<u>Uncertain</u>
A. All students have the opportunity to participate	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
B. Presently, the intramural program offers a variety of activities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
C. Adequate facilities and supervision are provided	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
D. Inter-school competition tends to de-emphasize the importance of intramurals	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

10. Please check any intramural program that is presently non-existent in which you would like to be a participant.

11. COMMENTS:

STUDENT ORGANIZATION FUNDING

Check the appropriate box(es) and fill in blank(s) if necessary.

Student organizations receive funds from the following sources:

- ☐ Activity fee
- ☐ School budget
- ☐ Membership fee
- ☐ Fund raising projects
- ☐ Private grants, gifts, etc.
- ☐ Other _____
- ☐ None

Monies obtained from an activity fee or school budget are allocated according to:

- ☐ Budget submitted by each organization
- ☐ Set amount per member \$ _____
- ☐ Set amount per organization \$ _____
- ☐ Other _____
- ☐ None

Comments:

STUDENT ORGANIZATION ADVISORS

Check the appropriate box(es) and fill in blanks if necessary.

Advisors for student organizations are:

- ☐ Selected on a voluntary basis
- ☐ Appointed
- ☐ Elected by faculty
- ☐ Other (please specify) _____
- ☐ Do not know

For his services an advisor receives the following compensation

- ☐ Pay
 - (a) _____ Based on merit
 - (b) _____ Set amount
- ☐ Gift
- ☐ Reduction in teaching load
- ☐ Other (please specify) _____
- ☐ None
- ☐ Do not know

Advisory meetings are held:

- ☐ Never
- ☐ Once a month
- ☐ Once a semester
- ☐ Once a year
- ☐ Other (please specify) _____
- ☐ Do not know

Advisory meetings include youth organization activities in their agenda

- ☐ Never
- ☐ Sometimes
- ☐ At all meetings

STUDENT ORGANIZATION MEETING

Check the appropriate box(es) and fill in the blanks(s) if necessary.

Meetings occur:

- ☐ Once a week
- ☐ Every other week
- ☐ Once a month
- ☐ Other _____

Meetings are held on:

- ☐ Monday
- ☐ Tuesday
- ☐ Wednesday
- ☐ Thursday
- ☐ Friday
- ☐ Varies
- ☐ Other _____

Meetings are usually scheduled during:

- ☐ An Activity Period
- ☐ Free-Block Hour
- ☐ Non-School Hours
- ☐ None

Meetings are usually held at:

- ☐ School Facilities
- ☐ Other Institutions
- ☐ Varies
- ☐ Other _____

Area VTAE District 14
Wisconsin Rapids, Wisconsin

STUDENT SENATE

PARLIAMENTARY PROCEDURE

I. Value of parliamentary procedure

- A. Enables an assembly to transact business with speed and efficiency.
- B. Protects the rights of each individual therein.
- C. Preserves a spirit of harmony among the members.
 - 1. Only one subject may claim the attention of the assembly at one time.
 - 2. Each proposition presented for consideration is entitled to full and free debate.
 - 3. Every member has rights equal to those of every other member.
 - 4. The will of the majority must be carried out, and the rights of the minority must be preserved.
 - 5. The personality and desires of each member should be merged into the larger unit of the organization.

II. Order of business after the chairman has called the meeting together. (Chairman says "The meeting will please come to order.")

- A. Roll call by the secretary. Chairman says, "The secretary will please call the roll."
- B. Reading of the minutes of the previous meeting, followed by their correction and approval.
 - 1. Chairman says "Will the secretary please read the minutes of the last meeting." (If there has been a special meeting since the last regular meeting, the report of the special meeting is read also.)
 - 2. After secretary has read report Chairman says "Are there any corrections?"
 - 3. If there are no corrections, Chairman says "Since there are no corrections the minutes stand approved as read."
 - 4. If there are corrections, these corrections are made and then chairman calls for further corrections. If none, he says, "there being no further corrections, the minutes will stand approved as corrected."
- C. Report of treasurer (not necessary at every meeting.) Chairman says "Will the treasurer please give his report."

- D. Report of standing committees or special committees. (not necessary at every meeting.)
- E. Unfinished business (that business not completed at past meeting.) Chairman says "Is there any unfinished business to come before the meeting."
- F. Announcements (Read by the President)
- G. New business. (That business not previously discussed by the club members.) Chairman says "Is there any new business to come before the meeting?"
- H. Adjournment. After chairman takes vote on motion to adjourn he says, "the meeting is adjourned" or "The meeting is not adjourned (if the motion did not receive necessary vote.)"

III. Motions used most often in a business meeting.

A. Main motion

- 1. Definition--a proposal of an activity for an organization.
- 2. Proper phraseology. "I move that we have a party." "I move that we give \$10 to the Red Cross." Not: "I make a motion."
- 3. Steps in the procedure of a main motion
 - a. Member addresses chairman "Mr. Chairman," or "Madam Chairman"
 - b. Chairman recognizes him saying "Mr. Jones" or "Mary." By this action the Chairman gives the member permission to speak. He is said to have the floor.
 - c. Member states his motion as "I move that we attend the play "The Corn is Green."
 - d. Another member seconds the motion saying simply "I second it". If no second, chairman says "motion is lost for lack of a second."
 - e. Chairman states the motion to the group as "It has been moved and seconded that we attend the play "The corn is Green" Is there any discussion?"
 - f. Discussion (i.o. pro and con comments by members of the proposed main motion). These suggestions are observed:
 - (1) The member wishing to speak must rise address the chairman and be recognized by the chairman. This eliminates discussion between two or three members and directs everyone's attention on the member speaking to the group.
 - (2) The chairman gives priority in speaking to the member who rises first. If there is a draw between two members, the chairman lets one speak and then the other except - if one of the members has been talking often, the chairman lets the other member speak first. Alternative views of the different members are preferred by the chairman.

- (3) The chairman must keep the discussion centered on the motion before the house.
- (4) At no time while he is acting as chairman should the chairman express his viewpoints on the motion. Another member may preside if the chairman wishes to discuss pro or con.
- (5) The chairman cannot show partiality. At all times he is a neutral presiding officer.
- (6) If there is no discussion, the chairman tries to encourage discussion by calling on individual members to express their views on the motion.
- g. Chairman takes the vote saying "All those in favor of the motion that we attend the play "The Corn is Green" please say "Aye", Contrary, same sign. Affirmative vote is taken first.
- h. Chairman announces the vote, "The motion is carried."
"The motion is lost."
4. Vote required is a majority which usually means one over 1/2 of those present.

B. Amendment

1. Definition - a change of modification in a motion. Amendment may be made by adding something to original motion or by substituting something instead of a word or phrase in the original motion. Also called an amendment of the first order.
2. Proper phraseology "I move that we amend the motion by adding the words "at our expense" after the words "That we have lunch in the tea room". "I move that we amend the motion striking out the word upperclassmen on the original motion. ("I move that we send 3 upperclassmen to the convention as our delegates")
"I move that we amend the motion by substituting (or striking out the word four and inserting the word 2 in the original motion.)"
3. Subsidiary motions apply to main motions.
4. Steps in procedure of an amendment
 - a. An amendment may be proposed only during the discussion period.
 - b. Member rises, addresses chairman.
 - c. Chairman recognizes him.
 - d. Member states amendment.
 - e. Amendment is seconded.
 - f. Chairman states amendment to the group and calls for discussion of the amendment.
 - g. Discussion of amendment.
 - h. Chairman takes the vote on the amendment.
 - i. Chairman announces the vote. If the amendment is carried the chairman makes that modification in the original motion. Then he calls for further discussion of the changed motion. If the amendment is lost the chairman calls for further discussion of the motion in its original form.
5. Vote required to pass an amendment is a majority.

C. Amendment to an amendment.

1. Definition - a change or modification of an amendment. It is also called an amendment of the second order. Only one

amendment of the second order can be before the house at one time. Likewise, only one amendment of the first order may be before the house at one time.

2. Proper phraseology "I move to amend the amendment by striking out (or by adding) (or by substituting.)"
3. Steps in the procedure.
 - a. An amendment to an amendment can be proposed only during the discussion period of the amendment.
 - b. The steps are the same as in the amendment.
4. A majority vote is necessary to carry the amendment to the amendment.

D. Point of Order.

1. Definition - member wishes to designate a mistake or error in parliamentary procedure. In this motion he states an error has been made. Since it is necessary to correct a mistake as soon as possible after it has been made, this motion may interrupt a member speaking. It is too late to correct a mistake if other business has transpired.
2. Proper phraseology "Mr. Chairman, I rise to a point of order."
3. Steps in the procedure.
 - a. Member rises and says without waiting for recognition "Mr. Chairman, I rise to a point of order."
 - b. Chairman says "State your point of order."
 - c. Member states error as "There is one amendment of the first order before the house, until that is voted upon another amendment of the first order is out of order."
 - d. Chairman gives decision. If the member is right he says "your point of order is well taken." If no mistake in parliamentary procedure has been made the chairman says "your point of order is not well taken."
 - e. If the chairman does not wish to give a decision, he calls for a vote by the members and the group abides by that decision.
4. Vote-none-chairman decides generally. If he does take a vote, a majority decides.

E. Parliamentary Inquiry

1. Definition - Member tactfully asks if an error has been made in parliamentary procedure. Otherwise it is like point of order. Sometimes that is the more tactful way of calling attention to a mistake.
2. Proper phraseology "Mr. Chairman, I rise for Parliamentary inquiry."
3. Steps in procedure.
 - a. Member rises and says without waiting for recognition "Mr. Chairman, I rise for parliamentary inquiry."
 - b. Chairman says "State your inquiry."
 - c. Member asks his question. "Is there not one amendment of the first order before the house? Then, is not this amendment of the first order out of order until a vote has been taken upon

the first."

- d. Chairman gives decision. "Your inquiry is well taken" or your inquiry is not well taken."
4. Vote - None-Chairman decides.

F. Previous question sometimes call question.

1. Definition - The previous question is simply a motion to discussion or debate upon the motion before the house. It does not decide the motion under consideration only ends discussion of it.
2. Proper phraseology. "I move the previous question" Also acceptable but not as good: "question".
3. Steps in the procedure.
 - a. Proposed only during discussion period of motion.
Member rises - addresses chairman saying "Mr. Chairman"
He cannot interrupt a speaker.
 - b. Chairman recognizes member.
 - c. Chairman states motion "I move the previous question"
 - d. Motion is seconded. If motion is not seconded chairman says "The previous question motion is lost for want of a second."
 - e. But if seconded chairman says "The previous question has been moved and seconded. All those in favor please raise right hand (or stand) Contrary the same sign." There is no discussion period of the previous question in motion. That is the group does not make pro and con comments about stopping the discussion of the original motion.
 - f. Chairman announces vote on previous question. If the previous question is carried, the chairman immediately takes a vote on the motion which is under consideration. If the previous question is lost there is further discussion of the motion under consideration.
4. Vote necessary is 2/3. This large vote protects the members against any railroading of a motion and insures each member his right to comment upon the motion before the house. Since a 2/3 vote is necessary, this vote is taken by a show of hands, or by the members standing.

G. Request for Information

1. Definition - Member wishes certain knowledge before voting upon a question. For example, before he votes to have a party, he may wish to know how much money is in the club treasury.
2. Proper phraseology, "Mr. Chairman, I rise for information."
3. Steps in the procedure
 - a. Request is made during the discussion period of a motion, generally. Member may interrupt a speaker-but often matter is not that important. Member rises and says "Mr. Chairman, I rise for information."
 - b. Chairman says "State what you wish."
 - c. Member says "I should like to know how much money we have in our treasury." Requests are always answered through the chairman.
 - d. Chairman says "Mr. Jones (The treasurer) would you tell us how much money there is in the treasury?"
 - e. Treasurer rises and says "Mr. Chairman, we now have \$35.17 in the treasury."
4. No vote.

H. Refer to a Committee

1. Definition - a small group of individuals is delegated to investigate a proposal or make the necessary detailed arrangements to carry out a motion: as investigating the need for a recreational program, or working out the arrangements for a picnic.
2. Proper phraseology "I move that a committee of three be appointed by the chairman to take care of our party arrangements."
3. Steps in procedure.
 - a. Proposed during discussion period of motion or after a motion has been passed.
 - b. Member rises, addresses chairman, and waits for recognition by chairman.
 - c. Chairman recognizes member.
 - d. Member states motion, "I move that the problem be investigated by a committee of three appointed by the chairman."
 - e. Motion seconded.
 - f. Chairman states motion to group.
 - g. There is no debate except that concerning number of Committee members or how they shall be selected.
 - h. Chairman takes vote.
 - i. Chairman announces vote.
4. Vote required majority.

I. Lay on the table.

1. Definition - this motion sets aside the motion before the house for later consideration.
2. Proper phraseology "Mr. Chairman, I move that we lay the motion concerning our gifts to the Red Cross on the table," or Mr. Chairman I move that we table the motion concerning our gift to the Red Cross."
3. Steps in the procedure.
 - a. Proposed during the discussion period of a motion only.
Member rises, addresses the chairman, waits for recognition.
 - b. Chairman recognizes member.
 - c. Member states motion.
 - d. There is no discussion of a motion to lay on the table, if the motion is seconded the chairman takes the vote immediately.
 - e. Chairman announces result of the motion to lay on the table.
4. Vote - majority.

J. Take from the Table.

1. Definition - This motion brings up for consideration a motion previously set aside or put on the table.
2. Proper phraseology "I move to take from the table the motion concerning our gift to the Red Cross."
3. Steps in the procedure.
 - a. Member rises and addresses the chairman
 - b. Member is recognized by the chairman
 - c. Member states motion
 - d. Motion is seconded
 - e. There is no discussion of the motion to take from the table,

if the motion is seconded the chairman takes the vote immediately.

f. Chairman announces the results of the vote.

4. Vote - Majority. A motion may be taken from the table at the same meeting in which it has been laid on the table only if other business has transpired or it may be taken from the table at the next meeting. After that, it is a dead motion, and if it is to be brought up again it must be proposed as an entirely new motion.

K. Withdraw a motion.

1. Definition - to retract, recall or take back a motion proposed. Circumstances show that it is unwise.
2. Proper phraseology "I wish to withdraw my motion concerning the party this week end."
3. Steps in the procedure
 - a. Proposed only during the discussion period of a motion and proposed only by the individual who made the original motion.
 - b. Member rises addresses the chairman.
 - c. Chairman recognizes member.
 - d. Member states "I wish to withdraw my motion concerning the party this weekend."
 - e. Chairman says "Is there any objection?" If there is no objection to the member withdrawing his motion, the chairman says "the motion is considered withdrawn."
 - f. However, if one member does not believe the other member should withdraw his motion he says "I Object."
 - g. Another member then says "I move that Mr. Jones be permitted to withdraw his motion."
 - h. The chairman then says "All in favor of the motion that Mr. Jones be permitted to withdraw his motion please say "Aye" Contrary same sign."
 - i. Chairman announces vote.
4. Vote necessary - majority

L. To adjourn

1. Definition - motion to end the present meeting.
2. Proper phraseology - for unqualified form it is "I move that we adjourn." For qualified form "I move that we adjourn at 3 p.m."
3. Steps in the procedure.
 - a. Member rises, addresses the chairman and awaits for recognition.
 - b. Chairman recognizes member.
 - c. Member states motion "I move that we adjourn."
 - d. Motion is seconded.
 - e. There is no discussion. The chairman says "It has been moved and seconded that we adjourn. All those in favor please say "Aye" Contrary same sign."
 - f. Chairman announces vote. The group is not adjourned until the chairman announces that the meeting is adjourned. Therefore, members should not make movements of leaving until dismissed.
4. Vote Necessary - majority.

OUTLINE OF CONSTITUTION RULES AND GENERAL REQUIREMENTS

The items (marked with asterisks) below are the criteria for MTC organization constitutions which will be presented to all student organizations on campus. They were drawn up jointly by a SLIC subcommittee and the Organizations Committee of University Student Government.

In order that all students will have equality of opportunity to qualify for any student organization on the MTC campus and to reap the maximum benefits from membership in such organizations, it is felt that the basic laws, constitutions, charters, or any such designated documents of all student organizations shall include at least the following provisions.

CONSTITUTION

Preamble

States the purpose and aims of the group.

Article I - Name

States the name of the organization.

Article II - Membership

States the requirements and size limitation, if any. Active membership must be limited to persons officially connected with MTC. One must be a student to be an active member of any student organization. One must be an active member to be an officer of any student organization.

*The organization must state that all students of MTC, without regard to race, color, creed, or national origin, have equality of opportunity for membership in the organization; or, in place of this type of statement, the organization must make a statement of membership whereby all students satisfying a specific criteria of membership not based upon race, color, creed, or national origin shall be able to join the organization.

*Qualifications for membership should be clearly written so that a student may determine whether he is eligible to file application.

Article III - Officers

Contains the list of officers and their term of office in the group.

*It should be up to each organization to state the qualifications for its officers.

*The constitution should also contain a statement of when and how often elections are to be held, giving definite dates for terms of office and stating specifically the powers of each officer. (Usually stated in the by-laws)

*Appropriate provisions should be defined for the impeachment and removal of officers.

Article IV - Executive Committee

States the make-up of the executive committee (board or council), the method of their selection, and their term of office. Provision for vacancies of officers of other executive members may be included in a section under this article.

Article V - Faculty Advisers

*Where the choice of advisers is left to the organizations, provisions for election and term of office of same should be clearly stated as prescribed in the officer's clause.

Article VI - Meetings

States the regular meeting time and provisions for calling special meetings. If meetings cannot be held regularly, authority to call meetings may be stated here.

*Each organization is asked to cite the source used in resolving questions relating to procedural matters, such as Robert's Rules of Order. (Usually stated in the by-laws)

Article VII - Amendment

Requires previous notification, also a two-thirds or three-fourths affirmative vote of those present and voting, or of those present for its adoption.

Article VIII - Ratification

May or may not be necessary. If more than a majority of those present is desired, a special article should be included.

By-Laws

Sections of the by-laws deal with the following:

1. Detailed material concerning members, that is, rights, duties, resignation and expulsion procedures.
2. Provision for initiation fee, if any dues and assessments should be covered here, also details regarding delinquencies.
3. Date and method of electing officers and duties of the officers.
4. Duties, authority, and responsibilities of an executive committee.
5. The names of the standing committees and the method of choosing chairmen and committee members. The duties of the committees should also be stated.

7. The number constituting a quorum.
8. Provision for honorary members or honorary officers if the group so desires. (Usually stated to provide for non-MTC student members.)
9. A method to amend the by-laws, usually a majority vote.

Amending the constitution should not be too simple a process, for the sake of stability of the group. It should be possible to amend the by-laws with greater ease. The constitution should always carry the date it was last revised. It is a good idea to insert in parentheses after an amendment the date it was passed.

The committee is well aware that these are not all of the essentials for a constitution, but it is also mindful that its duty is not to write constitutions nor to unnecessarily encroach upon the autonomy of such organizations.

Rather, the committee considers it its task to make certain that student organizations conform to the basic policies of the institution and to safeguard the right of all students to enjoy the advantage of membership in such organizations.

These recommendations are based upon the premise that the existence of any student organization of the campus depends upon such organization continually serving in the well-rounded intellectual, cultural, and social development of the individual student, and its existence does not depend, or at least should not depend, on any other basis.

Adopted February 14, 1958

Amended February 23, 1966

RESPONSIBILITIES OF COMMITTEE CHAIRMAN

1. Discuss with the Vice President a broad outline of objectives concerning your committee for the coming year.
2. Set up your own outline on how you intend to accomplish these objectives and distribute a syllabus to each of the committee members.
3. Assemble a list of the members of your committee with addresses and phone numbers and distribute this list to all of your committee members. Add to this list job descriptions for each of the committee members' positions.
4. Set up a schedule for regular committee meetings. These meetings should be called at the discretion of the chairman. Postcards can be obtained by the secretary for use as meeting notes.
5. The success of your committee rests completely with you. Get your members started on specific jobs immediately. It cannot be stressed enough that the members of your committee must be constantly working toward the actual committee objective. In past cases, one of the greatest leadership problems was assuming a statement to be fact without thoroughly researching it. Use your committee to turn assumptions into facts. When assigning work, be sure to record who the work was assigned to and date by which assignment must be completed. Be sure to inform your members that if a problem arises that may prevent the completion of the assignment, in accordance with the assigned date, that you should be contacted at the earliest possible time, whereas the problem may be rectified without disrupting the initial committee outline and other committee assignments.
6. "Committee Memos" should be used as mail communication to relay future information and reminders to your committee members.
7. You should have an outline set up prior to each committee meeting in order to assure the progress of a smooth running committee meeting.
8. Keep accurate records of all work accomplished and all problems connected with them for future reference. The Vice President should be provided with a monthly report concerning the committee's progress. This report should be produced in quadruplicate. It is advisable to appoint a member of your committee as a secretary to assist you in this and to keep minutes of any committee meeting you may have.
9. You will be contacted as to the time, date, and place of the Executive Committee meetings. All chairmen are members of the Executive Committee and are expected to attend these meetings as part of their overall responsibility.
10. If you lose contact with your committee members at the first several meetings, it is because they lack a certain degree of motivation. It is also your responsibility to provide this motivation for all your committee.

DuMaurier. Story concerns a young bride who comes to a mysterious manor in England. There she finds that the memory of her husband's first wife haunts her and she tries to discover the secret locked in her husband's heart of what has happened to her. Events take a terrifying pace and the result is one of the great transformations of a work of literature to the screen.

BADGER - MINNESOTA FOOTBALL GAME

The powder-puff football team, the Tech Bombers, are sponsoring a bus trip to the Minnesota-Wisconsin Football Game on November 20. The cost of the trip will be \$10 (includes bus ride and tickets). You must sign up by Friday, October 29.

If enough students do not sign up, all moneys will be returned.

T & I CLUB

There will be a T & I Club organizational meeting on Thursday, October 21, in Room 102. All students in the T & I areas are invited to join.

The purpose of the club will be explained at this meeting. Mr. Gilbertson, Metals Instructor, will serve as the advisor.

SCHOOL SHIRTS AVAILABLE

Tech Vets' Club has ordered "Tech" sweat and T-shirts which may be purchased through the school bookstore for \$3 each. Samples are displayed in the Marketing Department display window.

WOMEN'S FORUM OFFERS SECOND SPEAKER

"Causes and Cures for the Common Marriage," will be the topic addressed by Dr. William T. Brown, professor in the Psychology Department at UW-EC, Tuesday, October 19. Tickets to this presentation at 7:30 p.m. in the Demonstration Center are \$1 at the door or \$3 for the entire season of seven remaining programs. Mrs. Maybelle Brechlin, organizer of the project, points out that students may attend free by presenting their ID's.

Student Center Activities

Various recreational equipment is available for student use in the Student Center (Room 6). This equipment includes:

Badminton Sets	Football Equipment
Basketballs	Horseshoes
Cards	Jarts
Checkers	Ping Pong Tables
Chess	Pool Tables
Cribbage Boards	Softball Equipment
Dartball	Tennis Racquets & Balls
Foosball	Volleyball Equipment

Check-Out Service

All full-time students are eligible to check out equipment for a 24 hour period. Each student is required to exchange his I.D. and sign out the equipment with Mr. Fred Miller. Upon return of the equipment the I.D. is returned to the student.

Tournaments

During the academic school year tournaments will be held by the recreation department for both men and women. Trophies are awarded for first place and runner-up. Each participant is required to pay an entry fee 25¢ per tournament. The tournaments include:

<u>Men</u>	<u>Women</u>	<u>Co-Ed</u>
Badminton	Badminton	Checkers
Dartball	Ping Pong-Singles	Chess
Foosball	Ping Pong-Doubles	Cribbage- Singles
Horseshoes	Pool: 8-Ball	Cribbage- Doubles
Ping Pong-Singles	14-1	Foosball
Ping Pong-Doubles	Straight Ball	Ping Pong-Doubles
Pool: 8-Ball		
14-1		
Straight Ball		
Tennis		

T.V. Area

Students are cordially invited to watch colored T.V. in the Recreation Center during the school day. This area, adjoining the game room, may also be used for playing cards or simply chatting with fellow students.

On Monday nights, during first semester, the T.V. and game room will be open from 7:00 until 11:00 p.m. Students may watch the Monday night football games or play a game of pool, ping pong, etc.

Philosophy

Recreational activities at District One are recognized as an intergral part of a students "total" education. The combination of academic study and an opportunity to enrich their leisure time is beneficial to the student and the over-all atmosphere of the student body.

The main objectives of the recreation program are to:

1. Provide enjoyable and healthy types of recreational activities during the concentrated academic school day.
2. Provide a means in which co-educational activities may be promoted.
3. Provide activities that will carryover for the students after they graduate from District One.
4. Create a "happy atmosphere" for the present student body at District One.
5. Create interest and promote competition through hosting tournaments in which all students may participate.

RULES AND REGULATIONS FOR THE STUDENT CENTER

No foods or beverages are allowed in the Student Center.

No smoking in the ping-pong area.

No games of chance allowed in the Student Center.

Students must check out and check in equipment with the Student Center Supervisor--ID cards may be requested.

All equipment must be checked in at the close of each school day.

Equipment and furniture must be left arranged and used properly.

Chairs are not to be used as footstools.

Pool tables and ping-pong tables are to be used on a "first come, first serve basis". Special regulations will be established for special events.

The Student Center is not a place for sleeping.

We expect students to abide by all of the above regulations.

Students maliciously or deliberately destroying anything in the Student Center will be required to pay for same. This action along with derogatory conduct will be cause for dismissal from school. (See Student Handbook)

Keep this a Student Center that you can be proud to visit!

Intramural Activities

During the 1972-73 school year an extensive intramural program shall be offered to all students enrolled at District One. These programs include:

Men

Basketball

Dartball

Football (Flag)

Softball (Slo or fast pitch)

Women

Basketball

Powder Puff Football

Softball

Co-ed

Bowling

Swimming

a Open Swimming

b. Beginning Swimming

c Intermediate Swimming

d Beginning Diving

e. Intermediate Diving

Volleyball

Eligibility

(1) Each participant must be enrolled as a full-time student at District One.

(2) A student is not eligible for an intramural activity if he is a member of a varsity team.

(3) No student may participate on more than one team in any individual sport. However, if his team drops out of the league he is eligible to transfer to another squad.

(4) Team managers may drop or add players to the roster after league competition begins. However, the new player must not be a member of another squad.

(5) Any team that uses an ineligible player must forfeit the games in which he participated.

Captains

(1) Captains are responsible to make sure all team members are eligible to participate in league play.

(2) Captains are responsible for getting rules, schedules, and other materials to their teammates.

(3) Captains are responsible for attending meetings that are held by the recreation department. Except for bowling they will be held at school during the activity period on Thursday.

(4) Captains are responsible for collecting and turning in the assessed entry fees to the recreation department.

(5) All protests must be turned in by the Captains within 24 hours of the intramural contest being protested.

Unsportsmanlike Conduct

A. Disrespect Toward Officials

Any player addressing an official in an unsportsmanshiplike and discourteous manner disqualifies himself immediately for the remainder of the game. The official will give the offender's name to the Intramural Director, and the offender will be put on probation. A second ejection shall result in disqualifications from that sport for the remainder of the season.

B. Shoving or Striking an Official

This shall result in suspension for the remainder of the school year (minimum).

C. Penalty for Becoming Involved in a Fight

The penalty for becoming involved in a fight will be a two (2) week suspension (of league play) from all intramural sports (minimum) to ejection for the remainder of the year. (Note: the Intramural Council and/or the Director of Intramural Sports shall review the case).

D. Derogatory Remarks of Acts

The referee shall have the power to warn or disqualify for the game or match any player, substitute, coach, or manager who commits, in the referee's opinion, any of the following gross violations of sportsmanship.

1. Persistently addressing the officials in regard to decisions.
2. Making derogatory remarks about or to the officials.
3. Committing acts derogatory to the officials or tending to the officials or tending to influence their decisions.
4. Making personal and derogatory remarks about or to opponents.

Entry Fee

Each team participating in any intramural league shall pay an entry fee to join the league. These fees, in return, shall be used to buy awards for the individual league and tournament champions.

Equipment

All athletic equipment for league play will be provided through the recreation department. Students are requested that they take care of the equipment and use them in a normal manner.

The equipment will be available at the sight of league play 15 minutes before the start of each event.

Injuries

Students injured in intramural contest shall be given emergency care at Sacred Heart or Luther Hospital. However, the student assumes all financial obligation. Participation in all intramural activities is strictly voluntary. District is not responsible for injuries incurred while participating in intramural. Students are urged to carry some type of health and accident insurance.

Scheduling

All league schedules shall be done by the recreation department. The department, when possible, shall try to schedule teams around late classes, field trips, etc. However, each team is responsible for requesting a certain time one week in advance of the event.

Tournaments

Post-season tournaments shall be held at the close of each intramural league schedule. All teams will be invited to participate. The schedule shall put the teams with the best over-all record against the teams with the poorest in the opening rounds. (ie. 1 v 8, 2 v 7, 3 v 6).

Awards

Trophies shall be awarded to all individuals on a league or tournament championship team. Also, outstanding individual performances will be recognized through trophies for making M.V.P. or an all-star team.

Traveling team trophies are awarded for place in football, basketball, softball, dartball, and volleyball.

Philosophy

The intramural sports staff believes that participation in the competitive experience fulfills a basic need in the student's education. Believing in the value of the wholesome physical competitive activity, the intramural sports staff realizes the following as their objectives:

1. To offer a variety of activities, balanced between vigorous and light exercise and team and individual sports to meet present interests and future needs.
2. To reasonably safeguard health by choice of activities, medical counseling, safety rules, good equipment, and proper supervision.
3. Believing that social relations and attitudes can be developed through intramural participation by upholding high standards of sportsmanship, fair dealing with all individuals and groups, and providing multitudes of opportunities for leadership and cooperation.
4. To equalize competition by scheduling teams of similar playing ability.
5. To provide facilities, leadership, officials, and constant supervision in order for the participants to receive maximum benefit from the sports program.

VOCATIONAL FOLLOWUP
IDENTIFIERS - *TENNESSEE

ABSTRACT - TO DETERMINE THE EFFECTIVENESS AND
PRESENT STATE OF SECONDARY VOCATIONAL
EDUCATION PROGRAMS IN TENNESSEE, TWO FOLLOWUP
STUDIES WERE DONE ON 89,240 STUDENTS FROM 375
SCHOOLS. ALL PARTICIPANTS HAD SUCCESSFULLY
COMPLETED AT LEAST ONE PROGRAM DURING THE
1970-71 TERM. THE FIRST FOLLOWUP FOCUSED ON
STUDENTS' CHARACTERISTICS, ATTITUDES, AND
ECONOMIC CONDITIONS, WHILE THE SECOND
CONCERNED ITSELF WITH THEIR OCCUPATIONAL
STATUS. ALL DATA WERE BASED ON INFORMATION
REPORTED BY TEACHERS. RESULTANT FINDINGS
INCLUDE THE FOLLOWING: (1) FROM TWO TO 13
VOCATIONAL PROGRAMS OPERATE IN EACH OF THE 12
COUNTIES, (2) THE AREA OF TRADE AND INDUSTRY
INCREASED MORE THAN ANY OTHER VOCATIONAL AREA
DURING 1971-72, (3) OF THE TOTAL STUDENTS
ENROLLED IN PROGRAMS, 70 PERCENT WERE WHITE
AND 28 PERCENT BLACK. FEMALES ACCOUNTED FOR
60 PERCENT OF THE POPULATION, (4) THE
MAJORITY OF STUDENTS ENROLLED WERE NINTH AND
TENTH GRADERS, (5) A LITTLE OVER HALF OF THE
STUDENTS ENROLLED HAD NO PLANS OF CONTINUING
CLASSROOM STUDY BEYOND THE HIGH SCHOOL LEVEL,
(6) BOTH HANDICAPPED AND DISADVANTAGED PUPILS
WERE ENROLLED, AND (7) OVER 60 PERCENT OF THE
FORMER STUDENTS INVOLVED WERE EMPLOYED IN
FIELDS RELATED TO THEIR TRAINING, AND ONLY 16
PERCENT WERE UNEMPLOYED. TABLES AND GRAPHS
SUPPLEMENT THE REPORT. (SN)

ACKNOWLEDGMENTS

We gratefully acknowledge the support given this project by both the Tennessee State Advisory Council on Vocational Education and the Tennessee State Division of Vocational-Technical Education. We also wish to thank all teachers and administrative personnel upon whose cooperation and good will the success of this project depended. We would like to express our appreciation to Virginia Patterson of the University of Tennessee Computer Center for her sincere efforts and assistance. Special recognition is given to the members of the staff for their efforts and diligence above and beyond the call of duty.

The staff of this project consisted of the following persons:

Bob Clater
Sandy Green
Rella Hines
Allyson Lunden
Gwen Lunden
May Lunden

Glen Reed
Ken Sargent
Alice Marie Woody
Gary Woody
Jerry Wilkins
Melba Wilkins

ABOUT THE STUDY

All data represented in this report are supported by names and addresses of students and teachers.

Data for the follow-ups were gathered from December through May, 1972. Student and teacher data for the 1971-72 school year were gathered April through June, 1972. It is important that the reader keep this in mind since a percentage of students who enter at the beginning of the school year leave the program for various reasons and therefore would not be included in a "point-in-time" sample taken other than in September.

The status of vocational-technical education in secondary schools in Tennessee is exemplified by the following:

1. The following table illustrates some basic vocational-technical program data about teachers, school districts, and counties as reported in the spring of 1972.*

	<u>Ag.</u>	<u>D.E.</u>	<u>Health</u>	<u>H.E.(C)</u>	<u>H.E.(O)</u>	<u>Off.</u>	<u>Tech.</u>	<u>T&I</u>
Teachers	252	126	25	476	44	158	30	523
Schools	218	105	21	286	27	124	17	136
Districts	115	56	16	125	16	68	6	79
Counties	94	42	12	91	16	39	6	63

2. 20 counties offer only 2 vocational-technical programs.
23 counties offer 3-4 vocational-technical programs.

*All figures to include teaching aides, and other supporting personnel.

16 counties offer 5-6 vocational-technical programs.

8 counties offer 10-11 vocational-technical programs.

5 counties offer 13 or more vocational-technical programs.

3. The greatest growth in number of students from 1971-72 was in the area of trade and industry. This was a 23% increase.
4. During the 1971-72 school year, 60% of the students enrolled in vocational-technical education programs in Tennessee were female.
5. The number of students in vocational-technical programs are spread fairly evenly among the high school years with a slightly larger percentage of students in ninth and tenth grade levels.
6. Approximately seventy percent of the vocational-technical students in Tennessee are white and twenty-eight percent of the vocational-technical students are black.
7. Twenty-three percent of the students enrolled during 1971-72 were in vocational-technical education courses for the first time.
8. Many vocational-technical education students plan to complete high school only (53%). Six percent plan to attend area vocational schools; one percent plan to

attend community colleges; and six percent plan to attend four year colleges.

9. Twenty-six percent of the students enrolled in vocational-technical education classes during 1971-72 were classified as disadvantaged by their teachers.¹ Teachers also classified five percent of their students as handicapped.²
10. About one-third (32%) of Tennessee's vocational-technical education teachers are veterans.
11. Over three-fourths (78%) of Tennessee's vocational-technical education teachers have a Bachelor's degree and twenty-four percent have a Master's degree.
12. Sixty-six percent of Tennessee's vocational-technical education teachers have five years or more of experience in education; one-fifth (20%) have twenty-one or more years in service.

Instructions to teachers were as follows:

¹This item implies that the student is either academically or socioeconomically disadvantaged. If in your opinion, the student's performance is impaired by a significantly weaker than average educational background or if the student comes from a family with less than a \$3,000 per year income, this item should be marked.

²This item implies that the student has been identified as mentally or physically handicapped and that this handicap significantly affects the student's performance in your class.

13. A large percentage (40%) of the vocational-technical education teachers in this state have five or more years experience in business and/or industry and ten percent have twenty-one or more years. Interestingly enough, the same percentages are applicable to "years in present position."
14. Tennessee has 132 teachers (9%) that classify themselves as part time (page 70).
15. The age distribution of Tennessee vocational-technical education teachers is excellent (pages 70 and 135).
16. Of the 1970-71 graduates followed-up in 1972, 62% were employed in a field related to their training.
17. At some time during 1972, 9,033 former Tennessee vocational-technical students were available for placement.
18. In December, 1971, 1,487 (16%) of Tennessee's former vocational-technical students were unemployed. Note: 4,420 were not available for placement.

GENERAL INTRODUCTION TO FOLLOW-UP STUDY

The purpose of the Follow-Up Study was to determine the placements of students who have completed vocational education training programs. The study was based upon data from 375 schools (listed on pages 8-11) in Tennessee. The information was reported by teachers for 89,240 students who completed a vocational program in the school year 1970-71. The status reports are for the 1971-72 year.

The Placement of Program Completions graph illustrates the relationship between the total number of students completing a program in one of the eight major areas to the number of those same students employed in a related field. Each program is listed by United States Office of Education (USOE) code for each district and tallied for each county in the Placement of Program Completions in Vocational Education Programs (pages 14-41).

The chart on page 44 tallies the information supplied by teachers for 89,240 students. Based upon this information, a projection was made for the placement of the total 95,472 students who completed a vocational training program in 1970-71. The Summary of Pupil Status by USOE Code Tabulation of Single Status Codes lists each program and reports the placement status of the students who completed that program.

This chapter is not intended to give an actual account of each student as an isolate but to give a good indication of the placement status of the class of vocational students who completed a vocational program in 1970-71.

INTRODUCTION TO FOLLOW-UP STUDY

The Placement of Program Completions in Vocational Education Programs (pages 14-42) illustrates the placement of vocational education students who have completed particular vocational programs. The categories utilized to determine the placement of the students are: graduated, dropped, status unknown, not available for placement, education at a higher level, available for placement, employed in a related field, and known to be unemployed. The categories are not mutually exclusive; a student may fit into two categories, or may have completed more than one program. It is not possible to total students vertically within this segment of the report.

DISCUSSION OF FOLLOW-UP DATA

The Placement of Program Completions in Vocational Education Programs chart is based upon data reported by vocational teachers. The 89,240 students were reported in the follow-up of vocational education students for the 1970-71 school year. The status report concerns the placement of these students during the 1971-72 school year. The chart lists the vocational programs by four-digit USOE codes and gives totals for each major area--agriculture, distribution, health, homemaking office, technology, and trades and industry. The possible categories for student placement after program completion are: graduated, dropped, status unknown, not available for placement, education at a higher level, available for placement, employed in related field and known to be unemployed.

Based upon this information, a projection was made for the actual 95,472 students enrolled in vocational training programs during the school year 1970-71. This projection is charted on page 46 in the Placement of Program Completions in Vocational Education Programs projected totals. This chart does not represent an actual accumulation of data but is a ratio of the previously mentioned teacher reports for 89,240 students that is projected to 95,472 students.

Adjusted by line item based upon 1970 placement ratios.

SINGLE USOE CODE TABULATION

The following table (pages 49-57) is a summary of the present placement status of students enrolled in a Vocational Educational Program during the school year 1970-71. The students are listed by the USOE 4-digit code system by name. Twelve status possibilities are utilized for each of the USOE codes: (1) school attendance on the same level; (2) school attendance on a higher level; (3) school attendance within another vocational program; (4) dropped; (5) graduated; (6) in military service; (7) employment in related training; (8) employment in unrelated training; (9) unemployment; (10) deceased; (11) moved out of the district and; (12) status unknown. However, these categories are not mutually exclusive and any one student may be tabulated within any reasonable combination of categories (i.e., a pupil may be simultaneously listed as both graduated or in military service). Thus, vertical totals for sets, combinations, and/or a total student count will prove to be erroneous and should not be attempted. This information is available in other sections of this report.

STATUS - 1971-1972

STUDENTS AND TEACHERS BY GEOGRAPHIC AREA

Data has been entered into matrices in response to specific questions asked by the State Advisory Council relating to the status of vocational-technical education. The matrices used both digest lineally and cross tabulate multidimensionally all of the specific questions answered. Matrix formats are reused in various sections, and therefore it is necessary to understand the interrelationships of the basic matrices as they are used and applied to different subsets of data. Data will be encountered in this order: Grand Totals (Students), Grand Totals (Teachers), and Regional Totals (West, Middle, and East). Each geographic division includes a lineal tally of all USOE code numbers by number and name occurring within the respective geographic area.

Data in this section is reported for the school year 1971-72 during the period February-June and is compiled in full-time regular secondary courses only. Data is presented as collected and verified by the teachers of respective classes on optical scan sheets and systematized by the use of programmed texts entitled "A Guide for Completing the Vocational-Technical Student Enrollment Information Form" and "A Guide for Completing the Vocational-Technical Personnel Information Sheet." The accuracy of all data is based upon the cooperation of each individual administration and/or teacher reporting under the above mentioned criteria.

INTRODUCTION TO MAPS AND CHARTS

The charts and graphs which follow are detailed to identify conclusions based on information obtained during the period of this project. In some instances, comparisons are made to the information found in the 1971 Status and Image of Vocational-Technical Education.

The eight basic vocational programs are arrayed throughout the state as a function of local demand for such programs. Several Tennessee maps are found on pages 104 through 113 detailing counties teaching the basic vocational subject areas. It is interesting to note the two oldest subject areas--agriculture and home economics--are being taught in one or more high schools in a variety of curricula concepts in almost every county in Tennessee. On the other hand, the two newer areas--occupational home economics and health occupations--have sparse offerings.

The map on page 113 illustrates a detailed survey of those counties providing course work in two or more basic vocational programs. As would be expected, the greatest number of programs are to be found in the large metropolitan areas such as Shelby, Hamilton, Knox, Washington and Davidson counties.

CONCLUDING REMARKS

The underlying mechanism that collected Tennessee's 1971-72 status report is a student and personnel information system based upon a programmed text format. This system utilizes an optical scan form to gather the basic information seen on the next page. This information makes an excellent nucleus for decision making. Other uses of this data should be considered. For instance, an automated directory for both vocational-technical education students and personnel is inherent in the design of the present data bank. An "indepth" personnel data bank would be an easily added feature of the already existing system. With the addition of administrators and counselors names, this system would provide the basis of a comprehensive automated mailing system to greatly facilitate communication among the different facets of vocational-technical education.

A greatly improved service could be made available by the use of an internally controlled computer facility with interlocking on-line facilities throughout the state. On-line capacity would be particularly helpful for updating files and keeping an accurate record of the cycling of irregular length vocational-technical courses. The on-line feature would automatically improve the accuracy of the reporting system by early and uniform notification of newly organized vocational-technical classes.

ABSTRACT - A SURVEY OF SEVEN HIGH SCHOOLS IN
THE FARMINGTON VALLEY (CONNECTICUT) REGION
WAS CONDUCTED TO INVESTIGATE THE
POSSIBILITIES OF A MUTUAL EFFORT TOWARD
IMPROVING THE EDUCATIONAL OPPORTUNITIES IN
THE REGION. THE RESULTS OF THE SURVEY
PROVIDE: (1) AN ANALYSIS OF THE STUDENT
POPULATION, INCLUDING THEIR ATTITUDES,
INTERESTS, AND DESIRES, (2) AN ANALYSIS OF
THE EXISTING INDUSTRIAL ARTS AND HOME
ECONOMICS PROGRAMS INCLUDING COURSE LENGTH,
ENROLLMENT, MAXIMUM NUMBER OF STUDENT PER
CLASS, AND AREA PER STUDENT IN LARGEST CLASS,
(3) INFORMATION PERTAINING TO MANPOWER NEEDS
FOR HEALTH SERVICES, METAL WORKING
OCCUPATIONS, PRINTING INDUSTRY, DISTRIBUTIVE
OCCUPATIONS, AND TECHNICAL JOBS, AND (4)
COSTS AND FEASIBILITY OF TRANSPORTING
STUDENTS TO AND FROM THE SCHOOLS IN THE
REGION. SURVEY QUESTIONNAIRES, LETTERS, AND
OTHER MATERIALS ARE APPENDED. (SB)

INTRODUCTION

Seven high schools in the Farmington Valley are currently participating in a move toward more significance in vocational education and orientation in their systems. This move toward a more relevant approach to the changing nature of educational needs, is necessary and imaginative in light of the current concern for increasing the opportunities for education for the non-college oriented student.

In an attempt to capitalize on the relative short distances between the high schools, and the possibility of mutual cooperative use of the program facilities in vocational education, the Granby Board of Education, acting as agent for the seven towns contracted for a research grant from the Connecticut State Board of Education, to investigate the possibilities of a mutual effort toward improving the education opportunities in the region.

The successes of the survey were varying. In some cases, information was readily available, and lent itself easily to organization and presentation. In other instances, the material sought was obscured by local lack of investigation, or lack of relevance to a particular system. In all attempts, the survey team's efforts were facilitated by the project advisory board member in the high school, and counselors, teachers and administrators from the seven towns.

The information presented here is by no means complete. It represents a three month old scratch on the surface of innovative approaches to programs in vocational education in the region. The survey develops a perspective of the student population of the schools, their attitudes, interests, and desires; the existing facilities in the high schools for cooperative efforts in programs; and the current trends in employment in the region; in hope that this information will act as a springboard to further investigation and more meaningful programming.

The survey team is grateful to the many teachers, counselors, and administrators who helped make the many phases of the survey possible. To Mr. Bob Coniglione and his students, who prepared this information for publication and distribution, and special thanks to Mr. Philip C. Couchon, without whose guidance and support this survey could not have been accomplished.

PART -- I.

ANALYSIS OF POPULATION

POPULATION

A total of 5686 students attend the seven high schools of the Farmington Valley Survey Region, from grades nine through twelve. In an attempt to survey the general characteristics of the population the following procedures were used: survey the student population by use of a common interest vehicle, a questionnaire and compare the responses for an estimation of student attitude and need; investigate the State requirements for aid to disadvantaged and handicapped students and establish the applicability of existing populations to these laws; and investigate the post-secondary school students of the various towns and their relationship to the program in innovative vocational education.

STUDENT POPULATIONQUESTIONNAIRE:description

The questionnaire consisted of seventy-one questions of a multiple choice variety. Questions concerned basic data like age and grade, interest in school, and counseling awareness, as well as more variable information like attitudes toward occupational groups, exposure to the work field and relevance of school studies to intended career goals. The questionnaire also assessed the student attitude to new programs in certain vocational fields.

(see) Apndx I

objectives

Through use of the questionnaire, the survey team attempted to measure the ability of participating students to: set goals for themselves; evidence proper decision making; identify strongest interests, aptitudes and abilities; identify immediate and long-range values; establish personal career areas of interest, and relate them to personal aptitude; and identify potential employment possibilities. (These constructs are the tenets of a Client-Centered approach to vocational counseling similar to the Priorities Counseling Survey of Orange County, California.)

The survey instrument, used to view student opinion and attitude on a large proportion, was not designed to accomodate statistical validation. With this in mind, the questionnaire tentatively established student problems like: no direction or plans for the future; need for help in education or career planning; uncertainty in present course of study, or uncertainty about identifying aptitudes and abilities; need for help in course planning, decision-making, developing study skills or improving grades, and developing relations with meaningful career orientation.

procedures

Approximately twenty per cent of each high school population was to be surveyed. A student cross-section was to be established by the Survey advisory board member at the high school in conjunction with a department chairman, or a member of the guidance department. Directions to the coordinating high school faculty member were to cut across student population in academic groupings, distributing the questionnaires evenly among classes considered high-medium-or low. It was requested that the questionnaire be administered in a school department which serves the entire student population (i.e. English, Social Studies, if required, Freshmen Science etc.) to insure a relative degree of randomness to the population cross-section.

In most cases, a member of the survey team was present to administer the questionnaire to the class. In the instances which he could not be present, instructions were furnished with the clarification of reading bottlenecks.

(see)Apndx II

The questionnaire was composed of questions answerable by choosing one of a number of selections. Since computer facilities were available the survey questions were answered by marking the appropriate section on the computer card.

Students were instructed to indicate a code for their high school (Avon-01, Bloomfield-02, etc.) in order to identify the group they took the survey with. This was the only identification they were to make on the card. Students were insured that their answers would be confidential.

Since the survey was not a controlled test questions were received and clarification of procedures and other troubles and misunderstandings were readily answered. Students considered "mentally handicapped" also participated in the survey under the direction of their class teacher. Cards for these students were reviewed with teachers for estimation of interpretation and validity. In most cases this information was too incomplete to be useful and was not included in the survey sample.

Students were allowed as much time as was needed to complete the questionnaire. With a few exceptions, students were able to finish the questionnaire in 40 minutes.

At the end of the survey period students were requested to give verbal impressions of questionnaire, and make any suggestions they might have.

Results of the questionnaire were computed on the basis of a simple per centage of number of respondees to a particular question, divided by number of participants with respect to grade and sex. The comprehensive report of findings follows, with a summary of total population attitudes and responses.

evaluation

The results of the student survey questionnaire demonstrated a significant dichotomy to the use of the information gathered. As a research vehicle the results are not statistically valid. The questionnaire itself, was at points, difficult for some groups to grasp; not comprehensive, that is, it did not include more than a few possible selections for each of the many general questions; it was not a controlled instrument (test administrators were requested to facilitate understanding with feedback to student questions); and in some cases, as a result of a misunderstanding over the use of the computer answer cards by students and survey team, some responses were invalidated. The most important consideration to make in light of these deficiencies is that no statistically valid predictions can be made concerning the student population surveyed.

In all, fifteen per cent of the seven school populations were surveyed.

In contrast to the questionability of the statistical significance of the survey vehicle, the information-gathering function it served was greatly beneficial. As an attitude and preference analysis, it demonstrated a very significant look at the student populations of the seven high schools. The fact that of 865 students surveyed there is an even distribution of boys and girls, and an almost equal division of grade levels, (11th grade was high with 32%), shows a consistent survey base. The variance in the choice of favorite courses (Question #6), and the estimations of personal preparation for the World of Work, (Question #26) indicates a surprisingly valid cross section. Two-thirds of the student body had some contact with vocational courses and at least half had worked in the past year. These observations also lend legitimacy to the cross section. The preferred motive for choice of a first job was the availability of good experience, and half the students thought the courses they were taking in the high school would help them in their chosen career. Well over half of the students are disposed to work experience programs and would also participate in courses in an innovative vocationally-oriented program.

When considering the 865 students surveyed, the number and characteristics of students of these students alone, without making a projection to the entire student body, would certainly accomodate the innovative approach to vocational education proposed.

QUESTIONNAIRE RESULTS AND SUMMARY

The following information was calculated on the basis of computer compiled results for a population of 865 students. The information presented is based on an analysis of student response by grade and sex. Other information available is the calculation of student response for each town participating in the survey, and total male/female responses to all questions.

POPULATION QUESTIONNAIRE

SUMMARY:

Eight hundred and sixty-five students from seven high schools in the Farmington Valley region participated in the survey. Of these 865, four hundred and thirty-two were boys, and four hundred and thirty-three were girls. Twenty-two per cent of the 865 were in the ninth grade; twenty-six per cent of the 865 were in the tenth grade; thirty-two per cent were in the eleventh grade; and twenty per cent were in the twelfth grade. The greatest number of students were in the age group of fifteen, sixteen, and seventeen. Ages and grades were directly proportional.

Activity in school-sponsored programs is about evenly divided with forty-seven per cent considering themselves active, twenty-four per cent not active, and twenty-four per cent not having enough time to participate.

The percentage of students who have worked in business or industry is slightly positive with fifty-three per cent of the students indicating that they had worked in this capacity during this past year as compared to the forty-four per cent of the students who indicated that they had had no experience.

The greatest interest in a single course group offered in school was shown to be in the field of Humanities and Social Studies which accounted for thirty-one per cent of the total. Science studies rated second accounting for twenty-five per cent of the total. Of the remaining vocational skill areas offered the most popular course study was indicated as Industrial Arts and Skills accounting for eighteen per cent of the total.

Seventy-eight per cent of the students are taking a course in their favorite field of study. Almost half (49%) indicated that the course they are taking in their favorite course group will help them in their future career. Three quarters (73%) of the students would like to see more new and advanced courses in their favorite group.

One third (33%) of the students had never taken an Industrial Arts or a Home Economics course While twenty-two per cent of the students had taken one course in these areas, only fifteen per cent had completed three or more courses.

Over half the students (57%) had discussed their educational plans with a counselor. More than one third (37%) felt that their counselor was able to spend enough time with them and less than one third (29%) felt that their counselor could not.

Seventy per cent of the students indicated they had chosen their own courses this year. Fourteen per cent of the students were aided by parents in making their course selections and nine per cent were aided by counselors.

Seventy percent of the students had not visited a business or industry in their home town area with the intent of viewing possible jobs and occupations during the past year.

Fifty-two per cent of the responses indicated an awareness of representatives from businesses and industries visiting the school to discuss job opportunities and training requirements. Twenty per cent was unaware of these visitations. Twenty-six per cent of the students were uncertain if representatives had been at their school.

Forty-six per cent responded that "career days" and job discussions were beneficial, while thirty-two per cent of the students thought the sessions left something to be desired.

One third (33%) of the students thought that it was better to be a specialist in a particular occupation, while only four per cent indicated it better to be a generalist. Another third indicated a person should begin to specialize in high school; thirty-five per cent indicated this was appropriate during college. Fifteen per cent indicated that specialization was called for while working "on the job".

A preference (52%) for public contact careers was indicated by the responses. Twenty-four per cent preferred a mechanically-oriented occupation. Twenty-one per cent indicated no preference.

Thirty-four per cent chose "an opportunity to gain experience and learn" as the most important reason for choosing a first job. Nineteen per cent chose friendly co-workers and surroundings as of primary importance. Sixteen per cent chose the "ability to succeed in the job and satisfy oneself".

Eighty-six per cent of the students refuse to accept college as the only way to a secure future.

Over half (59%) considered it important to have both language and math skills, while twenty-five per cent favored language skills as most beneficial and thirteen per cent favored a math and science background.

Fourteen per cent of the students indicated that a course taken in high school in a skilled trade or occupation could lead to a secure, high paying position, while seventy-three per cent responded that this was possible but depended on the individual and his experience.

Thirty-one per cent of the students thought that most adults are not happy in their chosen professions; forty per cent were unsure. Ninety-four per cent considered this an important factor in deciding on a career.

Fifty-three per cent thought they would need three or four more years of study (either apprenticeship or college) to prepare them for their chosen careers. Twenty per cent indicated a need for only one or two more years of training. Nine per cent expressed a desire to be prepared on graduation from high school.

Twenty-three per cent of the students indicated "a growing need for people with ability and training in this career" as the most probable reason for choosing a career. Thirty-one per cent indicated that their reason for choosing a career was one other than the reasons listed.

The following occupational choices were the most frequently

chosen as possible careers; Personal Health Care Services accounted for thirteen per cent of the responses, Education accounted for twelve per cent and Engineering accounted for ten per cent. Twenty-five per cent were unable to choose a career from the list provided.

The three most popular courses in the list of possible future offerings were Auto Maintenance (7%), Aeronautics (7%), and Secretarial and Office Practices (7%). Thirty-four per cent felt there was another possible course not mentioned which would be beneficial in their careers.

The installation of short, non-credit "mini-skill" courses was mentioned as a possibility. Interest in this was expressed by the students in the form of checking either "interested" or "not interested" after each possible course. Forty-one per cent of the students expressed an interest in a course in First Aid. Twenty-three per cent were interested in a course in Firefighting. A Photography course drew a forty-two per cent interest response. Twenty-four per cent were interested in a Needlecraft course. Eighteen per cent were interested in a Rug-braiding and Hooking course. A course dealing with the Basics of Police Practices was of interest to twenty-two per cent of the students. The last possible course offering dealing with Consumer Interests drew a thirty-nine per cent interest response.

Students who had made future plans for education were instructed to answer three questions and the responses were the following. Twenty-seven per cent thought they have had some experience which relates to their chosen occupation. Twenty-three per cent know of industries in their home town area where they could gain experience. Over one half (58%) would consider working in their chosen occupations on a part-time basis after school for pay and credit.

Fifty-three per cent of the students indicated that they would take an industry-vocation oriented course in place of Social Studies, Math or an elective. Forty-one per cent of the students indicated they would take an extra course on top of their regular credit load that focused on this area.

no significant variance of ages

3. Number of boys and girls in each grade surveyed:

	9		10		11		12	
	M	F	M	F	M	F	M	F
	101	92	109	118	131	150	91	74

4. Percentage of boys and girls who are active, inactive or not interested in school activities, by grade:

	9		10		11		12	
	M	F	M	F	M	F	M	F
active	56%	55%	39%	45%	22%	42%	52%	39%
not active, not interested	23%	23%	32%	23%	28%	27%	18%	31%
not enough time	16%	19%	27%	21%	1%	27%	27%	26%

5. Percentage of boys and girls by grade who have or have not been employed in business or industry in the past year:

	9		10		11		12	
	M	F	M	F	M	F	M	F
<u>yes</u>	39%	14%	48%	26%	73%	67%	79%	76%
<u>no</u>	57%	77%	50%	63%	27%	31%	18%	22%

6. Percentage of boys and girls who prefer a specific course group:

	9		10		11		12	
	M	F	M	F	M	F	M	F
Humanities Social Sts.	21%	32%	28%	36%	33%	30%	33%	41%
Industrial Arts	34%	5%	35%	5%	30%	6%	23%	3%
Business Studies	3%	12%	6%	17%	2%	9%	0	9%
Science Studies	35%	23%	28%	13%	30%	21%	36%	18%
Home Econ. Art	3%	25%	1%	25%	2%	29%	3%	24%

7. Percentage of boys and girls who are presently taking a course in their preferred group:

	9		10		11		12	
	M	F	M	F	M	F	M	F
<u>yes</u>	77%	63%	82%	76%	82%	80%	86%	77%
<u>no</u>	18%	30%	15%	18%	13%	19%	12%	19%

11. Percentage of students who have discussed their educational plans with a counselor:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	33%	34%	50%	48%	66%	73%	72%	74%
no	59%	63%	48%	45%	34%	23%	24%	19%

12. Percentage of students indicating the most influential person helping in course selection for them:

	9		10		11		12	
	M	F	M	F	M	F	M	F
relative	24%	22%	16%	15%	13%	15%	4%	4%
close friend	3%	1%	4%	3%	2%	3%	1%	0%
counselor	6%	8%	10%	8%	13%	11%	8%	8%
teacher	2%	0%	0%	2%	1%	1%	1%	0%
decided for self	56%	67%	68%	67%	71%	69%	85%	85%

13. Percentage of students who responded as to whether or not they felt their counselor was able to spend enough time with them to help them with their future plans:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	28%	38%	32%	37%	43%	37%	45%	35%
no	16%	27%	28%	27%	25%	37%	35%	42%
don't know	52%	33%	37%	32%	30%	23%	18%	20%

14. Percentage of students who have visited business or industry in order to view jobs and occupations in the past year:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	21%	13%	29%	23%	27%	41%	30%	34%
no	76%	85%	69%	74%	70%	57%	68%	64%

15. Percentage of students who have knowledge of visits from representatives of business and industry to their school:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	53%	67%	33%	57%	46%	55%	45%	64%
no	20%	11%	31%	18%	22%	17%	27%	5%
not sure	23%	21%	34%	22%	28%	27%	26%	26%

16. Percentage of students who have an opinion concerning "career days" or group discussions about jobs:

	9		10		11		12	
	M	F	M	F	M	F	M	F
good	53%	58%	57%	41%	43%	39%	42%	43%
no good	8%	1%	11%	9%	9%	7%	8%	12%
done better	28%	30%	20%	41%	29%	39%	28%	36%
not interested	4%	7%	10%	5%	16%	11%	20%	5%

17. Percentage of students who view specialization or generalization to a job field:

	9		10		11		12	
	M	F	M	F	M	F	M	F
specialist better	29%	29%	39%	24%	38%	37%	35%	31%
generalist better	39%	36%	40%	42%	41%	35%	47%	45%
not sure	27%	33%	17%	28%	18%	24%	16%	22%

18. Percentage of students who have opinion as to when a person should specialize:

	9		10		11		12	
	M	F	M	F	M	F	M	F
high school	39	38	32	36	30	39	23	24
college	29	35	34	38	30	32	43	39
on the job	16	3	19	11	18	14	23	19
junior high	4	10	4	3	2	1	2	3
not sure	12	11	8	7	15	8	5	9

19. Percentage of students who feel a type of career would appeal to them:

	9		10		11		12	
	M	F	M	F	M	F	M	F
work with people	22	62	29	74	31	75	43	82
work with machines	47	10	38	5	39	9	38	4
no preference	28	25	29	19	27	13	15	12

20. Percentage of students who have a preferred motive for choosing their first job:

	9		10		11		12	
	M	F	M	F	M	F	M	F
high pay	16	9	17	1	16	4	12	5
good experience	32	42	38	40	28	34	25	28
friendly co-workers	16	13	16	28	24	21	11	0
ability to succeed	34	33	26	30	29	37	45	46

21. Percentage of students who feel college is the "only" way to a happy secure future:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	16%	11%	12%	16%	9%	7%	14%	9%
no	82%	82%	85%	79%	89%	93%	85%	86%

22. Percentage of students who have an opinion about the development of personal skills and talents:

	9		10		11		12	
	M	F	M	F	M	F	M	F
important to speak, write well	8%	28%	12%	36%	14%	37%	22%	43%
understand science, math, mechanics	22%	8%	24%	6%	22%	4%	11%	4%
both are important	68%	61%	60%	53%	63%	54%	66%	49%

23. Percentage of students who feel high school specialization in skilled vocational areas could lead to good, high paying job:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	16%	14%	13%	14%	15%	14%	18%	9%
maybe	65%	76%	74%	74%	69%	74%	74%	69%
no	14%	4%	11%	9%	10%	9%	7%	12%

24. Percentage of students who feel that adults are happy in their chosen occupation:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	28%	24%	36%	27%	21%	19%	36%	11%
no	17%	23%	29%	24%	38%	38%	32%	42%
don't know	50%	48%	34%	42%	35%	38%	30%	42%

25. Percentage of students who feel importance for their future happiness in a future occupation of their choice:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	94%	96%	90%	97%	93%	97%	93%	95%
no	--	--	2%	--	--	1%	2%	--
does not matter	2%	0%	2%	0%	3%	0%	0%	1%
don't know	2%	1%	4%	0%	3%	1%	2%	0%

26. Percentage of student opinion about job preparation and the amount of time they will have to prepare for a career:

	9		10		11		12	
	M	F	M	F	M	F	M	F
high school	10%	12%	6%	11%	5%	14%	2%	11%
1 to 2 years	28%	11%	25%	14%	26%	22%	14%	10%
3 to 4 years	20%	32%	28%	42%	30%	31%	30%	34%
more than 4 years	25%	23%	18%	17%	17%	20%	37%	28%
don't know	14%	21%	22%	12%	19%	12%	15%	14%

27. Percentage of students who have indicated awareness of future job or career choice:

	9		10		11		12	
	M	F	M	F	M	F	M	F
growing need	21%	23%	17%	16%	21%	28%	26%	34%
parent's career	5%	4%	6%	1%	2%	2%	5%	0%
friend's career	6%	1%	4%	3%	8%	3%	6%	0%
like equipment in job	31%	16%	32%	19%	19%	8%	14%	18%
work needs to be done	4%	7%	10%	8%	7%	5%	3%	2%
opportunity for creativity	7%	17%	8%	14%	16%	17%	18%	12%
employment in home town	4%	1%	8%	1%	4%	1%	2%	0%
not made up mind as of yet	12%	16%	15%	12%	18%	11%	12%	5%
another reason not listed	30%	28%	20%	40%	30%	34%	23%	31%

29. Percentage of students' choice of occupational group:

		9		10		11		12	
		M	F	M	F	M	F	M	F
	agriculture	7%	12%	11%	6%	11%	8%	9%	2%
	building trades	12%	2%	16%	1%	8%	2%	9%	0%

no	45%	43%	52%	53%	48%	50%	46%	40%

65. Percentage of students who have made definite plans for a future occupation and who have had similar work experience in the past:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes, had experience	30%	26%	25%	17%	24%	28%	32%	42%
no, no experience	43%	42%	42%	42%	48%	41%	46%	38%

66. Percentage of students who are aware of businesses in home town in which could accomodate their experience needs:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes, experience available	31%	36%	30%	29%	28%	39%	48%	39%
no	15%	12%	18%	10%	23%	14%	23%	22%
don't know	0%	19%	18%	18%	20%	15%	10%	19%

67. Percentage of students who would consider part-time employment for experience in their chosen occupational field:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	52%	57%	54%	45%	58%	62%	65%	72%
no	9%	5%	4%	4%	5%	3%	10%	7%
don't know	8%	7%	10%	9%	7%	4%	5%	4%

68. Percentage of students who would take a vocationally-oriented course in place of social studies, math or an elective:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	57%	61%	73%	59%	63%	63%	11%	15%
no	29%	27%	26%	25%	23%	3%	9%	3%

69. Percentage of students who would take a course (like #34-57) in addition to their schedule:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	47%	46%	53%	44%	47%	47%	19%	14%
no	16%	13%	12%	18%	21%	17%	19%	7%
don't know	29%	30%	26%	28%	21%	23%	4%	1%

70. Percentage of student reactions to the questionnaire:

	9		10		11		12	
	M	F	M	F	M	F	M	F
interesting, important	55%	37%	38%	31%	37%	31%	19%	16%
interesting, not helpful	14%	29%	35%	37%	23%	32%	39%	51%
difficult to answer	16%	21%	12%	17%	10%	18%	10%	5%
waste of time	10%	8%	12%	8%	21%	13%	27%	15%

71. Percentage of students who would like to help physically or mentally handicapped students:

	9		10		11		12	
	M	F	M	F	M	F	M	F
yes	36%	57%	30%	53%	36%	61%	30%	64%
no	38%	14%	28%	12%	30%	13%	31%	9%

LEGAL DEFINITION:

Handicapped, Disadvantaged Individual

"Disadvantaged individual" means (1) any individual who is under a physical or mental disability which constitutes a substantial handicap to employment, but which is of such a nature that vocational rehabilitation services may reasonably be expected to render him fit to engage in a gainful occupation; (2) an individual disadvantaged by reason of his youth or advanced age, low educational attainments, ethnic or cultural factors, prison or delinquency records, or other conditions which constitute a barrier to employment; and (3) a member of his family when the provision of vocational rehabilitation services to family members is necessary for the rehabilitation of an individual described in subdivision (1) or (2); (f) evaluation and work adjustment services include, as appropriate in each case, such services as (1) a preliminary diagnostic study to determine that the individual is disadvantaged and has an employment handicap, and that services are needed; (2) a thorough diagnostic study consisting of a comprehensive evaluation of pertinent medical, psychological, vocational, education, cultural, social and environmental factors which bear on the individual's handicap to employment and rehabilitation potential including, to the degree needed, an evaluation of the individual's personality, intelligence level, educational achievements, work experience, vocational aptitudes and interests, personal and social adjustments, employment opportunities and other pertinent data helpful in determining the nature and scope of services needed; (3) services to appraise the individual's patterns of work behavior and ability to acquire occupational skills and to develop work attitudes, work habits, work tolerance and social and behavior patterns suitable for successful job performance including the utilization of work, stimulated or real, to assess and develop the individual's capacities to perform adequately in a work environment; (4) any other goods or services provided to a disadvantaged individual, determined to be necessary for and which are provided for the purpose of ascertaining the nature of the handicap to employment and whether it may reasonably be expected the individual can benefit from vocational rehabilitation services or other services available to disadvantaged individuals; (5) outreach, referral and advocacy; and (6) the administration of these evaluation and work adjustment services. (1969, P.A. 449, S.1.)

An attempt to quantify the numbers of handicapped students and disadvantaged students in the seven high schools was made through the office of Special Education Services and the Superintendent of School's Office in each of the school systems. A questionnaire was submitted to the authority in an attempt to establish the numbers and trends toward the dual problems of special education each of these groups requires. (see Appendix III through V). The information received was very valuable but for the most part incomplete, making the following observations of a strictly general nature.

In most cases no count of "disadvantaged" students had been made in the high schools. Of the schools responding, "disadvantaged" students were those students considered in the low-average intellect area. It was

felt that these students could not benefit from offerings in the high schools since the facilities and individual guidance needed to give these students special attention are lacking. No program for accomodating these students is presently available, but certain new courses are being instituted to try and compensate for the apparent need. At this time, "disadvantaged" students represent less than 1% of the total seven school population.

Students considered "handicapped", physically, perceptually, and mentally are much more apparent, and special education programs represent an ongoing part of most high schools. In some cases, school systems share programs in special education. Others cooperate with regional centers and private workshops, or have students participate in non-graded programs in the schools. The number of "handicapped" students also represents less than 1% of the total school populations, of the seven towns.

One important source of information for the incidence of children eligible for state aid for the "handicapped" or "disadvantaged" will be the 1970 Census Report, Series PC(1) - C + D, which establish general social and economic characteristics on a sample basis of 20%. Other information can be established by a thorough survey based on the recommendations of the state board of education concerning "evaluation and work adjustment services".

The significance of "disadvantaged" is important to note when considering that "economically disadvantaged children" mean children of families with an annual income of less than four thousand dollars per family or children receiving state aid for dependent children. This situation exists in many of the participating towns. It cannot be grasped until an effort is made to investigate the opportunities available to these children and capitalize on them.

see Appendix III - V

POST SECONDARY SCHOOL STUDENTS

Post-secondary school students are the most significant group of students to be effected by the innovative program. This group also represents the most difficult sector of the student population to come in contact with. None of the high schools surveyed have up-to-date information on last year's graduating class, but neither do they have the time and facilities to conduct so comprehensive a survey. The counseling loads have reached a 500 to 1 ratio in one of the participating high schools. The post-secondary school student is the individual who is not participating in further education, and is either underemployed or unemployed. The only information available at this time concerning recent graduates is the Graduate Follow-Up compiled by the Division of Vocational Education of the Connecticut State Department of Education. This report indicates the number of students graduating from specific vocationally-oriented programs in the high schools and the degree of employment they had attained since graduation.

This information is extremely valuable in assessing the successes of the vocational programs in the various high school programs, and will continue to aid the innovative education program in future years, but at this time does not establish a significant perspective of post-high school unemployment. This information is not available, even in terms of a youth employability factor from the State Department of Labor. Newspaper coverage of the projected program for post-high school students has been facilitated by the Farmington Valley Herald, the regional weekly, and the Farmington Valley news of the Hartford Times.

Verbal feedback from seniors interviewed in the course of the survey investigation indicated that the opportunity to return to the high school offered them a significant advantage. The thought of an opportunity to specialize or gain experience was encouraging, as many face uncertainty about their future as they graduate.

In an attempt to measure the frequency of students leaving college, or further education, the number of students from the seven towns enrolled at Central Connecticut State College in the past year was established. This number was then compared to the number of students, living in the seven towns, who had withdrawn from the College (for undetermined reasons), during that semester. This data, conceivably represents the number of students from CCSC who entered the labor market last year, contrary to initial plans to graduate from college. Of the seven towns, 233 students of all grade levels were enrolled for the Spring Semester, 1971. Of the 233, forty students withdrew for reasons unknown (or 17% of the seven town population). For Fall, 1971, of 227 students enrolled, 22 withdrew from the school. These figures do not account for students returning to the college after a leave of absence, or sickness, which might be the circumstance in all the cases, but if it is possible for 17% of a regional population to withdraw in the course of a few months, the proportion of students returning to their home towns from other Colleges and Universities is well worth considering. The coexistence of the college drop-out and the high school terminal student who is unemployed makes a special program oriented to the occupational needs of the post high school student very important.

The most obvious observation to make in light of these considerations is that the present senior class represents the post-high school students of the future. It is crucial to the investigation of the post-secondary school student, that this class be informed of the possible programs available to them in the high school in the future.

RECOMMENDATION:

A strong recommendation would be to make personal contact with the students in the high schools to (1) find out if there are people they know who are recent graduates and who might be interested in training and skills and, (2) explain to them the dimensions and responsibilities of the program, and how they can get involved.

PART --II

ANALYSIS OF PROGRAMS

Vocational Education in the Farmington Valley Schools

The approach that was taken with regard to Innovative Vocational Education in the Farmington Valley region was to determine what areas of the school offered the greatest potential for developing vocational courses within the existing curriculum structure and present facilities. While all of these schools are in the main college preparatory, there are a few courses offered in each school that are definitely vocational in the purest sense and others while not vocational in their present direction, nevertheless have great career potential.

The typing and secretarial courses offered by the business departments are strictly vocational because the skills that are learned and developed are directly employable upon completion of the course. Because of the nature of the training and the requirements of employers, we found that this area did not lend itself to innovation.

The Home Economics departments of each school are in a better position to offer vocationally oriented courses. A great variety of course offerings exists among the towns in which some are directed toward more vocational pursuits. Table VI has listed three areas of home economics studies which are vocationally oriented.

By far the areas of the school which have the greatest potential for innovative vocational education programs is in the Industrial Arts department. The woodworking, metalworking, graphics, electrical and power mechanics shops abound in potential career development experiences. All too frequently however, most of the Industrial Arts personnel do not consider the purpose of their instruction to be vocational. If vocational education courses are to be initiated within the structure of the industrial arts departments, a recognition of the principles of vocational education as they differ from industrial arts must take place in the minds of the industrial arts teachers before such courses can succeed.

Some confusion has existed for many years with regard to the relationship between industrial arts and vocational industrial education. The main distinction between the two is one of purpose. Industrial Arts is included in school curricula primarily to serve the non-occupational needs common to a majority of students. The objectives of industrial arts are those of general education and are concerned with habits, attitudes, appreciations, leisure time, home mechanics and consumer knowledge. While some skills useful to vocations are frequently acquired in industrial arts, this acquisition is incidental and secondary to the major purposes of industrial arts.

The purpose of vocational industrial education is to enable workers and prospective workers to acquire vocational efficiency in a chosen occupation. In today's rapidly changing technology, training and retraining in specific technical occupations is an ongoing, ever-changing, and must be a continually improving activity. Therefore, the problem of determining whether a specific course involving industrial shop activity is industrial arts or vocational education is simply a matter of determining the major purpose of the activity. If it is designed to serve the needs held in common by a majority of school students or adults it is industrial arts insofar as these persons are concerned. If, on the other hand, the activity is organized to enable a student to prepare for or progress in a specific occupation of his choice the activity is classified as vocational industrial education.

Vocational Education is a major part of career education, but career education should not be considered synonymous with vocational education. Industrial arts should not assume that the transfer of relevance of their subject to career development is automatic. The shop activity in the vocational programs must be related to life and career development.

Marvin Feldman has said we can no longer tolerate an educational system that ignores the world of work where occupational studies are considered inferior to general studies and where youngsters in vocational tracks do not receive the training necessary for entry into college and those in college preparatory tracks are denied a vocational experience which relates their learning to reality.

The 1969 Annual Report of the National Advisory Council on Vocational Education notes that by 1980, fewer than 20% of the job opportunities will require a four year college degree.

Description of Existing Industrial Arts and Home Economics Programs

Tables I through VI describe the industrial arts and home economics programs that are either in operation now or are planned for the coming 1972-73 year. The tables are constructed in such a way as to present the pertinent information in a concise manner. The objective was to provide a convenient town by town comparison of the type and extent of course offerings available with a tabulation of enrollment statistics. A brief description of the column is as follows:

ENROLLMENT - The total enrollment for a particular course in all grades as desired by the students.

MAX # of STUDENTS/CLASS - This is the capacity of the classroom or the optimum number of students that can be accommodated as determined by the school.

AREA/STUDENT IN LARGEST CLASS - This figure (in square feet) is based upon the largest anticipated class divided into the floor area of the room.

The State Bureau of School Buildings recommends that the number of square feet in the woodworking and metalworking shops be based upon 120 square feet per student including storage.

From these columns it is possible to determine:

- a, the number of sections and therefore the number of class periods required to handle the projected enrollment.
- b, the ability of a town to accommodate additional students from the region who show interest in a particular course.
- c, the number of work stations in a shop compared to the maximum number of students allotted per class that might suggest a larger class with more than one instructor participation.

Enrollment figures are based on student preference as gathered by each school toward the end of the 1971-72 school year. They should not be considered absolute as adjustments in class scheduling for the coming year will undoubtedly alter these figures to some extent. They represent the best indication of enrollment at the time they were made available.

Tables VII through XII describe the woodworking and metalworking shops in each school with an evaluation of a number of supporting facilities in each shop. All schools have sizeable woodworking shops and with the exception of East Granby, all have metalworking shops. These two areas were explored in greater detail because these shops offer the greatest potential for innovative vocational education programs. Facilities for carrying on certain vocational skill training within the shop vary from town to town and it became necessary to make a judgement on the adequacy of such facilities to aid in the selection of a shop for specific programs.

The use of the terms adequate (A) or superior (S) in describing the extent of the facilities is entirely subjective. Observations and comparisons were made on a school-to-school basis. Listed below is a description of what would constitute a superior support facility. Adequate facilities fall short of superior in one or more aspects but are considered suitable for their intended purpose.

Superior overhead lighting is lighting sufficient to illuminate the entire room with no dark corners and with no need to illuminate localized areas of work around power machinery, welding booths or other areas of close observation. Outside natural lighting was excluded from this consideration.

Superior exhaust system is a system which expels all fumes, dust, and smoke to the outside of the building, which has sufficient ports to cover more than one operation and which does not upset comfort heating facilities nor create disturbing noises.

Superior dust collection is the ability to remove all dust particles as they are generated from woodcutting operations. Each woodcutting machine would have individual ductwork leading to a centralized collector which shall be located outside the room where woodcutting operations are being performed.

Superior electrical power is the availability of 110/220/440 volt AC single or three phase at any point in the room. It's accessibility should offer a maximum of safety with freedom from long extensions. Circuit breaker and emergency shut down switches should be conveniently accessible.

Superior lockable storage refers to a lockable room to which entry can be gained only through a door. A wire screen cage of less than ceiling height would not qualify.

In both woodworking and metalworking shops certain floor mounted machines used for material cutting and forming are considered standard equipment. The minimum complement of machines necessary to perform basic operations is shown below. In Tables VII and IX, the column marked minimum equipment complement was checked for each school which has this complement. Where a shop was deficient in one or more basic machines, it is so indicated by a minus number. Hand tools such as chisels, files and saws as well as power portable tools were not surveyed. Of course, benches with vises are basic to any shop operation.

Minimum power equipment complement consists of at least one of each of the following units:

Woodworking equipment

Circular or Radial Arm Saw
Band saw
Jig saw
Planer
Joiner
Wood lathe

(see Appendix VI)

Metalworking equipment

Engine lathe (6" min radius)
Drill press
Vertical miller
Horizontal miller
Precision grinder
Shaper
Welding equipment
Casting and Forging equipment
Sheet metal press and shear

STATE TECHNICAL COLLEGES

The State Technical Colleges differ from other community colleges in that their programs are not intended to be feeders into the senior levels of a college or university. Their objectives have been and still are the training of fully qualified engineering technicians who are direct support personnel to scientists and engineers. While their objectives are identical, their programs differ slightly in content.

The following is a brief description of the programs of the four Connecticut State Technical Colleges.

Hartford State Technical College offers 2 year Associate Degree programs in Civil, Data Processing, Electrical, Manufacturing, Mechanical, Nuclear Engineering Technology. In addition they offer one year certificate courses in Fire Technology, Surveying and Pre-Technical courses.

The Waterbury State Technical College offers 2 year Associate Degree Courses in Chemical, Data Processing, Electrical, Manufacturing, Materials, Mechanical, Civil Engineering Technology. In addition they offer one year certificate courses in Fire Technology, Industrial Management and Drafting Technology.

The Thames Valley State Technical College offers essentially the same courses as the Waterbury Technical College with the addition of a new (1972-73) one-year certificate course in Electronics Technology.

The Norwalk State Technical College again offers essentially the same programs as the Waterbury Technical College with the addition of 2 year Associate Degree program in Electro-Mechanical Engineering Technology and a one year certificate course in Architectural and Building Construction Drafting Technology.

APPRENTICE TRAINING

Apprentice training programs provides workers with on-the-job training along with related classroom instruction for anywhere from two to five years, depending on the occupation involved. Each program is carried out under a contract between the apprentice and the employer under the direction of the Apprentice Training Division of the State Labor Department. This arrangement, of learning from experienced tradesmen both on-the-job and in the classroom, enables a worker to advance to a journeyman level and beyond, while at the same time being paid progressively higher wages.

Apprenticeship programs in Connecticut are guided by standards established and supervised by Connecticut State Apprenticeship Council, which is composed of representatives of management, labor and vocational education. The Council has a deep commitment to maintaining standards of excellence which will enable trainees to enter the journeyman ranks as skilled craftsmen.

(see Appendix VII)

COOPERATIVE WORK EXPERIENCE PROGRAMS

All towns with the exception of Granby and East Granby have work experience stations within their town. Each town which has such a program was asked a number of questions regarding the success of his program. Of the towns responding, all said they conducted interviews with the prospective employer for the purpose of defining the educational outcomes of the students participating. Replies varied from town to town to the extent that employers furnished a job description or list of responsibilities in which the student was to be exposed. The evidence was strong, however, that employers and counselors evaluated their student workers usually once each quarter or marking period and that a form was used for such purposes. There is some evidence to suggest that this work experience has resulted in higher grades among the participants. All mentioned that there were more students willing and able to participate in this program than were cooperating employers available.

(see Appendix VIII)

PROPRIETARY SCHOOLS

An information-seeking letter was sent out to all private, or proprietary schools in the Greater Hartford-Springfield Area. Information requested was to establish the types of programs, costs, and length of attendance for various vocationally-oriented proprietary schools in the area. A list of over twenty schools of this nature was compiled, but the introduction of a newer and more comprehensive listing of vocational careers by the State Department of Education through its Division of Vocational Education, superseded the efforts of the survey team in this area. The Career Guide lists alphabetically all occupations in which educational programs are offered in the State. It also is a directory in as much as it lists all the state vocational-technical schools, business schools, nursing schools, hospital schools, technical and trade schools, and even the state and private universities and colleges, with a look at basic information on the schools and their vocational career programs. It is recommended that this guide be used to establish areas of occupational training for students involved in the innovative program.

(see Appendix IX)

CAREER ORIENTATION PROGRAMS

Through an investigation conducted by the survey team, it was established that three programs of Career Orientation bear further investigation. They are Cliff E. Henning's Career Development Program, from Robbinsdale Area Schools, Minneapolis, Minnesota; Houston's Career Counseling Through Groups, both recent projects in career analysis and orientation, and G. Westley Ketcham's Pyramid Approach as illustrated in the next page.

FUTURE PROGRAMS AS INDICATED BY STUDENTS

Small group discussions with students in five of the seven high schools indicated one strong force being brought to bear on course selection by students in the high schools. In a word, Relevance. These students, and the many others who gave oral or written feedback to the survey questionnaire administered in the high schools, cried out for a meaningful curriculum, and a more realistic appraisal of the "education" they are being offered at the present time. For many of the students, the possibility of "freeing" themselves from the push to go to college, took the form of the innovative program as it was explained to them. Still others saw the possibility of learning a skill, and part-time work experience as the vehicle they need to appraise their own occupational attitudes and goals. Some students expressed a desire to participate on the basis of plain interest and enjoyment. The disheartening fact was that all the students shared a skepticism which was unavoidable: something that seems as "good" as the opportunity to realize all these motives, would never be established in the high school. Seeing is believing.

When asked through the questionnaire to indicate a preference for a course listed in 22 possible choices, 294 students felt another course, which they had in mind, would be very necessary for their future, while the following courses showed these numbers of students interested:

1. Auto Maintenance..... 64	students	12. Materials Testing..... 23	students
2. Secretarial Work..... 61	"	13. Printing & Graphics... 20	"
3. Aeronautics 61	"	14. Dental Assistant 20	"
4. Nurse's Aide..... 53	"	15. Accounting..... 19	"
5. Carpentry 50	"	16. Surveying..... 19	"
6. Commercial Art..... 46	"	17. Small Appliance Rpr... 17	"
7. Teacher-Librarian aide 42	"	18. Air Conditioning 17	"
8. Computer Prog.& Keyp.. 40	"	19. Barbering & Hairstyle..19	"
9. Electronics & Radio .. 36	"	20. Commercial Vehicle.....13	"
10. Food Management..... 31	"	21. Oil Burner Service.... 8	"
11. Instruments in Elec.. 29	"	22. Plumbing Troublshng.. 8	"

A large proportion of the student population failed to answer these questions positively. In most cases students either answered that the courses did not suit them, or failed to answer. An observation on the courses in the list is that they are fairly restricted to vocational fields, and they demand prior knowledge of the subject to be meaningful in a course. The students responding positively to these questions represent a sizable number considering the probable capacity of each program should it be offered, but more investigation is needed into the demands of students, and the shortcomings of their present programs.

EXPECTED EMPLOYMENT CHANGES BY INDUSTRY **1970 - 1985**

EMPLOYMENT CHANGES FOR THE FUTURE

With over 603,000 youths reaching 18 years and the labor force increasing by a net of 221,000 over the next decade, from where will the jobs for the future come?

Let us look at these new jobs first on a business or industry basis.

Largest expansion is expected in the service and trade businesses. The service group includes such activities as health, education, amusements, hotels and motels, automobile repair and service stations, beauty shops, business consulting services, and research. Activities in these groups reflect the trend toward a less material society and have increased rapidly during recent years. As proportionately less people are required to produce food, housing, clothing, automobiles and other material goods, more people avail themselves of health, educational, leisure, and other services which have become part of our rising standard of living. Their continued rapid growth is expected during the decade.

The expansion in trade will be due to both the greater population and to greater output of goods which must be distributed. Not only will there be more people, but it is hoped that more goods will be available to each person as our economy rises.

More people means more government services. These will be needed primarily in the field of health, public safety, streets and highways, and social services. To meet the problems of an expanding population, more federal, state, and local governmental employees will be required in our growing state. The expansion in governmental employment, however, will not be as large as during the sixties due to a slowing down of the population growth and to growing fiscal problems.

Of lesser growth but playing an important part in providing the jobs of the future will be insurance, finance and real estate,

and communications and utilities. These business activities will continue to grow but the job growth will be lessened due to new data processing equipment and other automated processes.

Total manufacturing output is expected to increase substantially during the decade but the added output will be achieved through increased productivity rather than through additional workers. During the sixties productivity of Connecticut workers increased by 51%. A similar productivity rise in the seventies will take care of the additional output without any significant change in the employment level.

Building and highway construction is also expected to have a substantial increase but this too will be provided by increased productivity through new methods, materials, and equipment rather than through an increased number of workers.

While the total number of workers is expected to remain the same in these activities there will be a shift in the type of workers needed. In both construction and manufacturing, automated processes will replace mainly unskilled and semiskilled workers while more skilled, professional, and technical employees will be needed.

Public transportation employment has remained nearly stationary for a number of years and little future change is expected as the increased population turns more toward the use of the automobile rather than mass transit. Increased freight transportation is handled more by larger trucks rather than by more units.

Connecticut's agriculture employment has been affected by both rising productivity and the conversion of farm land into commercial and residential building sites. This trend is expected to continue with the resultant drop in the number of farm workers.

EXPECTED OCCUPATIONAL NEED CHANGES 1970 - 1985

OCCUPATIONAL NEEDS FOR THE FUTURE

The occupational structure of our work force has constantly undergone changes. Agricultural occupations dominated the work force until the start of the twentieth century. They were then supplanted by manufacturing occupations which had their "heyday" during the period spanning the two World Wars. Since the mid 1950's, white collar occupations have dominated. A factor common to the growing occupations is the increasing requirement for higher education and specialized training.

The largest occupational increases expected during the decade are in the professional and technical, and service groups.

Increased production of manufactured goods through more sophisticated and technical machinery will account for the rise of professional engineers and technicians in industry. The concentration of population in cities will require more professional and technical workers on environmental problems and urban renewal as well as in the social sciences. Nearly all professional occupations in the health field will show continuing growth. Research and development activities needed to meet the problems of the seventies will also require more workers in these occupations. Professional and technical jobs increased more rapidly during the past several decades than any other major occupational group and are expected to lead other categories at least through 1985. Counter to this growth trend will be a decline in the need for teachers. Fewer school chil-

dren will result in considerably lower needs for teachers at the elementary level and a decline or levelling off for high schools and colleges.

The second largest rate of growth will be among service workers. Largest gains in this category will be the health service workers, followed by cooks and waitresses. Large gains are also expected in police officers and firefighters, and in beauticians.

The third largest group among the major occupational groups will be in the office, or clerical, group. Leading this will be the need for secretaries, stenographers, and typists. A strong need will also exist for bookkeepers and cashiers.

In the goods producing occupations a small gain is expected in the skilled occupations while little or no increase is expected for operatives, or semiskilled workers, as sophisticated technological advances replace their services. Jobs for unskilled laborers are expected to continue their decline which was apparent in the sixties.

In the sales field, a continuing growth in the number of jobs is expected but at a considerably lower rate than during the 1960s. While selected sales occupations will grow at a good rate, overall the need will be held down by changing techniques in merchandising.

HEALTH SERVICES

The following excerpts are taken from a survey report done by Professor David Pinsky of the University of Connecticut Labor Education Center to establish a perspective of future needs in health service occupations.

"The continuing shortage of health personnel is emphasized in the U.S. Labor Department's Occupational Outlook Handbook, which states, "A continued rapid expansion of employment in the health field is expected through the mid-1970's, although the rates of growth will differ considerably among the various health service occupations...In addition, many new workers will be needed each year to replace those who retire, die, or - particularly in the case of women - leave the field for other reasons."

"Health services are thought of mainly in terms of improving physical well-being. They also make a major contribution to the economy. The nation's 1,138 hospitals employ more than 1,800,000 workers, half again more than the entire railroad industry and more than double the number in automobile manufacturing. Hospitals are the fifth largest industry in the nation with assets in excess of \$21 billion. Add to this the other forms of health services, i.e. doctors, dentists, industrial health, rest homes, and public health, and the true magnitude becomes apparent. In addition, the employment has been growing faster in health services than in any other sector... In Connecticut, the number of persons employed in non-governmental health activities totals 43,000, nearly double the 23,000 employed in 1956. This is the fastest growing segment of the state's economy also, and it provides an annual payroll of close to \$200,000,000 in 1966."

"The growth will undoubtedly continue over the next decade. Required to meet this expansion will be trained personnel as well as facilities. The training for health service workers involves not only time for actual class learning and work experience, but also time to plan curricula and build physical facilities... In order to plan for the expansion of training programs, some concept of the nature and number of these increasing jobs must be obtained."

"The occupation with the largest ten year need is staff nurse with an estimated demand of 1,714. This consists of 106 current vacancies (1966), an expansion of 221, and a replacement need of 1,387... The next larger needs are also in the nursing field. A ten year demand for 660 nurse aides and 210 licensed practical nurses is expected... In technical occupations, there will be a ten year need for 43 X-ray technicians and 42 medical laboratory technicians. Among dental occupations, there will be a need for 68 dental assistants, 63 dental hygienists, and 60 secretary-dental assistants.... The indicated ten year need for secretary-receptionists in physician's or dentist's offices is 247. In the food area, the largest needs will be for dietary aide- 122, cook- 62, and cook helper- 38."

DISTRIBUTIVE EDUCATION

The following excerpts are taken from a survey report done by Dr. Philip Stiles and Dr. W. Howard Martin of the University of Connecticut to demonstrate a potential for food handling and distributive training in Connecticut.

"A glance at the modern food store tells us that a wealth of planning, ingenuity, and skill are necessary to keep today's many food products flowing smoothly into consumer hands. However, little emphasis has been given to education aimed at more effective and efficient distribution of food.

Today there is a shortage of well-trained people in the food handling and distribution industries. While automation and pre-packaged convenience foods have replaced some traditional skills, new and more demanding positions grow and grow. The industry will continue to face an acute shortage of managerial talent--people to fill positions as store managers, supervisors and other administrative jobs.

The food industry is finding that vocational training at high school or post-high school levels is of value to youths entering their employ. It is also advantageous in youth's search for higher starting wages, more attractive positions and their understanding of the job he seeks.

Stability and security are the hallmarks of the food industry. Its opportunities for advancement are equal of even superior to many other occupations. Numerous satisfying, well-paid jobs exist at all levels, and the opportunity is great for frequent advancement of well-trained individuals."

"As in other significant enterprises, it seems evident that a variety of educational programs are needed. This variation is needed to serve persons having different levels of ability and aspirations. It is needed in terms of job specialization.

The nature of these programs suggest three broad areas of educational needs: (1) knowledge of foods and food products (technical), (2) salesmanship, and (3) marketing and management. In traditional programs of vocational education these three areas are generally found in three or more instructional areas.

Broad parameters exist in vocational training in all the food related industries including food distribution. Job levels range from positions for handicapped and retarded persons, to executives and research scientists.

Student potential in a food distribution program must be developed. The tremendous opportunity exists for part-time food store employment at convenient hours during the student's free time. However, interest must be nurtured to maintain student demand. This is enhanced by industry encouragement, job advancement, teacher enthusiasm, adequate counseling and parent acceptance. These must be integrated into the total program to insure a high percentage of satisfaction.

METALWORKING INDUSTRIES

The following excerpts are taken from a report done jointly by the School of Engineering and the Labor Education Center of the University of Connecticut to look ahead to establish the effect the technological changes in metalworking will have on Connecticut's industry in the next ten years.

"Many new metalworking techniques were developed or improved during the 1960's and will find extensive use in the 1970's. Most important of these is numerical control. Others are direct computer control; adaptive control; and electrodischarge, electrochemical, and ultrasonic machining... Employment in metalworking industries is expected to decline from 354,240 in 1968 to 314,700 by 1980. This will be accompanied by a substantial increase in output due to the application of new technology... The change in the number of jobs will not be uniform by occupation. A rise of 7,050 professional and technical positions are expected. Skilled, or craft jobs, are expected to decline by 5,090. The semi-skilled, or operative jobs, are expected to decline by 17,180... The technical schools in Connecticut have 2,500 students enrolled in metalworking and related courses. An increasing number of high schools are providing vocational courses in this field. Technician training is provided in the two-year technical colleges... Capital investment will be a major factor in the introduction of new machines and techniques. Management must develop a system to determine the optimum time to introduce new techniques... A more highly educated and trained work force will be required. Educators must have better communication with management and labor to provide the specific needs of the 1970's."

"The technician occupations will require 5,170 new workers during the next decade. A large number of these will come from persons now employed in other metalworking occupations who can move up to the technical level by special education programs or on-the-job training. This number will have to be augmented by youths who are trained in the technical schools and colleges in the state... The four year technical schools in Connecticut have programs for developing the skilled workers of the future. As with technicians, the majority of present skilled machinists and "related" workers have learned their trade informally on the job. The apprentices and technical school training programs have, however, provided the basic core of the skilled work force... The metalworking machine trades apprentice programs now have 2500 enrollees. A substantial number of these apprentices will have to take further training upon completion of their programs to meet the changing structure of the metalworking industries... The technical schools now have 3,500 enrolled in metalworking and related courses. These include 1,000 in industrial electronics; 1,200 a machinists, and 300 as tool and die makers.

PRINTING INDUSTRY

The following excerpts represent a small portion of the information available in the University of Connecticut's Labor Education Center's report on the Occupational Needs, Educational Requirements for the future in Printing Industries in Connecticut.

"Connecticut has 560 printing and publishing firms in 1968 which employ 18,900 workers. Most of these firms are small with only 33 employing more than 100 workers and 44 employing between 50 and 99. This does not include captive printing plants, that is, departments maintained by non-printing firms for their own use only. Nor does it include personnel employed in reproduction services in nearly all other establishments. The value of the output of printing and publishing in Connecticut was \$245,000,000 in 1967, more than double the value of \$116,000,000 in 1958. The two largest segments of the industry in Connecticut in terms of employment are Commercial Printing, 6,960, and Newspaper Publishing, 6,170...The growth in printing output and the need for more personnel has resulted in critical labor shortages in certain occupations. The time required to train skilled workers runs from two to six years... In 45 occupations studied 9,613 were employed of whom 8,593 were journeymen and 1,200 apprentices. The number employed in these occupations was about half of the total of 18,418 employed in the entire printing industry in March 1968. The largest groups studied were in composing 2,946 and binding 2,180... The study revealed that there will be a need for 3,499 additional trained workers by 1973. This includes 617 current (1968) job vacancies that is, positions for which employers were actively recruiting 1,936 workers to meet expansion needs, and 946 workers to replace those who retire, die, or otherwise withdraw from printing...By activity, the largest requirements by 1973 are in composing with a need of 1,117 additional workers consisting of 210 for current job vacancies, 551 for expansion and 356 for replacement. Bindery activity has a need for 885 trained workers and lithographic activity has a need for 836 more persons by 1973...The individual occupations with the largest five-year worker needs are bindery worker, hand, 413; bindery worker, machine, 160; compositor, hand, 340; linotype operator 228; lithographic pressman, sheet, 184; lithographic pressman, web 131; proofreader 178; letterpress pressman, web, 149; and letterpress pressman, sheet 117...Due to differences in the occupational structure in newspaper printing, a separate table for printing occupations in this segment is shown. The newspapers will have a five year need of 521 additional workers consisting of 85 current vacancies, 231 expansions, and 205 replacements. The remainder of the industry has a five year need of 2,978, consisting of 532 current vacancies, 1,705 expansions, and 741 replacements.

Manpower Needs 1978

Initially it was planned to evaluate the manpower needs up to 1978. The new techniques now being introduced or developed make any detailed occupational estimates beyond the first five-year period quite hazardous. The change-over to the new machines and methods has not been rapid and only a few changes are contemplated in the

near future...The principal developments expected are in composing and printing methods. Another development further on the horizon is electrostatic printing. A shift from hot type(linotype, monotype, etc.) composing to computer and photo-composing, cold type, is contemplated which would result in a lack of growth in the number of linotype operators, make-up men, monotype-casting-machine operators and monotype-keyboard operators, and an increase in photocomposing-machine operators and photocomposing-machine perforator operations...In press operations, there is a continuing shift to offset from letterpress. This will result in a lack of growth in the letterpress occupations and an increase in lithographic preparatory and pressroom occupations...It is difficult to assess the magnitude of these changes by 1978 and therefore its effect on specific occupational needs. Although some decline in numbers of workers in these adversely affected occupations may occur, they will remain fairly stable while the need for workers will grow in other occupations...The survey revealed relatively few printing firms definitely expecting to effect a complete changeover from hot type to photocomposing, or from letterpress to offset printing in the near future. A good number of these firms, however, are studying the possibility of changing the these new methods.

TECHNICAL JOBS

The following excerpt is from an extensive report done by the Labor Education Center of the University of Connecticut designed to determine the technician need by occupation through the mid 1970's and to ascertain their educational requirements.

While manufacturing employment showed little overall change, there were shifts in the occupational structure within the group. The non-production, or what is often referred to as the educated sector, which includes management, sales, engineering, technicians etc., comprised 33.3% of the manufacturing work force in 1970 as compared with 22.4% in 1956. Thus this segment gained 52,000 jobs over the 14 year period, including many in the technician category. Conversely, the number of production jobs dropped by 41,000... Based on census data, the number of technicians in Connecticut, other than those in health related occupations, increased from 2,344 in 1950 to 7,464 in 1960, a gain of 5,120. Data from the 1970 census is not yet available but a much larger increase during the past decade is most likely...A study by the University of Connecticut on occupational changes in the metal working industries projects an increase of 3,000 technicians in these industries...During the economic upturn, the manpower emphasis and shortages will be in the engineering and technician occupations, as they have been in the past. The present period of employment downturn provides a breathing spell during which training should be intensified for those occupations which will be in short supply.

The next pages illustrate the future need and requirements for technicians.

CONCLUSIONS AND RECOMMENDATIONS:

It is apparent from this list, and the information alluded to in the occupational briefs that certain occupational groups can accomodate students in their search for jobs, and that many of these jobs are attainable with a high school education. The more important and more pressing fact is that unemployment is a conscious and inavoidable problem which is being faced by many newly graduated students from the high schools. Students in many cases are not getting the direction possible in the high school from their programs, and therefore are not developing the credentials necessary for employability. Present investigation into the dimensions of youth unemployment is hampered by lack of direct evidence demonstrating the various reasons for unemployment. Pointed analysis is virtually impossible since the information available from the State Labor Department can be viewed only in terms of Labor Market Area, or Standard Metropolitan Statistical Area (SMSA). The towns in the Farmington Valley are part of the Hartford SMSA which seriously biases the perspective of employment in the seven towns. Hopefully the upcoming analysis of Occupational Characteristics in the 1970 Census will form a basis for investigation in the seven towns.

A very ambitious suggestion in this case would be to investigate the nature of employment opportunities in the Farmington Valley Region in light of avenues for meaningful orientation for students to the world of work. This calls for a recognition of the developmental nature of the employment picture, and not soley job placement. Job opportunities must be sought with the individual student in mind, recognizing his needs, and affording him an opportunity to assess his own interests and abilities in a particular occupational group. A practical application of this investigation would be a committee of educators and members of civic groups (like the Chamber of Commerce) with the mission of bringing students and careers together.

PART --IV

TRANSPORTATION

TRANSPORTATION

The problems in transporting participating students in the program of course-curriculum sharing in the seven high schools is very complex. The distances involved extend from a short three miles between Avon and Farmington High Schools, to an almost prohibitive distance between Farmington and East Granby High Schools of twenty-one miles.

The approach to surveying the problem of transportation was: (1) to establish the distances and the most probable routes to be used by vehicles travelling among the seven towns; (2) estimate the approximate times between stations; (3) seek the approximate costs of transportation of students by school bus contract; (4) estimate the costs of personally provided transportation, with reimbursement for mileage; (5) investigate the State requirements for insurance, and accident liabilities; (6) and establish a perspective of the State requirements for aid for transportation for participating students.

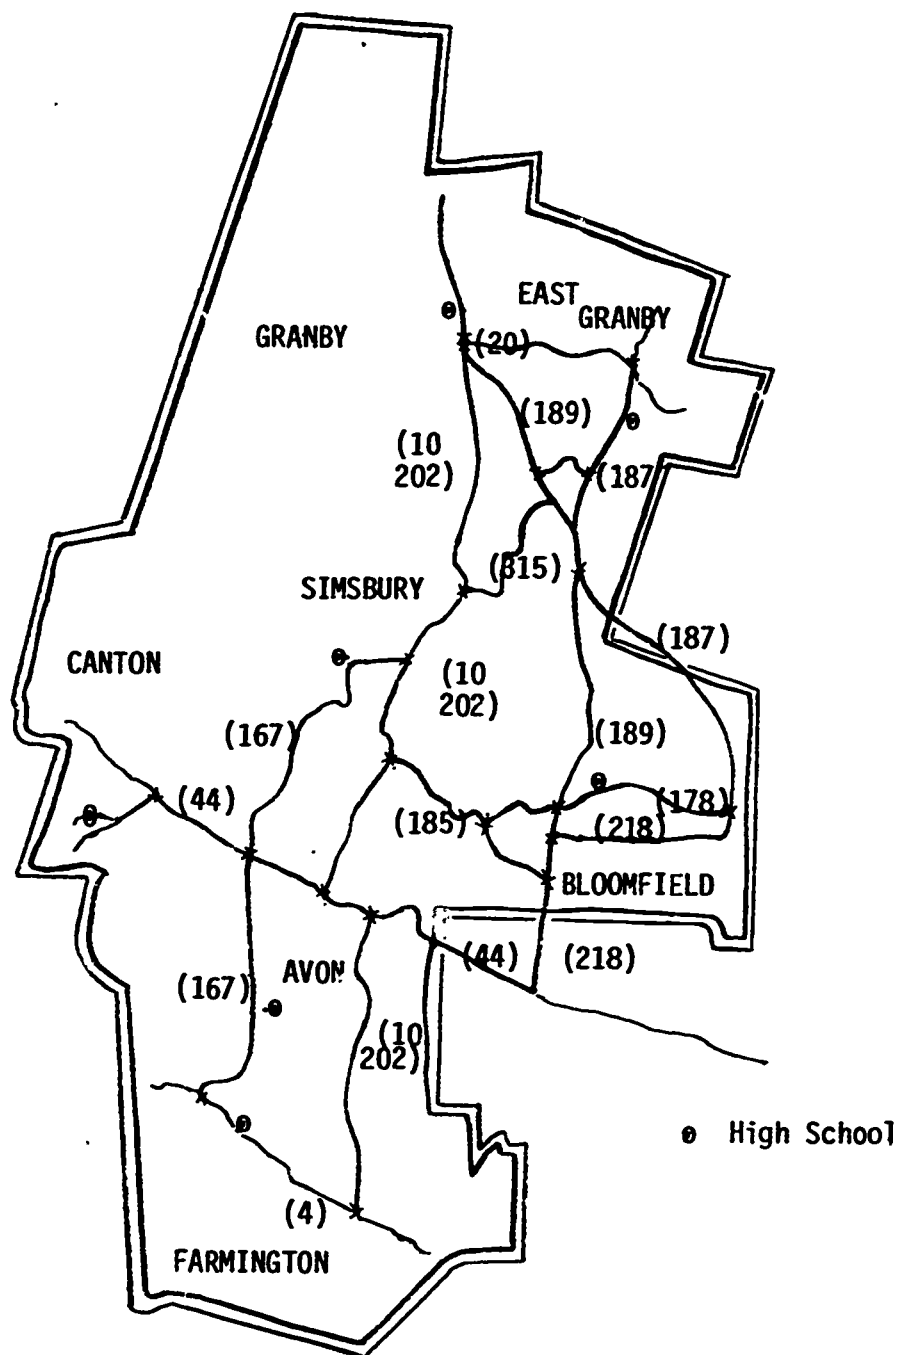

The distances and most likely routes of travel were compiled from a map of Hartford County provided by the State Department of Transportation, Wethersfield. Estimates of times and costs of travel between stations on a round-trip basis were provided by Mr. Robert M. Goodwin, of Goodwin Bus Company, Windsor Locks.

Estimated costs for personally provided means of transportation were calculated on a round-trip pro rata of ten cents (10) per mile for the approximate distances between stations.

State requirements for insurance and accident liability for school busing contractors and State provisions for aid to transport students to vocational schools was extracted from a compilation of Laws Relating to Education, 1970, in Connecticut by Willis H. Umberger, Chief, Bureau of Federal-State-Local Relations of the Connecticut State Department of Education.

SCHOOL BUSES INSURANCE

The State of Connecticut provides for the following insurance limits for contracted school bus services:

"The amount of insurance or of such bond which each public service motor vehicle or service bus owner or lessee shall carry as insurance or indemnity against claims for personal injury or death shall not be less than (1) twenty-five thousand dollars for one person subject to that limit per person; (2) for all persons in any one accident where the carrying capacity is seven passengers or less, one hundred thousand dollars; (3) eight to twelve passengers, inclusive, one hundred fifty thousand dollars; (4) thirteen to twenty passengers inclusive, two hundred thousand dollars; (5) twenty-one to thirty passengers, inclusive, two hundred and fifty thousand dollars; and (6) thirty-one passengers or more, three hundred thousand dollars; and such policy or such bond shall indemnify the insured against legal liability resulting from damage to the property of passengers or of others to the amount of five thousand dollars,"

(1949 Rev., S.2371; 1955, S. 1293d; November, 1955, S. N164)

unless the commission (PUC) has found the company to be of sufficient financial responsibility to meet legal liabilities for damages.

PERSONALLY SUPPLIED TRANSPORTATION

Student-supplied transportation represents an agreement between the local school board and the participating student. In this case, the student acts in accord with programs in the high schools existing for transportation of students to the local technical regional high schools. The guardian of the student, therefore is responsible to insure his transport for the amounts designated by state law, unless the student has attained the legal age by the initiation of the pilot program.

In the case of a town wishing to establish an individual contract (or agreement) with a student, willing to transport himself to and from the program facility, a waiver of responsibility is recommended to be established. Each town in the Farmington Valley is insured for any claim to bodily injury through the program of Comprehensive General Liability Insurance each town subscribes to.

Low-cost school insurance policies for individuals are available which for a small sum would cover students for accidents occurring during school hours or while participating in a school activity.

STATE AID: TRANSPORTATION TO VOCATIONAL SCHOOLS

It is important for a clear understanding of the ramifications of state aid to vocational education programs for transportation to first define "vocational schools" in terms of state law.

For our purposes therefore, "vocational schools" are those "public and continuation schools, part-time schools and evening schools for instruction in the arts and practices of vocations".
(1967, P.A. 751, S.3.)

The State of Connecticut makes the following provisions for transportation to "vocational schools":

...any regional school district shall provide the reasonable and necessary transportation of any student under twenty-one years of age who resides with his parents or guardian in such town or regional school district or who belongs to such town, and who attends a state or state-approved vocational school, other than a technical college, within such town or regional school district as a regular all-day student or as a high school cooperative student, and for any such student who attends any such high school in a town other than the town of his residence, provided, when the cost of such transportation out-of-town would exceed the sum of two hundred dollars per year, said board of education may elect to maintain such student in the town where he attends such vocational school and for the cost of such maintenance in the same manner and to the same extent as in the case of payment for transportation....Where transportation is provided solely within the town or residence, the board of education thereof shall be reimbursed for fifty per cent of the cost of such transportation not to exceed an average of twenty dollars per pupil annually. The comptroller shall, annually, upon voucher of the secretary of the state board of education, draw his order on the treasurer in favor of any town or regional school district transporting vocational school or vocational agriculture pupils out of town, for a sum equal to one-half the amount paid by it for transportation under the provisions of this section and under such rules as may be prescribed by the state board of education, provided not more than an average of two hundred dollars per pupil shall be paid by the state for the transportation of such pupils.

Programs in vocational education which meet with the approval of the Connecticut Board of Education are eligible for state reimbursement for transportation.

CONCLUSIONS:

The number of students who will be transported will be the most significant factor in determining which method of transportation should be used. Buses seem to be economically feasible only when considering transportation of reasonably large groups of students from station to station. In terms of the longest distances, buses offer the best alternative to concentrating the means of transport, since increasing distances yield increasingly higher individual costs, but other problems in busing exist which make the effective use of buses on a large scale for this program questionable.

First of these problems would be, transportation of students to their homes after the various programs were finished. The necessity of students returning safely to their homes demands more bus scheduling and increased cost. Another pertinent problem would come with scheduling, both course work and transportation. In this case, a voluntary participatory program would not restrict the program exclusively to school hours. A third apparent problem, is that state aid to transportation is not currently available for regional cooperative vocational education programs. It appears that state reimbursement for student busing would not be available to out-of-town programs unless the home school facilities were non-existent in a particular field. In too many cases, facilities are available in a school, in the Valley, but they can't compare to a better facility in another school--hence a cooperative program, but the state makes no provisions for busing in this situation.

In comparison to the problems of using school busing for transportation, personally-supplied transportation offers some definite advantages (especially in light of the relatively small size of the pilot program). First, personal travel suits smaller numbers. It has been used effectively in all the towns in transporting students to the regional technical high schools. Secondly, it provides real round trip transport for students, to their homes, while not restricting the scheduling for either the hours in school, or after school. The cost of a prorata subsidy of student-supplied transportation is (more economically feasible compared to) the costs of bus transportation for small groups.

RECOMMENDATION:

For the initial stages of the cooperative program, participating students should be offered a prorata sum for supplying their own transportation.

APPENDIX I

This is a questionnaire about career plans: your plans for the future. We are asking these questions because your high school is joining with the other high schools in the Farmington Valley to offer certain career-oriented courses next year. These courses will be made available to you at any one of seven high schools in the region, if sufficient interest is shown by you and other high school students. If you have made definite plans for your future, you can help us by telling us some of the reasons for your choice. If you haven't made a decision, then this questionnaire might help you identify some feelings and ideas you have about your future. Most importantly, it will help us know which courses you might want.

Do not rush, but read the questions carefully before making your answer on the IBM card. This is not a test, but a survey of your ideas. Answer by filling in the bubble next to the letter of the answer you agree with the most. Please do not write on this questionnaire.

PART I

This set of questions will help us learn something about you.

1. I am a:
 - a. boy
 - b. girl
2. My age next September will be:
 - a. 14
 - b. 15
 - c. 16
 - d. 17
 - e. 18 or older
3. Next September, I will be in:
 - a. 9th grade
 - b. 10th grade
 - c. 11th grade
 - d. 12th grade
4. Are you active in sports, band, or other school sponsored activities?
 - a. yes, very active
 - b. no, I am really not interested in school activities
 - c. I do not have time to participate in school activities
5. Have you ever worked in a business or industry (full or part time, or even just for a short time) this past year?
 - a. yes
 - b. no

6. In the course groups below, which group do you like the best?
 - a. Humanities and Social Studies(English, History, Languages)
 - b. Industrial Arts and Skills(Drafting, Woodworking, Metals)
 - c. Business Studies(Office Practice, Typing)
 - d. Science Studies(Chemistry, Mathematics, Biology)
 - e. Home Economics and Art(Foods, Fashions, Child Care, Design)
7. Are you presently taking a course in the group you like best?
 - a. yes
 - b. no
8. How many Industrial Arts and Skills or Home Economics courses (either whole year or semester courses) have you completed in high school?
 - a. I have not taken any
 - b. one
 - c. two
 - d. three
 - e. four or more
9. Are there any courses in the Group you checked in Question#6 that are related to what you would like to do for a future job?
 - a. Yes, the knowledge I gain from taking this course(one of my favorites) will help in my future career.
 - b. I have a lot of interest in this course, but I do not think I will use in to develop my career.
 - c. No, the course is more fun for me than anything else.
 - d. I am not taking a course in my favorite group.
10. Would you like to see your school offer more new and advanced courses in your favorite group?
 - a. yes
 - b. I do not think more courses are necessary
11. Have you discussed your educational plans with a counselor?
 - a. yes
 - b. no
12. Who helped you most to decide which courses to take this year?
 - a. A relative (mother, father, brother, sister)
 - b. A close friend
 - c. A Counselor
 - d. A Teacher
 - e. I decided for myself
13. Do you feel your Guidance counselor is able to spend enough time with you to help you in your future plans?
 - a. yes
 - b. no
 - c. I do not know

14. Have you visited businesses or industries in your home town area for the purpose of viewing jobs and occupations in the past year?
 - a. yes
 - b. no
15. Have people from business or industry come to your school to talk to you about job opportunities and training requirements?
 - a. yes
 - b. no
 - c. I am not sure
16. Do you think "career days" and discussions about jobs are good, and really help you know more about career opportunities?
 - a. Yes
 - b. No
 - c. Maybe, but career days and discussions could be done better
 - d. I am not interested in these activities

PART II

The next set of questions tries to tell us how you feel about the adult world, and the kinds of work you would be interested in doing. Think about each question, and be honest with yourself. Check the answer that really speaks for you, and fill in the bubble on the answer card.

17. Do you think it is better to be a specialist in a particular occupation or would it be better to have a general all-around knowledge of the occupation?
 - a. specialist is better
 - b. general knowledge is better
 - c. I am not sure
18. When do you think a person should begin to specialize, if he chooses a specific job to work in?
 - a. high school
 - b. college
 - c. on the job
 - d. junior high school
 - e. I am not sure
19. Which of the following types of careers appeals to you the most?
 - a. working with people (sales, social work, teaching)
 - b. working with instruments, machines, etc. (technician, mechanic)
 - c. I can not really say which I prefer

20. Which of the following would be most important to you in choosing your first job?
- high starting pay (with overtime available)
 - good opportunity to gain experience and learn
 - friendly co-workers and pleasant working conditions
 - ability to succeed in the job and satisfy oneself
21. Do you think that college is the only way to a happy, secure future?
- yes, without exception
 - no
22. Which skill would be more important to you?
- The ability to use words properly, think logically, speak effectively, appreciate literature
 - The ability to solve math problems, understand scientific and mechanical principles, have technical skills
 - both skills are important to develop
23. Do you think the training courses in a skilled trade or industry like welding, electronics, fashion design, or foods and nutrition, if offered to you in high school could ever lead to a secure, high paying position in business or industry?
- yes, it could lead to a "top" job
 - possibly, but it depends on the individual and his experience
 - no, probably not
24. Do you think most adults are happy in their chosen occupation?
- yes
 - no
 - I do not know
25. Do you think it is important for YOU to be happy in your chosen occupation?
- yes
 - no
 - It does not matter
 - I have not considered it yet
26. How many years after high school do you think you will have to go to school or training programs that will prepare you for the job or career you really want?
- I want to be prepared when I graduate from high school
 - 1 to 2 years (trade, technical school, community college)
 - 3 to 4 years (apprenticeship or college)
 - More than 4 years (internship or graduate school)
 - I have not really considered a future job, or the training I would need.

27. Study the following statements and indicate what reason you might have for choosing a future job or career. Only mark one answer. Choose from the following nine possibilities.
- There is a growing need for people with ability and training in this career
 - This is the career one or both of my parents are involved in
 - One or more of my friends is working in or seeking this career
 - I like the equipment and facilities I would be working with
 - A great deal of work needs to be done to improve the field
28. a. There are opportunities in this career to be creative
b. Further training and employment are available in my home town
c. I have not made up my mind yet
d. I have another reason not listed here
29. Listed below are Occupational Groups which describe some of the jobs which you might be interested in. Out of the twenty (20) possibilities below, choose the One Group which you think is closest to the career you are interested in.
- AGRICULTURE --farming, forestry, wildlife management
 - BUILDING TRADES-- carpentry, steelwork, drafting, painting
 - BUSINESS AND BUSINESS SERVICES--clerical, accounting, data process
 - CHILD CARE SERVICES--private and public service in child care
 - COMMUNICATIONS--broadcasting, newspaper journalism, printing
30. a. EDUCATION--teaching, counseling, coaching, writing
b. FOOD SERVICES--restaurant work, chef, cook, cafeteria management
c. ENGINEERING--technical development, mechanics, electronics, space
d. GOVERNMENT SERVICES--elected official, postman, civil service
e. HOMEMAKING AND HOUSEKEEPING SERVICES--housekeeper, family management
31. a. ART, CREATIVE AND COMMERCIAL--personal talent use, design
b. INDUSTRIAL MARKETING--sales, buying for stores, economics
c. LEGAL AID--lawyer, legal secretary, legal aide, court worker
d. MILITARY SERVICES--Army, Air Force, Navy, Marine Corps, Coast Guard
e. MUNICIPAL CONTROL AND PROTECTION SERVICES--police, firemen
32. a. OFFICE AND BUSINESS MANAGEMENT--administration, quality control
b. PERSONAL HEALTH CARE SERVICES--doctor, nurse, LPN, medical technology
c. GENERAL SERVICES--barber, hairdresser, tailor, florist
d. RECREATIONAL SERVICES--park supervisor, lifeguard, hotel-motel work
e. TRANSPORTATION SERVICES--road construction, bus driver, mechanic
33. I could not answer the Occupational Group choices because:
- I could not find the group I identify with the most
 - My college plans do not fit into any of the groups
 - None of the groups listed were interesting to me
 - I really have not made up my mind as of this time

PART III

This part of the survey tries to identify what your career interests are in order to determine what kind of courses or special training could be offered that would help you. Listed below are the titles of courses which may be taught if there is enough interest. Answer each one of the titles this way:

- *Fill in space "A" if the course is the one course which you would be interested in which would further your career interests.
- *Fill in space "B" if the course is the one course which could help, but you are not sure of how much.
- *Fill in space "C" if the course would not be useful or interest you.

You should choose two courses which interest you, marking one "A" and the other "B", and fill in "C" for the remaining course selections.

- 34. Basics of Accounting
- 35. Aeronautics and the Principles of Flight
- 36. Air Conditioning and Refrigeration
- 37. Auto Maintenance and Auto Body Repair
- 38. Barbering and Hair Styling
- 39. Carpentry and Construction
- 40. Commercial Art Techniques
- 41. Computer Programming and Key punch
- 42. Dental Assistant
- 43. Instruments in Electronics
- 44. Electronics and Radio Operation
- 45. Food Management and Preparation
- 46. Materials (Woods, Metals, Plastics, Concrete)
- 47. Nurse's Aide, LPN Program
- 48. Oil Burner Servicing
- 49. Plumbing Troubleshooting
- 50. Printing and Advanced Graphics
- 51. Surveying
- 52. Secretarial and Office Practices
- 53. Small Appliance Repair
- 54. Commercial Vehicle Operation
- 55. Teacher-Librarian's Aide
- 56. Some other career or vocational course not mentioned here which would be very necessary for my career
- 57. Some other career or vocational course not mentioned here which may help to further my career

In addition to the Career and Vocational Courses mentioned in Part III, we are planning to have other skilled people teach certain "mini-skill" courses. These courses will not be for credit and may be taught outside the school for less than one semester (about one marking period) if enough people show interest in this kind of course. Look over the list and show your feelings by:

*Marking "A" if the course sounds very interesting to you.

*Marking "B" if the course is not interesting to you.

Mark each Question either "A" or "B".

- 58. First Aid Procedures
- 59. Firefighting Techniques
- 60. Darkroom Photography
- 61. Needlecraft
- 62. Rug Braiding and Hooking
- 63. Basics of Police Practices
- 64. Consumer Points of Interest (how and what to buy on the market, department store, and clothing level)

If you have made future plans for education

If you have definite plans for a future occupation answer Questions #65-66-67. If you are undecided, go to Question #68.

- 65. Have you ever had any work experience which was the same as, or similar to, what you have chosen as an occupation?
 - a. yes
 - b. no
- 66. Are there businesses or industries in your area where you could gain experience in your chosen occupation?
 - a. yes
 - b. no
 - c. I do not know
- 67. Would you consider working in this chosen occupation part-time after school, for pay and credit if it could be arranged?
 - a. yes
 - b. no
 - c. I do not know

If you are graduating this June, skip Questions #68-69 and go to Question #70.

- 68. Would you take a course (like the ones in Questions #34-55) if offered in your high school in place of social studies, math or an elective?
 - a. yes
 - b. no

69. Would you take a course (like the courses listed) as an extra course, an addition to your schedule?
- a. yes
 - b. no
 - c. I do not know
70. This is the end of the questionnaire, we would like your opinion about it. Do you think this questionnaire was helpful?
- a. it was an interesting survey, it brought to mind some important things for me.
 - b. it was interesting but not helpful
 - c. some of the questions were difficult for me to answer properly
 - d. it was a waste of time.

SPECIAL INTEREST QUESTION:

Would you like to help students in your high school who might be physically or mentally unable to keep up with everyone else?

- a. yes
- b. no

SPECIAL INSTRUCTIONS FOR THE TEACHER:

If a member of the survey team cannot be present to administer the questionnaire, we ask you to distribute the material, read the Special Instructions (encl.) for the answer card, and answer any questions a student might have. We hope this situation will not arise, but should it so happen, these comments can help solve some confusion:

QUESTIONS 29 to 33: if a student didn't read the instructions carefully he will be confused here. There are 20 possible choices. He should only choose 1 (ONE) from the 20, and indicate his choice.

QUESTIONS 34 to 57: Students have three possible responses, but it is important that students only indicate ONE "A"; ONE "B"; and the remaining either "C" or leave it blank.

QUESTION 46: The word TESTING should be added to the end of the selection to clarify the meaning of the selection.

If a student feels he cannot answer a question by using the choices pointed to, he should leave his answer space blank. This is not a controlled time or information survey, feel free to answer any question a student might have to the best of your knowledge. Please make every effort to accomodate the student's understanding of the survey material.

Thank you for your support.

SPECIAL INSTRUCTIONS FOR THE USE OF THE ANSWER CARD:
can be read to students:

Take your IBM Card and lay it lengthwise on the desk so the Figure 1A is in the upper left-hand corner of the card. In the column directly under 1A, labelled SECTION fill in _____ in the first column, and _____ in the second column. These numbers identify your high school. You don't have to record your name anywhere on the card or test.

When you have filled in the two numbers turn the card so the 1A is in the upper right-hand corner, and the yellow is on your right. About half-way down the card you will see ANSWER spaces numbered 1 to 24. Answer these questions, and continue to answer the questions on the other side of the card. When you get to the Special Interest Question, the last one on the survey, make your answer in space #71. Read all the instructions carefully, and take your time. If there are any questions, raise your hand. The questionnaire is not a Test. It's an opportunity for you to give some valuable information, and help develop new programs in your high school.

APPENDIX III

Granby Memorial High School
318 Salmon Brook Road
Granby, Connecticut 06035

June 4, 1972

Mr. Pasquale E. Starble
Superintendent of Schools
Granby Town Hall
Granby, Connecticut

Dear Mr. Starble:

As you know, the Granby School System is involved in a Special Program in developmental Vocational Education to be initiated next September in the Farmington Valley. Bob Lougee and I have been employed to survey the existing programs in the various towns. One of the most important consideration we have to make is the ability of students with low levels of motivation and poor preparation to succeed in an educational setting which leads to development of a marketable skill for the student.

As a result of the direct emphasis placed on Vocational Education priorities by the Amendments of 1968, I'd like to request your assistance in establishing the existing areas in which these priorities are brought to bear.

First and foremost, I'd like to establish the number of "disadvantaged" students in levels 7-12 in your system. In this case I am referring to academic, social-economic and culturally disadvantaged individuals. I am presently conducting a similar survey directed toward the physically, perceptually and emotionally "handicapped" through your Director of Pupil Personnel Services.

We are trying to identify these groups in order to give direct consideration to the individual needs of each student to prevent them from vocational program when with forethought modifications can be ordered to acomodate these needs.

I ask you to comment freely on the questions I have submitted (see enclosure).

It would be a great advantage to us if you could respond immediately as we are limited to a rather short schedule.

Thank you vey much for your time and consideration.

Sincerely,

Peter A. DeLisle, Consultant
Capitol Region Education Council

APPENDIX IV

Granby Memorial High School

Granby, Connecticut 06035

June 4, 1972

Director of Special Education Services
Town Hall
Farmington Valley

The town of Farmington is presently involved in a search for more comprehensive and meaningful approaches to vocation education as a function of career development.

I'm presently polling all the Special Education Departments of the schools involved in the project to assess the dimensions of the existing programs in the schools. Could you return the enclosed questionnaire? The information you could supply us with would be invaluable in the development of special programs for students called "handicapped" who are too often overlooked.

Thank you very much for your help and consideration.

Sincerely,

Peter A. DeLisle, Consultant
Capitol Region Education Council

APPENDIX V

PROJECT SURVEY INNOVATIVE VOCATIONAL EDUCATION

Handicapped

1. How many "handicapped" students are presently in grades 7-12 in your school system? (grades 7-12, M-F)
2. How many of these students take an active part in the vocational education opportunities in your school system? (grades 7-12, M-F)
3. Has it been necessary to make any modifications in the current programs in vocational education to accomodate these students? Do you foresee a need for program modification or supplimentation? Please comment.
4. Is there any appreciable evidence to indicate the success or failure of your school system to enable the "handicapped" students to achieve the vocational education objectives that would have been otherwise beyond their reach because of their disadvantaged condition?
5. How are the students considered "handicapped" compensated or aided?

Disadvantaged

1. How many "disadvantaged" students are presently in grades 7-12 in your school system? (grades 7-12, M-F)
2. How many of these students take an active part in the vocational education opportunities in your school system? (grades 7-12, M-F)
3. Has it been necessary to make any modifications in the current programs in vocational education to accomodate these students? Do you foresee a future need for program modification or supplimentation? Please comment.
4. Is there any appreciable evidence to indicate the success or failure of your school system to enable the "disadvantaged" students to achieve the vocational education objectives that would otherwise be beyond their reach because of their handicapped condition? Please comment.
5. How are the students considered "disadvantaged" compensated or aided?

APPENDIX VI

Vocational Education School Facilities

Name of School _____ Rm. No. _____ Instructor _____

Describe Present Use of School _____

Size of Room Length _____ ft. Width _____ ft. Height of Ceiling _____

Describe Plumbing Facilities Available _____

Describe Electrical Facilities Available _____

Type of floor _____ Number of drains _____

Overhead Door Size _____

Granby, Conn. 06035

June 4, 1972

Mr. James W. Axon
Chief
Apprentice Training Division
Connecticut Dept. of Labor
200 Folly Brook Blvd.
Wethersfield, Connecticut 06109

Dear Mr. Axon:

I would like to request some information from your office concerning entry into the Apprentice Training Programs of the various trades in the state.

I am presently involved in an information gathering survey considering innovative approaches to vocational education in the high schools in the Farmington Valley. In light of this survey, I am interested in finding out the entrance requirements of Apprentice Training Programs, including age minimums; the particular skilled trades these programs prepare an apprentice to participate; and the most recent employment statistics for the various trade which participate in apprentice training programs.

Any other information you might find pertinent to the current applicability of the apprenticeship training programs to our investigation would be greatly appreciated.

Thanks for your time and consideration.

Sincerely,

Peter A. DeLisle
Consultant, CREC

APPENDIX VIII

(This questionnaire was distributed to each of the schools seeking information regarding the cooperative work experience programs in each school)

A significant part of our survey concerns itself with the work-study programs of career education. We would like to learn some aspects of your school and community's efforts to develop a good work-study program. Your answers to the questions listed below will help us derive a better perspective of the present success of your program.

1. How many students are enrolled in some form of cooperative work experience for which the school recognizes an educational benefit?

Ans. _____

2. Is an interview arranged with the prospective employer for the purpose of defining the educational outcomes of the student worker? (select one answer)

- a, Yes, in every case _____
- b, Sometimes, in _____% of the cases
- c, No _____

3. Is there evidence that cooperating employers provide a written job description or list of responsibilities in which the student will be exposed?

Ans. _____

4. Is there evidence of a periodic evaluation performed on each participating student to derive the success of his experience as it relates to his academic standing?

Ans. Yes _____ or No _____

4a, If yes, how many students have been evaluated so far this year? Ans. _____

4b, How frequently is the evaluation performed? Ans. _____

4c, Is there an evaluation form used for this purpose? Ans. _____

4d, Is there evidence that work-study experience has resulted in higher scholastic grades in any subject for the participant? Ans. _____

5. Do you presently have more students who are willing and able to participate than are employers available? Ans. _____

Remarks: You are invited to make any comments or suggestions that you believe may aid our survey which have not been defined above. Thank you for your cooperation.

APPENDIX IX

Granby, Conn. 06035
June 4, 1972

Robert M. Goodwin
Goodwin Bus Company
Windsor Locks Garage
Windsor Locks, Connecticut

Dear Mr. Goodwin:

I would appreciate the following data: approximate costs, distance, time in transit, and individual town liabilities for bus transportation and station wagon transportation in the following situations:

Students transported:

From: Avon H.S. to Canton H.S.
Avon H.S. to Granby H.S.
Farmington H.S. to Avon H.S.
Farmington H.S. to Granby H.S.
Canton H.S. to Bloomfield H.S.
Canton H.S. to Farmington H.S.
Canton H.S. to East Granby H.S.
Simsbury H.S. to Farmington H.S.
Simsbury H.S. to Granby H.S.
East Granby H.S. to Farmington H.S.
East Granby H.S. to Bloomfield H.S.
Bloomfield H.S. to Simsbury H.S.
Bloomfield H.S. to Farmington H.S.

If you cannot accomodate us please let me know. I will call later this week to make an appointment to see you again.

Thanks.

Sincerely,

Peter A. DeLisle
Consultant, CREC

ABSTRACT - THE YOUTH IN PRISON PREPARING
EAGERLY TO EARN (YIPPEE) PROJECT WAS A
COOPERATIVE EFFORT INVOLVING SEVERAL AGENCIES
FOR THE SPECIFIC PURPOSE OF PROVIDING
YOUTHFUL OFFENDERS (AGES 16-21) AT THE
CHESHIRE REFORMATORY WITH A TRAINING PROGRAM
WHICH INCLUDED MOTIVATION AND SALEABLE SKILLS
IN SELECTED OCCUPATIONS. INMATES WERE
SCREENED BY EMPLOYMENT SERVICE COUNSELORS FOR
EDUCATIONAL ABILITY, SKILL ABILITY, AND
SECURITY RISK AND WERE ASSIGNED TO ONE OF THE
SEVEN SHOPS (MACHINE, AUTO, SHEET METAL,
PRINTING, DRAFTING, CARPENTRY, AND COOK). THE
INMATES SELECTED FOR THE PROJECT RECEIVED
PRACTICAL OCCUPATIONAL TRAINING, SHOPWORK,
AND THEORY AT A TECHNICAL SCHOOL AND RELATED
CLASSROOM WORK AND/OR WORK ASSIGNMENT TO
OCCUPATIONAL TRAINING AT THE REFORMATORY.
SOME GENERAL COMMENTS BASED ON THREE YEARS OF
OPERATION INCLUDE: (1) INMATE CONTACT WITH AN
OUTSIDE INSTRUCTOR WAS A CONSTRUCTIVE VEHICLE
IN THE REHABILITATION PROCESS, AND (2)
SEVERAL INMATES POSSESSED MINIMAL OR VERY LOW
ENTRY ABILITIES WHICH EMPHASIZED THE NEED FOR
BASIC EDUCATIONAL TRAINING IN SUCH SUBJECTS
AS READING AND WRITING. OTHER INFORMATION
PERTAINING TO THE OPERATION COMMITTEE, INMATE
SELECTION, THE EDUCATIONAL PROGRAM, AND
PROGRAM COSTS ARE DESCRIBED IN THIS REPORT.

PREFACE

"YIPPEE" - "Youths In Prison Preparing Eagerly To Earn"

Project YIPPEE was a cooperative effort involving several agencies for the specific purpose of providing the inmates at the Cheshire Reformatory with vocational training and education in an "outside the walls" atmosphere. These youths, ages 16 to 21, had little opportunity at the Cheshire Reformatory to receive training for gainful employment upon their release. Most had a poor educational background and were inadequately prepared for competition in our society. Generally, their respective family backgrounds were far from desirable.

Project YIPPEE was initiated as a pilot program to offset the above deficiencies. The following State of Connecticut agencies cooperated collectively in a concerted effort: The Cheshire Reformatory; The Bureau of Vocational Technical schools; Manpower Office; The Connecticut State Employment Service; Division of Vocational Rehabilitation; Department of Corrections; The H. C. Wilcox Technical School. Various representatives of each of these agencies contributed to the make-up of the project.

INTRODUCTION

This report is intended to provide a synopsis of the objectives of YIPPEE, a brief overview of the training at Wilcox Tech, and a general summary of the success of the program involving the inmates of the Cheshire Reformatory. This was a pilot program intended to provide youthful offenders, ages 16 thru 21, with an opportunity at vocational training in an "outside" atmosphere.

OBJECTIVE OF YIPPEE

In a cooperative educational and training effort between the Cheshire Reformatory and the Wilcox Technical School, an outside-the-walls training program started in October 1969 and terminated June 30, 1972. The program operated for 32 months.

The objectives, descriptions, and operations as outlined in the September 1970 report, An Evaluation of Project YIPPEE Conducted at the Wilcox Technical School and the Cheshire Correctional Center, elaborates accurately the proceedings which prevailed for the program.

The objective was simple - "to provide youthful offenders at the Cheshire Reformatory with a training program which includes motivation and saleable work skills in selected occupations under this exemplary program operating at both institutions. (A) At Wilcox - practical occupational training-shop work and theory, (B) At Cheshire - related classroom work and/or work assignment to occupational training." It is to this objective that the following is described as viewed from the Wilcox Tech position. Included is a description of candidate selection, the training shops involved, and associated data.

OPERATION COMMITTEE

The Operation Committee of the Wilcox-Cheshire YIPPEE Project, composed of all the state agencies mentioned earlier, met constantly at about 6-week intervals or as needed to evaluate the progress being made. This inter-agency cooperation yielded the best possible solutions to this project which was fraught with some problems.

Some topics covered at the many meetings included the progress of each agency, evaluations, security, phases of training at Wilcox and at Cheshier, ratings, the problems of the inmates, inmate release and the function of the CSES in placement, "good time", follow-up reports by CSES.

Prominent was the problem of security at Wilcox Tech whereby the presence of Cheshire Reformatory officers was mandatory to offset possible inmate escape. The ideal security-free program could not materialize as three escape episodes did occur.

The inevitable transfer of the training program to the within-the-walls at Cheshire was obvious. Training would be made available to the greater majority of inmates at Cheshire regardless of security risks and would be available for a full day rather than for a limited time as at Wilcox. Space is available for setting up several shops at Cheshire and several visitations by the Wilcox and Vocational Bureau administrators yielded constructive recommendations. Noteworthy is the progress made by the Cheshire administration in consolidating various existing shops and making available space for training. The establishment of the vocational training carpentry shop was a constructive move. The establishment of the cook training program was equally successful. The establishment of truly vocational training shops in auto, machine shop, printing, small engines, appliance repair, and others

should provide basic training to many for entry into useful employment in the labor market and an opportunity to return to their respective community as self-sufficient members of society.

THE CANDIDATES FOR TRAINING

Candidates for the Wilcox-Cheshire program were selected by the Cheshire Reformatory. Each candidate was tested as having met the minimum standards of educational ability as well as trade ability. Testing was done by the CSES guidance counselor assigned by CSES to Cheshire for the purpose of testing and counseling. Further screening for security ensued. The selected candidates therefore were screened for educational and skill ability and for security risk.

At the outset, the numbers of qualified inmates as back-up trainees assured maximum enrollment in each training shop. However, during the last six months no new trainees were available thereby resulting in very low enrollment. It could be concluded that the candidates were below standard in ability and/or were security risks. The diminishing number of qualified candidates could have well contributed to the need for shifting the training to inside the walls at Cheshire.

GUIDANCE AND COUNSELING

The CSES provided a resident counselor at the Cheshire Reformatory for the expressed purpose of interviewing, testing and counseling candidates for this project. Follow-up studies on each inmate and the positive or negative status following release were informative. There was close and constant cooperation between the training Supervisor at Wilcox Tech and the CSES counselor regarding the entry, withdrawal and progress of each trainee enrolled in the project.

TRAINING AT WILCOX

STAFF

The Wilcox Tech staff included the several shop instructors, one related subjects instructor, and the administration.

Overall administrator was the Wilcox Director. The duties of supervising the program was delegated to the adult education supervisor. The latter's duties included hiring and supervising instructors and curriculum, purchasing instructional supplies, counseling trainees as required, working closely with the CSES counselor regarding trainees, and to integrate the instructional program in collaboration with all the state agencies involved.

The shop instructors were certified for their respective trades. Notable was the fact that each shop included an instructor drawn from industry. The role of the shop instructor was most critical in that he helped convey the trade knowledge and helped mold a basic attitude toward the world of work. The comment may be made that "training at Wilcox was 35% trade training and 65% rehabilitation training."

The related trade instructor taught 3 hours daily at Cheshire in the field of mathematics, blueprint reading, and related theory.

SHOPS IN OPERATION

The following shops operated as indicated. For the period September thru June, classes were run from 3:30 to 6:30 p.m. daily. During the summer months training was held from 8 a.m. to 12 noon daily.

1969-70 - Machine, Auto, Sheet Metal, Printing, Drafting

1970-71 - Machine, Auto, Sheet Metal, Printing, Carpentry (summer)

1971-72 - Machine, Auto, Sheet Metal, Printing, Cook*, Carpentry*
(*at Cheshire)

1969-72 - Related trade training in Math, Blueprint Reading, and

Theory were provided Sept. thru June at Cheshire.

MACHINE SHOP

The Machine Shop training was conducted basically as an open-ended program whereby new trainees could be entered as the openings occurred.

Training included general machine shop experiences; lathe, milling machine surface grinder, cylindrical grinder, bench work, layout, metal cutting cut-off saw, band saw. The trainees advancement hinged on his personal ability and the length of time he attended.

Many training projects were used to provide a variety of experiences involving the many machines and tools of this department. Inherent in this training was the interpretation of blueprints, trade theory, set-up and operation of equipment, until a final product was completed.

Generally speaking, the trainee would be considered a good machine operator after six months of training. Exceptional trainees could readily be viewed as potential machinists.

It was in the machine shop that there was noted a void with some inmates who had difficulty in reading scales, in simple mathematics, and in reading in general. It was for this reason that the related trade instruction program at Cheshire was initiated. This program is described later.

From the outset through 1971, two groups were being trained at one time in the machine shop requiring two instructors.

AUTO SHOP

The auto shop training was found best when limited to about four to five months for each trainee. The basic training and theory were conducted in the lab where mock-up engines and accessories were torn down and reassembled. There was minimal availability of outside and actual (production) work. This was limited to exhaust systems, tire changes, tire balancing, brake work, or work that could be done within three (3) hours. The regular day school program tied up valuable and limited garage space and thus prevented overnight layover for the Cheshire work. This was understandable but a definite handicap.

However, summer programs were by far more effective because the entire shop "belonged" to the Cheshire trainees. The day school limitations were absent.

It was a general practice to cycle in new groups about three times per year due to the limitations of training cited above.

SHEET METAL SHOP

The sheet metal training included sheet metal layout, and fabrication of a wide variety. The experiences taught paralleled the regular day school instructional program.

It is to be noted that there was an overall greater consistency and least turnover with this group. Generally the length of stay for each participating inmate was longer. Problems with this group were nil.

Training in sheet metal was open-ended, thus permitting new trainees to enter as openings occurred.

PRINTING

At the outset letterpress printing was taught and was followed by instruction in offset printing. Upon evaluation of the opportunities in letterpress, the employment potential was poor. For this reason offset printing training was offered.

Training in offset printing included layout, preparation, camera work, stripping, platemaking, and operation of presses.

As the theory and training were progressive, efforts were made to have new groups start at one time. Or, a group of four or five new trainees could be added periodically for effective teaching by one instructor.

DRAFTING

Machine drafting was started in October 1969 but was short-lived.

Reasons for its termination included:

1. Training required at least a one year program for basic entry level competency
2. Adequate trainee numbers could not be maintained for a class size
3. Individual trainee requirements as to mechanical comprehension and draftsman qualities were lacking.

CARPENTRY

Two carpentry programs were offered. The first program was a successful summer program offered in 1971. The program included theory, basic building trades blueprint reading, and practical shop work. Basic manual skills were stressed including safety.

A second carpentry program was initiated in March 1972, within the walls at the Cheshire institution. This was the first breakthrough for true vocational training at Cheshire. Unlike the traditional production work training, this carpentry program is divorced from production. It includes theory and practice and stresses training in the fundamentals of the carpentry trade. It is not tied into the production system typically found in the Cheshire industries.

The latter carpentry program now runs seven hours per day with a regular day instructor on the Cheshire teaching staff.

COOK PROGRAM

The cook training program is the second within-the-walls program instituted at the Cheshire Reformatory in May 1972. Initially, the program was offered four hours per day following the close of the regular kitchen daily.

The instructional outline includes the preparation of foods, including salads, vegetables, meats, gravy, desserts, etc. -- all of which are consumed by the trainees each day.

Regarding adequate instructional supplies for the cook program, as well as for the carpentry program, these were purchased by Wilcox Technical School from funds available under the 933 account.

RELATED TRADE INSTRUCTION

MATH, BLUEPRINT READING, THEORY

In the summer of 1970, a summer program was started to teach basic fundamentals of mathematics and blueprint reading to the machine shop and sheet metal trainees. This program was to provide lacking fundamentals as evidenced in these shops. Training was at Wilcox Technical School.

In the fall of 1970, an instructor was hired to teach a daily three hour program for five days per week in related subjects of math, blueprint reading and theory. Training was within-the-walls at Cheshire, 12:00 Noon to 3:00 P.M.

The curriculum taught paralleled that taught to the regular day student at Wilcox. The same texts were adopted. Needless to say, the related training complemented the shop training at Wilcox.

GENERAL COMMENTS ON THE INSTRUCTION PROGRAM

1. In the opinion of the Wilcox teaching staff, the inmate contact with an "outside" instructor was beneficial. This outside contact was a constructive vehicle in the process of rehabilitating the inmate to the world of work. The process of attitude change should be considered more positive than the actual trade-training itself.
2. The summer program (8:00 A.M. to 12:00 Noon) at Wilcox was more effective than the 3:30 P.M. to 6:30 P.M. program offered September through June. The trainees were wide awake, more responsive, less tired, and had a more receptive attitude for learning.
3. There was a greater effort by the Cheshire Reformatory to place trainees in similar jobs at Cheshire.
4. An exploratory program could not materialize as Cheshire could not provide adequate numbers of applicants.
5. Safety was stressed as an integral part of all shop programs.
6. There was noted of Cheshire inmates minimal or very low entry abilities at times. This points out low educational achievements of the inmates and the need for basic educational training in reading, writing, etc., to ensure reasonable training success.
7. The recommendation by Mr. Walter Verney, Senior VTE Program Officer, from Washington, D.C., that a full-time Director be appointed for this program, can become a reality when the program is operating within-the-walls at Cheshire. A "coordinated" program should evolve.

8. The problem of "Job Orientation" is one which should be resolved to the best interest of the trainee. It is unfortunate that no state agency could act on this.
9. Regarding security at Wilcox, the presence of security officers was mandatory and very costly. The cost to Cheshire was a vital factor in closing the Wilcox operation. The negative responses by inmates regarding their dislike for the presence of security officers is deemed only an expression. There is no evidence to indicate impairment of the educational effort.
10. The cooperation rendered by the CSES counselor in the person of Mr. Butkus contributed to the success of YIPPEE. His role at Cheshire with the selection and counseling of inmates and his cooperation with the Wilcox administration are recognized as praiseworthy.
His periodic reports regarding the status of the released inmates were useful evaluation tools.

COST OF TRAINING (Wilcox Only)

The table below lists the costs for YIPPEE:

<u>School Year</u>	<u>Annual Total</u>	<u>Supplies Minor Equip. Other</u>	<u>Instructional Salaries</u>	<u>Student Laborer, Clerk</u>
Oct. 1969-70	\$15,674.40	\$4,200.00	\$10,560.00	\$ 914.40
1970-71	33,617.80	6,097.00	26,332.00	1,188.80
1971-72	<u>40,938.94</u>	<u>12,972.00</u>	<u>23,944.00</u>	<u>4,022.94</u>
Totals		\$23,269.00	\$60,836.00	\$6,126.14
GRAND TOTAL				<u>\$90,231.14</u>

10-69 thru 6-30-72

Mr. Butkus' summary ending 6-30-72 indicates that a total of 197 trainees were enrolled in the Cheshire/Wilcox Program since October, 1969. Thus the cost at Wilcox Tech only to train one individual is:

$$\frac{\$90,231.14}{197} = \$457.52 \text{ Training cost per person}$$

RATINGS

Each trainee was rated at intervals by his instructors. His progress was made on a simple check sheet (copy in appendix) providing a scale from poor to excellent. Emphasis was placed upon both personal traits as well as trade progress. A provision was made for instructor comments.

YIPPEE - A COOPERATIVE EFFORT

The YIPPEE project was a cooperative effort involving many agencies including the Bureau of Vocational Technical Schools, Central Office, the Department of Corrections, the Connecticut State Employment Agency, the Cheshire Reformatory, DVR, and Wilcox Technical School.

Since its inception in October, 1969, many meetings were held by the above department members to insure YIPPEE'S success. The reciprocal meetings of the Wilcox Staff, Cheshire Administration, and the Cheshire production staff has yielded results. The EVALUATION by members of Mr. Woods' office was fruitful in its findings. The cooperation and understanding of the teaching staff contributed immeasurably to the success.

According to Dr. Bidwell's report, there arise questions to be answered when the results of the experimental and control groups are evaluated. Her findings do state "qualitative differences in job experiences were noted which supported the advantages of the training program."

The comments of Wilcox instructors concur with Dr. Bidwell's suggestions that inmate behavioral change and attitudes are factors to be dealt with to ensure the inmates a successful return to normal productive life upon release. Persistent follow-up upon release is a necessary must in the post-release months.

Trainee: _____

EVALUATION OF PERSONAL TRAITS

1. INDUSTRY, ENERGY, APPLICATION,
WORK HABITS (day to day application)

- ☐ Indifferent; makes little effort.
- ☐ Usually lazy, needs prompting
- ☐ Average Industriousness
- ☐ Hard worker, consistent
- ☐ Exceptional, dilligent, above average.

2. ABILITY TO LEARN ASSIGNED TRAINING

- ☐ Does not have ability for assigned training.
- ☐ Learns slowly; requires repetition for mastery
- ☐ Average ability
- ☐ Above average capacity
- ☐ Exceptional ability & adaptability

3. DEPENDABILITY (Sharing responsibility
of assignments)

- ☐ Requires constant supervision
- ☐ Varies at times
- ☐ Requires some direction;
- ☐ assumes responsibility
- ☐ Dependable; needs no discipline
- ☐ Totally dependable & reliable

4. EMOTIONAL STABILITY IN RESPECT TO
TRAINING

- ☐ Trainee lacks emotional stability for this training or trade and could be considered unfit or undesirable for this trade.
- ☐ Readily upset, poor control
- ☐ Apathetic, Unresponsive
- ☐ Good balance of control
- ☐ Very good self-control

5. SHOP OR TRADE ABILITY

- ☐ Trainee has apparent ability but does not apply himself
- ☐ Trainee does not qualify for trade based on past progress
- ☐ Below average ability
- ☐ Average
- ☐ Very good
- ☐ Outstanding

6. PROGRESS RATING (%)

- ☐ F Failure - due to lack of application
- ☐ F Failure - due to lack of ability
- ☐ D (60-69) Poor achievement
- ☐ C (70-79) Average achievement
- ☐ B (80-89) Above average
- ☐ A (100-90) Outstanding

7. ESTIMATE OF TRAINEE'S FUTURE SUCCESS

- ☐ Failure
- ☐ Little success
- ☐ May encounter difficulty
- ☐ Average
- ☐ Above average

8. TRAINEE'S APPARENT ATTITUDE TOWARD
PRESENT TRAINING.

- ☐ Unfavorable
- ☐ Not unfavorable, but less than desirable.
- ☐ Acceptable - generally good
- ☐ Favorable-attitude adds to effect of training.
- ☐ Definitely favorable-enthusiastic attitude should aid in future employment.

9. COMMENTS AND RECOMMENDATIONS (con-
cerning trainee's fitness for con-
tinued training)

FOREWORD

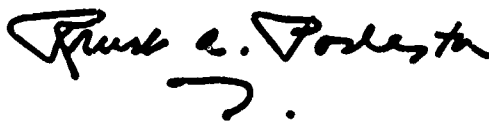

The Public Works and Economic Development Act provides important tools to augment the self-help efforts of areas suffering from chronic unemployment or underemployment.

To stimulate economic growth and to help create new job opportunities in these areas, the Act provides:

- Loans to new or expanding industries;
- Loans and grants to communities for public facilities that are vital if new firms are to get started or existing ones are to expand;
- Technical assistance to help find answers to long-standing economic problems.

Before a redevelopment area can take advantage of these Federal aids, it needs to know where it's going and how it plans to get there.

This publication was prepared to help local economic development groups and others concerned with economic development in their efforts to locate and attract new and expanding industry. The growth characteristics of manufacturing industries provided in this booklet will permit a concentration of these efforts on those industries having the greatest economic development potential.

Robert A. Podesta
Assistant Secretary for Economic Development

INTRODUCTION

This study is designed as a technical tool and research aid for those working in the industrial development field. Specifically, the study lists manufacturing industries ranked by growth trend and provides supporting information on labor characteristics. Its purpose is to provide a starting point for individuals and agencies in their efforts to locate and attract new industry to redevelopment areas.

While the study responds to a wide variety of questions, the following probably represent those of greatest interest to area redevelopment officials:

- Which industries show growth potential and, therefore, present industrial development opportunities?
- Which industries are declining, or have shrunk substantially from previous peaks, and, therefore, may be troubled by excess production capacity?
- Within a particular industrial category, which industries have the greatest, or least, growth potential?
- Does industry A or industry B have the better growth record?
- How does a particular industry rank in its investment in plant and equipment?
- Which industries are likely to place greatest emphasis on low wage labor? On an abundance of production type workers?
- What is the size of a given industry (or product class) as represented by value of shipments?

The primary emphasis of this study, then, is (1) on industry growth characteristics, because the growing industries are those which will be locating new plants, and (2) on labor characteristics, because those industries that will effectively employ surplus labor are the prime focus of area development activity.

The substance of the study is presented in three tables and attendant explanations. Complete reading of the explanatory material with each table is necessary for effective use of the study.

TABLE I

Growth and Labor Characteristics of Selected Manufacturing Industries

DESCRIPTION OF CONTENTS

The 411 manufacturing industries in Table I of this study are those with four-digit Standard Industrial Classification (SIC) codes. SIC codes refer to the breakdown of industry into major categories and several stages of subcategories, as defined by the Executive Office of the President, Office of Management and Budget, and as used by the Bureau of the Census. The level of manufacturing industry detail ranges from two-digit codes (major industry groups) to seven-digit codes (products). For example:

<i>Industry breakdown</i>		<i>Industry product, etc.</i>
Major industry group	20	Food and kindred products
Industry group	203	Canned and frozen foods
Industry	2033	Fruits and vegetables, etc.
Product class	20331	Fruits
Product	2033113	Applesauce

The Table I industries are rated for growth trends, recent and long-term; the year of peak employment during the 1953-67 period; the percentage decline, if any, from the peak employment year to 1967; capital formation or the relative growth in investment for plant and equipment; and three labor characteristics: average wage rate for production workers, blue collar workers as a percentage of total employment, and labor intensity (production workers wages as a percentage of value added by manufacture).

The industries are grouped in categories according to their recent growth trend—1958 through 1967. The long term trend—1958 versus 1967—is also listed and can be used for comparative purposes. Industries whose data show a sharp contrast between the recent trend and the longer term trend may need more extensive investigation. It is probable, however, that the 1958-67 trend will be the more significant of the two.

Within the growth categories, the industries are listed by SIC code order. In this way, the Table I listing permits quick selection of the top growth industries in each major industry group. For example, the top growth industries among the Food and kindred products industries (SIC 20) are Frozen fruits and vegetables (SIC 2037), which falls in

the Very High Growth (VHG) category, and two other industries, Dehydrated food products (SIC 2034) and Blended and prepared flour (SIC 2045), which fall in the High Growth (HG) category.

For quick reference, the two-digit SIC codes for major industry groups are as follows:

SIC	Industry Group	SIC	Industry Group
20	Food and kindred products	31	Leather and leather products
21	Tobacco manufactures	32	Stone, clay, and glass products
22	Textile mill products	33	Primary metal industries
23	Apparel and related products	34	Fabricated metal products
24	Lumber and wood products	35	Machinery, except electrical
25	Furniture and fixtures	36	Electrical machinery
26	Paper and allied products	37	Transportation equipment
27	Printing and publishing	38	Instruments and related products
28	Chemicals and allied products	39	Miscellaneous manufacturing
29	Petroleum and coal products		
30	Rubber and plastics products, n.e.c.		

Criteria used and key to symbols

The informational key to each of the columns in Table I and the symbols used are as follows:

Table stub:

1. The SIC code identification of industries.
2. List of industries identified by short descriptive title and grouped by growth categories developed by comparison of average annual employment in the 1958-60 period and the average for 1966-67. The growth categories are as follows:

VERY HIGH GROWTH (VHG): 1966-67 average annual employment versus 1958-60 equals 50-percent gain or better. In other words, average employment for the 2-year period 1966-67 exceeds the average employment for the 3-year period 1958-60 by 50 percent or more. Includes 40 industries.

HIGH GROWTH (HG): 1966-67 average annual employment versus 1958-60 equals 30-percent to 50-percent gain. Includes 59 industries.

MODERATE GROWTH (MG): 1966-67 average annual employment versus 1958-60 equals 10-percent to 30-percent gain. Includes 134 industries.

STATIC (S): average annual employment in 1966-67 rose above 1958-60 by less than 10 percent. Includes 58 industries.

DECLINING (D): average annual employment in 1966-67 declined from the 1958-60 average. Includes 120 industries, 70 of which declined by less than 15 percent and 50 of which declined by more than 15 percent.

Column Headings

Column (1)—1967 Employment Relative to Peak Year. The peak year for total employment in each industry and the percentage, if any, by which 1967 employment has shrunk from the peak year. The column attempts to provide a rough indication of the amount of excess productive capacity, if any, in a particular industry. This is based on the assumption that the various industries were operating at or near capacity in the peak year, and that any decline from the peak year would indicate the existence of excess production capacity in the industry. The validity of this assumption is reduced by the spread in time between 1967 and the peak year, since the nature or size of an industry's production capacity will change with the gradual abandonment and/or construction of production facilities. On the other hand, a decline from a recent peak year may be of a cyclical or temporary nature.

All of the industries listed as having "Very High Growth" had their peak year in 1967, whereas most of the "Static" and "Decline" industries peaked much earlier.

In summary, 137 industries (33 percent of the total number) reached their employment peak in 1967; 110 industries (27 percent) declined between zero and 10 percent from the peak year; 65 industries (16 percent) declined 10-20 percent; 50 industries (12 percent) declined 20-30 percent; 23 industries (6 percent) declined 30-40 percent; and 26 industries (6 percent) declined over 40 percent. On a cumulative basis, 33 percent of the industries declined not at all, 60 percent declined less than 10 percent, 76 percent declined less than 20 percent, 88 percent declined less than 30 percent, and 94 percent declined less than 40 percent.

Peak years were determined from among those years back through 1953 for which data were available. Peak employment was reached in 1967 by 137 industries, in 1966 by 82, and in 1953 by 53. The remaining 139 industries reached their peak, as many as 24 in 1956 or as few as 2 in 1961, during the 12-year period from 1954-65.

Column (2)—Long Term Growth Trend. Symbols in this column measure growth based on the ratio of the industry's 1967 value added by manufacture to its 1958 value added as related to the all manufacturing industry average. The key to the symbols used is as follows:

VHG: Very high growth, 1967/1958 ratio exceeds 130 percent of

that for all manufacturing. Includes 47 industries.

HG: High growth, 1967/1958 ratio equals 110 percent to 130 percent of that for all manufacturing. Includes 73 industries.

MG: Moderate growth, 1967/1958 ratio equals 90 percent to 110 percent of that for all manufacturing. Includes 110 industries.

S: Static, 1967/1958 ratio equals 70 percent to 90 percent of that for all manufacturing. Includes 119 industries.

D: Declining, 1967/1958 ratio is less than 70 percent of that for all manufacturing. Includes 61 industries.

Since the symbols describe trends computed by comparing only two points in time, 1958 and 1967, the long term rating may be affected unduly by annual production variations, industry to industry. The trend based on the average annual employment in 1958-60 compared with 1966-67 may on the whole be a more valid indicator of industry growth potential.

Column (3)—Capital Formation. This indicator compares an industry's total gross value of depreciable assets (plant and equipment) at the end of 1963 and 1967, and on a relative basis provides a comparison of one industry with another. The underlying data represent the actual cost of the assets at the time they were acquired. Whenever a plant changes ownership, however, the new owner typically uses an appraised or purchase value. In industries where there have been numerous changes of ownership, the value of the assets may have dropped off substantially. Declining valuation, therefore, to some extent might be the result of accounting practices. On the other hand, the underlying values represent book value (original cost) of fixed assets, and a substantial increase in the data reported for an industry would indicate a major increment of growth in facilities for manufacturing. The data on book value are secured by sampling manufacturing establishments and, at times, may be subject to high sampling variation which, if excessive, leads to withholding of the information. The key to the symbols used to show changes from 1963 to 1967 are as follows:

VH: Very high additional investment in plant and equipment, roughly 85.0 percent or more above the 1963 aggregate book value, by 25 industries.

H: High additional investment over 1963, between 50.0 and 84.9 percent, by 94 industries.

M: Moderate additional investment over 1963, from 25.0 to 49.9 percent, by 150 industries.

L: Low additional investment over 1963, between zero and 24.9 percent, by 87 industries.

VL: Very low or negative investment, from 1963 to 1967, by 28 industries.

Column (4)—Average Wage Rate. This provides a rough indication of the skill levels required of production workers in the industry. An indication of lower skill levels may be important to a community development group whose main objective is to reduce unemployment among a large pool of lesser skilled individuals. On the other hand, an area in which wage rates and skills are above average likely would assemble its list of prospective industries from those that pay high wages. Symbols in this column represent categories based on 1967 annual wage for production workers divided by total hours worked. The key to the symbols used is as follows:

VH: Very high wages, over \$3.75 per hour. Includes 18 industries.

H: High wages, \$3.25 to \$3.74 per hour. Includes 76 industries.

M: Moderate wages, \$2.50 to \$3.24 per hour. Includes 175 industries.

L: Low wages, \$2.00 to \$2.49 per hour. Includes 98 industries.

VL: Very low wages, under \$2.00 per hour. Includes 44 industries.

Column (5)—Percent Blue Collar. This indicates the importance of production workers relative to managerial, professional, technical, and clerical employees. Industries with a relatively low percentage of blue collar workers will have a correspondingly high proportion of employees of the type that demand superior community amenities and services, such as education, recreation, health, and transportation facilities. High blue collar percentages may indicate industries that are more interested in a large labor supply. Symbols in this column represent categories based on production workers as a percent total employment in 1967. The key to the symbols is as follows:

VH: Very high, 90 percent or more. Includes 36 industries.

H: High, 85-89 percent. Includes 78 industries.

M: Moderate, 70-84 percent. Includes 216 industries.

L: Low, 35-69 percent. Includes 69 industries.

VL: Very low, under 55 percent. Includes 12 industries.

Column (6)—Labor Intensity. This is an indication of the overall importance of labor to a particular industry. Industries whose labor costs are high relative to their total costs will normally have an intense interest in the labor factor as a locational determinant. Whether this type of industry can be attracted to a particular community will depend upon whether its requirements for labor are white collar or blue collar, high skill production or low skill production. All of the labor factors, therefore, should be considered by an economic development group in targeting its efforts toward a select list of industries. (An example

of one such list is Table III.) Symbols in this column represent categories based on production worker wages as a percent of value added by manufacture in 1967. The key to the symbols is as follows:

VH: Very high, over 50 percent. Includes 15 industries.

H: High, 40-50 percent. Includes 101 industries.

M: Moderate, 25-40 percent. Includes 213 industries.

L: Low, 15-25 percent. Includes 62 industries.

VL: Very low, under 15 percent. Includes 20 industries.

SPECIAL COMMENT

In summary, the criteria used in the tables to describe growth characteristics have proved satisfactory for most of the industries. However, no single criterion for growth can accurately characterize all industries, since the trends in various economic sectors are often divergent. Homebuilding activity during the 1958-62 period was in an extended downtrend, thereby affecting the need for building products as a whole. Out of 24 industries readily identifiable as in building and related products, only one each then was in the VH and H groups, 4 were in M, 14 were in S, and 4 were rated D. Industries in this group as of 1967, broadly speaking, were still on the downgrade, with 17 in 1967 in the static or declining category compared with 18 back in 1962. However, in 1967 a larger number, 12, were classified as declining, whereas only 4 were in decline in 1962. In terms of 1967 dollars, or in constant dollars, the volume of residential construction, a major consumer of building products, averaged in 1961-62 just about the same as the average for 1958-60. By 1969-70, however, though still 3.5 percent down from the 1958-60 level, homebuilding construction was better off, and current forecasts for the 1970's indicate strong expansionary growth, not only in homebuilding, but in most other sectors of the economy.

TABLE I: Growth and Labor Characteristics

SIC code	Industry (Recent growth trends)
	Very High Growth (VHG)
2037	Frozen fruits and vegetables.....
2256	Knit fabric mills.....

TABLE II

Volume of Shipments and Growth Characteristics of Selected Industries and Product Classes

DESCRIPTION OF CONTENTS

The information in Table II augments that in Table I, presenting growth and value of shipments data for the 411 industries (four-digit SIC code) and for 1,110 product classes (five-digit SIC code) for the 1964/65-1967/68 period. The inclusion of product classes provides growth categorization at a finer level of industrial detail than exists in Table I.

Industries that appear to have merit based on information in Table I should be checked against Table II to determine that part of the industry (if there is more than one part) having the greatest growth potential, and to determine the industry's or product class's relative size based on value of shipments. An extremely small industry or product class will have relatively little area development potential despite its rising trend. Conversely, a large industry that is declining may likewise offer very little developmental aid.

The listing of Table II industries by order of Standard Industrial Classification (SIC) also affords the user the means conveniently to cross-check on a particular industry for reference to the labor information shown in Table I, through use of the growth-category symbol.

Criteria used and key to symbols

The 411 industries (four-digit SIC code) and 1,110 product classes (five-digit SIC code) are listed in their Standard Industrial Classification code order. The volume of shipments is stated for 1968.

Industry (four-digit) growth categories are identical with the growth categories in Table I.

Product class (five-digit) growth categories, however, are based on trends in value of shipments as follows:

VHG: Very High Growth, 1967-68 average annual value of shipments versus 1964-65 equals 150 percent gain or better. Includes 118 product classes.

HG: High Growth, 1967-68 average annual value of shipments versus 1964-65 equals 40-150 percent gain. Includes 209 product classes.

MG: Moderate Growth, 1967-68 average annual value of shipments versus 1964-65 equals 10-40 percent gain. Includes 459 product classes.

S: Static, 1967-68 average annual value of shipments versus 1964-65 equals 4.9-percent decline to 10-percent gain. Includes 196 product classes.

D: Declining, 1967-68 average annual value of shipments versus 1964-65 equals 5 percent and greater decline. Includes 128 product classes.

Since industry (four-digit) growth trend rankings are based on employment data for the periods 1958-60 and 1966-67 whereas product class growth trends are based entirely on value of shipments (which is affected by price volatility) during a shorter and somewhat different time period, there are apparent differences between the industry growth rank and the ranks of the industry's product class components. The employment concept used for the industries is considered the more reliable growth indicator, but employment data are not available for product classes on a historical basis.

TABLE II: Volume of Shipments and Growth Characteristics of Selected Industries and Product Classes

SIC code	Industry	1968 Value of shipments (millions of dollars)	Growth category

39990	Manufactures, n.e.c., n.s.k.....	142.6	VHG

n.e.c. = not elsewhere classified

n.s.k. = not specified by kind

NA = not available

(D) = Withheld to avoid disclosing figures for individual companies.

(S) = Census estimate withheld as not meeting publication standards.

General note: Figures shown for 1968 value of shipments are based on the Annual Survey of Manufactures, 1968, "Value of Shipments by Classes of Products," M68(AS)-2; and upon the 1967 Census of Manufactures. In a number of instances the 1968 values are preliminary and, for a small number of cases, have been estimated on the basis of related data.

TABLE III

Example of Table I Data Use, List of Growth Industries With Selected Characteristics

DESCRIPTION OF CONTENTS

Table III is an example of one use of the basic Table I information. It lists 74 industries (selected from Table I) having five characteristics in common: a moderate or better growth trend, a moderate to very low capital investment, a moderate to very low average wage rate, a moderate to very high percentage of blue collar workers, and a moderate to very high labor intensity.

Industries having these five characteristics in common probably have a high potential for area development, since their locational requirements normally place considerable emphasis on the availability of an abundance of blue collar type labor. In addition, some communities will be interested in industry wage rates as an indicator of the degree of skills demanded by the industry.

As stated before, Table III is merely an example of a use of the data in Table I. Many other select lists of industries can be constructed by scanning Table I data symbols or a combination of symbols.

Criteria used and key to symbols

Table III is a list of industries with five characteristics in common based on information shown in Table I:

- (1) a moderate or better growth trend, symbols MG, HG, VHG;
- (2) a moderate to very low capital investment, symbols M, L, VL;
- (3) a moderate to very low average wage rate, symbols M, L, or VL;
- (4) a moderate to very high percentage of blue collar workers, symbols M, H, VH; and
- (5) a moderate to very high labor intensity (production worker wages as a percentage of value added), symbols M, H, or VH.

The columns show the SIC code, the number of employees, since labor characteristics make up the main basis for this table, and the Table I growth category.

STUDENT ENROLLMENT

ABSTRACT - THIS ANNUAL REPORT OF THE
DEPARTMENT OF AGRICULTURAL EDUCATION AT THE
OHIO STATE UNIVERSITY FOR 1971-72 CONTAINS
DESCRIPTIVE AND EVALUATIVE INFORMATION
PERTAINING TO: (1) THE UNDERGRADUATE AND
GRADUATE PROGRAMS, (2) STUDIES COMPLETED OR
IN PROGRESS BY STUDENTS AND STAFF, (3)
INSERVICE EDUCATION PROGRAMS, (4)
INTERNATIONAL EDUCATION, (5) TECHNICAL
EDUCATION, (6) CURRICULUM MATERIALS SERVICE,
(7) PUBLIC INFORMATION PROGRAM, (8)
FACILITIES, (9) ALUMNI ASSOCIATION, (10) LONG
RANGE PLANNING ACTIVITIES, AND (11) STAFF
SERVICES. SOME HIGHLIGHTS FOR THE YEAR
INCLUDE: (1) THE NUMBER OF DECLARED MAJORS
RANGED FROM 132 TO 156, (2) CHANGES WITHIN
THE AGRICULTURAL EDUCATION COURSES INCLUDED
THE PROVISION OF EARLIER PROFESSIONAL
EXPERIENCES, (3) THE TOTAL UNDERGRADUATE AND
GRADUATE STUDENT REGISTRATION IN AGRICULTURAL
EDUCATION COURSES WAS 1,307 AS COMPARED TO
1,178 FOR 1970-1971, (4) RESEARCH WAS
ACCOMPLISHED PRIMARILY THROUGH THE DOCTORAL
DEGREE PROGRAM, INCLUDING SUCH AREAS OF STUDY
AS CONTINUING EDUCATION FOR TECHNICAL COLLEGE
GRADUATES, MANPOWER NEEDS IN ENVIRONMENTAL
MANAGEMENT, AND CHARACTERISTICS OF
DISADVANTAGED RURAL YOUTH, AND (5) THE
CURRICULUM MATERIALS SERVICE HAS PUBLISHED 38
NEW MANUALS, FOUR SLIDE SERIES, AND ONE SET
OF TRANSPARENCIES. (SB)

FOREWORD

This is the annual report of the Department of Agricultural Education for 1971-72. The information reported herein serves somewhat as a history and as a basis for evaluation. It was prepared by the staff for the purpose of making further improvement in the Department.

Members of the agricultural education staff recognize and appreciate the significant contribution of other individuals and groups particularly the supervisors of vocational agriculture and other personnel of the State Department of Education, the administration and faculty of the College of Agriculture and Home Economics and the College of Education, personnel of the Cooperative Extension Service, and the Ohio Agricultural Research and Development Center.

Ralph E. Bender, Chairman

SOME HIGHLIGHTS

- Sixty-four students were qualified for certification to teach vocational agriculture; 40 were placed in such positions. The supply did not meet the demand even though an expanded program of recruitment has been conducted including as a new procedure the use of 10 agricultural education majors who participated in a series of FFA officer or training programs throughout the state. Nearly 1,500 students attended these meetings.
- The number of declared majors ranged from 132 to 156. This does not include freshmen and sophomores enrolled in University College who will be pursuing an agricultural education program.
- New certification standards were in effect as of January 1, 1972. They involved the preparing of prospective teachers in specialized areas of horticulture, agricultural business, agricultural equipment, food processing, agricultural resources, and forestry in addition to production agriculture.
- Changes within the agricultural education courses included the provision of earlier professional experiences. More observation and participation experience has been included in Agricultural Education 200 and the "380" series of experience courses have been changed to the 200 level in order to attract and serve sophomores. Through special consideration of the Dean's office, Agricultural Education 200 was offered for third quarter freshmen.
- Sixty-two students participated in student teaching that was provided in 29 schools and 24 County Extension centers.
- Nine undergraduates received Agricultural Education Scholarships. A new \$500 scholarship provided by the Ohio Grain, Feed and Fertilizer Dealers was established.
- The total undergraduate and graduate student registration in agricultural education courses was 1,307 as compared to 1,178 a year earlier.
- 265 students from 12 states and Taiwan majoring in agricultural education were enrolled in programs beyond the Bachelor's degree. Much of this enrollment was in a program of three-week workshops during the summer quarter. Off-campus courses were offered during the autumn and spring quarters.
- 83 new and returning teachers of vocational agriculture were supervised by the staff in agricultural education in cooperation with Assistant State Supervisors.
- A planned program was developed and approved for the certification of personnel interested in becoming local supervisors of vocational agriculture.

- Seventeen students received the Ph.D. degree and 30 students were recipients of Master's degrees.
- A new graduate course, Analysis and Interpretation, was developed and approved for offering autumn quarter 1972.
- Research was accomplished primarily through the Ph.D. degree program including such areas of study as continuing education for technical college graduates, manpower needs in environmental management, characteristics of disadvantaged rural youth, change orientation of vocational teachers, guidelines for evaluating activities conducted by State Advisory Councils, perceived training needs of urban Extension agents, and role of area Extension agents.
- The materials published by the Ohio Agricultural Education Curriculum Materials Service during 1971-72 included 38 new manuals, 4 slide series, and one set of transparencies. In addition, hundreds of materials were made available as identified through these catalogs that are issued by the Service.
- A \$260,000 USOE grant was approved for the period June 15, 1972 to June 15, 1974 for the preparation of curriculum guides pertaining to career education in agricultural business, natural resources, and environmental improvement. The project, which was planned by Dr. Harlan Ridenour, is being directed by Roger D. Roediger and includes materials in career education at various levels K-12 grades.
- Materials are being developed which deal with a cooperative way of doing business by J. H. Lintner as a project which has been funded by the Martha Holden Jennings Foundation and the Ohio Council of Farmer Cooperatives. This grant was for \$20,000.
- The Ohio Farm and Home Electrification Council is contributing \$1,500 for the development of materials for farm and home electrification by the Curriculum Materials Service.
- A project "Development and Dissemination of Courses of Study and Instructional Materials for Environmental Science and Protection Programs" which was started January 1, 1971 was completed during the year. The 18-month project was funded by a \$34,922.50 grant from the Division of Vocational Education, Ohio Department of Education.
- Biennial plans of the department of 1973-75 and 1975-77 including improvements and new programs were submitted to the College. The programs involved air conditioning, research and development, individualized instruction, a new communications course, preparation of specialized agricultural education personnel, youth development, curriculum development and instructional materials, and preparation of personnel for agricultural technician programs.

ANNUAL REPORT

1971-1972

The Department of Agricultural Education has responsibility for the initial preparation and continuing professional development of personnel in agricultural education. In cooperation with the Division of Vocational Education of the State Department of Education and as a part of the College of Agriculture and Home Economics of The Ohio State University, the department attempts to serve many clientele in agricultural education including teachers of agriculture in secondary schools, area vocational centers, and post-secondary institutions; Cooperative Extension personnel at the county, area, and state levels; personnel in vocational education and Cooperative Extension in administrative and supervisory positions; and other individuals needing specialized competencies in agricultural education.

The department, which is housed in the Agricultural Administration Building, comprises 13 faculty members, 7 of whom are part-time and six secretaries. Forty-six others with ranks of instructor or higher, including emeriti, have appointments in the department.

Undergraduate Program

At the end of the Spring Quarter the Department of Agricultural Education had 156 declared majors, which is a decrease from the last several years as may be noted in Table 1. It is difficult to attach causes for the decrease in enrollment. The change in the draft laws which no longer gives exemptions for teachers may have had some negative influence on enrollment. On the positive side, the employment opportunities this past year have been favorable for vocational agriculture teaching in comparison to other fields. This advantage has seemingly not influenced undergraduates to change their major or to encourage noncommitted students to declare their major in agricultural education. However, many students from other departments are taking courses in agricultural education to become certified to teach.

The number of graduates qualifying to teach vocational agriculture in the College of Agriculture and Home Economics is shown in Table 2. There were 7 fewer qualifying in the past year than in the two years previous. Another item to note is that 13 non-majors were qualified to teach, which is five less than the year before, however, high compared to 1967-68 and 1968-69. Counselors in the Department report that during the past year many students from other departments sought information regarding requirements for teaching. This interest may

reflect changes of major to agricultural education that could increase department enrollment in the future.

TABLE 1
NUMBER OF DECLARED MAJORS IN AGRICULTURAL EDUCATION

Quarter	1967-68	1968-69	1969-70*	1970-71*	1971-72*

TOTAL	56	71	72	72	64

Course Enrollment

Enrollment in courses for agricultural education in 1971-72 and each of the four years previous is listed in Table 3. The undergraduate courses begin with 200 and include 581, 582, and 583, although

TABLE 3

ENROLLMENT IN AGRICULTURAL EDUCATION COURSES

Course Number	Number Enrolled				
	1967-68	1968-69	1969-70	1970-71	1971-72
200	122	134	133	121	154

999	47	61	65	77	54

advanced undergraduates may enroll in courses beginning with 621 and including 693. However, very few undergraduates are enrolled in such courses.

It may be observed that enrollment in Agricultural Education 200 has increased and in 230 it has slightly decreased. Since 230 is primarily a junior-senior course, it is not likely that the effect of the increased enrollment in 200 will show up in 230 until 1972-73 or 1973-74. Enrollments in 380.01, 380.02, and 380.03, undergraduate experience courses, are slightly lower than for the three years previous but they, along with Agricultural Education 230, are likely to have increases in enrollment next year. It may be observed that enrollment in Agricultural Education 581, 582, and 583 is quite similar to enrollment in 230. This is what we would expect because students take 230 just previous to student teaching. As may be observed the overall numbers of undergraduate students enrolled in 1971-72 are about the same for the past two years. The indication of supply of graduates for teaching is the number of completions in student teaching and as may be observed this number is 11 less than the year before.

The outlook for graduates in 1972-73 may be influenced somewhat in the enrollment in Agricultural Education 200 and 230. Next year it would be conceivably more than the 64 completing in 1971-72. Factors altering the final outcome for next year would be an increased number of students transferring to the department from other departments particularly in their senior year, and the number of returnees with Bachelor's Degrees needing two or three quarters of course work for certification.

Recruitment

An expanded program of teacher recruitment was initiated by The Ohio Recruitment Commission for Agricultural Education, including vocational agriculture teachers, College administration and department staff members, under the advisorship of Ralph Woodin.

This year, each beginning teacher was provided a kit of recruitment materials. A letter was sent to all agricultural teachers in January suggesting increased effort be given to recruitment of teachers. The topic "Careers in Teaching" was added to the FFA Extemporaneous Speaking Contest during the 1972 FFA Camp program.

Ten agricultural education majors participated in ten officer training meetings throughout the state by presenting a 20 minute narrated slide show relative to the need for teachers and jobs available in agricultural education. There were nearly 1,500 students in the total audience.

A special horticultural recruitment program to acquaint students in that department with opportunities in teaching vocational horticulture was conducted by Woodin, Boucher and James Utzinger, Extension Horticulturalist.

Recruitment exhibits were prepared and placed at The Ohio State Fair, Farm Science Review and the Ohio FFA Convention.

Twenty states having a surplus of agricultural teachers were contacted about opportunities in Ohio for teaching. Thirty-eight persons indicated an interest in teaching in Ohio.

Approximately 800 prospective students attended the two College career days. Vocational agriculture teachers supported the College activities by bringing students to campus for Career Day as well as Youth Science Day.

Recruitment receives high priority as a department activity. Nationally, 120 departments were closed last year due to a shortage of teachers. Woodin reported only 49% of the agricultural education majors in the United States are teaching compared to 60% in Ohio.

Student Financial Assistance

Students in agricultural education are eligible for the financial assistance made available to all students of The Ohio State University. However, there are three special funds for majors in the department: Agricultural Education Scholarships, Lester B. Harner Scholarships, and the Landmark Agricultural Education Scholarship which provides \$300 to one student for one year.

Unfortunately, the Processed Limestone Association discontinued their scholarship of \$400; however, during the year the Ohio Grain, Feed and Fertilizer Dealers established a scholarship for agricultural education majors which provides \$500 to one student for one year.

In 1971-72 the following undergraduates received scholarships: Harner Scholarships: Tom Rosenbeck, St. Henry; Jeff Johnson, Bellevue; David Moulton, Revenna; Mark Gebhart, Lewisburg; and Doyle Stevens, Norwalk; Landmark Scholarship: Don Breece, Delaware; Agricultural Education Scholarships: Ron DeLong, Van Wert; Roger Greenwalt, Beloit; and Russel Sword, Wellington.

Curriculum and Course Changes

Curriculum changes were made in the program for teacher certification in agriculture to meet the requirements for seven specialties.

Committees were appointed for these specialties and their curriculum proposals, after some revisions, were approved by the joint staff and the State Department of Certification. Occupational competence to the extent of one year of practical experience or six months of directed experience is required for certification. Since 85% of the students seeking certification in the specialty area "production" are farm reared, they have the necessary farm experience and so are not affected by the 1972 certification standards. However, with the other specialties more attention will need to be given in counseling students so that they are assured of having the prerequisite practical experience for certification. During 1972, a committee working with personnel in the Dean's Office began planning programs with students so that they could secure directed work experience including supervision with University credit.

The program for certification in production agriculture was not drastically changed from the years past except that economic entomology or plant pathology were added to the required list and Genetics 140 or 314 encouraged.

The curriculum for agri-business is in the process of revision due primarily to the changes being made in courses in agricultural economics such as the addition of management of small business and record keeping for agri-businesses that were previously secured from courses in the College of Administrative Science. Even though approval was also granted for the curriculum submitted in industrial equipment, agricultural resources, forestry and horticulture, it is very likely that during the coming year revisions are in order for these specialty areas.

Programmed instruction for both Agricultural Education 200 and 230 introduced in 1970-71 and carried on during the past year is being expanded for 1972-73. Micro-teaching utilizing the video-tape machine has been found most helpful in the courses 200 and 230. The machine is also being used extensively in other courses in agricultural education.

During the year Agricultural Education 380.01, 380.02, and 380.03 were lowered to the 200 level and have been approved as 280.01, 280.02, and 280.03. The staff is generally agreed that providing experience early in the undergraduate college career is important and are encouraging students between their freshman-sophomore year as well as between their sophomore-junior and junior-senior years to enroll in 280.01, 280.02, or 280.03. The courses 280.01 and 280.03 give particular emphasis to "September Experience" when high schools are in session and previous to the beginning of the Autumn Quarter at the University. Agricultural Education 230 was moved to 330 since its enrollment consists of juniors and seniors and so should not be on the sophomore and 200 level. Through special consideration of the Dean's Office, Agricultural Education 200 may be scheduled by third quarter freshmen.

The staff recognizes that undergraduate courses are designed to assist students to make a successful entry into teaching but that additional professional preparation is required beyond the Bachelor's Degree if they are to approach optimal proficiency in the field. Thus, it becomes necessary for a teacher to enroll in post-graduate work, hopefully in programs earning the Master's or Ph.D. Degrees. The incentives for graduate work including increases in salary make advanced degrees almost a necessity if a teacher is to continue in the profession. The staff encourages students to be prepared for entry into the Graduate School. Students whose undergraduate grade point hour is below 2.7 are asked to take the Graduate Record Examination so that they might qualify or otherwise learn what they need to do for admission to the Graduate School. During the year 25 graduates from the department were admitted to the Graduate School.

Departmental Field Experience Program

During the past year, 62 students were enrolled for student teaching. They received field experience in 29 cooperating centers in agricultural education and 24 county extension centers as reported in Tables 4 and 5. Twelve more cooperating centers were used for other field experience. Ten undergraduates completed field experience in employment positions, and 65 undergraduates were placed for field experience programs in Agricultural Education 380.01 and 380.03. Two students were placed for special field experience in Extension, Agricultural Education 380.02.

Continued in this year's program in many instances was the innovation of assigning a student teacher to a cooperating school and to an extension center in the same county. Coordination of learning experiences by the extension agent and the agriculture teacher provided the student teacher with timely and worthwhile activities throughout the quarter. Cooperating teachers' and agents' meetings were held at the beginning of the quarter rather than at the end. At these meetings the agents and teachers identified objectives for the quarter and discussed plans for cooperating the total experience program. Final evaluation of the student teacher by the cooperating agent and teacher was accomplished during a visit by University personnel.

Fifty student teachers were placed in 24 cooperating centers for extension experiences as a part of student teaching. Seminars were held to prepare the student teachers for the experiences in which they engaged during their extension field experience. Seminar topics were area extension programs, extension program development, work with

agricultural related agencies, socio-economic aspects related to community educational programs, and relevant issues facing extension in the future.

Visitations by University personnel were made to each of the cooperating school and extension centers and consultations were held with student teachers and the cooperating instructor. Comments by student teachers indicated a very favorable reaction to the instructional

efforts provided by school and extension faculty serving as cooperating instructors. They regarded the extension experience as a part of their overall student teaching and one of the contributing factors to their understanding more about the community and the educational programs therein.

During seminars held concurrently with student teaching attention was given to concerns such as planning for instruction, providing for student occupational experience, the organization of youth leadership programs, organizing post-secondary education, techniques of instruction and the evaluation of teaching and student performance.

Through the continued use of new video equipment, it was possible to have closed circuit TV observation of teaching during a seminar. Student teachers were able to observe and discuss the teaching of a high school class by one of their group, without the intrusion upon the class.

While much benefit is gained from the seminars where student teachers meet and discuss common problems, there is growing need that the number of such meetings be reduced because of the wider placement of trainees to provide experience in the subject area in which they are certified to teach. Beginning, mid-term, and closing seminars may be continued so long as students are able to travel the required distance.

Student teachers were reimbursed ten cents per mile for travel to seminars and farm-home and occupational program visits. They received mileage from agricultural extension for activities during their assignment to a county office. Mileage per student teacher varies depending upon the distance the trainee travels to seminar locations. The placement of student teachers to teach in specialized programs increases the mileage used in attending seminars.

During the 1971-72 year, 50 student teachers drove a total of 15,108 miles in vocational agriculture. The cost was \$1,510.80 with an average of \$30.22 per trainee. A total of 9,342 miles were driven in extension activities at a cost of \$934.20 and an average of \$25.95 per trainee. This is approximately the same as it has been in previous years.

Agricultural Education Society

The undergraduate majors who are members of the Agricultural Education Society plan and conduct with their advisor, Willard Wolf, a program of activities to develop professional competence through experiences that are not generally provided in course work. The program emphasizes the development of competence in leadership by member participation in such roles whether in meetings of the society, committee

functions, or in cooperative undertakings with other students in the University and College.

Members engage in forums and symposiums, conduct social and educational meetings, plan presentations, prepare exhibits, and maintain a decorum and appearance befitting the profession.

The society meets regularly on the second and fourth Tuesdays of the month with meetings starting at 7:00 p.m. and ending about 8:30 p.m. Included is a business session, an educational program, and time for socializing and refreshments.

The society sponsors a steak fry, a faculty-student get together, a Christmas party with students at the Columbus State Institute (school for mentally retarded) during the Autumn Quarter; a banquet, exchange with an Agricultural Education Society (Vermont and Penn State in 1972) during the Winter Quarter; a recruitment luncheon, a lunchstand to feed 2,000 plus FFA members attending the State Judging Contests, and a leadership training weekend at Camp Muskingum during the Spring Quarter. This year instead of the usual recruitment luncheon, members made trips to the officer training meetings in each district and gave slide presentations and talks on recruitment.

The society members prepare a printed yearly program of activities including roster of officers, officer and faculty editorials, calendar of events, monthly activities, duties and responsibilities of officers, goals with ways and means for eight major activities, budget, and constitution. A scrapbook is maintained and kept in the departmental reception room. The society prepares a quarterly publication "The Townshend Educator" featuring major articles associated with the profession, current issues and problems, timely announcements, reports of society activities, and personal items.

Conflicts with class sessions, work schedules, and other curricular and extra-curricular activities affect member participation in the program of the society. However, compared with other departmental organizations, the AES is recognized as doing well. The attendance at the regular meetings this past year ranged from 20 to 100. The banquet and steak fry each attracted in excess of 200 including 100 members. The bi-monthly executive meetings held on the first and third Tuesday of each month usually have 15 or more in attendance.

Students in agricultural education regard the activities of the society as worthwhile. They conduct their activities in a professional manner. Their performance and participation indicate their regard for this part of their professional pre-service education.

This year, for the first time, girls were permitted to become members of the society.

Placement

A total of 64 students were certified to teach vocational agriculture. Of this number, 51 were regularly qualified with the remainder being graduates of other departments or returning for special training. Of the 64 certified, 40 were placed as teachers of vocational agriculture, 1 in Extension, and 3 continued in their educational pursuits through the Graduate School. As may be noted in Table 6, 20 were classified in other related fields in education and agriculture or inducted into the service.

Graduate Program

A total of 265 students participated in the programs beyond the Bachelor's Degree provided by the Department of Agricultural Education.

Many of these students were pursuing the Master's Degree. As observed in Table 7 the group was comprised of 155 teachers of agriculture, 34 Extension persons and 76 others. Students from 12 states and Taiwan were enrolled in the graduate program in addition to those from Ohio. The enrollment data as reported by the Graduate School for the four quarters are reported in Table 8.

TABLE 8
GRADUATE SCHOOL ENROLLMENT IN AGRICULTURAL EDUCATION
AS REPORTED BY GRADUATE SCHOOL

Quarter	Masters	Ph.D.*	Total
Summer, 1971	74	37	111
Autumn, 1971	29	26	55
Winter, 1972	35	29	64
Spring, 1972	54	29	83

*Board of Regents Classification: the rank is Ph.D. if the student holds a Master's Degree or has earned more than 50 hours of graduate credit.

During the year 30 Master's Degrees and 17 Ph.D. Degrees were awarded. Compared to last year, this represents a significant increase in the Master's Degree program; however, there were two less than the record number of Ph.D.'s in the year previous.

Departmental offerings on campus included Agricultural Education 622, 641, 795.01, 795.03, 795.05, 810 and 811 in the Autumn Quarter. During the Winter Quarter the graduate offerings included Agricultural Education 631, 794, 795.06, 823 and 885. Spring Quarter courses were 640, 641, 642, 770, 795.03 and 886. During each quarter special problems and research were available. Separate sections in 811 and 823 were conducted for extension personnel.

The off-campus offerings during the year for teachers included Agricultural Education 744, Practicum in Teaching Farm Business Planning; Agricultural Education 622, Continuing Education in Agriculture; Agricultural Education 642, Youth Organizations; Agricultural Education 743, Practicum in Teaching Agricultural Mechanics; and Agricultural Education 640, Instructional Media in Teaching Agriculture. The courses in adult education, occupational experience and youth organizations were extended beyond the quarter. For example, adult education and occupational experience courses were started during the autumn quarter but were not completed until early in the spring quarter. This was done to accommodate the teacher of agriculture in not having so many meetings concentrated within a quarter. Also it was able to adapt the course offerings more nearly to the developments in the department.

Agricultural Education 795.03, Leadership Development, was conducted for extension agents and teachers in the Washington Court House area

during the Autumn Quarter. Another special program for 30 extension agents was available for a three week period in September. The course offerings included Agricultural Education 795.06, Communications and Agricultural Education 794, Camp Program Development.

A total of 176 teachers of vocational agriculture participated in this year's courses and workshops which were conducted during the last three weeks in June. Areas of special courses included agronomy - crop production, animal breeding and genetics, agricultural mechanics, pollution control, and environmental studies. Agricultural education offerings were teaching materials, methods, curriculum planning, research methods, farm business planning and analysis, agricultural business and supplies and horticulture. Four intern programs for agribusiness, agricultural equipment, agricultural resources and horticulture were provided.

Dr. Charles Drawbaugh, Chairman of the Department of Vocational Education at Rutgers University was the graduate lecturer during the spring quarter. He spoke to approximately 50 graduate students and faculty concerning "Adapting of the Program of Vocational Agriculture to an Industrial State."

A number of brown bagger luncheons for graduate students and faculty were planned by the graduate students. These luncheons were informal in nature and featured for the most part a particular state or country reported by a graduate student. Also there were some brown baggers of graduate students with their advisor. A reception for all graduate students and wives was again held during the early part of the autumn quarter.

Research

A new course on Analysis and Interpretation of Data (Agricultural Education 887) was developed and approved. The course which resulted from a graduate seminar offered the past two years will be offered for the first time during the autumn quarter, 1972. The course is designed for Ph.D. candidates who have completed at least one year of graduate study, including at least one course in statistics. The course deals with the application and interpretation of statistical techniques, including the use of the computer, to research in vocational-technical and extension education. Warmbrod and Cunningham will teach the course.

The study of currently enrolled students and graduates of post-secondary technical agriculture programs in Ohio was continued during the year. This OARDC funded project is directed by Bender; James Cummins is the graduate research associate assigned to the project. The following report of the project was issued during the year:

Cummins, James E. and Ralph E. Bender. "Agricultural Technician Education in Ohio -- 1970-71." April 1972.

The research phase of the project on "Development and Dissemination of Courses of Study and Instructional Materials for Environmental Science and Protection Programs" was completed during 1971-72. Ridenour directs the project which is funded by the Ohio Department of Education. Warmbrod was the consultant for the research phase of the project which was designed to identify and estimate manpower needs in environmental protection occupations and to determine the competencies required for entry into these occupations. Graduate research associates completing the research phase of the project were John Hillison, David Howell, and William Farrington. The research phase of the project is reported in the following publications:

William S. Farrington and J. Robert Warmbrod. "Manpower Needs in Environmental Management Occupations in Industrial Firms in Ohio." June 1972.

John H. Hillison and J. Robert Warmbrod. "Manpower Needs in Environmental Management." July 1972.

The research project "The Influence of Instruction in Agriculture in Grades 9 and 10 on Students' Subsequent Educational and Occupational Performance" was begun during 1971-72. The project is staffed by a graduate research associate position supported by funds allocated to the Department by the Agricultural Education Service, Ohio Department of Education. Arthur Neavill is the research associate assigned to the project; Warmbrod directs the project. The first year of the project was devoted to the development of instruments and techniques for conducting a criterion-referenced assessment of ninth- and tenth-grade instructional programs in agriculture. Another graduate research associate position supported by funds allocated to the Department by the Agricultural Education Service of the Ohio Department of Education was used to staff the project on "Follow-Up of Graduates of Vocational Horticulture Programs in Ohio." Kenneth Parker is the research associate assigned to the project. Woodin directed the project.

During 1971-72, the following publications, in addition to those listed previously, were issued in the Department's "Research Series in Agricultural Education."

Iverson, Maynard J. and Ralph E. Bender. "Guidelines for the Development of Student Organizations Associated with Agricultural Programs at Two-Year, Post-Secondary Educational Institutions in the United States." August 1971.

Miller, James R. and Robert W. McCormick. "A Theoretical Model to Improve the Extension Education Outreach of The Ohio State University; Utilizing Marketing, Behavioral, Business, Management, and Systems Concepts." January 1972.

Noland, Warren G. and Ralph J. Woodin. "Migration Patterns of Vocational Agriculture Graduates in Ohio." July 1971.

Steele, Doris H. and Clarence J. Cunningham. "Opinion Leadership in Family Living Among Low Income Homemakers in the Expanded Nutrition Program in Ohio." April 1972.

Welton, Richard F. and Ralph E. Bender. "Relationship of Student Characteristics and Program Policies to Participation in FFA." July 1971.

Guiler, Warmbrod, Wilson, and Woodin and several graduate students attended the Central Region Research Conference in Agricultural Education held at Purdue University, August 1971. Warmbrod attended an American Educational Research Association Training Session on "Applied Linear Regression Analysis in Educational Research" held at the University of Chicago, April 1972. During 1971-72 Warmbrod served as Chairman of the Special Interest Group on Vocational-Technical Education of the American Educational Research Association.

The Department's 1973-75 and 1975-77 Biennial Plans developed during the year include a program improvement project titled "Agricultural Education Research and Development Program." The major goals of the proposed program improvement are (a) the establishment of a research program in agricultural education (vocational-technical and extension education) that is supported by College and Ohio Agricultural Research and Development Center funds, (b) the establishment of a Department of Agricultural Education in the Ohio Agricultural Research and Development Center, and (c) the further improvement of the graduate program in research methodology offered by the Department. The proposal requests additional faculty and graduate research associate positions for persons who will plan and conduct research, prepare proposals for research to be funded from sources outside the University, and direct research conducted by M.S. and Ph.D. candidates.

Faculty members directed 17 Ph.D. dissertations and 2 M.S. theses which were completed in 1971-72. Faculty members are currently supervising 28 Ph.D. dissertations that are in progress.

In-Service Education Program for New Teachers

An in-service educational program for 83 new teachers of vocational agriculture was coordinated by the teacher education department in cooperation with the state supervisors of vocational agriculture. The purpose of the program was to further develop the competencies needed by teachers to plan, conduct, and evaluate their total program of vocational agriculture in local communities.

The program consisted of over 70 clock hours of workshops, small group seminars, and individual consultation which was planned and conducted by Guiler, Starling and the district supervisors. An orientation program was held at the annual teachers conference. A five day workshop was conducted at the FFA Camp Muskingum on the module system to which the teachers were assigned to sessions concerning their needs. The time was largely devoted to curriculum planning, classroom teaching techniques, reports, policies, procedures, evaluation and teacher responsibilities. Every teacher had the opportunity of giving a demonstration of classroom teaching on video tape and having it evaluated by other teachers.

A three-day seminar was conducted December 27, 28, and 29 for all new teachers at The Ohio State University in the Agricultural Administration Auditorium. The purpose of this workshop was to evaluate progress, improve plans for curriculum, identify problems, and share experiences by taxonomy areas with assistance from the state supervisors of agricultural education. In addition, each new teacher was observed during the school year by teacher educators and assistant supervisors or the local supervisor in the joint vocational school.

Vocational agriculture is becoming more diversified as indicated by the number of new teachers employed in specialized areas reported in Table 9.

There were 51 teachers who were trained in Ohio along with three from a state other than Ohio employed before the school doors opened in September. Twenty-one teachers were employed from industry to fill the vacancies in several specialized areas of teaching such as horticulture, agricultural equipment and mechanics, and agricultural business. Eight student teachers graduating at the end of the autumn quarter 1971 were

on special placement (temporary certificate) due to the shortage of personnel.

A role perception-expectation study initiated in 1965 by Guiler was continued through 1971-72 with all new and returning teachers helping the Department of Agricultural Education assess the relative effectiveness of the internship program afforded teachers during their first year of employment.

A brief outline of the program is as follows:

DATE	ACTIVITY AND PURPOSE	LOCATION
July 12-13-14	Introduction of new teachers to Annual Teacher's Conference and review of In-service program	Scot's Inn, 4800 Sinclair Road, Columbus, Ohio
August 16-20	Five day workshop for all new teachers certified and non-certified - Curriculum Planning	Camp Muskingum Leesville Lake
September	1/2 Day Seminar for all new teachers - classroom management	Small group meetings in schools by geographical areas
October	Individual school visits - Occup. Exp., Classroom and shop problems	In local schools
November	1/2 Day Seminar-Teaching Methods Classroom Problems Occupational Experiences	Small group meetings in schools by geographical areas
December 27-28-29	Three Day Workshop Curriculum Adjustments and Problems concerning the total program for all taxonomies	Agr. Adm. Bldg. Aud. O.S.U.
January	Individual Visits - Agricultural Mechanics - Youth Organization	In local schools
February	1/2 Day Seminar Agricultural Mechanics	Small group meetings in area schools
March	Individual teacher visits Teaching Methods and Individual Improving Programs	In local schools
April	Individual Teacher visits Inventories - Individual Evaluation	In local schools
May	1/2 Day Seminar-Year End Closing School Year-Evaluation Outline for Summer	Small group meetings in area schools
May	Evaluation and Summary of New Teacher Program	

In addition to these activities the teachers were encouraged to participate in off-campus courses as indicated in the graduate education section of this report.

TABLE 9
NUMBER OF NEW AND RETURNING OHIO TEACHERS
AS SHOWN BY AREA OF SPECIALIZATION DURING PAST THREE YEARS
1969-72

Area of Specialization	Number of New Teachers		
	1969-70	1970-71	1971-72
Production Agriculture 0100	45	47	48
Agricultural Business and Supplies 0200	2	3	7
Agricultural-Industrial Equipment and Service 0300	6	7	8
Ornamental Horticulture 0500	15	12	10
Farm Business Planning and Analysis 9900	3	0	3
Agricultural Resources and Environmental Science	0	3	5
Agricultural Work Experience (AWE) 9900	12	3	2
TOTAL	84	75	83

An evaluation of new and returning teachers of vocational agriculture was made by school administrators at mid-year and at the end of the school year. These data were used for basis of individual teacher counseling and to further enhance the total in-service education program.

**In-Service Education for All Teachers
of Vocational Agriculture**

The in-service education program which is a cooperative effort between the supervisory staff, State Department of Education, and the teacher education staff was designed to further develop competency in teaching vocational agriculture. This program during the past year was coordinated by Welch Barnett and Gilbert Guiler.

A total of 332 teachers participated in 14 non-credit, in-service workshops held throughout the state. These programs were planned and conducted primarily by resource personnel under the guidance of Welch Barnett and other supervisors.

**Summer Workshops
Non-Credit, In-Service
July 1, 1971 - June 30, 1972**

<u>Title</u>	<u>Attendance</u>	<u>Dates</u>	<u>Location</u>

International Education

The Department is represented on the International Agricultural Advisory Committee for the College of Agriculture and Home Economics, Ohio Agricultural Research and Development Center and the Ohio Cooperative Extension Service by Leon W. Boucher. Committee action supported the College Peace Corps for Tunisia Seminar, student study abroad and scheduled seminars in cooperation with various academic units.

The Department helped recruit students and young farmers for the Peace Corps Intern program for Tunisia. Regular Peace Corps personnel were recruited from the vocational agricultural teachers ranks. Mr. and Mrs. Dan Humphrey will be on contract in Sierra Leone Africa for two years. Dan taught at Patrick Henry High School.

Barry Glaz, a junior in agricultural education completed a year's study at Punjab Agricultural University at Ludhiana, India and returned to Ohio State University in May, 1972. This was in cooperation with the student exchange program between our College of Agriculture and the Punjab Agricultural University in India. A program of studies was identified and approved by both institutions before the student left for foreign study. All credits are accepted by the home institution permitting the student to graduate according to his normal schedule.

Omkar Nath Kunzru of India received his Ph.D. degree in agricultural education. His dissertation related to "Role of the Area Extension Agents in Program Development as Perceived by Selected Extension Personnel." Omkar Singh Rathore of Pakistan received his Ph.D. in agricultural education with a dissertation topic "Adoption of Extension Innovations Among Selected Personnel in the Ohio Cooperative Extension Service."

Six other foreign nationals continued educational programs in the department. They were: Sumita Roy, Rajeswari Venkatraman, Kwado Opare and Jabar Singh of India; Ted Lee of Korea; and Nasrullah Hashemi of Afghanistan.

Arthur Deisher, an agricultural education major, participated in the International Farm Youth Exchange Program by living with participating families in England. Several of the agricultural education graduates are serving in Peace Corps positions in Viet Nam, India, South America, Africa, Samoa, and British Guiana.

The Department cooperates with the International Affairs Office of the College in hosting visitors from foreign countries. Visits to secondary schools and area vocational schools are arranged upon request and need of the foreign participants.

Curriculum Materials Service

The Ohio Agricultural Education Curriculum Materials Service is a cooperative activity sponsored by the Agricultural Education Service, State Department of Education, and the Department of Agricultural Education. The purpose of the Service is the improvement of instruction in local agricultural education programs. The activities of the Service are under the direction of Harlan E. Ridenour.

An advisory group composed of local agricultural education teachers and representatives of the supervisory and teacher education staffs served to assist the Service in establishing priorities for developmental projects. When needed, special advisory groups in specific program areas, composed of experienced teachers, staff members, and representatives from industry and government, are assembled to assist the Service with specific developmental projects.

The Curriculum Materials Service assists in the identification of instructional materials needs. A search from all known available sources is then made to identify available materials. Such materials are evaluated by the Service with the assistance of selected teachers and program area specialists. These available materials suitable for use in Ohio programs are then cataloged and made available to Ohio teachers through the Curriculum Materials Service. A total of 583 such items were made available to Ohio teachers. An additional 90 items, available from commercial sources, were listed which teachers could order directly from the source.

In those areas in which suitable instructional materials are not available, the Curriculum Materials Service prepares those items which support the curricula of Ohio teachers. The 1972 catalog lists 129 such items.

The materials published by the Ohio Agricultural Education Service during the 1971-72 fiscal year were as follows:

Manuals

Trees for Landscaping, Identification, Culture, Use (Revision)
Shrubs for Landscaping, Identification, Culture, Use (Revision)
Some Common Types of Insects
Membership - The Pathway to Leadership
Introduction to Environmental Protection
Money Management
Vocational Horticulture Record
The Garden Center Worker
Trends in Agriculture. A publication for each of the 88 Ohio
counties based upon census data.
Ups and Downs - The Basic Principles of Ladder Safety
Ladder Safety Test
Curriculum for Agricultural Education (22" x 22" chart)
Agricultural Education Student Progress (17" x 28" chart)
Opportunities in Agricultural Occupations (Student Manual)
Opportunities in Agricultural Occupations (Teacher's Guide)
Human Relations in Business (Student Manual)
Human Relations in Business (Teacher's Guide)
Advertising and Promotion (Student Manual)
Advertising and Promotion (Teacher's Guide)
Marketing Agricultural Products (Student Manual)
Marketing Agricultural Products (Teacher's Guide)
Business Money Management (Student Manual)
Business Money Management (Teacher's Guide)
Selling and Salesmanship (Student Manual)
Selling and Salesmanship (Teacher's Guide)
Business Procedures and Records (Student Manual)
Business Procedures and Records (Teacher's Guide)
Keeping Your Records Straight (AWE 5)
Budgeting and Spending (AWE 6)
Getting Started on Your Job (AWE 7)
Taking Care of Yourself (AWE 8)
Instructional Units on Agricultural Marketing
A Teacher's Guide to Farm Money Management
Farm Records - A Management Tool
Farm Accounting Problem (Student Manual)
Farm Accounting Problem (Teacher's Manual)
Agricultural Chemicals (Major Revision)
Conservation Aide
 I. Soil and Water Conservation
 II. Defining Soils and Watersheds
 III. What Are the Responsibilities of a Soil and Water District
 Employee
 IV. Surveying
 V. Engineering Conservation Structure and Practices

Slide Series

Tillage Systems for Corn (70 color slides)
Poinsettia (43 color slides)
Soil and Its Properties (65 color slides)
Shrubs for Landscaping

Transparencies

Interpretation of Farm Business Analysis

Materials Currently Under Development

Occupational Opportunities in Environmental Management
Curriculum Guide and Instructional Materials for Environmental
Protection Occupations
Electrification Unit
AWE 9 - Insurance
AWE 10 - Holding Your Job
Insect, Tick, and Mite Pests of Livestock and Pets (Under final editing)
Insect Pests of Field Crops and Stored Grains
Pesticides
Feeds (Major Revision)
Viburnum - Color slide series (final stages)
Series of approximately eight manuals dealing with the cooperative
way of doing business. (Five manuals in 1st and 2nd draft stage)
Turf Management (Final editing and layout)
Some Identifying Characteristics of Seeds Common in Midwest (Major
Revision)
Fork Lift Safety
Safety with Jacks and Hoists
Seed Production of Corn, Soybeans, and Small Grain - Color slide
series (Now being printed)
The Inside Story of Madam Brood Sow - color slide series (Now being
printed)
Flowering Shrubs - Color slide series (Now being printed)
Trees for Landscaping - Color slide series (Under development)
Business Procedures for a Landscape Service Organization (Final
printing)
Balers

Materials from a variety of sources w .. distributed through the
Curriculum Materials Service --
Film and Video Tape Catalog -- Cooperative Extension Service
Ohio Agricultural Education News -- Department of Agricultural
Education
Soil Conservation District News -- SCS
Ohio Herd Development Observer -- Department of Dairy Science,
The Ohio State University

The Ohio Future Farmer -- Ohio FFA Association
Ohio Young Farmer -- Young Farmer Association

The Curriculum Materials Service is a member of the American Association for Vocational Instructional Materials. The Director for the Ohio Service serves as a member and Vice President for the American Association Board of Directors. As a result of the participation, a total of 21 publications, four film strips, nine color slide series, and six transparency sets are available to Ohio teachers through the Ohio Service. The Service issues three catalogs as follows:

Ohio Curriculum Materials -- Listing materials developed and produced by the Ohio Service

Curriculum Materials -- Which lists materials which are purchased from other sources for resale to Ohio teachers.

AAVIM Teaching Aids -- Which lists the materials produced by the American Association for Vocational Instructional Materials.

Materials developed and produced by the Ohio Agricultural Education Curriculum Materials Service have been distributed to schools, farmers, and industry on a national basis.

Special Grants

A research and development project to identify environmental protection occupations was completed as of July 1, 1972. Occupations in the area of environmental protection were identified. Those appropriate for inclusion in vocational education programs were selected. Task analysis was conducted on the selected occupations. The follow-up stage will be the development of curriculum and supporting instructional materials. (\$34,900.00)

Career Education in Agribusiness, Natural Resources and Environmental Improvement. A United States Office of Education project to develop curriculum guides in the following areas:

K - 6th grade	Awareness
7 - 8th grade	Orientation
9 - 12th grade	Exploration
11 - 12th grade	Preparation

Roger D. Roediger is Director of the Project which runs from June 15, 1972 to June 15, 1974. (\$260,000.00)

Martha Holden Jennings and Ohio Farmer Cooperative Project. A project funded by the Foundation, the Ohio Council of Farmer Cooperatives, and the Ohio Agricultural Education Curriculum Materials Service. Materials are

being developed which deal with the cooperative way of doing business. Separate units are being planned for rural and urban students. Dr. J. H. Lintner is developing the materials. (\$20,000.00)

Ohio Farm and Home Electrification Council is funding the development of materials for farm and home electrification. Roger D. Roediger is coordinating the project. (\$1500.00)

Farm Business Planning and Analysis

Approximately 750 farm operators received instruction in Farm Business Planning and Analysis through programs conducted by Ohio teachers of vocational agriculture during the past year. This instruction was provided by ten full-time and four part-time adult instructors as well as 43 regular high school teachers who provided instruction for 4 to 6 couples beyond the contractual day.

A summary of farms which was submitted for computer analysis showed an average capital investment of \$100,000 per farm so this instructional program had an influence on farm business investments of over \$74 million.

In-service training in Farm Business Planning and Analysis and related areas was provided by John Starling in cooperation with staff members in the Department of Agricultural Economics and the Cooperative Extension Service. This training included: (1) an off-campus class held during the Autumn Quarter at the Lima Campus of The Ohio State University in which sixteen teachers and one banker were enrolled; (2) a summer workshop which was conducted on a half-day basis for a period of 12 days in which 18 teachers were enrolled; (3) a two day non-credit seminar held in Belmont County in which fourteen eastern Ohio teachers and two county agents from Switzerland participated; and (4) small group meetings held at various locations throughout Ohio which were attended by 67 different teachers.

In addition to in-service training for teachers of vocational agriculture a series of 15 two-hour sessions was conducted during the Winter Quarter for 17 branch managers of the National City Bank in Marion County.

The following instructional materials were prepared for teacher use:

"Farm Records a Management Tool," 85 pages;

"Farm Money Management," 68 pages; and

"Unit Budgets for Major Livestock and Crop Enterprises," 60 pages.

Certification for Local Supervisory Positions

During the year the department cooperated with the Division of Vocational Education of the State Department in proposing a program to certify teachers and others interested in becoming local supervisors of vocational agriculture. According to the state standards, it is necessary for a person to have 27 months of successful experience in vocational agriculture and the completion of at least 15 quarter hours beyond the Bachelor's degree. The 15 quarter hours were identified as follows:

Six hours of required courses:

Agricultural Education 811, Administration and Supervision, 3 hours
Agricultural Education 621, Curriculum Development, 3 hours

Nine hours to be selected from the following:

641, Occupational Experience in Agricultural Education, 3 hours
684.10, Internship in Agricultural Education, 3 or 5 hours
693, Individual Studies, 2 or 3 hours
770, Evaluation, 3 hours
790.21, Workshop for Supervisors, 3-5 hours
885, Research Methods, 3 hours

Other desirable electives for the prospective supervisor include:

622, Continuing Education in Agriculture 3 hours
631, Methods in Teaching Agriculture 3 hours
642, Youth Organizations in Agriculture 3 hours
795.03, Seminar in Leadership Development 1-3 hours
795.06, Seminar in Communication 1-3 hours
810, Principles of Vocational-Technical Education 3 hours
823, Program Planning and Development 3 hours

Public Information

Every faculty member of the department contributed to a public information program on agricultural education. Warmbrod is consulting editor of The Agricultural Education Magazine. Bender prepared ten issues of "TEACH," a newsletter for staff members and graduate students. Boucher edited "Ohio Agricultural Education News," which is published quarterly and distributed to all teachers in the state as well as leaders in other states. A total of 983 copies of the publication is mailed quarterly.

Members of the staff have had articles published during the past year in the American Vocational Journal, the Agricultural Education Magazine, the Ohio Vocational Reporter, the National Future Farmer, the

Ohio Farmer, and the Journal of American Association of Teacher Educators in Agriculture. The staff assisted the Ohio Vocational Agriculture Teachers Association and the state supervisors in publicizing vocational agriculture activities at the Ohio FFA Convention, the Ohio Young Farmer Convention, the Ohio State Junior Fair, the Annual Teachers Conference, and the Farm Science Review.

Other public information activities included Guiler's service as Membership Secretary of the Ohio Vocational Association and Boucher's service as a member of the American Vocational Association Public Information Committee. Numerous items have been published in University channels such as the faculty staff bulletin, the blue sheet and the faculty information service. Majors in the Department of Agricultural Education have served as a speakers bureau for local high schools emphasizing teaching agriculture as a career.

Facilities

The Department is provided 13 offices, 5 secretarial stations, one conference room, three rooms for 30 plus graduate students, two readily available classrooms, and such others as needed in the Agricultural Administration Building.

Finances for the year limited the additions to facilities to the following: drapes in Room 208, table and four chairs, upholstering 16 chairs, two filing cabinets, and refinishing one desk.

Space for staff and storage is urgently needed. The lack of air conditioning is affecting staff efficiency. Considering the work load of the staff in the Department during the summer months, it seems most essential that provisions be made to secure air conditioning. At the time of preparing this report plans were underway to install six window units.

Long range plans call for a new construction south of the Agricultural Administration Building and Stadium Drive to house the Department of Agricultural Education as well as the other departments of vocational education on the campus, the Agricultural Library, and a Teaching-Learning Center for the College. The target date for the project has not been determined.

The preliminary planning for the vocational-technical facilities is being done by representatives of the various vocational services including Wolf from agricultural education. The first report was presented in June 1971. It gave the historical background, functions, uniqueness, impact, service areas, priorities, minimum number and room sizes, number of offices and rooms, office size, room area requirements, room specialization, and faculty locations.

The final report was presented to Deans Roy M. Kottman and Luvern Cunningham in June, 1972.

Alumni Association

At the annual meeting of the College Alumni Association held on March 25 at the Center for Tomorrow, James Dougan, as recommended by the Department, was awarded a Distinguished Alumni Award. There was no special meeting of the Alumni Association for the Department during the year. However, the Executive Committee did meet to set up preliminary objectives for the annual meeting during 1972-73.

Biennial Plans - 1973-75 and 1975-77

The Department of Agricultural Education proposed the following program improvements and new programs to the College of Agriculture and Home Economics to be initiated and developed during the 1973-77 period. The various programs and a brief analysis of their scope beginning in 1973 are as follows.

1. Air Conditioning New Program

The offices and special classrooms of the Agricultural Education Department should be air conditioned. This facility will result in more efficiency on the part of the total staff. Air conditioning is particularly needed because of the amount of activity and work during the summer quarter. It is estimated that such a program would cost \$60,000 if central air conditioning is installed. If window units are used, the cost is estimated at \$10,000.

2. Research and Development Program Improvement

The major purpose of this program is to further expand and develop the program of research in the department. The establishment of a research department, including both vocational-technical and extension education, as an integral part of the Ohio Agricultural Research and Development Center as identified in the long-range plans of the College is proposed. The request calls for an additional faculty member, a research associate, and a part-time secretary to begin July 1, 1973. Priority emphasis of the research includes development and assessment of the use and effectiveness of learning resources and new instructional media; estimation of employment opportunities in occupations requiring knowledge and skill in agriculture; evaluation of educational programs in local and area schools, post-secondary technical institutes, and extension programs; and the establishment, conduct, and appraisal of pilot programs in vocational and extension education. The estimated cost of this program is \$23,800, one-half of which is to be provided by OARDC.

3. Individualized Instruction New Program

This program emphasizes improvement of instruction through the

initiation, demonstration, and experimental use of individualized instruction procedures and techniques. Attention will be focused on individual differences and varied needs of students in complementing and supplementing regular classroom instruction. It is anticipated that instructional units will be located in the Agriculture Library.

Present faculty can initiate and design the program; however, a full-time visual-graphic artist is needed. This person is to develop differentiated learning materials and instructional aids as well as operate and maintain audio visual equipment. A research associate is also essential to help students make the most effective use of the materials and equipment. It is estimated that costs beginning July 1, 1973 would be \$17,400.

4. Visual Communications Course New Program

The Curriculum Committee of the College of Agriculture and Home Economics suggested the offering of a new course "Visual Communications in Agriculture." The department is proposing that such a course be offered beginning the autumn quarter 1973. It is anticipated that at least 150 students would be enrolled during the three academic quarters. A new staff member is needed to begin the development of this course and align appropriate presentation aids. The estimated cost of the new staff member, supplies, travel, and equipment amounts to \$20,650.

5. Preparation of Specialized Personnel New Program

This proposal includes three segments: (a) undergraduate internship in agricultural occupations; (b) preparation of area school supervisors in agriculture; and (c) improved preparation of teachers for vocational horticulture.

To qualify for the new certification standards it is necessary for all prospective teachers to have at least one year of occupational experience. The University should help provide and supervise this experience in selected business establishments and agencies throughout the state. This experience should be individually planned and supervised in order for it to be more meaningful. It is proposed to secure selected teachers of vocational agriculture to assist in providing some of the on-site visitations.

Due to rapid expansion of vocational education in agriculture, it is anticipated there will be a need for preparation of 35 supervisors in addition to 20 who are presently serving as local supervisors of agriculture. A part-time staff member is needed to develop this pre-service and in-service program that will meet state certification standards as well as make the program more effective.

About 100 teachers of vocational horticulture will be working in Ohio schools in 1972. These teachers need special in-service education

and more assistance is needed in the preparation of future teachers of vocational horticulture. A one-half time faculty member employed in cooperation with the Department of Horticulture could provide the teaching and other in-service education.

These three programs necessitate 1.12 FTE staff, 1.25 secretaries, and one research associate. The total cost as of July 1, 1973 is \$33,925 including \$5,000 for travel which would be provided from State Department funds.

6. Youth Development Program Improvement

This program consists of preparation of professional youth workers who have a responsibility for the development of youth education programs primarily outside the public schools. The major emphasis will be for the development of competence to work with the 4-H club program. Youth workers in other non-governmental youth programs might also be engaged in such a program. Additional part-time faculty members are needed to support one additional undergraduate course and four graduate level courses designed specifically for youth personnel. The graduate courses include (1) Development of Youth Education Programs, (2) Camp Program Development and Administration, (3) Volunteers in Development of Youth Education, and (4) Administration of Youth Education Programs. This program can be initiated in 1973 with the addition of a .4 FTE faculty member and a part-time secretary necessitating a total cost of \$7,825.

7. Curriculum Development and Instructional
Materials Program Improvement

The department is interested in further expansion and improvement of curriculum and instructional materials as a service to teachers of vocational agriculture. This service includes the curriculum development for the specialized programs in vocational agriculture, their evaluation, and dissemination. Non-credit, in-service programs should be developed with the teachers as well as conducting research including pilot and demonstration programs. This expanded program starting in 1973 necessitates a new staff member, two secretaries, three graduate associates, and two persons on wages. Cost is estimated at \$87,500. Of this amount, \$78,000 would be available from outside sources including earnings of the service and contributions from the State Department of Education.

8. Preparing Personnel for Agricultural Technician
Education Programs New Program

This is an effort to provide leadership in developing and conducting educational programs to prepare teachers and other personnel for service in institutions where agricultural technicians are being trained. This includes in-service education to persons presently engaged in such programs as well as a long-range, continuing, pre-service program. It

is assumed that this program will be initiated July 1, 1972 if Dr. Halterman's salary is provided through funds in technical education. The salary and position in the department then would be used to employ the person to head up this phase of the program. If this is not realized, it is proposed that the program be initiated as of July 1, 1973. In addition to the faculty member, a part-time secretary and one research associate are needed. The costs of the program are estimated at \$27,400.

GARTNER, ALAN;RIESSMAN, FRANK
THE TRANSFORMATION OF TRAINING. NEW KINDS OF
CONSUMER-BASED SERVICES REQUIRE NEW KINDS OF
TRAINING--BASED ON PARTICIPATORY SIMULATION.

NEW CAREERS DEVELOPMENT CENTER, NEW YORK,
N.Y.

MF AVAILABLE IN VT-ERIC SET.

PUB DATE - OCT71 23P.

DESCRIPTORS - *SIMULATION; TRAINERS; SKILL
DEVELOPMENT; *TRAINING TECHNIQUES; *HUMAN
SERVICES; PARTICIPATION; TRAINING;
*PARTICIPANT INVOLVEMENT

ABSTRACT - HUMAN SERVICES IN THE PAST HAVE
GENERALLY BEEN INSENSITIVE AND NON-RESPONSIVE
TO THE NEEDS OF THE CONSUMER; SERVICE HAS
BEEN MORE DETERMINED BY THE SERVICE GIVER
WITH VERY LITTLE CONCERN GIVEN THE GENERAL
PUBLIC. EFFORTS ARE NOW BEING MADE TO CHANGE
THE PREVAILING ATTITUDE. HOWEVER, THIS CAN BE
DONE ONLY IF THE MODE OF TRAINING IS CHANGED
FROM THE BROAD-SCOPED, DIFFUSE, INDIRECT, AND
TIME-CONSUMING OPERATION THAT IT NOW IS TO A
MORE NARROW SKILL-CENTERED EFFORT WHICH
ALLOWS FOR PARTICIPATION. PRESENTED IN THIS
DOCUMENT IS A PARTIALLY DEVELOPED SIMULATION
TRAINING MODEL WHOSE CURRICULUM IS BASED UPON
THE TASK ANALYSIS OF THE TRAINEES' NEEDS, AND
A JOB DESCRIPTION OF WHAT THE NEW WORK WILL
BE LIKE RATHER THAN SIMPLY AN IMITATION OF
WHAT THE EXISTING PROFESSIONAL DOES OR DOES
NOT DO. IN SO DOING, HE (THE TRAINEE) IS
HIMSELF BEING TRAINED AS A TRAINER. CHARACTER
AND SENSITIVITY ARE THUS DEVELOPED THROUGH
PARTICIPATION. (AUTHOR/SN)

VT017845

There is considerable new concern that the human services in America become more efficient and sensitive, less determined by the service giver and more accountable and responsive to the consumer. If this is to take place, the training of the service worker will have to be radically transformed. At the present time, most such training is not sharply pinpointed in relation to the specific skills required to perform services such as teaching--rather, broad education is stressed and the training is essentially diffuse, indirect, and prolonged. Furthermore, neither the content, form, nor style of the training reflects adequately the new service styles nor are they preparatory for it or derivative from it.

A comparison of the training of two other kinds of workers--plumbers and airplane pilots--provides clues regarding what a positive training model might look like.

Plumbers vs. Pilots

It takes four years to train a plumber but only 18 months to train an airplane pilot. If one looks at the training designs in the two areas, one can readily see why. Plumbers are generally trained in an apprenticeship model which unnecessarily stretched out the training process. Airplane pilots, by contrast, learn to fly essentially by the use of simulators, such as the Link Trainer. The Link Trainer is essentially a cockpit on the ground. The trainee climbs into the

hooded cockpit and various problems are radioed to him in sequences of ever-increasing difficulty. He, in turn, attempts to handle them and receives feedback on his performance. As he masters each problem, he gains valuable skills which are tested in the next stage.*

The airplane pilot is trained in a carefully phased sequence using simulated exercises, directed toward training him for highly specific skills. His training is directed by experienced trainers, and there is a phased relationship between the simulational dimension and later in-flight training.

By contrast, the apprentice model permits an inexperienced trainer, who happens to be an able plumber, to train the novice entirely on the job. Not only is the plumber untrained as a trainer, but he actually has a job to do which, in many ways, interferes with and prolongs the training he is to give the apprentice. Furthermore, the particular job that he does on any day is not sequenced so that the trainee will learn the necessary skills in any particular order; rather, the apprentice sees and hopefully learns those dimensions of the job that are relevant to the performance of the work that the plumber is doing on any one day. Ultimately, the apprentice may have the opportunity of fitting the different parts together and, in a highly prolonged fashion, acquire the necessary skills. He performs the task under the watchful eyes of the experienced plumber but if he had the opportunity to do the task in a simulated, protected setting he would be able to try out various approaches without the danger of messing up the work itself.

*See Kevin Ryan, "A Plan for a New Type of Professional Training for a New Type of Teaching Staff," in Occasional Papers published by the National Commission on Teacher Education and Professional Standards, NEA, Occasional Paper #2, Feb., 1968.

Neither the plumber nor pilot, of course, are human service workers. The training of human service workers resembles much more the prolonged indirect pattern of the plumber model rather than that of the airplane pilot. The fact is that most human service workers have been trained in traditional professional model, which is not especially-oriented to the rapid development of highly specific skills leading to efficient consumer-focused services. Friedson, Hughes, and others have noted that accountability to one's professional peers was more the emphasis of the professional. In the teacher training model, for example, general education and broad knowledge is stressed more than specific skills that would make the service more productive. Thus, teachers are not effectively trained in teaching skills, are not selected for them or evaluated in terms of them; rather, the criteria for teacher selection is whether the individual has a B.A. degree and has taken the proper mix of courses in the field of education.*

Most professional training grew out of an elite tradition in which the major concern was that the professional-to-be acquire a definite point of view and perspective about the work he was to do. For example, he is trained to be a lawyer, not so much to do lawyering. Ralph Nader has described the process in legal education, where he says, "Law professors take delight in crushing egos in order to acculturate the students to what they called 'legal reasoning' or 'thinking like a lawyer.'" There was no particular hurry about the acquiring of the necessary skills. In fact, it was part of the entire tradition that he acquire these skills in a rather leisurely fashion via slow internships and apprenticeships from other peers.

*In some instances, the teacher-to-be takes a test, which is really a form of I.Q. test. These tests have never been validated in relation to teacher performance.

Most professional practice and training is directed toward (and often results in) maintaining a monopoly over the necessary skills and knowledge. Similarly, an effort is made to limit the number of people who could acquire professional skills and knowledge. Thus, restrictive licenses and expensive, prolonged training practices are highly suitable, just as they are very useful for the plumbers' union in maintaining its monopoly.

As there was no hurry to train the human service workers--whether doctors or teachers or social workers--and since there was no consumer carefully demanding accountability of the task performed, it was very easy to maintain the traditional highly stretched-out model of training and education, thereby protecting the semi-monopoly of the existing professional stratum.

In the present period, however, there is a whole wave of new demand from consumers, particularly the poor and the minorities who have complained bitterly about the character of the service provided by the professional. In addition, these same groups are demanding entrance into the professions; that is, they want to become doctors, lawyers, teachers, and they're not at all so sure that it should take so long to acquire necessary skills. Both of these pressures have led to the demand for performance criteria in evaluating the practice of the teacher, rather than traditional intelligence type tests which serve to screen in the middle class and screen out the poor. This is

all part of the general ethos demanding accountability to the consumer on the part of the teacher, or other practitioner, and new forms of education and training which will much more rapidly produce the new worker and produce him in a much more relevant, task-oriented, efficient fashion, perhaps something more like the airplane pilot--always recognizing that teaching has dimensions to it that are qualitatively different from teaching.

The Relation Between the New Services and the New Training

In order to see how training can be related to the new services, it is important to outline what the basic changes are that are emerging in the human services. Essentially services, like training, have been too professional centered and too removed from the consumer.

The first and most essential change that is necessary in the character of the human services is that they must be much more consumer oriented. Margaret Mead writes of the "revolt of all the people that are being done good to." She talks of pupils, patients, clients, prisoners, all wanting a share in what's going on, and an end to the era of "great numbers of professional people who knew best and did good."

This new consumer orientation should mean, in the first place, accountability--that the service is effectively used by the consumer, that children learn, that disturbed people get better, that sick people become well, that fewer people become sick, that fewer children drop out and get turned off from learning.

A second element in improving the effectiveness of a service is that it be offered in the style and mode of the consumer. This frequently means that a service be offered in a much more individualized, decentralized, culturally relevant fashion. Thus, neighborhood health

centers and family planning clinics, staffed by neighborhood residents have been used much more by poor people, who seem to find them much more attractive.

A third consumer oriented dimension requires that the service not only be effective and offered in a relevant fashion, but that the consumer also have the opportunity critically to evaluate the service whether it be as a student in the classroom, a member of a community board or a worker in a human service agency.

Finally, the fourth and perhaps most crucial dimension is related to the increasing evidence which indicates that an important aspect of effective service is the direct involvement of the consumer as service giver, for example, children teaching children, people with problems helping other people with similar problems such as Alcoholics Anonymous, Synanon, etc. There is increasing recognition, even in the field of medicine, that patients' knowledge and involvement can be very beneficial in preventing illness and in dealing with potential illnesses at an early point. The use of bio-feedback techniques is a growing new field, and doctors are now giving readings to patients regarding their illnesses, thus training them in self-help. Victor Fuchs states that what people do and don't do for themselves is the most important factor in improving the health of the American people.

If this consumer participatory dimension is a crucial feature in the drastic improvement of human services, then the training of human service workers must prepare the worker for it. This means courses and curriculum material with this focus. But even more than talk and reading about consumer participation, the training must isomorphically, as far as possible, reflect this dimension. This means in the first instance that the training itself must be highly participatory rather

than be trainer or professional centered. Since we want the teacher in the classroom to be responsive to the pupil, the social worker to the client, the doctor to the patient, we must insist that in the training the professor be responsive to the trainee and that the training be responsive to the trainee's needs including their perception of those needs.

Because we want services which are highly accountable and efficient, it also means that we need a training model that is geared to the development of the specific skills required for effective service delivery. And since consumers are expressing a strong need for many more effective services that cannot be long delayed, we need much more accelerated training designs.

The particular style, mode, and pattern of training is both derivative from the nature of the practice for which it is preparing the trainee, as well as preparatory for that practice. For example, as the old aphorism has it, "Teachers teach as they are taught, not as they are trained to teach." Thus, regardless of the words about participation, accountability and relevance, when teacher training programs emphasize routine facts, are professor-centered, and use traditional training designs, trainees, when they become teachers, are likely to teach that way.

There are then three key characteristics of the new services, each with their derivative consequence for training. First, the service is to be consumer centered. This leads to a participatory training design. Second, the service is to be accountable and efficient. This means that the training must effectively develop the workers' skills and, third,

as there is an expanding demand for services, the training must be as rapid as possible.

The Special Significance of Participatory Simulation

If modern training is to avoid the limits of the academic classroom as the major mode of instruction and the prolonged character of on-the-job apprenticeships, it will have to develop a new core. We believe that simulation, which, of course, is used in a good deal of skill training such as that of the airplane pilot, should be a central feature, a key mode around which human service training can take place.

In medical schools, computer models have been designed which present situations

which might not otherwise be readily available to students. Situations have already been developed which offer the student the opportunity to manipulate data, make mistakes, get into trouble, and get out of trouble - all without endangering patients or using up valuable hospital time.

Dr. Stephen Abrahamson and associates at the University of Southern California have developed a simulation model known as Sim One to facilitate clinical training in anesthesia. This life-size manikin has several functions, such as respiratory activity, skin color, and pupillary size, which are under the computer's control. Each function responds to drug administration as well as to other interventions used by the anesthesiologist in managing patients in surgery. This model can be used by a trainee to interact with a variety of situations that he will shortly encounter in the real-life operating room. He is allowed to deal with these situations repeatedly without risk to real patients and with immediate feedback about the effects of his judgments and his actions.

Dr. William Harless and associates at the University of Illinois have developed a computer-aided simulation of the clinical encounter (CASE). During the interactive session, the computer assumes the role of the patient, and the student assumes the role of the practicing physician. Virtually any type of patient with any variety of health problems can be simulated.*

Simulation designs alone, however, do not fully fit our needs. Typical models, as in pilot training, or the computer designs of the medical school, set up situations to which there are "correct" answers; the training issue is to teach the student this proper way. However, there often are many "correct" ways of handling a problem or the "correct" way is not known. Thus, a less closed dimension of simulation must be used in which one of the goals is the development of individual styles, the collectivization of knowledge, the building of new techniques.

What is necessary is a participatory training design which grows out of the nature of the new services we seek. The greater use of teams and groups in service delivery in health, mental health, education, and social work will also be abetted by a participatory training design. And, as we see value in teams members of different disciplines and differing backgrounds, one of the characteristics of the training should be the cross-socialization of the trainees. This group-centered training design should promote the development of practitioners who see, in their peers, sources of help and collegiality rather than, as in

*Journal of Medical Education, "Educational Technology for Medicine," a special issue, July, 1971.

public school teaching, the teacher being the lord of and prisoner in her own classroom. Also, as relates to teaching, we believe that the learning process is most effective when all parties to the transaction are learning and, of course, a professor-centered training design constrains against seeing the teacher as a learner.*

Participatory simulation can be applied to all kinds of training-- it can be used in the training of teachers, social workers, doctors, nurses, whatever. In the training of teachers for example, mock classroom situations are set up in which a number of teachers in training play the roles of children and one individual plays the role of the teacher. Various problems are role played or simulated: for example, some of the people playing the children may act disruptive or difficult and the "teacher" then practices various ways of dealing with these disruptive children. At first, she will probably tend to try out fairly standard approaches, such as punishing the disruptive child or bribing him by giving him a special assignment or taking him to the principal's office or asking to see his parents and so on. The group as a whole

*This point of the helper being helped, the teacher learning, appears most strongly in education as in the learning through teaching design (See Alan Gartner, Mary Conway Kohler, and Frank Riessman, Children Teach Children: Learning by Teaching, Harper and Row, 1971). However, the process can also be seen in the "helper therapy" principle in mental health and social work. Indeed, it may be true of the human services as a whole that the transaction between service giver and service recipient is most powerful when it is one of reciprocal gain.

then discusses what has occurred in the simulation to see if it could be done differently, what other approaches are possible. The group collectivizes its experience and brainstorms the problem at first suggesting other specific things and then moving more and more to possible things that could be done.

The trainers may introduce some new ideas or questions: Could the problem be dealt with by dealing with the group as a whole and not with individual disruptive children? Should a teacher change the lesson and try a different approach? Should the whole class discuss problems of discipline in the school? Perhaps the activity of the groups could be changed and a new activity introduced at a point where a number of youngsters are becoming disruptive. Perhaps even the disruption is an indicator to the teacher that the lesson is not effective, is not contacting the youngsters. Perhaps more indirect approaches such as changing the seating arrangement of the classroom might be effective in changing the whole atmosphere.

Then the trainees try out the various new approaches that they have themselves suggested and some that the trainers have suggested. They may actually change the seating structure of the make-believe "classroom" and see how differently it feels when people are seated around in a group than when they are in the standard rows and files; or they can move the chairs back further to be further away from the center, or move them close and see how that feels. That is, they actually do the problem, acting out the proposed solutions.

In this situation, the trainees slowly develop extended awareness of what can be done in the classroom situation as well as actual practice in working out the problems. From this, they begin to carve

out an expansion of their styles. Each will probably select some very different approaches from a large range of possible suggestions that the group comes up with. She fits these suggestions to her particular style which she becomes more conscious of and her repertoire is expanded. In doing the actual role playing or simulations, the trainee gets feedback, a mirror of how she looks and what is effective and what is not. Someone else in the group may actually play her. It is even possible to video tape the simulation and the trainee can get a direct look on video of how she behaves--a full mirror, so to speak. Teachers in training (or in-service training) may move from the simulated sessions to a micro-teaching design where they are able to practice some of their new skills in a controlled small-scale classroom with a small number of children. (The micro teacher can be videotaped, as can the simulated sessions, providing a mirror for the lessons). They then may do some practice teaching where they are supervised carefully.

In cases where the trainees are also involved in classroom work, the teacher takes back her new learnings and practices them in the actual classroom. Some things will work very well, but there will be other problems that were not anticipated; the teacher brings these new experiences back to the simulational sessions for further discussion and the development of new approaches for solving the unanticipated difficulties.

Training in the Mental Health Field

In training paraprofessionals, for example, to work as mental

health aides in neighborhood service centers, it is important to teach them how to interview clients and how to deal with various social agencies. The situations which they will encounter are carefully broken down and simulated so that initially, for example, one paraprofessional would role play a community person coming into a center for help and another paraprofessional would play the interviewer who would be providing help in a center. (Parenthetically, it is important to note that the role reversal aspect of this, that is the opportunity of the worker to play the client, is extremely valuable for providing understanding in how that person feels and experiences the situation. Thus, in the above examples, playing the role of children is valuable for teachers in training in helping them to understand how children perceive teachers, the classroom, and the school.)

Slowly, the paraprofessional acquires skill in various aspects of interviewing. Initially very simple problems are presented, such as the client coming in who needs somebody to sign a paper because he himself cannot write, or a little later on a client appears with a very simple problem that lends itself to easy solution. As the worker in training acquires skill in dealing with these simple problems and develops his own style through simulated practice, new and more difficult problems can be introduced. Ultimately, extremely difficult situations are presented. For example, a community person comes in and interrupts a simulated interview. The interruptor demands immediate attention and help, and does so in a rather disorganized chaotic fashion. Later the group talks over this kind of problem and develops various approaches for dealing with it, which they then further practice. In

a sense, the worker is (positively) overtrained. When he goes into the real life situation he may rarely experience problems as difficult as those presented in the simulated exercises, but he has acquired the power and skill to deal with them, which to some extent offsets the non-reality of the simulation in contrast to life.*

In training the paraprofessionals, the entire training should be carefully phased so that initially situations are simulated with appropriate overtraining and then the workers move into the neighborhood storefront centers for one-half day, carefully supervised and backed up by trained, experienced workers. Then they come back to the simulation sessions in the afternoon and discuss the problems that they confronted in real life in the centers in the morning. Slowly but surely they spend more time in the centers, on the job, with less intensive supervision.

The various human service fields are giving increased attention to training. In education, a great deal of activity has been inspired by the Education Professions Development Act, including programs such as The Career Opportunities Program (COP). The use of special training centers has gained attention in social work training, similar to education's laboratory schools and medicine's teaching hospitals. Innovative techniques are increasingly used, such as micro-teaching in education and the use of video-tape in several fields.**

*In fact, in the training at the Lincoln Hospital Mental Health Center, many of the paraprofessionals, when they later went into the centers, reported that the training was more difficult than the actual life situations. One is reminded of the way that Vince Lombardi trained the Green Bay Packers, where it was said that the practice sessions were much more difficult than the actual games.

**"Innovation in Education," by Norman F.R. Maier, American Psychologist (August 1971), Vol. 26, #8.

One of the more comprehensive training designs has been proposed as part of a Council on Social Work Education comprehensive training project (Jack Rothman and Wyatt Jones, A New Look at Field Instruction, 1971). The authors propose replacing the traditional reliance on agency placement with a phased design moving from a laboratory-observatory to a skills-development laboratory including the use of simulation games and programmed instruction, concluding with a practicum experience; in short, a much more conscious and explicit training design with attention given to particular experiences, specified learnings, discrete skills.

In the laboratory-observatory the student will be exposed to a wide range of practice contexts, programs, and skills. The focus is on obtaining an understanding of the nature and settings of practice rather than on learning practice skills.

The skills-development laboratory is oriented toward teaching specific practice skills to students in consciously selected and controlled content areas. Schools would expect to determine a delimited range of skills that they judge important for students to acquire by the end of the first year and prior to entry into actual agency practice (practicum). The skills-development laboratory is similarly attached to an academic methods course where theory or conceptualization relevant to the application of skills is treated in a systematic way. Thus, if students in the laboratory are being trained in methods of decision making in planning, the methods course will cover various theories of and approaches to decision making. In the skills laboratory students would not be assigned to a given agency on a continuing basis but would engage in common experiences that might include simulation games, programmed instructional materials, community activities not connected with agencies, as well as tasks in selected agencies. Unlike the observatory, in the skills-development laboratory the students would be engaged in the actual "doing" of practice and the mastery of skills, but in a structured and controlled context.

The practicum will begin in the second year and is conceived of as a holistic and realistic agency experience where the student is expected to put the skills he has previously acquired into operation under circumstances approximating those the practitioner experiences on the job. Thus, the student is expected to apply his skills (and learn others) under conditions of reality which include temporal and political pressures, structural restraints, interpersonal complications, etc. The disciplined use of self and need to grapple more immediately with value dilemmas come to the fore in this phase.

The Benefits of Participatory Simulation

What are the special benefits of a participatory simulation training design? The use of simulation facilitates the trainees learning from each other as opposed to a model which places the teacher in the role of sole dispenser of knowledge.

The teacher or human service worker has the opportunity in a protecting, permissive setting, to observe and try out a variety of real life problems without real life consequences. Most teachers, for example, do not have the opportunity in the classroom to experiment with different techniques, practices and approaches to tackling classroom problems; the risks are too great that any one method may produce disastrous results. Consequently, the teacher does not even mentally explore a variety of methods, but rather very quickly seeks

to develop something that works at least at a minimal level and then it becomes the way the individual deals with the problem. The particular way is frozen and becomes a rigidified part of the teacher's style forever. On the other hand, in simulation, the teacher in training not only has the opportunity of seeing a great variety of approaches, but can actually begin to use some approaches in a situation which is relatively easy at first, and thereby build up coping skills which can then be applied as the situation is made increasingly more difficult.

The simulational sessions can also serve to develop new conceptualizations and theory; thus, the group may discuss, under the leadership of the professor, why some children appear to be disruptive or apathetic. Is this due to the fact that the material being taught, or the way that it is being taught is not stimulating or contacting? From this, a discussion of the contact curriculum can emerge. There can ensue a discussion of why children of ghetto background may be antagonistic to the school, and hence sociological concepts emerge in a meaningful way around practice.

The traditional curriculum involves a professional functioning in a "deductive" model where he presents the basic ideas first, has the students react to them, and perhaps attempt to deduce applications for practice, if possible. The professor and his material is central in this design.

On the other hand, combining simulation with an "experience-based" or inductive curriculum, the center of gravity is shifted. The student's experience and phenomenally felt problems become focal, and the professor has to apply or develop ideas, concepts, and curriculum around these experiences.*

*The "clinical" professor has to learn a whole new way of teaching; he will also develop new knowledge based on practice and experience brought in by the students.

This design shifts the focus of instruction away from both traditional academic classroom instruction, on one hand, and on-the-job trial and error on the other. It demands far different skills of those responsible for the training of human service workers. For they must be capable of moving with ease between theory and practice, rather than being either ruminators about their experiences and practice, or pontificators over their own or others' theoretical notions.

The new service to be built is not limited to "the presenting problem", but must both respond to that phenomena and go beyond it. If it were a service which focussed exclusively on the immediate problem, technical skills might be sufficient. However, because the new service emphasizes both the immediate and the deeper phenomena, so in the training there should be a building of theory from a grounding in practice. Thus, the training design must move participants back and forth between theory and practice gaining insight into practice from the perspective of theory as the participant gains understanding of theory from the grounding in practice.

The simulational model combined with the inductive curriculum allows for the best integration of skills and knowledge so that the resultant product--the human service practitioner--is not simply a skilled technician, but rather a true professional for the essence of a professional is the integration of systematic knowledge and skill; either without the other is highly limited.

Simulations also allow for the development and practice of new roles. The teacher, for example, can practice working with other people in the classroom such as paraprofessionals, children who teach children, volunteers, specialists, as well as the use of various kinds

of programmed materials. The teacher has an opportunity to explore the new "orchestrator" role where he can be a diagnostician, a supervisor, a planner, a developer of small groups. This is the key to reorganizing effectively the teacher role and, we believe, is the basis for a leap in both teaching and learning. The entire simulation design that we have presented is clearly oriented in a participatory direction, and most of the new training exercises, games and sensitivity training are similarly highly participatory and non-hierarchical in character.

Simulation by itself is extremely valuable for developing skills, knowledge, and practice and hence is a major training technique for the improvement of service delivery. Participatory simulation, in addition, adds the group and peer dimension which are especially valuable if the training is to match the new participatory character of services. In other words, simulation as such is related to the efficiency of services while participatory simulation relates to the character of the services.

Conclusion

Professional training in the human services typically has not been explicitly skill-centered, nor participatory in character. Both of these features are essential for the services if their efficiency is to be sharply improved and their character transformed to make them more inclusive of the consumer.

Participatory simulation is both skill-centered and peer-oriented. By contrast, sensitivity training, while possessing clear participatory dimensions, is not at all oriented toward the development of skills. On the other hand, traditional simulation,* although strongly skill-centered, is not necessarily or self-consciously participatory.

What then are the desired characteristics of the new training model? It must be sharply related to a real improvement of the service for the consumer; it must assist in the changing of the traditional professional whether as service provider or trainer; it must be participatory and open in character. Trainees must be trained in ways in which they will perform.

The modern simulational-centered training design leads to much more rapid development of the trainee's skills. The new training is attuned to a new kind of trainee who cannot tolerate a long drawn-out apprenticeship under a professional who will slowly socialize him to traditional professional norms. It employs a skill-centered curriculum with systematic professional knowledge built around it.

Training, in order to be relevant and effective, has to be highly attuned to the tasks, the work, the activities to be done. This requires a careful task analysis of what that work is, so that skills can be built in a specific fashion. The curriculum is based upon the task analysis of what the trainee needs to do the job and a developed job description of what the new work will be like, rather than simply an imitation of what the existing professional does or is. The era where professional behavior was valued for itself because it was so difficult to assess its results is rapidly coming to an end.

*Sensitivity training, despite its lack of skill emphasis and its extreme orientation to self awareness, is a highly participatory, non-hierarchical process. That is, the boss and all the workers are equal in the sensitivity session at least. And anybody can say anything to anyone else.

Moreover, the new trainer is himself trained as a trainer; he is not just a smart man who happens to do some teaching like the able plumber who does the apprentice training, but who doesn't know anything about training.

Traditionally, most human service workers were given quite a bit of general education, but very little skill training.* Currently, the pendulum has swung the other way and we are certainly recommending the need for much more relevant pinpointed skill training for teachers and other human service workers. But unless this is combined with systematic professional knowledge, there is the danger that what will be produced is a group of narrow skilled technicians rather than new professionals. Hence, it is extremely important that the simulated sessions lead to and be focused upon broader issues and understandings, not simply skills and immediate practice. In addition, of course, much systematic professional knowledge will have to be developed and then become part of the total education and training pattern. Much professional knowledge at the present time is not sufficiently related to practice and field experience, nor is it sufficiently skill based. The revamping of professional knowledge will hopefully emerge from new practice and new training designs.**

*Law schools, for example, have traditionally seen their role as training students in the law, not in lawyering, which was to be learned in an apprenticeship during the first years of practice.

**Rapping, sensitivity training, and the contact curriculum all have value, but they are not enough. A real leap in the character of the services requires sound systematic professional knowledge that is well understood and flexibly applied. Skilled technicians can improve the human services beyond what they are now, but they will not produce the necessary leap, the reorganization, the real new effective human services that are so needed.

Epilogue

How is the new training to be produced? Where is it to come from? It is typical to think that the necessary expertise resides some place, perhaps in the minds of people who write articles like this one. It is further in tune with one of the fashions of the day to see this training emanating out in "multiplier" style from some central source, a "TTT" model (Training the Teacher Trainers). The assumption being that the training coming from some group or center will radiate out in waves to education professors or other teacher trainers who, in turn, teach teachers who teach the children. It is essentially a top down authority laden schema, just a more sophisticated version of the traditional professional model where doctor (teacher, professor) knows best.

The problem is, of course, that the new training models are not fully developed; they are in need of constant modifications and transformations, related to a rapidly changing practice. What is required, then, is the collectivizing or pooling of the experience of many field-based trainers who are close to the service giver, a constant building of ever-changing models from the bottom up, rather than the top down. The new models that emerge must be fed by practice and then dispersed to be tested in practice--in pre-service and continuous in-service training.

PREFACE

This publication identifies and illustrates some of the more significant statistical highlights of occupational education in the public secondary, adult, and 2-year college programs of New York State during the 1971-72 school year.

These statistics have been compiled through the Occupational Education Data Subsystem, which annually collects data from the BOCES area occupational education centers, local school districts, public 2-year colleges, and urban centers. Through the cooperative efforts of the Department's Information Center on Education and participating agencies, more information is available than ever before regarding the dimensions of New York State's occupational education effort. It is now possible to provide such information as racial/ethnic and sex composition of enrollments at all levels of instruction in a variety of agency types. The intent has not been to report all of the data collected, but rather to highlight those statistics which may be of special interest.

The term "adult," as used in this data analysis, refers only to those persons enrolled in an adult education program sponsored by a local public school district or a Board of Cooperative Educational Services. Part-time 2-year college students and urban center students are identified separately, although they are generally classified as adults and are included as a part of the total adult enrollment in the State Plan and the Annual Report for Occupational Education. These categories are kept separate in this publication because in comparing the enrollment statistics of one agency type with another, the distinction between an adult program conducted by a public school or BOCES area center and a program conducted at a 2-year college may be interesting and significant.

OVER HALF A MILLION SERVED IN OCCUPATIONAL EDUCATION PROGRAMS —

During the school year 1971-72, 543,135 persons were served in occupational programs by New York State's public educational agencies.

- 349,982 secondary students were served.
- 95,165 adults were served in public schools and BOCES area centers.
- 60,506 students were served in full-time degree programs at public 2-year colleges.
25,733 students were served in part-time degree programs at public 2-year colleges.
11,749 students were served in nondegree programs at public 2-year colleges and urban centers.

OCCUPATIONAL EDUCATION ENROLLMENTS
1971-72

**60 PERCENT OF SECONDARY ENROLLMENTS WERE IN
BUSINESS AND OFFICE PROGRAMS —**

- 209,087 secondary students were enrolled in Business and Office programs.
- 83,897 secondary students were enrolled in Trade and Industrial, and Service programs.
- The remaining 16 percent of the enrollments were distributed across the other five program areas.

**SECONDARY OCCUPATIONAL EDUCATION ENROLLMENTS
BY PROGRAM AREA**

**IN PUBLIC SCHOOLS AND BOCES AREA CENTERS 57 PER-
CENT OF ADULT ENROLLMENTS WERE IN TRADE,
INDUSTRIAL, AND SERVICE PROGRAMS —**

- 54,703 adults were enrolled in Trade, Industrial, and Service programs.
- 30,392 adults were enrolled in Business and Office programs.
- The remaining 11 percent of the enrollments were distributed across the other five program areas.

**ADULT OCCUPATIONAL EDUCATION ENROLLMENTS
BY PROGRAM AREA**

PUBLIC 2-YEAR COLLEGES SERVED OVER 60,500 OCCUPATIONAL EDUCATION STUDENTS IN A WIDE VARIETY OF FULL-TIME DEGREE PROGRAMS —

- The highest concentration of enrollment — 20,094, or one-third of the total enrollment was in Business and Office programs.
- Three other program areas served at least 10 percent of the total enrollment:

Health	12,356
Technical	9,596
Trade, Industrial, & Service	8,262

FULL-TIME DEGREE OCCUPATIONAL EDUCATION ENROLLMENTS BY PROGRAM AREA

THE SIX MAJOR CITIES SERVED 40 PERCENT OF THE STATE'S SECONDARY OCCUPATIONAL EDUCATION STUDENTS, BUT 63 PERCENT OF THE ADULTS SERVED IN PUBLIC SCHOOLS AND AREA CENTERS —

- Secondary students served in occupational programs in the Six Major Cities far outnumbered adult students — 139,589 to 60,240 — but represented a smaller proportion of the total State enrollment than at the adult level.
- The following are among the reasons for this wide disparity:
 - Traditionally, it has been more feasible for large cities, where population is concentrated, to provide extensive adult programs, though more comprehensive programs at BOCES area centers are being developed.
 - Private and parochial schools are concentrated in urban areas, thus a relatively lower proportion of the school age population attends public school in the Six Major Cities than in other areas of the State.
 - High school dropout rates are highest in the Six Major Cities (over three times as high as for the rest of the State), both decreasing the secondary enrollment and increasing the need for adult programs in the cities.

DISTRIBUTION OF OCCUPATIONAL EDUCATION ENROLLMENTS AND POPULATION

Percent of State Total —
Six Major Cities and Rest of State

	Six Major Cities	Rest of State
Secondary Enrollments (Occupational Ed.)	40%	60%
Adult Enrollments (Occupational Ed.)	63	37
Public School Enrollments (9-12) *	38	62
New York State Population **	50	50

* 1970-71 school year.

** U.S. Department of Commerce, Bureau of the Census, 1970 Census of Population, New York State, February 1971.

OVER 78 PERCENT OF ADULTS ENROLLED IN OCCUPATIONAL EDUCATION IN THE PUBLIC SCHOOLS OF THE SIX MAJOR CITIES PARTICIPATE IN PROGRAMS TO UPGRADE THEIR SKILLS —

- Of the 60,240 adults served in the Six Major Cities, 47,243 were enrolled in adult supplementary programs.
- The Six Major Cities accounted for 63 percent of all New York State's adult enrollment, but three-quarters of the State's adult supplementary enrollments.
- The Six Major Cities also accounted for 71 percent of the State's apprentices receiving related instruction.

DISTRIBUTION OF OCCUPATIONAL EDUCATION ADULT ENROLLMENTS AND POPULATION

Percent of State Total —
Six Major Cities and Rest of State

	Six Major Cities	Rest of State
All Adult Programs	63%	37%
Adult Preparatory	21	79
Adult Supplementary	75	25
Apprentice	71	29
New York State Population*	50	50

* U.S. Department of Commerce, Bureau of the Census, 1970 Census of Population, New York State, February 1971.

BOCES SERVED THE MAJORITY OF SECONDARY OCCUPATIONAL EDUCATION STUDENTS IN NONOFFICE PROGRAMS CONDUCTED OUTSIDE THE SIX MAJOR CITIES —

- BOCES occupational centers, designed to conduct programs in areas of the State where limited enrollments in individual school districts prevent economical expansion of occupational programs to serve the wide variety of students' needs, served 40,635 persons in secondary nonoffice programs — 53 percent of the total nonoffice occupational enrollments in these areas.

SECONDARY OCCUPATIONAL EDUCATION ENROLLMENTS OUTSIDE THE SIX MAJOR CITIES

Percent of Enrollment in Each Program Area Served by BOCES and by Local Educational Agencies (LEA)

59 PERCENT OF SECONDARY OCCUPATIONAL EDUCATION STUDENTS WERE FEMALE . . .

- 205,131 females were served in secondary occupational education programs.
144,851 males were served in secondary occupational education programs.
- Over 79 percent of all females served at the secondary level were enrolled in Business and Office programs.
- 62 percent of the secondary occupational education students served in BOCES occupational centers were male.

SECONDARY OCCUPATIONAL EDUCATION ENROLLMENTS BY SEX

BUT 65 PERCENT OF ADULT OCCUPATIONAL EDUCATION STUDENTS ENROLLED IN PUBLIC SCHOOLS AND AREA CENTERS WERE MALE . . .

- 33,474 females were served in adult occupational education programs.
61,691 males were served in adult occupational education programs.
- Nearly all apprentices receiving related instruction were male.
- 63 percent of adult supplementary students were male.
- About half of the adult preparatory students were male.
- 72 percent of adult students in the Six Major Cities were male.

ADULT OCCUPATIONAL EDUCATION ENROLLMENTS BY SEX

AND THE MAJORITY OF POST-SECONDARY OCCUPATIONAL EDUCATION STUDENTS WERE MALE —

- 37,678 females were served in post-secondary degree occupational education programs.
48,561 males were served in post-secondary degree occupational education programs.
56 percent of post-secondary degree occupational education students were male.
- 55 percent of full-time degree post-secondary occupational education students were male.
59 percent of part-time degree post-secondary occupational education students were male.
- 66 percent of post-secondary nondegree students (including those at urban centers) were male.

**POST-SECONDARY OCCUPATIONAL EDUCATION ENROLLMENTS
BY SEX**

AT THE SECONDARY LEVEL, IN SIX OF THE SEVEN PROGRAM AREAS, AT LEAST THREE-QUARTERS OF THE ENROLLMENT WAS OF ONE SEX . . .

AT THE ADULT LEVEL, IN ALL OF THE SEVEN PROGRAM AREAS, AT LEAST THREE-QUARTERS OF THE ENROLLMENT WAS OF ONE SEX . . .

AT THE POST-SECONDARY LEVEL, IN FULL-TIME DEGREE PROGRAMS, ENROLLMENTS IN SIX OF THE SEVEN PROGRAM AREAS WERE MORE BALANCED BETWEEN MALES AND FEMALES THAN AT EITHER THE SECONDARY OR ADULT LEVEL —

- Among nondegree and part-time programs, in a majority of the seven program areas, at least three-quarters of the enrollment was of one sex.

27 PERCENT OF ALL SECONDARY OCCUPATIONAL EDUCATION STUDENTS WERE MEMBERS OF MINORITY GROUPS —

- 93,871 minority group members were served.
- 53,577 blacks were served.
30,295 Spanish Surnamed Americans were served.
6,253 American Indians were served.
3,746 Orientals were served.
- The percentage of occupational education students who are members of each minority group is roughly proportional to the percentage of all public school students who are members of the same group.

DISTRIBUTION OF MINORITY GROUP MEMBERS IN SECONDARY OCCUPATIONAL EDUCATION AND IN THE PUBLIC SCHOOLS

	Percent of Secondary Occupational Education Enrollment	Percent of * Total Public School Enrollment (K-12)
Black	15.3%	15.5%
Spanish Surnamed American	8.7	9.1
American Indian and Oriental	2.9	.8
Total Minority Groups	26.9	25.4

* 1970-71 school year data.

MOST MINORITY GROUP MEMBERS WERE SERVED IN THE SIX MAJOR CITIES —

- 86 percent of the minority group members enrolled in secondary occupational education programs were served in the Six Major Cities.
- 90 percent of the minority group members enrolled in adult occupational education programs were served in the Six Major Cities.
- The distribution of minority group enrollments in occupational education between the Six Major Cities and the rest of the State closely parallels the distribution of these groups in the public school enrollments and general population.

DISTRIBUTION OF MINORITY GROUP ENROLLMENTS AND POPULATION

**Percent of Each Minority Group Enrollment Who Were
Enrolled in the Six Major Cities**

	Total All Minority Groups	Black	Spanish Surnamed American	American Indian and Oriental
Secondary Occ. Ed.	86.5%	82.4%	91.7%	92.3%
Adult Occ. Ed.	89.5	88.4	92.8	82.1
Public Schools *	86.5	83.0	93.9	70.3
Population **	N.A.	85.8	N.A.	N.A.

* 1970-71 school year.

** U.S. Department of Commerce, Bureau of the Census, *1970 Census of Population*, New York State, February 1971.

MINORITY GROUPS WERE UNDERREPRESENTED IN PROGRAMS SERVING APPRENTICES

- Only 11 percent of the apprentices receiving related instruction were members of minority groups.
- Minority groups had a much higher participation rate in adult programs that provide supplementary instruction than in adult programs that provide preparatory instruction.

MINORITY GROUP ENROLLMENTS IN ADULT OCCUPATIONAL EDUCATION PROGRAMS

	PREPARATORY		SUPPLEMENTARY		APPRENTICE	
	No.	Percent* of Total Enrollment	No.	Percent* of Total Enrollment	No.	Percent* of Total Enrollment
All Adult Students	19,530	—	63,035	—	12,600	—
Black	2,655	13.6	13,964	22.2	1,032	8.2
Spanish Surnamed American	696	3.6	8,181	13.0	303	2.4
American Indian	88	.5	42	.1	26	.2
Oriental	32	.2	1,177	1.9	21	.2
All Minority Groups	3,471	17.8	23,364	37.1	1,382	11.0

* Detail may not add to total due to rounding.

**MINORITY GROUPS WERE UNDERREPRESENTED IN
POST-SECONDARY OCCUPATIONAL EDUCATION
PROGRAMS —**

- Only 5.2 percent of all degree students at the public 2-year colleges were members of minority groups.
- Full-time degree programs enrolled a larger proportion of minority group members than part-time degree programs.

**MINORITY GROUP STUDENTS ENROLLED AT
PUBLIC 2-YEAR COLLEGES
Degree Programs**

	FULL-TIME		PART-TIME		ALL DEGREE PROGRAMS	
	No.	Percent of Total Enrollment	No.	Percent of Total Enrollment	No.	Percent of Total Enrollment
All Students	60,506	—	25,733	—	86,239	—
Black	2,514	4.2%	435	1.7%	2,949	3.4%
Spanish Surnamed American	964	1.6	129	.5	1,093	1.3
American Indian	57	.1	4	*	61	.1
Oriental	306	.5	62	.2	368	.4
Total Minority Groups	3,841	6.4	630	2.4	4,471	5.2

* Less than .5%.

MOST MINORITY GROUP STUDENTS SERVED IN OCCUPATIONAL EDUCATION WERE FEMALE —

- The proportion of females among black students was higher than among all occupational education students at every level of instruction.
- The proportion of females among Spanish Surnamed American students was higher than among all occupational education students at every level of instruction except secondary.
- American Indian enrollees were over 80 percent female at the secondary level, and over 90 percent male at the adult level. Post-secondary enrollments were fairly evenly balanced between males and females.
- Oriental enrollments, unlike the other minority groups, were mostly male at every level of instruction.

MINORITY GROUP ENROLLMENT BY SEX Percent of Each Minority Group Enrollees Who Were Male and Female

	All Enrollees	Blacks	SSA	American Indian	Oriental
Secondary—					
Male	41%	39%	43%	18%	53%
Female	59	61	57	82	47
Adult—					
Male	65	51	52	91	81
Female	35	49	48	9	19
Post-Secondary (Full-Time Deg. Only)					
Male	55	41	35	49	58
Female	45	59	65	51	42

OVER 100,000 DISADVANTAGED PERSONS WERE SERVED IN OCCUPATIONAL EDUCATION PROGRAMS —

- 88,756 disadvantaged served in secondary programs.
- 8,345 disadvantaged served in adult programs at public schools and area centers.
- 3,966 disadvantaged served in post-secondary programs.
- 2,636 disadvantaged served in part-time programs at public 2-year colleges and at urban centers.

- Over 85 percent of all disadvantaged persons served in occupational education programs were served at the secondary level.
- 25 percent of secondary occupational education students were disadvantaged.
9 percent of adult occupational education students were disadvantaged.
6 percent of post-secondary (full-time degree) students were disadvantaged.
- 83 percent of the secondary disadvantaged were served in the Six Major Cities.
71 percent of the adult disadvantaged were served in the Six Major Cities.

**HEALTH PROGRAMS ENROLLED A LARGER PROPORTION
OF DISADVANTAGED STUDENTS THAN ANY OTHER
OCCUPATIONAL PROGRAM AREA —**

- Over half the Health enrollments at the secondary level were disadvantaged.
- Over a third of the Health enrollments at the adult level were disadvantaged.

**PERCENT OF ENROLLMENT IN EACH PROGRAM AREA
WHO WERE DISADVANTAGED**

Program Area	LEVEL		
	Secondary	Adult	Post-Secondary (Degree Full-Time)
All Programs	25%	9%	6%
Agriculture	16	3	2
Distribution	20	2	7
Health	51	37	7
Home Economics	19	17	6
Business and Office	25	15	9
Technical	36	6	4
Trade, Industrial, and Service	23	4	4

7,822 HANDICAPPED PERSONS WERE SERVED IN OCCUPATIONAL EDUCATION PROGRAMS —

- 7,012 secondary occupational education students were handicapped.
211 adult occupational education students in the public schools and area centers were handicapped.
569 post-secondary (full-time) students were handicapped.
30 part-time post-secondary students were handicapped.
- Over 78 percent of the secondary handicapped enrolled in occupational programs outside the Six Major Cities were served in BOCES programs.
- 2 percent of the secondary occupational education students were handicapped, .9 percent of full-time degree students were handicapped, and only about .2 percent of adult students were handicapped.
- Handicapped students were distributed among the program areas in much the same way as general students — they were heavily concentrated in Business and Office programs and Trade, Industrial, and Service programs. Handicapped students, however, were more likely to select a Trade, Industrial, and Service program and less likely to choose a Business and Office program than general students.

HANDICAPPED OCCUPATIONAL EDUCATION STUDENTS BY PROGRAM AREA AND LEVEL OF INSTRUCTION

	Secondary	Adult	Post-Secondary	
			Full-Time	Part-Time
Total	7,012	211	569	30
Agriculture	303	4	25	0
Distribution	322	3	60	3
Health	290	9	88	1
Home Economics	404	5	42	1
Business & Office	3,080	45	208	18
Technical	260	4	65	5
Trade, Industrial, and Service	2,353	141	81	2

**COOPERATIVE WORK EXPERIENCE PROGRAMS SERVED
OVER 18,500 STUDENTS —**

- 16,718 secondary occupational education students were served in cooperative programs.
- 1,802 post-secondary occupational education students were served in cooperative programs.

**COOPERATIVE OCCUPATIONAL EDUCATION ENROLLMENTS
BY TYPE OF AGENCY
AND
PROGRAM AREA**

	Secondary				Post- Secondary
	Total	BOCES	Six Major Cities	Other LEA'S	
Total	16,718	1,264	7,122	8,332	1,802
Agriculture	234	39	115	80	—

Technical	563	164	395	4	278
Trade, Industrial, and Service	2,813	575	921	1,317	—

- Secondary students were more likely to participate in cooperative programs than post-secondary students (4.8 percent as opposed to 3.0 percent)
- BOCES students were less likely to participate in cooperative programs than students enrolled in local educational agencies (2.7 percent as opposed to 5.1 percent).

**DISADVANTAGED AND MINORITY GROUP MEMBERS
WERE MOST LIKELY TO PARTICIPATE IN
COOPERATIVE PROGRAMS —**

- Secondary disadvantaged students were slightly more likely to participate in cooperative programs than general students; post-secondary disadvantaged students were much more likely to participate in cooperative programs than general students.
- At the secondary level, minority groups had a slightly higher participation rate in cooperative programs than in other programs.
- At the post-secondary level, about the same percentage of cooperative enrollments and regular enrollments were members of minority groups.

COOPERATIVE OCCUPATIONAL EDUCATION ENROLLMENTS

Percent of Total Enrollment Who Belonged
to Each Type of Student Classification

	SECONDARY		POST-SECONDARY (Full-Time Degree)	
	All Enrollees	Cooperative Enrollees	All Enrollees	Cooperative Enrollees

American	9	7	2	1
American Indian	2	5	*	*
Oriental	1	1	1	*

* Less than .5 of 1 percent.

** Detail may not add to total due to rounding.

**MOST COOPERATIVE WORK EXPERIENCE STUDENTS
WERE ENROLLED IN BUSINESS AND OFFICE
OR DISTRIBUTIVE PROGRAMS —**

- Over 80 percent of post-secondary cooperative students were enrolled in Business and Office or Distributive programs.
- Nearly three-quarters of secondary cooperative students were enrolled in Business and Office or Distributive programs.
- Distributive programs enrolled the highest proportion of cooperative students.
25 percent of post-secondary Distributive enrollments were cooperative.
22 percent of secondary Distributive enrollments were cooperative.

**PERCENT OF STUDENTS IN EACH PROGRAM AREA
WHO PARTICIPATED IN COOPERATIVE PROGRAMS**

- Despite the high enrollments in Business and Office and Distributive programs, cooperative programs enrolled only a slightly higher percentage of females than regular programs.

At the secondary level, 59 percent of all students were female and 60 percent of cooperative students were female.

At the post-secondary level, 45 percent of all students were female and 50 percent of cooperative students were female.

Peter A. Eissele, director

June 30, 1972

Mr. James West, Director
Division of Vocational Education
State Department of Education
State Education Building
Santa Fe, New Mexico 87501

Dear Mr. West:

In response to your request that the State Advisory Council serve as a third party evaluator of the 1971-72 Exemplary Programs, I hereby submit to you our findings and conclusions. Such conclusions were drawn following a random sampling of on-site visitations and a careful analysis of each project report. Generalizations relating the performance outcomes to the program objectives dominate the report; however, an effort was made to highlight activities deemed exceptional by the Council staff.

The Council feels the returns exemplified in the innovative Career Awareness Programs, especially at the elementary level, far exceed the initial investment. Actually, the gains indicate a sound beginning to redirecting our approach toward Career Education. The State Division of Vocational Education should be highly commended on their project selection and support in terms of serving relevant needs of communities as well as the State through Exemplary (Part D) funds.

Yours truly,

M. A. McCutchan
Chairman--SAC

PREFACE

The Vocational Education Act of 1963 as amended by Title I, Part D, of the Vocational Education Amendments of 1968 provides for the establishment of Exemplary Programs and Projects whose expressed purpose is "to stimulate, through Federal funding, new ways to create a bridge between school and earning a living for young people, who are still in school, who have left school either by graduation or by dropping out, or who are in post-secondary programs of vocational preparation, and to promote cooperation between public education and manpower agencies." Programs initiated under Part D of the Act are further designed to broaden occupational aspirations and opportunities for youths with special emphasis give to those who have academic, socioeconomic, or other handicaps. Such programs may include among others:

- 1) Those designed to familiarize elementary and secondary school students with the broad range of occupations for which special skills are required and the requisites for careers in such occupations.
- 2) Programs or projects for students providing educational experiences through work during the school year or in the summer.
- 3) Programs or projects for intensive occupational guidance and counseling during the last years of school and for initial job placement.
- 4) Programs or projects designed to broaden or improve vocational education curricula.
- 5) Exchanges of personnel between schools and other agencies, institutions, or organizations participating in activities to achieve the purposes of this part, including manpower agencies and industry.

- 6) Programs or projects for young workers released from their jobs on a part-time basis for the purpose of increasing their educational attainment.
- 7) Programs or projects at the secondary level to motivate and provide pre-professional preparation for potential teachers for vocational education.

In accordance with the provisions of the Act, the State of New Mexico requested and received funds to implement nine exemplary programs, four new and five continuing projects, for the 1971-72 school year. These programs were reviewed and evaluated according to the following criteria, to what extent:

- 1) Is the proposed program or project designed to meet the vocational education needs of disadvantaged youth?
- 2) Will the proposed program or project have an impact on reducing youth unemployment?
- 3) Will the proposed program or project contribute to the solution of important vocational education problems?
- 4) Does the proposed program or project promote cooperation between public education and manpower agencies?
- 5) Will the proposed program or project be integrated into the presently existing vocational program in the local school and/or State?
- 6) Does this proposed program or project meet the priority areas in vocational education specified in the long-range program plan and annual plan?
- 7) Are the personnel designated to carry out the proposed program or project adequate in number and competent for the proposed positions?
- 8) Are the cost estimates reasonable for the program or project proposed?
- 9) Are the procedures to be used in achieving the objectives appropriate, adequate and efficient?
- 10) Are the facilities, equipment and materials adequate to allow the proposed program or project to attain the objectives set forth?

- 11) Is the proposed program or project reasonably and substantially exemplary?
- 12) Does the proposed program or project make provision for the participation of students in private nonprofit schools, and will participation be genuine and meaningful?
- 13) Have effective policies and procedures been provided for, assuring that Federal funds to be used for proposed program will not be commingled with State or local funds?
- 14) Are the provisions made for evaluating the proposed program or project appropriate and adequate, providing for a reasonable degree of objectivity?
- 15) Are the local provisions for providing information to the State Board about the proposed program or project appropriate and adequate?
- 16) Does the proposed program or project reveal adequate planning by the local district and is there documentation showing the extent of involvement in planning implementation and appraising project activities of teachers, students, or other school personnel and others, including persons broadly representative of the vocational education resources of the public in the area to be served?

Selections were made by the Director of the State Division of Vocational Education with the aid and recommendations of the State Supervisors and an advisory committee and in conformity with Part I, section 6.13, of the New Mexico State Plan for Vocational Education.

The following Annual Report of those exemplary programs operating in the State of New Mexico during the 1971-72 was prepared by the New Mexico Advisory Council on Vocational-Technical Education. As these programs were initially assessed in terms of the criteria for selection, the Council's evaluation focused on the effectiveness of each program in meeting their proposed objectives.

INDUSTRIAL DEVELOPMENT TRAINING PROGRAM

Ampex Corporation

Program Coordinator: D. Richard Beck, State Supervisor
Industrial Development

INDUSTRIAL DEVELOPMENT TRAINING PROGRAM

During the past five years, vocational education has enjoyed the luxury of rapid growth. Increased Federal funding through the Vocational Education Amendments of 1968 greatly expanded program offerings at all levels, however, many were in the traditional vein of vocational education. While statisticians and prognosticators continued to stress the dilemma of the potential abundance of persons trained in professions requiring a four year college degree and the projected shortage of persons preparing for careers not holding that requirement, vocational educators generally remained quiescent. Thus, public support has been slower in coming than might be expected. Nevertheless, as employment demands continued to substantiate the need for a broadened scope of involvement in vocational education, new programs designed to serve the pressing needs in their respective states were developed. One such critical concern in New Mexico focused on the lack of any State-supported effort that could train the unemployed population for jobs created through the expansion or relocation of industries new to the State. Community groups reacted favorably to a proposed State-wide program to supplement Federal support for such a purpose and in September of 1970 a two year exemplary pilot was initiated under the State Division of Vocational Education. In 1970-71, three unique training programs were developed which prepared 184 persons for newly created jobs -- the type of occupations not served in the standard vocational offerings. In addition, 75 persons received upgrading training for advancements. In 1971-72, the program, under the able management

of Mr. Richard Beck, prepared 250 persons for four new firms offering permanent employment opportunities. In each case, the Industrial Development Training Program also served as a primary instrument in attracting the firm to the State. The four firms selected in 1971-72, or less than 20 per cent of those expressing a serious interest in the program, located in economically depressed areas having high unemployment rates. Each firm, without exception, employed in excess of 95 per cent of its work force from the immediate area.

A short-term program was developed at the Bernalillo Skill Center in Sandoval County to prepare 140 additional electronics assemblers for the Ampex Corporation. It essentially involved pre-employment training with the company assuming the cost of the subsequent on-the-job training. As a result of this effort, the skill center will be able to provide an ongoing service to assure the availability of qualified applicants for Ampex as well as other electronic-related firms in the area.

Fifty persons were trained as machine operators for Pecos Trail Jeans, a textile production firm employing an initial work force of sixty-five to seventy-five persons in Santa Fe, New Mexico. Expansion plans include a similar size operation in Las Vegas, New Mexico by early fall. The latter community is an area of high unemployment with an extremely low economic base. The cost of this project was \$10,000.

\$7,800 was spent to train 20 Indians from the Mescalero Reservation as machine operators for Marvel Engineering, a filter production firm which recently relocated in New Mexico. The training again was in conjunction

with Federal funds (MOVE, JOBS) and provided an entire framework of preparation from work orientation to on-the-job experience.

Felco Industries, a jewelry manufacturing firm employing an initial total work force of 100, located in Rio Rancho Estates in Sandoval County. The firm used the Bernalillo Skill Center to train 40 people in various jewelry working occupations. \$17,777 of industrial development training funds were granted for pre-employment training with manpower training programs such as SER, CEP, and WIN providing extensive funding for on-the-job-training.

In all, \$38,000 was spent for the four projects with the average cost per trainee being \$152. In turn, 450 jobs were created as a result of these companies locating in New Mexico. Thus, the average cost per job created was less than \$100.

As the program grew in magnitude, it became apparent that it would effect greater and wider change than imagined. Communities and regions easily recognized the validity of relating job creation to the educational function and began to completely review community development plans in light of educational opportunities. This was especially true in rural areas. A new dialogue between vocational educators and various sectors of the population has resulted from this new relationship and, thus, has prompted unsolicited public endorsement of post-secondary school expansion as a catalyst for continued community development. Secondary schools in rapidly growing areas have begun to emphasize curriculum design outside the

existing service areas in order to serve the dynamic needs of today's industrial/business setting.

To sustain the program and develop an increased level of funding to accommodate the requests, the industrial developers joined the State Department of Education and the State Department of Development in successfully promoting passage of a bill to provide \$250,000 to the Division of Vocational Education over a two-year period. The State's Board of Economic Development, which was given approval authority on requests, and the community leaders throughout the State have viewed this operation and subsequent legislation as a major step in enhancing the employment picture and overall economic condition of New Mexico.

CAREER SELECTION EDUCATION PROGRAM

Cloudcroft High School
Cloudcroft, New Mexico

Weed High School
Weed, New Mexico

Program Coordinator: Mrs. Mary Jo Clendenin, Counselor
Cloudcroft High School

CAREER SELECTION EDUCATION PROGRAM

Student follow-up surveys administered by school officials from Cloudcroft and Weed High Schools indicated that many students were not prepared to make a career choice upon graduation and were unaware of the multiple occupational opportunities open to them. The majority of graduates interviewed expressed the need for a program that would provide exposure to and counseling in various career areas -- those not requiring as well as those requiring a Baccalaureate Degree. The size of the school populations and the teaching staffs available, however, did not justify offering a variety of technical-vocational courses. The Career Selection Education Program was thus designed to fulfill this need. It had as its objective to increase the students' capacity to make career decisions by realizing their abilities and limitations and by knowing, as empirically as possible, pertinent facts about numerous careers. Initially funded in 1970, the program was continued for the 1971-72 school year. Total cost of the program was \$5,185. Combined Federal allocations equalled \$2,100, \$1,300 to Cloudcroft and \$800 to Weed, with local funds absorbing the remainder.

The Career Selection Program was conducted at Cloudcroft High School and made available to the students of Weed High School one-half day per week through a share plan. It incorporated a Career Psychology course, offered as an elective to sophomores, juniors, and seniors, and individual career counseling. Mrs. Clendenin served in a dual capacity as instructor and counselor for the two schools.

The course consisted primarily of discussion sessions concerning careers, career selection, and personality development utilizing a basic psychology text, interest inventory tests, decision-making models, and the Western Small States School Project, Integrated Career Development Curriculum, as source materials. Class activities included traveling to Roswell Trade School and attending lectures given by speakers representing the following occupational fields: architecture, governmental services, the military, and the construction and computer industries. In addition, during one nine week term, students from Cloudcroft High School worked one hour per day without pay for various employers within the community. Those businesses cooperating in this effort included the grocery store, beauty salon, service station, newspaper, electric cooperative, sandwich shop, and the forest service. Career counseling was not restricted to those enrolled in the Career Psychology class but was open to any pupil desiring assistance. Seventy-eight students were served as a result of the total program -- forty-five through individual counseling and thirty-three through course instruction.

The degree to which students were able to successfully make an occupational decision as a result of the Career Selection Program cannot be determined until follow-up studies have been made of the graduates. The instructional materials and learning experiences incorporated in the program, however, provided pupils with the information necessary to strengthen their ability to choose a career field. The interest inventory tests and decision-making models enabled students to assess themselves and their occupational choices in a systemized manner. Career information was furnished through the field trip, guest speakers, counseling sessions, and through first-hand experience.

Employment in the various community businesses had the additional effect of aiding Cloudcroft students in obtaining summer jobs.

Administrative and student response to the program was both favorable and enthusiastic; however, the limited time Mrs. Clendenin has to devote to career-oriented activities due to her other counseling and teaching duties and an extremely tight administrative and teaching budget preclude establishing it as an on-going program. School officials have submitted a proposal to the State Department of Education for the 1972-73 school year that would allow for continuation of the Career Psychology course and expansion of the career counseling services. The proposal provides for a full-time Career Guidance Counselor and Career Education Coordinator whose responsibilities would entail coordinating career education K-12, supervising independent occupational studies in selected areas, functioning as a placement agent, initiating in-service training for other staff members, conducting research related to student and community needs, and working with parents and other representatives of the community. Approval of this proposal would assure the program's continuation as a viable part of the curriculum.

VOCATIONAL GUIDANCE PROGRAM

Hobbs High School
Hobbs, New Mexico

Program Coordinator: Edward DeJarnet, Coordinator of Evaluation
Hobbs Municipal Schools

VOCATIONAL GUIDANCE PROGRAM

Initiated in 1970-71 to expand and improve the existing guidance and counseling services, the Vocational Guidance Program conducted at Hobbs High School was continued in 1971-72 with greater emphasis on extending vocational guidance to as many elementary and secondary students as possible and providing occupational information by updating material and purchasing equipment conducive to career planning. Expenditures for the program totaled \$16,050. Of this, \$12,000 was provided by Federal funds and the remainder by local monies.

The Vocational Guidance Program was designed as a learning experience for both the faculty and students rather than as a specific course to be offered as part of the curriculum. Brochures, periodicals, and other publications containing occupational information were distributed among the administrators, teachers, and counselors to augment their knowledge of the various career fields. Supplementary materials were used as references to aid them in developing effective procedures for disseminating this data to the remainder of the school. The students, in turn, received career information through individual and group counseling sessions conducted by staff members which incorporated the following instructional techniques: films, slides and cassettes, and guest speakers. Due to increased public interest, many members of the community also became actively involved in the program. Local employers and employees were used for video tapes of job descriptions and interviewing methods. Additional businessmen

furnished data concerning their respective occupations on a referral basis and participated in a Career Day, a question and answer session providing students direct contact with local employers, held for the sophomores, juniors, and seniors. Both activities allowed industry a valuable input into the program.

As of this evaluation, the Vocational Guidance Program had been formally implemented only at the high school level where it served 550 students during the 1971-72 school year -- 50 sophomores, 200 juniors, and 300 seniors. Interest in providing their students with such a program, however, has been generated in the lower levels. The films, slides, and cassettes developed by Hobbs High School have been employed by the junior high teachers in their classrooms and feedback from the staffs indicated a desire to expand their counseling services in that direction. Similarly, the elementary schools are currently involved in the initial stages of designing a career guidance program -- pre-planning and staff development.

The full import of the Vocational Guidance Program cannot be assessed until participating students have graduated and follow-up studies can provide answers to the following questions: How relevant was the program material in terms of the types of jobs students pursued after graduation? How many of those graduating were influenced in making a career selection by the counseling they received? Initial student responses, however, described the program as being interesting and informative as well as helpful in choosing a career and in applying for a job. As a result of this response and the support of the administration and faculty, the program will be continued and maintained as an integral part of the total course of study.

PRE-VOCATIONAL BUSINESS EDUCATION PROGRAM

Pecos Junior High School
Pecos, New Mexico

Program Coordinator: Mrs. Patricia Vigil, Instructor
Pecos Junior High School

PRE-VOCATIONAL BUSINESS EDUCATION PROGRAM

The Pre-Vocational Business Education Program conducted at Pecos Junior High School during the 1971-72 school year constituted the second year of a proposed four year program initially developed and funded to meet the occupational needs of those students graduating from the Pecos School System. Approximately 75 per cent of these graduates do not enroll in further education but directly enter the labor force primarily in clerical positions. This program was designed to provide those students with a pre-vocational orientation in office occupations.

Approximately 160 students participated in the program which was offered as an elective to students in the seventh and eighth grades. Under the teaching direction of Mrs. Patricia Vigil, these pupils received instruction in filing, typing, shorthand, business english and etiquette, sales, basic bookkeeping, and the care and operation of business machines. She utilized several teaching techniques including lesson drills, games, films, field trips, guest speakers, and, in the eighth grade, role playing. In addition, the eighth grade students spent one-half day working with staff members in various divisions of the State Department of Education.

All activities were implemented within an office simulation framework with the students rotating among the four business occupations represented -- receptionist, executive secretary, banker, and payroll clerk. While in each occupation, they learned the qualifications for and the responsibilities

of that position and practiced those skills necessary to successfully fulfill the responsibilities. Due to the shortage of machines, the class was divided so that one half was instructed on the machines while the others worked on lesson drills commensurate with their respective occupations. Except for the first two weeks of introduction and orientation, the students progressed by individual work schedules prepared by the teacher to meet their respective needs and achievement levels. In all, \$8,681 was spent on the program. Federal allocations provided \$8,500 with local funds furnishing the remainder.

The present program, encompassing the seventh and eighth grades, will be continued next school year with no major changes in content. Mrs. Vigil hopes to initiate a similar ninth grade course for the 1972-73 school year in order to provide students with a sequentially developed course of study. She will also be working during the summer with the senior high business teacher to aid in restructuring her curriculum to meet the needs of those pupils who have already been exposed to and have gained a degree of proficiency in typing and shorthand before entering high school.

As no one class has participated in the entire office education program as it now exists, the full import of the program cannot be evaluated at this time. A qualitative overview of the program, however, does indicate that it represents a significant addition to the previous course offerings. Students are being provided with a broadened, progressive curriculum which supplements the business courses, typing and shorthand, offered at the high school level. Included in the program's format were two basic components of career education -- awareness of the occupations available and

exploration in specific business-oriented careers -- in addition to the development of business skills. Guest speakers, films, and lesson drills, such as typing different job descriptions in lieu of standard text drills, exposed the students to a variety of occupations. Other films, field trips, role-playing, and hands-on experience related the needs, responsibilities, and qualifications of specific jobs in the clerical field. The games, lesson drills, and testing procedures all combined to increase the students' business skills so that, for example, one student could progress from typing zero words per minute to forty-six words per minute in one semester.

The existing Pre-Vocational Business Education Program was restricted only by the physical facilities and equipment available. The classroom size while adequate to serve the minimum needs of the classes did not allow for great flexibility or expansion in the course content. As a result of the response to this and other vocational programs, Mr. Herrera, principal of Pecos Junior High, supported plans for the construction of a new building to be erected adjacent to the current structure which will house all the vocationally oriented courses. Scheduled for completion during the 1972-73 school year, it will provide enlarged and improved facilities for the pre-vocational business program. Hopefully this will remedy the space problems that were prevalent this year. The equipment used in the program consisted of eight standard typewriters and three ten-key adding machines to accomodate approximately forty students per class. Additional electric typewriters and another adding machine should be made accessible to the program in order to better serve the needs of the students and the course.

Through her teaching techniques, Mrs. Vigil was able to make optimum use of the facilities available. In addition, she developed the majority of instructional materials employed in the classroom. These represent an extremely imaginative and flexible instrument that can easily be adapted to other areas and classrooms throughout the State.

CAREER EDUCATION PILOT PROGRAM

Taos Public Schools
Taos, New Mexico

Program Director: Paul Shelford

CAREER EDUCATION PILOT PROGRAM

Approximately one year ago, the U.S. Commissioner of Education, Dr. Sidney P. Marland, Jr., appealed for the establishment of a new system in American Education -- one designed to provide every child with a genuine career choice and the intellectual and occupational skills needed to achieve it. Ideally, every student would leave this educational system with an entry-level job skill and a knowledge of basic academic subjects sufficient to enable him entry into further education, either post-secondary occupational education or a university degree program, if he desired it. This concept, designated "Career Education", has gained the support of the President of the United States, and model programs are being initiated in each of the fifty States. In accordance with criteria established by the U.S. Office of Education, the State Department of Education selected Taos as the development, testing, and demonstration site for Career Education in New Mexico.

Taos is a rural, economically depressed community in which minority groups compose 86 per cent of the total population. Approximately 70 per cent of the students do not enroll in further education but directly enter the labor force upon leaving the school system. This economic, social, and educational structure is representative of numerous districts throughout the State. What is hoped to be transportable from the Taos pilot project is the method of initiating similar systems of Career Education in these other rural and semi-rural areas.

The program coordinators have named the pilot project Taoscore -- "CORE" being the acronym for Careers/Oriented/Relevant/Education. Initiated on January 3, 1972, Taoscore has as its long-term objectives:

- 1) to develop and implement a program at the elementary school level (K-6) designed to increase career awareness;
- 2) to improve the guidance and counseling services at all grade levels with special emphasis on career orientation and meaningful exploratory experiences for students at the junior high level;
- 3) to provide job preparation in occupational areas for grades 10 through 12 with special emphasis on the utilization of work experience and cooperative education opportunities, and
- 4) to establish a placement service to insure the placement of all existing students in either a job, a post-secondary occupational program, or a baccalaureate program.

In all, \$96,852 was allocated for the program with Federal funds for Exemplary Programs and Projects providing \$10,000 and other Federal, State, and local funds furnishing the remainder.

At the time of this evaluation, Taoscore was in the initial stages of program planning and orientation. Although it had completed only six of the eighteen months allotted, several significant achievements could already be noted. Of singular importance at the elementary level is the completion of a Career Education Matrix -- a 179 page model in the form of lesson plan suggestions for integrating Career Education concepts with the existing curriculums. It covers four of the basic disciplines -- Social Studies, Science, Math, and Language Arts. Each elementary teacher will receive a copy of the matrix and will be encouraged to use, modify, or discard the proposed lesson plans in accordance with his or her teaching

approach. In addition, a Career Awareness Committee composed of three teachers from Taos Elementary and one from each of the outlying elementary schools has been selected to review the existing curriculums and to evaluate revisions designed to incorporate career awareness experiences and the career development theme in the elementary grades. With the aid of the program director, the committee members have developed a comprehensive workshop plan and a working manual that will be distributed to all elementary teachers within the school system at a three-day inservice training workshop to be held on August 21, 22, and 23. Similar one-day workshops are scheduled for the junior and senior high school faculties, the former on August 24 and the latter on August 25. Teachers attending each of these three workshops will receive, in addition to the other materials, a comprehensive library index compiled for their respective levels. Library aides at the elementary, junior high, and senior high schools have catalogued the available books, both fiction and non-fiction, according to the fifteen occupational clusters and their respective sub-clusters. Twenty-three thousand job titles are represented in all. The lists will be a valuable asset to all faculty members and students in making and completing classroom assignments.

Two of the secondary teachers are currently engaged in developing course outlines for three classes that will be included in the 1972-73 curriculums. Two of these will be offered at the senior high level and one at the junior high level. Designed to produce student career awareness and sensitivity, the classes will initially serve approximately 120 students. A sustaining cooperative work experience program is also being established for eleventh and twelfth grade pupils that will operate in conjunction with the existing

vocational education program. Forty students are expected to participate in this supplemental program.

Concurrent with these other activities, the program director and the counseling staffs have been involved in the development of a career-oriented guidance program. They are currently engaged in establishing a career education guidance philosophy for all twelve grade levels and setting up objectives and means of implementation for group guidance sessions that will serve all the secondary students. A placement service is also being developed to handle both post-secondary school and job placements. In administering all the components of Taoscore, the program director has worked to bring together the already existing, though dissociated, elements of Career Education in the Taos schools to form the core of a new educational emphasis rather than superimposing a totally new curriculum upon the schools.

A final performance evaluation of the Taos Career Education Pilot Program cannot be made until after its termination on June 30, 1973; however, the program director's adherence to the timetables established by himself and the State Department of Education for program development and his able coordination of all the project's components indicate that at the completion of the pilot program the framework necessary for the administration of a successful Career Education program will be established in the Taos school system.

MINI-GRANT PROGRAM

**Program Coordinator: Richard Harmeson, Assistant Director
Research Coordinating Unit
Division of Vocational Education
State Department of Education**

MINI-GRANT PROGRAM

The Mini-Grant Program was established by the State Department of Education to initiate those exemplary projects that were of singular importance in meeting the specific educational needs of a school, community, or geographical area within the State and that required funding levels of \$500 or less.

During 1971, the Albuquerque Public Schools requested and received a block grant to implement numerous mini-grant projects at the elementary level. These will be reviewed separately in the report. The three projects subsequently evaluated were chosen by the Council staff as being representative of the other mini-grants funded for the 1971-72 school year. A complete list of those selected can be found at the end of this section.

Crafts As A Vocation

Valley High School
Albuquerque, New Mexico
Program Coordinator: Mrs. Eva Noble, Instructor
Valley High School

This crafts program was designed to increase the general craft student's awareness of the vocational and avocational potentials for his particular talents through elementary training in a number of crafts. Under the direction of Mrs. Noble and Mr. Robert Henion, fifty students received instruction in printing and silk-screening, pottery, small sculptures weaving and jewelry-making. In addition to mastering the basic skills, the

students examined the simpler technical elements of these mediums, they developed a realistic idea of the fundamentals involved in setting up a studio and in marketing a finished product, and they became familiar with the various ways these crafts could become a vocation or a valuable asset to other occupations.

The crafts program represented a significant addition to the existing curriculum. It was both a forerunner to the comprehensive Career Education system proposed for Valley High School and the school's first art course to look at crafts as a vocation.

Small Gasoline Engines

Pojoaque High School

Pojoaque, New Mexico

Program Coordinator: Alfredo Martinez, Instructor
Pojoaque High School

Prior to the initiation of this mini-grant project, Pojoaque High School did not include a mechanics course as part of the total curriculum. As a result, this course was developed to offer students the opportunity to explore the field of mechanics as a career choice and to gain hands-on experience in the repair of small gasoline engines. Through lectures, demonstrations, and application, the students learned to identify and locate all the major working parts of an engine, to identify and use the proper tools and equipment needed for engine repair, and to disassemble a gasoline engine and subsequently reassemble it in working order. In addition, they acquired a general knowledge of other mechanical skills and of the employment outlook for auto mechanics both within the immediate area and throughout the State.

The value of the Small Gasoline Engine Program can be evidenced in two of its accomplishments. First, it fulfilled a school and student need for a basic mechanics course; and, secondly, it acted as a feeder program for the Espanola Vocational Technical School thus providing those class members interested in pursuing the field of mechanics as a career with a sequential training program not previously available.

Preparation For Child Care Related Occupations

Portales High School
Portales, New Mexico
Program Coordinator: Mrs. Margaret Fox, Instructor
Portales High School

This mini-grant project was developed and funded to supplement the Vocational Child Care Course already existing at Portales High School. Its objectives were two-fold: to broaden the students' concepts of child care related occupations and to prepare them for entry-level employment in home and institutional child care services. Group observation of public and private elementary school classes and individual work experience in various community training stations, private kindergartens, public grade schools, and special education classes combined to equip students with many of the skills necessary to satisfy the qualifications for a child care assistant. Two field trips provided a first-hand informative introduction to the variety of child care related occupations.

One immediate effect of the program was class recognition that the care of children was not just a local activity but an accessible future vocation. This new attitude subsequently resulted in the organization of the first HERO Chapter of Future Homemakers of America in New Mexico. Due to increased

student and public interest, a second high school class section in Vocational Child Care was added to the curriculum and a full-time kindergarten teacher was employed for the Child Care Training Center -- a facility constructed through Federal funds at Portales High School to augment the child care program. Finally, a curriculum guide with behavioral objectives and teaching aides was prepared for use in occupational training for child care assistants.

1971-1972 MINI-GRANT PROJECTS

<u>Title of Project</u>	<u>Coordinator/School</u>	<u>Federal Funds</u>
1) Establishment of an Orchard and Development of a Resource Unit	Nunn Las Cruces High School	\$445.00
2) Migration Patterns of Vocational Agriculture Graduates in New Mexico	Noland New Mexico State University	\$425.00
3) Occupational Opportunities for Off-Farm Agricultural Employment in Selected Areas of New Mexico	Noland New Mexico State University	\$450.00
4) Relationship of Student Characteristics and Policies in New Mexico FFA Participation	Noland New Mexico State University	\$290.00
5) A Teacher Resource Unit for Environmental Management	Noland New Mexico State University	\$145.00
6) Trouble-Shooting the Two-Stage Air Conditioner	Johnson Eastern New Mexico University	\$350.00
7) Pre-Vocational Exploration--A Mini-Course	Tabor Highland High School, Hobbs	\$315.00
8) Model Job Simulation of the Los Alamos Scientific Laboratory Individualized Approach	Jordan Los Alamos High School	\$300.00
9) Office Simulation: Activities of a Federal Credit Union	Wilson Santa Fe Vocational Technical School	\$300.00
10) Publication of Materials on Simulation	Heemsten University of New Mexico	\$341.00
11) Vocational Office Internship-Inservice Training for the Experienced Teacher	Giordano University of New Mexico	\$301.00
12) A Sound-Slide Presentation of Ceremonies Used in OEA	Wilson Santa Fe High School	\$150.00

	<u>Title of Project</u>	<u>Coordinator/School</u>	<u>Federal Funds</u>
13)	The Development of Dictation Materials	McQueen University of New Mexico	\$500.00
14)	Small Gasoline Engines	Martinez Pojoaque High School	\$435.00
15)	Construction of a Small Building	Maestas Wagon Mound Public Schools	\$400.00
16)	Crafts as a Vocation	Noble Valley High School, Albuquerque	\$450.00
17)	Training Program in the Use of Manual Tools-Elementary	Dyche Edgewood Elementary School, Roswell	\$300.00
18)	Woodworking, Sewing, Cooking	Rogers Santa Rita, Bayard	\$250.00
19)	Family Life Conference	Olive Carlsbad Mid High School	\$500.00
20)	Better Family Living Through Home Economics	Gallegos Coronado High School, Gallina	\$425.00
21)	Marriage Enrichment Services	Bradford Rio Grande High School, Albuquerque	\$160.00
22)	Use of Visuals in Enriching Early Childhood Education	Bradford Rio Grande High School, Albuquerque	\$300.00
23)	Home Arts and Crafts-Something Old Something New	Turner Hagerman Municipal Schools	\$300.00
24)	Preparation for Child-Care Related Occupations	Fox Portales High School	\$425.00
25)	Semi-Modular-Industrial Arts Individualized Program	Estrada Tierra Amarilla Public Schools	\$300.00
26)	Community Crafts	Coca Anton Chico Elementary School	\$250.00
		<u>TOTAL:</u>	<u>\$8,807.00</u>
27)	Albuquerque Mini-Grants	Lowery Albuquerque Public Schools	\$19,000.00

ALBUQUERQUE MINI-GRANT PROGRAM

Albuquerque Public Schools
Albuquerque, New Mexico

Program Coordinator: Nelson Lowery, Director
Vocational Education
Albuquerque Public Schools

ALBUQUERQUE MINI-GRANT PROGRAM

The Albuquerque Mini-Grant Program was designed to incorporate both the career development theme and career awareness experiences in the elementary grades through the implementation of individual projects. As a result of this program, thirty-seven projects conducted within twenty-four Albuquerque schools were initiated during the 1971-72 school year. A complete list of these immediately follows this evaluation.

Realizing that self-awareness would be one of the key factors in making career choices, the initial emphasis in the majority of projects was on self-understanding. Through experience-oriented classroom environments, students were provided numerous and diverse opportunities to discover new interests and skills. As they became aware of themselves, their interests and abilities, these students were able to more realistically assess their career potentials. The method of integrating career awareness experiences varied from project to project. Some explored a single career activity, while others related occupational information through either films, field trips, and guest speakers, or through hands-on experience. Several types of instructional settings were also employed including single teacher-centered classrooms; single open concept classrooms in which the students were responsible for their own education by allowing freedom for self-selection, self-pacing, and self-evaluation; combined classes involving whole grades or combinations of different grades in open situations; after hours elective courses; and Friday afternoon elective courses.

The success of the mini-grant projects far surpassed all expectations. Student achievements were observable in terms of the changes brought about in their attitudes toward school, work, and society and in their behavior patterns, self-concept, and personal habits as can be seen from the following examples:

- 1) Special education students, who formerly could only read simple, three-letter words, now read and follow instructions for film development including such words as "dilute", "developer", "agitate", and "continuously". (Armijo)
- 2) A junior high dropout returned to school so that he could take part in the program on small engine repair. (Wilson)
- 3) One student became so involved with the animals and their welfare that she secured a job as a junior volunteer for the Animal Humane Association. (Cochiti)
- 4) A boy considered to be "Student Trouble-maker No. 1" became so involved in music and science activities in his open concept classroom that he now appears to be a model of good behavior. (Sierra Vista)
- 5) A first grade student learning how to use a pottery wheel created a beautiful large bowl equal to any you might find in a crafts shop. (Apache)
- 6) Students who seemingly were unable to succeed in math class, were able to master the math concepts in order to learn drafting. They were consequently given math credit for work in the drafting course. (Esperanza)

To the students involved in the program, education suddenly seemed relevant to their own experiences. For example, they realized the importance of knowing how to work with fractions when confronted with following recipes in a cooking lab. As a result, the classes became more interesting and the students better disciplined and more self-motivated.

The mini-grant program also made a significant impact on the parents and the community. Increased public interest led many to become actively

involved in the school projects. Parents volunteered their time to discuss and teach their respective occupational skills, and businesses conducted tours through their facilities and frequently donated equipment needed by the school. Students and teachers not involved in the program expressed the desire to initiate similar projects during the 1972-73 school year. The principals unanimously supported the projects conducted within their schools and are currently making provisions to incorporate them in next year's curriculum.

Meetings were held at the conclusion of the school year to discuss the final results of the mini-grant program. The teachers cited the following problems that would need solutions:

- 1) Late disbursement of funds caused delay in purchasing supplies and implementing programs.
- 2) Lack of space, particularly for separate "noisy" rooms for sewing machines, woodworking, etc.
- 3) Lack of time for planning, for arranging field trips and speakers, for purchasing supplies, and for collecting materials.
- 4) Lack of funds for equipment and consumable supplies.

These problems, however, do not diminish the value of the Albuquerque mini-grant projects. They represent successful program models upon which a viable system of Career Education can be built and expanded.

1971-1972 ALBUQUERQUE MINI-GRANT PROJECTS

<u>Title of Project</u>	<u>Coordinator/School</u>	<u>Federal Funds</u>
<u>Arts and Crafts</u>		
1) Mini-Production, Management, and Distribution	Kimmell John Adams Junior High School	\$500.00
2) Adventures in Art	Hillemeier Armijo Elementary School	\$500.00
3) Introduction to Pottery and Ceramics	Duran Armijo Elementary School	\$500.00
4) A Way to Learn--A Way to Earn	Thompson Armijo Elementary School	\$500.00
5) Photography--Hobby or Vocation	Stiebler Armijo Elementary School	\$400.00
6) Mass Communication--Photography	Perry Barcelona Elementary School	\$500.00
7) Vocational Leather Work	Eddy Baker Elementary School	\$500.00
8) Vocational Areas of Fine Arts	Peterson Comanche Elementary School	\$530.00
9) Development of Career Awareness Through an Art Program	Miera Duran Elementary School	\$500.00
10) A Career Program to Develop Arts and Crafts	Reel Lavaland Elementary School	\$500.00
11) A Creative Art and Vocational Crafts Program	Phelphrey North Area Office	\$456.00
12) Photography--A Method for Aesthetic Expression	Baker Stronghurst Elementary School	\$250.00
<u>Industrial Arts</u>		
13) An Exploratory Program in Vocational Education for the Elementary School	Franklin Alamosa Elementary School	\$500.00

<u>Title of Project</u>	<u>Coordinator/School</u>	<u>Federal Funds</u>
14) An Introduction to the Rudiments of Carpentry	Thompson Armijo Elementary School	\$500.00
15) Industrial Education in the Upper Elementary Grades	Chandler Baker Elementary School	\$490.00
16) Experimental Shop for the Development of Improved Student Attitudes and Abilities	Williams Chaparral Elementary School	\$515.00
17) Laboratory for Orientation to Safety and Equipment Utilization	Morgan Embudo Elementary School	\$468.00
18) Vocational Awareness Through Drafting	Johnson Esperanza School	\$425.00
19) Development in Reading Skills for Underachievers Through Improvement of Manual Dexterity	Salazar Larrazola School	\$500.00
20) Self-Help Project in Industrial Arts and Crafts	Merville McCollum Elementary School	\$500.00
21) Small Engine Repair	Larránaga Wilson Junior High School	\$615.00
<u>Career Awareness</u>		
22) A Vocational Exploration for Fourth Graders	Knight La Luz Elementary School	\$394.00
<u>Ecology</u>		
23) Exploring Developing Careers in Ecology in New Mexico	Walter La Luz Elementary School	\$480.00
<u>Home Economics</u>		
24) Career Exploration in Consumer Services	Schultz Baker Elementary School	\$500.00
25) Consumer Economics	Morgan Embudo Elementary School	\$475.00
26) Fifth Grade Career Awareness With Kindergarten Cross-Age Tutoring	Lujan Los Padillas Elementary School	\$500.00

<u>Title of Project</u>	<u>Coordinator/School</u>	<u>Federal Funds</u>
27) Self-Help Project in Foods and Nutrition	Murray McCollum Elementary School	\$500.00
<u>Office Education</u>		
28) Typing in the World of Work	Pepmuller Baker Elementary School	\$486.00
29) Written and Oral Correspondence Improvement Through Typing	Morgan Embudo Elementary School	\$447.00
<u>Career Combinations</u>		
31). Exploring the World of Work	Apple Apache Elementary School	\$491.00
32) Career Awareness for Kindergarten Children Through The Use of Prop Boxes	Armijo Elementary School	\$500.00
33) Open Concept to Vocational Education	Cooper-Montoya Cochiti Elementary School	\$500.00
34) Future Career Awareness , Directed Toward the World of Elementary Children	Blasi Matheson Park Elementary School	\$500.00
35) Elementary Career Oriented Counseling	Brown Mission Elementary School	\$272.00
36) Career Awareness	Moore Mitchell Elementary School	\$500.00
37) Building Pre-Vocational Attitudes and Literacy at the Elementary Level	Krogdahl-Wade Sierra Vista Elementary School	\$500.00
<u>TOTAL:</u>		\$17,194.00

A TESTING PROGRAM TO PREDICT CAREER CHOICES

Albuquerque Public High Schools
Albuquerque, New Mexico

Program Coordinator: Nelson Lowery, Director
Vocational Education
Albuquerque Public Schools

A TESTING PROGRAM TO PREDICT CAREER CHOICES

The testing program enacted in the Albuquerque Public Schools was initiated by Mrs. Hendrickson and Dr. Ihrig in response to statistics which indicated that a majority of students leave the Albuquerque school system each year without a salable skill. Many students, they felt, would be able to attain such a skill if the curriculum offerings were more relevant and the class schedules more flexible. Thus, this program was funded to determine student interests and career choices through the administration of the Ohio Vocational Interest Survey, to assess the curriculum studies students elect as related to existing schedules and offerings, and to establish guidelines for developing and implementing a course of study that would better serve the occupational needs and vocational class interests of the students. Program funding and expenditures equalled \$1,000 to cover purchasing the scoring service for the survey.

The first phase of the program -- defining student choices -- has been completed. During the months of April and May, the Ohio Vocational Interest Survey was administered to approximately 1,400 sophomore students. This figure includes the entire sophomore class of Highland High School plus a random sampling of sophomores from the eight other Albuquerque public high schools: Albuquerque, Del Norte, El Dorado, Manzano, Rio Grande, Sandia, Valley, and West Mes. Test results indicated that the predominate career choices were art, medicine, teaching, and social work, Auto mechanics, commercial art, forestry, office education, and dental assistant programs constituted the primary vocational courses pupils would like to take as part

of their high school course of study. School officials have reviewed these selections and are currently in the process of evaluating their existing curriculums, discussing the needed additions or deletions, and establishing guidelines for integrating these changes in the total curriculum. Implementation of those changes deemed both necessary and feasible is scheduled for the 1972-73 school year. Evaluation of the revised curriculums and the extent to which they served the occupational needs and vocational interests of the students cannot be made until that time.

In addition to curriculum planning, expanded career counseling programs have been initiated which are directed at both the sophomore students and their parents. Students who did not indicate a career choice or an interest in vocational classes comprised the target group for these programs. As many of these students as possible were individually counseled before the close of the school year as to their interests, goals, and the occupational areas open to them. Those not contacted will participate in similar meetings during the 1972-73 school year. The parents of these students were invited to group counseling sessions in which staff members discussed the purpose of the survey, the results, and subsequent follow-up and provided information on various career fields.

To evaluate the testing program with a performance analysis at this time would be invalid as the ultimate goal is a long-term one. Program coordinators, however, have made provisions to assure its continued progress.
